The farming industry has provided an interesting aspect of consumer credit. When we first introduced loans on farm equipment, local farmers were hesitant to take advantage of the plan. This field of financing was considered extremely hazardous as farms were small and farmers themselves feared that they could not adjust their earnings to meet monthly or quarterly payments. They further predicted that the rocky, cut-over terrain represented too difficult a problem for good tractor operation and were convinced that horses were the best answer for working the soil. But, with other types of farm mechanization taking hold, the tractor was not to be ignored and farmers began turning to us through dealers for installment loans on the rugged, more efficient, iron horses.

The close of World War II brought a great deal of interest in heavy machinery for clearing land, moving houses and building roads. Willing to help with the financing arrangements for this more expensive equipment, we were restricted by State law to loans of 15 percent of the bank's fully paid-in capital and surplus to any one borrower. Through participation loan agreements with correspondent banks, we were able to obtain the necessary funds and still gain a modest profit.

The end of World War II was to bring still another opportunity to enlarge our loan portfolio. The Veterans Readustment Act, more popularly called the GI bill, was to prove a boon to those country bankers who were unafraid to think progressively and to do business with the so-called redtape administration. This program offered the small bank still further means to introduce its services to the community, and to aid in the economic development of the postwar building surge. Our own achievements in this field have been gratifying. From the start of service separations, we made it a practice to write to every returning serviceman, outlining our services and inviting him to discuss his future plans with us. Loans made to veterans have been liquidated satisfactorily to prove again the soundness of regular budget payments.

Our small bank made over $500,000 in GI loans with a single claim being processed on a $260 truck transaction.

Earlier, in 1942, we established the Kanabec Credit Co. to obtain additional funds for livestock and machinery loans to farmers. These loans were rediscounted through the Intermediate Credit Bank. Although our earnings on these loans were held to 3 percent, this program enabled us to provide some $250,000 to area residents.

A necessary part of any all-out endeavor to provide the greatest financial assistance to a community is a constant and effective advertising public-relations program. Since the early days of instalment lending, we have turned to newpaper advertising, display posters, billboards, and direct mail to promote our loan department. This, we believe, is quite a program for a country bank. Our officers are assigned to be present regularly at meetings of local commercial clubs, the Parent-Teachers Association, Farm Bureau, the Grange, cooperative creamery groups, etc. We have also promoted meetings between dealers selling building materials, farm equipment, and other durable goods.

There is no need for a separate department for instalment loans. They can easily be handled with other bank loans. Our loan department officers are authorized and urged to grant immediate approval to any loan that they believe is sound. They are also directed to reject promptly credit for borrowers who cannot meet our minimum requirements. Prudent guidance for those borrowers seen headed for financial trouble has made fast friends of these people and they, in most cases, have returned to the bank for further assistance when their credit picture has improved.

Installment loans, comprising one-third of our loan volume and 46 percent of loan income, now stand at $800,000 at the present time. True, we have experienced our share of risks, but careful attention to the borrower's potential and to collection methods have developed this activity into one of the most profitable of all our bank services. In the first 20 years of installment lending, our total paper of this type amounted to over $4 million. What were our losses? A fantastically low one-hundredth of 1 percent, or less than $400. We are happy to say that this nearly nonexistent loss percentage continues to the present day. But the good will that the program has fostered cannot be figured in dollars and cents. Neither can we accurately appraise the amount of new business that this program has brought to our bank. What we can estimate is the responsibility for a large part of the economic development of our farms, merchants and townspeople.

Our attempts to gain all of the available installment paper in the area have been successful. We now will finance any durable goods from heaters to hearing aids on a time payment basis. By handling all dealer paper and abiding by our responsibility to meet all of the financial needs of our area, we have established strong bonds between merchants and consumers alike. So important do we believe installment credit is to the life of the community that we reduce other loan volumes when it appears we are loaned up in the installment loan phase of our operations.

Hesitation on the part of many country bankers in the past to accept financing plans under the FHA, the GI bill and all installment credit in general is, I believe, just another example of their hesitancy to adjust to the principles of modern banking, principles that country bankers must meet to remain competitive and to become real servants to the communities in which they are located.

As to the future of installment lending, I am particularly optimistic. The great demands for durable consumer goods created by manufacturers through the various advertising mediums have set a mass market in operation. Over 30 years of installment financing experience has familiarized the public with the advantages of budget buying. New products gaining in popularity, such as pleasure boats and airplanes, only promise to make this market even larger in the future. Country banks can profit from the experience of others in this field and gain a great deal of business that is available with a little careful effort.

We are convinced of the high value of installment lending. Past history has proved conclusively that installment payments are as sound as utility payments. People seem best able to have the things they so desire through a realistically conceived budget payment plan. There is no reason to doubt that ever-increasing populations earning higher salaries and wages will continue to avail themselves of the many benefits of installment financing.

Civil Rights

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

Mr. STEED. Mr. Speaker, the following editorial is a recent issue of the Daily Oklahoman, Oklahoma City, Okla., deals with a phase of the civil-rights problem that has not received much attention in the long debate on this subject. I am sure it will be of interest to many who have considered this problem. I agree that it will require a lot more than laws to cure one of the weaknesses of our American citizenship—how to get more people to vote.

The article follows:

FOR LACK OF INTEREST

It is nothing strange that Congress should spend months trying to pass a law making it easier for a few million citizens to cast an unrestricted ballot. Most Congressmen think that every citizen who has reached the required legal age and who is otherwise qualified to exercise the suffrage privilege should be permitted to vote on election day without any restraint whatsoever.

But it is decidedly odd that while Congress is spending the entire summer trying to make it easier for perhaps 3 million citizens to cast their votes, there are perhaps 30 million citizens in the United States who,

while being perfectly free to vote, refuse to cast a ballot in any election. The number of American Negroes who are being deprived of the suffrage right cannot exceed 3 million, but the citizens who can vote and who will not vote, probably equal 30 million. The number of people who have the right to vote and refuse to exercise it must be 10 times as numerous as the number who would like to vote but are not permitted to do so.

Of course it is no one reason that keeps so many millions of Americans away from the polls on election day. Many of them are not interested in government. Many of them are disgusted with government. Many of them agree with the French that every time there is a political change things get worse. Then there are a great many who feel they are too busy on election day to take the time to vote.

Probably these millions of nonvoters do not appreciate the influence they could exercise if all of them should vote. Many things would be different if everybody voted. Admittedly things might not be any better if every citizen voted and possibly many things would be a great deal worse. But those 30 million nonvoters possess a tremendous power, and think of the good that would follow if all of them should vote and vote intelligently.

About a century ago an ambitious citizen of Massachusetts ran for governor in 16 successive elections, and finally he was elected governor by a majority of one vote. He owed his election to every single citizen of Massachusetts who voted for him on election day. Had two of his supporters stayed at home he would not have won his 16th bid for the governorship.

Just a few years ago a Republican nominee for governor of Oklahoma was defeated by something like a 17,000 majority. On that election day more than 17,000 Republicans in Oklahoma County alone failed to cast their ballots. If those 17,000 had gone to the polls the man elected probably would have been the Republican nominee.

But little attention is being paid to this many millioned army of nonvoters. Most of our citizens rarely think of them. But while these 30 million non-voters are almost never thought of, Congress spends an entire summer trying to make it easier or possible for 3 million voters to cast their ballots in our popular elections. Of course it is a deplorable thing for 3 million citizens to be deprived of the suffrage privilege, but the refusal of 10 times that many citizens to cast a vote is also important.

Editorial Comment on Alaska-Hawaii

EXTENSION OF REMARKS

OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

Mr. BURNS of Hawaii. Mr. Speaker, while again I do not agree with the reasons advanced for failure of previous Congresses to pass Alaskan and Hawaiian Statehood, continuing editorial comment through all sections of the country clearly shows that Statehood has the support of an overwhelming number of Americans in all sections of the country.

For the information of the Members of Congress, I include for printing in the RECORD several recent editorials from various parts of the country.

The editorials follow:

[From the Los Angeles Examiner of August 1, 1957]

A BETTER PROSPECT

The insular affairs committee of the United States Senate has unexpectedly and commendably put a new and better face on the issue of Statehood for Alaska and Hawaii by giving unanimous approval to the measures which would bring the two great territories on our Pacific frontier into the American family of States.

The action by the committee was unexpected, because there previously had been apparent agreement that the matter would go over to the next session of Congress.

It is commendable because procrastination on the statehood issue is without legitimate excuse or defense, and it shames rather than credits the Congress, and in a very real and grave sense it disgraces and endangers the Nation.

The Examiner, in association with other Hearst newspapers, believes the proposals of statehood for Alaska and Hawaii constitute one of the most necessary and urgent pieces of unfinished business before the Congress.

There have always been substantial majorities in both Houses favorable to the measures, and it has only been the failure to get the matter to a vote in both Houses in the same session that has prevented approval.

President Eisenhower, after some early indecision about the necessity and wisdom of statehood, now wholeheartedly supports the proposition.

Speaker Rayburn of the House of Representatives has given his assurance that it will have his approval in the future.

By giving new life to the issue now, without waiting until next year to do what needs doing at once, the Senate committee has reflected the overwhelming opinion of the American people that the ends of security, justice and prosperity will be best served with Alaska and Hawaii permanently in the American Union.

[From the Cleveland Plain Dealer of July 29, 1957]

HAWAII SHOULD PRECEDE ALASKA

We are glad to note that former Senator George H. Bender, now special assistant to the Secretary of the Interior, is devoting his considerable talents to securing the admission of Alaska and Hawaii to statehood.

We are somewhat disturbed, however, to find that Bender is concentrating on Alaska as the 49th State-to-be, with Hawaii following later.

By every test of the qualifications for statehood, Hawaii has precedence over Alaska. The population of the islands is about three times as great as that of Alaska. The people of Hawaii pay far more in Federal taxes than the people of Alaska; in fact, their share of the Federal taxload is greater than that of some States. Moreover, Hawaii has been clamoring for statehood for more than 50 years. It voluntarily sought annexation to the United States on the assumption that statehood would be speedily granted.

Alaska has its claims to statehood, too, but they are far less impressive than those of Hawaii. But since both Territories want statehood, why not admit them to the Union at the same time?

The principal obstacle in the way of statehood for Hawaii is the fear that it might elect Members to the United States Senate who are not of Caucasian descent, the idea of which offends the sensibilities of some of our southern Senators. Admitting Alaska first would not remove this obstacle. It can be overcome only by admitting Hawaii first, on the understanding that Alaska would follow, or conferring statehood on both Territories in the same bill.

[From the Charlottesville (Va.) Progress of August 3, 1957]

HAWAII AND ALASKA

Statehood for Hawaii and Alaska seems to be one of the things that Congress won't get around to acting on at the current session.

It's nevertheless of interest to note that Dr. George Gallup's American Institute of Public Opinion, in a recent survey, found public opinion in this country overwhelmingly in favor of statehood for both Territories.

As to Alaska, the vote was 71 percent in favor of admission to the Union to only 8 percent opposed. The remaining 21 percent of those to whom the questionnaire was put had no opinion.

Statehood for Hawaii receive a somewhat less top-heavy endorsement but still an emphatic one. The vote was 64 percent in favor to 14 percent opposed, with 22 percent having no opinion.

These Territories are part of the United States of America. It is plainly in our national interest that they never should be anything else. Their peoples have repeatedly voted for statehood. The platforms of both of our major political parties have repeatedly promised it to them. The recent Gallup survey was the latest in a series, extending back to 1946, in which public opinion in this country has been recorded as approving statehood for them.

In the light of this record, what's the trouble in Congress? The plain truth is that it's political and closely related to the balance of power in Congress, particularly in the Senate. Although Hawaii is normally Republican and Alaska is normally Democratic, so the admission of both would appear likely to have stand-off results politically, there's fear of an upset that might cost the Democrats their control or hurt the Republicans' chances of winning control. Beyond that, some of the big State senators think the small States already have too much power. They do not want more small States. And some of the southern Members are afraid that their difficulties on race questions would be increased if Hawaiians of oriental (largely Japanese) descent had representation in Congress.

The fact remains that the peoples of these Territories are Americans. They should not be kept in a semicolonial status.

[From the Chattanooga (Tenn.) Times of August 3, 1957]

RIGHTS AND STATEHOOD

The Senate Interior Committee has unanimously approved a statehood for Hawaii and Alaska, but chances for the measure remain dim this session.

All kinds of reasons, some of them with the flimsiest arguments, have been advanced against the statehood bills in recent years. One fear seldom expressed publicly by some southerners in Congress is that statehood for Hawaii and Alaska would add more "civil-rights" votes in the Senate.

So the civil-rights bill is used as an albatross round the neck of one more needed and just piece of legislation. But statehood nevertheless gained ground with the Interior Committee's strong endorsement and, one of these days, may make it.

[From the Mansfield (Ohio) News-Journal of July 28, 1957]

HAWAII, ALASKA SNUBBED

Public opinion polls for years have listed a majority of citizens of the continental United States as favorably inclined toward the granting of statehood to Hawaii and Alaska, but Congress continues to look upon such proposals with a jaundiced eye. Washington observers regard the chances of fav-

orable action being taken at this session of Congress as zero.

If a poll taker asks an average American his views on a subject of this sort, chances are he hasn't done much (if any) serious thinking about it. Most Americans probably have an amiable feeling that Hawaii and Alaska are entitled to statehood, but they don't really care much either way.

In the case of polyglot Hawaii, there is considerable opposition from southern Senators, who are not prepared to welcome as a State a Territory where what they describe as "mixing of the races" goes further than anywhere else under the American flag.

Undoubtedly, the real key to the failure of Congress to abide by the wishes of the voters and admit the two Territories as States lies in the Senate. There, four more Senators would seriously jeopardize the power of the southern bloc which can always muster enough negative votes in the present total of 96 to wield a united influence far out of proportion to the area they represent.

Northern Republicans look askance at having any more Democratic Senators. The nonvoting delegates in the House of Representatives for both Alaska and Hawaii are Democrats. Both Territories have Republican governors and the Southern Democrats can easily envision four more GOP Senators along the statehood. So both northern and southern Senators band together to keep the status quo.

The spectacle is disgraceful and unfair to both Hawaii and Alaska, but nothing will happen until United States voters become aroused.

Career of Under Secretary of State Robert Daniel Murphy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. HUMPHREY. Mr. President, there appeared sometime ago in the publication known as the Ave Maria a splendid and informative article, entitled "Five-Star Ambassador," by Mr. Harry W. Flannery. Mr. Flannery has in a brief and well-documented article given us an insight into both the public and private life of a great public servant, the Under Secretary of State Robert Daniel Murphy.

Secretary Murphy epitomizes those qualities of public service which inspire others to dedicate their lives to the good and welfare of our great country. The career of Secretary Robert Daniel Murphy is an intimate closeup of the history of the past 25 years. He has been in the Foreign Service for approximately 40 years, serving in all of its many branches. No duty or responsibility too small or too large has escaped his attention. He has been described as "the most successful diplomat since Benjamin Franklin." Gen. Mark Clark once said of him:

His country's interests are always first in his mind. He is an honest, two-fisted, square-shooting American who has a keen grasp of military as well as political problems.

I have known Secretary Murphy for several years. His record of service to our country merits the commendation and respect of all.

I ask unanimous consent that the outstanding article by Mr. Harry W. Flannery, AFL–CIO radio and television coordinator and president of the Catholic Association for International Peace, entitled "Five-Star Ambassador," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIVE-STAR AMBASSADOR
(By Harry W. Flannery)

Bob Murphy thinks there's reason to be optimistic about the world situation, despite communists, Arabs, Israelis, restless satellite countries and a host of other problems.

And when Under Secretary of State Robert Daniel Murphy expresses hope and confidence about the international situation, the rest of us might well take heed. Speaking is a man who has been 40 years in the foreign service in all its branches—consular, diplomatic and administrative. He was even a secret agent. He has been in so many trouble spots that even John Foster Dulles can hardly land in a spot that may not be designated, "Murphy worked here."

One of Murphy's admiring colleagues calls him the most successful diplomat since Benjamin Franklin. President Eisenhower awarded him the Distinguished Service Medal and praised him as affable, friendly, extremely shrewd. Gen. Mark Clark, who was associated with Murphy in north Africa, Italy, Japan, and Korea, said, "His country's interests are always first in his mind. He is an honest, two-fisted, square-shooting American who has a keen grasp of military as well as political problems." The United States honored Murphy last year by making him one of the Nation's 4 career ambassadors, the diplomatic equivalent of a 5-star general.

For all his experience and honors, Bob Murphy is not a striped-pants type of diplomat. The hulking, slightly stoop-shouldered, 225-pound, 6-foot-4 Irish Catholic from Milwaukee lounged informally in a big leather chair in his State Department office as he chatted with me.

After preliminary pleasantries during which Bob Murphy's generous mouth expanded in hearty smiles, I began our interview with a general question. "How do you feel about world peace?" I asked.

The answer was direct. "Within the last year, there have been gains in stability and peaceful conditions in some world areas," he said. "This is especially true of Western Europe, certain Asiatic areas such as the SEATO countries and Japan, as well as Latin America and Africa. There are certainly elements of hope and confidence for the future and not the least of these is our own strength and prosperity, and that of our allies."

I noted Murphy's omission of the Near East from the hopefully peaceful areas, and made a mental note to return to that later. I asked first about Eastern Europe. "What will happen next among the Communist satellite countries?" I asked.

"Who can say?" Murphy replied, with a suggestion that there are too many unknown factors in that situation. "We do know," he went on, "that there is no apparent change in the ultimate objectives of the Russian Communists. They continue to aim at dominating the world. Their changes are tactical only. They adjust themselves to the necessities of a situation as they see it.

"Take Poland, for instance. Naturally the Soviet seeks to draw Poland back into the same kind of subservience that prevailed before the uprising there last fall, but the Russian leadership no doubt realizes that the discontent and volatility of the masses makes a return to the conditions during the Stalin period highly improbable. The present limited freedoms of the press and religion, among others, cannot be safely taken away suddenly."

Murphy talks about the Communists and their satellites from firsthand experiences. He had an important role in the Yugoslav-Italian dispute over Trieste. He was political advisor to the Allied Council in Berlin in the first days after the war, and in 1948–49, he served in the same capacity to the United States High Commission at Frankfurt.

Gen. Lucius Clay, who was in charge of the military government in the United States Zone at the time of the Berlin airlift, said that without Murphy's skilled negotiations with officials of a dozen governments, including our own, the airlife, the first united thrust against Russian aggression in Europe, might never have taken place. General Clark, referring to common experiences in Japan and Korea, said, "We were in complete agreement that the best way to do business with the Communists was with a big club."

"The developments in Hungary last October presented grave problems to the Kremlin," Murphy declared. "The Soviet rulers were faced with the choice of keeping faith with their own promises or of brutally maintaining their colonial empire. They chose the latter course.

"Have the events in Hungary resulted in a renewal of the Soviet hard policy? This question cannot be answered as yet with any certainty. There have been some straws in the wind. One is the threat of atomic retaliation against Great Britain, Norway, and Denmark. Another is the angry admonition issued to Sweden and to Finland on how they must behave if they are to avoid Soviet enmity. A third has been the denunciation by the Soviets and satellites of the theory that there are many roads to socialism.

"More and more we are being told that there is only one road, that there is no such thing as national communism, and that all communism must be under the great leadership of the Soviet Union. And finally, we have the increasingly repressive measures in Hungary and in all Soviet-ocupied countries. Yugoslavia, the father of national communism appears again to be on the verge of excommunication as a heretic."

Murphy returned to the situation in Poland, saying that Premier Gomulka was pursuing a delicate balancing act, made more difficult by an unfavorable economic situation.

"Did you ever think," he asked, musing, "what might have occurred if the uprising that took place in Hungary had been in Poland instead?"

I had not.

"That would have meant a large-scale revolt next door to East Germany," Murphy continued. "In the Eastern Zone, 17 million Germans are still held in unwilling bondage by the Soviet Army and a puppet regime manipulated from Moscow. The workers and students there are restless and dissatisfied. And," Murphy paused, "the insurrection might well have spread into East Germany. That would have provided a situation of the utmost gravity."

The words were in the vernacular of the diplomat, "a situation of the utmost gravity." Of course, I thought, if Soviet tanks and troops struck in East Germany, the North Atlantic Treaty Organization, NATO, including the United States, would certainly be involved.

"Do you mean," I asked, "that we might have had world war III?"

The diplomat again spoke. "Wars develop in unexpected ways," he said. "There is no set pattern. With the Russian obsession regarding military security, it is doubtful that they will willingly release their hold on territories they now hold. I believe their objective remains the control of West Germany as well as the East. For them the Ruhr industries provide a powerful attraction." In other words, the Russians, once

they had entered East Germany might have been tempted to continue into the free West, I said to myself. I know that the Russians believe they got the worst of the deal when Germany was partitioned, and the success with which the free state has been developing its resources has made Kremlin mouths water.

I returned to the revolt against the Russians and communism in Hungary.

"Should the United States or the United Nations have intervened when that revolt occurred?" I asked.

"I presume you mean: intervened militarily," Murphy commented. I said that was what I meant. "It is not conceivable," he said, "that there could have been military intervention without the risk of provoking a world war."

He spoke from authority, and he was certainly definite. Like others, I had believed we should have been able to do more to aid the Hungarians in their plight. But Murphy's answer was so unhesitatingly firm that I no longer entertained regret about what I thought was our failure to fighting freemen.

"The inability of the United Nations to secure compliance with its urgent resolution to secure the withdrawal of Soviet forces from Hungary is a source of deep disappointment among many peoples of the world," Murphy admitted. "The blame for this failure lies squarely at the door of the Soviet Union, which cruelly massacred thousands of Hungarians. Nevertheless, the United Nations has succeeded in focusing and maintaining the pressure of world opinion on these Soviet outrages. Its resolutions were a cogent reminder to all lovers of freedom of the callous threat which Soviet communism represents in the world today."

But what about the present? "Should we withdraw recognition from the Government of Hungary?" I asked.

Murphy did not think so. "There are many reasons for maintaining some form of representation in Budapest," he said. He noted that our representation was not in the same rank as previous to the Kadar accession. "Our minister is not in Budapest," said Murphy. "It happened that he had not yet presented his credentials when the new government came in. He has been called home, and we have a chargé d'affairs there."

Since economic aid to Poland is now a current problem in Washington, I asked about it.

"Would you say that our policy of aiding Yugoslavia paid off and that it helped bring about the uprisings in Poland and Hungary last year, in addition, of course, to the effect on these countries of the de-Stalinization policy?" I asked.

"I have no doubt of it," Murphy replied. "Yugoslavia was the one Communist country not dependent on Moscow, and it furnished an example for the Poles and the Hungarians. It was Marshal Tito's opposition to Hungarian Premier Matyas Rakosi, a Stalinist, you remember, that led to Rakosi's removal, and the rise of Imre Nagy."

The Secretary had already given generously of his time, but I still wanted to take up the Near East scene.

"Our main objective in that part of the world," Murphy said, "has always been to try to get the Arabs and Israelis to agree on a treaty of peace, and the terms of a basic settlement. We will continue such efforts within and without the United Nations.

"Our hope has been," he said, "to get Arab-Israeli agreement on individual issues, such as the water supply of the Jordan River, the refugees, and frontiers. We thought we had agreement on the technical level at one time on the Jordan, between Israel and Syria and Jordan, but area politics intervened."

Murphy suggested that it was vain to try to get agreements between Israel and the Arab States on all issues at once. The step-by-step process was more practical.

"The fighting last fall set us back," he remarked. "It aroused old and created new hatreds and made bitterness flare again. Emotions and hatred in the area have long been great."

I suggested that agreement between the Arabs and Israel would counteract much Russian influence in the area.

"It is obvious that if a basic settlement can be achieved, one of the main issues of Communist Russian exploitation will have been removed," Murphy agreed. "We will continue to work for peace as best we can. We cannot afford the luxury of discouragement."

Dusk was gathering outside the office windows as I took my leave. I remarked that I had last seen him when he addressed the John Carroll Society (of Catholic laymen) in Washington, after his return from Japan. "I would like to attend those breakfasts oftener," said Murphy, "but it was difficult to find time." The Secretary, an assistant told me on the way to the corridor, would work, as usual, several hours more that evening. He arrives in his fifth floor office in New State about the same time as his staff each morning (around 8:45), but he remains until 7:30 or 8 each evening.

Murphy, a man with big features and a receding hairline, was born 62 years ago in Milwaukee, an only child. His father, Francis Patrick Murphy, was a steamfitter. His mother, Catherine Louise Schmitz, was of German ancestry. Both were devout Catholics. Bob Murphy worked his way through Marquette University in Milwaukee. He fired a locomotive on the Chicago, Milwaukee & St. Paul Railroad, ran a steamhammer in a roundhouse, and was a day laborer with the Allis-Chalmers Co. At Marquette, he boxed and played golf. In Washington, Murphy attended George Washington University Law School at night, worked days as a post office clerk.

Kept out of active service in World War I, because he had crushed a foot while working in a factory, Murphy went to the American Legation in Bern, Switzerland, as a code clerk in 1917. A few years later he was back in the United States, working with the Treasury Department. The young man had not yet decided on his career. In 1920, he and a friend, both law graduates, took an examination for the consular service. Murphy passed. His friend didn't. The friend stayed in Washington, practiced law, became a multimillionaire. Murphy went into the foreign service, and lived for many years on almost nothing. But he has no regrets.

"My life has been varied, and perhaps useful," he says.

After the war, Murphy was vice consul in Zurich, Switzerland, and later in the same year, 1921, he was assigned to Munich, largely because he could speak German. Adolf Hitler was just getting started. Two years after Murphy arrived in Munich, Hitler organized the famous Beer Hall Putsch that ended ingloriously with his imprisonment in Landsberg, where he wrote Mein Kampf.

"As a young American consul in Munich," Murphy relates, "I had the great honor of being a member of a consular corps that included a comparatively young monsignor named Pacelli. He was the dean of our corps during the early days of the Nazi Party organization. And, in the course of our duties, we sent reports back to our superiors about Hitler. Monsignor Pacelli and I agreed on our analysis of the situation. We decided that Hitler was too crazy to be dangerous."

Later, during World War II, when Murphy came to Rome, as a member of the Allied Council for Italy, he called on Pius XII.

"Do you remember, Your Holiness," Murphy asked, "the reports which we agreed to send about Hitler from Munich?"

"Now, Robert," said His Holiness, "be careful. Don't you mention papal infallibility. Remember I was only a monsignor then."

To follow Murphy's career step by step would take a book. His big break came as he was finishing his 16th year as consular officer in Paris in 1936. William C. Bullitt had just arrived in Paris as Ambassador to France. Bullitt, who was President Franklin Roosevelt's chief adviser on foreign affairs, was a shrewd judge of men. He had picked some of the most able members of our Foreign Service.

In Paris, Bullitt watched how Murphy handled himself. One case was that of Americans, fighting in the Spanish Civil War, who had surrendered their passports. The Russians had collected them from members of the Lincoln Brigade for the use of their agents. It was important to get the passports back, but the task was one of considerable difficulty. Nevertheless, Murphy was successful. He handled the task so well that Bullitt saw to it that Murphy got the No. 2 job in the Embassy. Bullitt, furthermore, was back in the United States for consultation, and Murphy was in charge, after the French defeat. Thus it came about that he was at Vichy when Roosevelt and Winston Churchill planned the invasion of North Africa.

It was in this operation that Murphy acted as a secret agent. He negotiated with French colonial rulers in north Africa, wandered through the native quarters and the French residential sections, learning at first hand of the attitude of the people toward the Germans and the allies. He made successful arrangements for the invasion with every important French official except General Nogues. He worked out the plans by which the allies were able to land practically unopposed.

Since the operation was so important and secret, the President bypassed the State Department and sent instructions directly to Murphy. On one occasion, Murphy flew to London from Washington, to confer with General Eisenhower and his staff at a small cottage outside the British capital. He arrived on this occasion, in uniform, as Lieutenant Colonel MacGowan. He was the man on shore, when General Clark arrived, just before the invasion, to check military preparations.

The conference with Clark and French representatives began in a small hut about 10 at night after Clark's arrival by submarine. It continued until 7 in the morning, when the local police became suspicious, and made a call. Clark and a commando with him were warned in time, and hid in the cellar. By the time the gendarmes entered, they found no one but an innocent Irish-American shooting dice with some Arab farmers.

The allied landing went well, except in the Murphy area. Before the landing, friendly French, acting on Murphy's advice, had seized strategic points. Murphy himself went to the villa of Admiral Darlan, the ranking French authority, to tell him of the landing and put him under arrest. However, the Americans landed at a different spot than planned. They were 13 hours behind schedule in reaching Algiers. By the time they had arrived, Darlan had turned the tables, regained the city, and arrested Murphy. Even after the final landing, Murphy was 6 more hours behind bars, arguing with an obstinate French guard.

The expedition, marking the first direct onslaught by American and Allied forces against the Germans, was one of the most spectacular successes of the war, but Murphy got little but abuse at the time. Newspapers and individuals in this country denounced him as a Vichyite, which in those days was next to being a Nazi. Many so-called liberals were no more understanding and complimentary when Murphy, operating in Germany, refused to propose that America

act like a vindictive and relentless conqueror. These were the days when Morgenthau was hailed for proposing that Germany be made a "goat pasture."

From north Africa, Murphy went on with the Allied forces, taking part in the secret negotiations which led to the Italian revolt against Mussolini, helping American commanders solve the political problems that involved not only Germany, but also Italy, Spain, Britain, France, and later, Japan and Korea. Finally, in 1956, Murphy was rewarded by being named a career ambassador. Since then he has worked on every important problem besetting the United States, including that of Suez.

Despite his busy career, Murphy married and raised a family. He met Mildred Claire Taylor, of Kansas City, when she was with the Red Cross in Bern, and married her in 1921, the year he went to Munich. They have three daughters, Catherine, 31; Rosemary, 28, born in Germany; and Mildred, 26, born in the United States.

Catherine lives with her parents in the Chevy Chase section of northwest Washington. Rosemary and Mildred have an apartment on 73d Street in New York.

Mildred is a reporter on the New York Times, and Rosemary is an actress. She did graduate work in the famous drama department of the Catholic University in Washington and played her first parts in postwar German films. Like her sisters, she speaks German and French well. She had a bit part in an American film, Berlin Express, toured in summer stock with Judith Anderson and Sylvia Sydney, and played in Washington and New York, recently with Judith Anderson in the Chalk Garden. Rosemary has done some television, mostly with the Robert Montgomery show.

Murphy raised his family the hard way, not only because he was shifted to many countries in many posts, but also because the United States does not pay its state servants according to their responsibilities. For 15 years, Murphy supported his growing family on a salary that did not exceed $4,000 a year. He gets $20,000 annually in his post as a career ambassador, an increase from the $14,800 paid career ministers. The New York Times, commenting on this, said that $20,000 is "little enough for the post and less than some other countries much poorer than the United States give to their top-ranking diplomats."

Murphy, as I mentioned, is now Deputy Under Secretary of State, the highest post that can be reached by a career man in the United States Department of State. Harold Macmillan, who was his counterpart in the north African and Italian operations, rose to be British Minister for Foreign Affairs and Premier, but there is nowhere else for Murphy to go here. There is no law or rule barring his further rise, but the United States has always chosen the Secretary of State and even the Assistant Secretary for political and not career reasons.

There are people in Washington who do not agree with this policy, but they are not very influential. They cannot see a Foreign Service post too high for a man who has served under 4 Republican and 2 Democratic Presidents, and a parade of Secretaries of State—Robert Daniel Murphy.

Mr. William M. Miller

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. CANNON. Mr. Speaker, here in the closing hours of the session it is appropriate that we should pause long enough to pay honor to whom honor is due.

There is not a Member of the House who has not had occasion to thank Fishbait Miller, the Doorkeeper of the House, for innumerable services rendered above and beyond the call of duty. Half a dozen times this afternoon the conferees on one of the pending bills has been under obligations to him for information and service we could have secured from no other source. When all the learned doctors in the Library of Congress are unable to supply missing data—when all the efficient staffs of the committees of the House are unable to secure results—when the Federal departments downtown have been appealed to in vain—Fishbait will find it for you or will accomplish it for you, promptly, accurately, and efficiently. He is always at hand when needed. He is always on the job. Like the Keepers of Israel he neither slumbers nor sleeps.

Dirksen-Gwinn Amendment To Limit Taxes

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. GWINN. Mr. Speaker, there is a rapidly mounting tide of protest against our present Federal tax system, and something will have to be done about it before too long. It is already the subject of widespread discussion in daily and weekly newspapers, and in periodical publications. Life magazine had an editorial in its April 16, 1956, issue. Farm Journal, Reader's Digest are dealing effectively with the need for tax reform. T. Coleman Andrews, former Commissioner of Internal Revenue, in the American Weekly—with 11 millions of circulation—wrote a lead article: "Let's Abolish the Income Tax."

Representatives of both parties need, this summer, to be pledged to the support of the Dirksen-Gwinn amendment.

Passage of this amendment will provide capital and millions of jobs for oncoming youth and vastly increase the Nation's wealth production.

Following is a statement of Robert B. Dresser regarding Senate Joint Resolution 25 and House Joint Resolution 141 proposing an amendment to the Constitution of the United States relative to taxes on incomes, inheritances, and gifts:

STATEMENT BY ROBERT B. DRESSER

PROVISIONS OF AMENDMENT

The provisions of this amendment (formerly known as the Reed-Dirksen amendment and now called the Dirksen-Gwinn amendment) may be summarized as follows:

(1) The amendment reserves to the States the exclusive power to impose estate and gift taxes.

(2) The amendment limits income taxes on both individuals and corporations to a maximum rate of 25 percent, but permits Congress, by a vote of three-fourths of the Members of each House, to exceed that rate at any time without limit. When the top rate exceeds 25 percent, however, it can be no more than 15 percentage points above the bottom rate. For example, if the bottom rate were 20 percent, the top rate could not exceed 35 percent. If the top rate does not exceed 25 percent, however, there is no restriction at all on the bottom rate. It could be as low as 1 percent, or one-half of 1 percent. The amendment does not require the rates on corporations and individuals to be the same.

This would make it in the interest of every taxpayer (1) to keep the top rate down to 25 percent (as compared with the present rate of 91 percent), and (2) to keep the bottom rate no higher than 10 percent (as compared with the present rate of 20 percent).

It should eventually be possible to get the bottom rate down to much less than 10 percent.

The proposed amendment is just as important for the small taxpayer as for the large.

This united self-interest of all taxpayers is relied on as a force that would keep the tax rates within reasonable bounds. As long ago as 1951 there were 66 million individual income taxpayers in the United States. There are more today. Their voting power is decisive.

The discussion of this subject involves three questions:

QUESTION 1: INCOMES, INHERITANCES, AND GIFTS BE CHANGED?

(1) Should our present system of taxing incomes, inheritances, and gifts be changed?

(2) If it is concluded that our present system of taxing incomes, inheritances and gifts should be changed, can an enduring change be effected without a constitutional amendment?

(3) If it is concluded that our present system of taxing incomes, inheritances and gifts should be changed and that this should be done by amending the Constitution, is the proposed amendment the right sort of an amendment?

I shall discuss these questions in their order.

A. First, as to income taxes: Our present Federal tax laws provide for a heavy, progressive income tax on individuals, running from a beginning rate of 20 percent on incomes of $2,000 and under to 91 percent on incomes of more than $200,000, and a 30 percent normal tax on the first $25,000 of corporate income, with a surtax of 22 percent on income over that amount.

We have in this country an economic system commonly called the private enterprise system, which is based on private capital and private ownership. This is the system under which this country has prospered beyond all others, and grown to greatness. For this system to operate successfully there must be a steady continuing supply of new capital—billions of dollars each year—to start new industries and to maintain and expand existing ones on which so many jobs depend; for over 90 percent of all work in American industry is done by machinery.

It takes, on the average, about $12,000 of investment in new plant and equipment to provide a job in industry for one worker. This capital comes principally from the savings of corporations and individuals. In the case of individuals, it comes mainly from those having the medium-sized and larger incomes. Excessive taxation lessens or destroys the incentive to produce, save and invest such capital in industry, and at the same time reduces the supply by the amount of the tax. The heavy progressive income tax strikes with particular force at this source of supply.

If the savings which constitute the source of capital supply are taken from the owners by taxation, the needed supply of capital

will be reduced or stopped, and our private enterprise system will fail. It would then become necessary for the government to supply the capital. This means government ownership and control, which is socialism.

Socialism defined—its effects

Socialism may be defined as government ownership or control of the means of production and distribution. Communism is an extreme form of socialism, with special emphasis on equality in the distribution of wealth. Both socialism and communism lead to absolute dictation by the government, complete regimentation of the people, the loss of their liberty, and a lower scale of living for all.

The extreme to which our present system of taxation goes in destroying incentive and capital accumulation has been dramatically brought to the attention of the public by the television program, the $64,000 Question.

It appears, for example, that in the case of a single person with a $4,000 income from other sources, a winning of $32,000 is taxed $15,400, leaving the winner $16,600. An additional $32,000 would be taxed $23,292, leaving the winner $8,708. For such a person to have and keep $64,000 after paying the income tax would require a prize of $448,711.

The result is that people hesitate to go beyond the $32,000 mark. Likewise persons hesitate to invest in business enterprises, and businessmen hesitate to embark on new ventures because of the loss involved in the event of failure and the confiscatory taxes levied in the event of success. The ultimate effect is certain to be disastrous.

Some significant figures

The following figures are important:

One-half of the total Federal revenue is provided by the tax on individual incomes. Only 3 percent of the total revenue (about $2 billion) is produced by the rates of this tax above 34 percent. Thirty-five percent is the highest rate that could be imposed (with the present beginning rate of 20 percent) under the Dirksen-Gwinn amendment.

The proposed increase of only $100 in the present $600 personal exemption and credit for dependents would result in a reduction of 7 million in the number of income-tax payers, and a revenue loss of $2½ billion.

A $20 income-tax cut for all taxpayers and dependents, proposed in a recent session of Congress, would have cost the Government a revenue loss of $2,300,000,000.

Eighty-four percent of the revenue from the individual income tax is produced by the beginning rate of 20 percent.

Experience of other countries

The experience of other countries, and most recently that of England, should be a warning to us to change our tax laws.

For many years England has had heavy graduated taxes on both incomes and inheritances. These taxes have so reduced the supply of capital that there has not been enough to provide her industries with the capital needed for modern machinery and equipment.

A British economist of international reputation, Prof. Lionel Robbins of the London School of Economics, recently writing in Lloyd's Bank Review, has this to say about the heavy progressive income tax in Great Britain:

"In the revolution of our time it is the tax machine which is the principal revolutionary agent. If I were asked to sum up in a word the salient charactertistic of this revolution, I should choose the word "collectivism" * * * the tendency to shift more and more the sources of initiative to the central government and its organs.

"I think it is about time that someone who is not deeply involved personally, having chosen a different way of life, should say bluntly that the higher reaches of our own (taxation) progression are quite indefensible save upon an avowedly confiscatory theory. So far as earned income is involved, they constitute a discrimination against enterprise and ability such as has never before existed for any long time in any large-scale civilized community. Certainly they are not dictated by any needs of revenue; the upper rates of surtax could be just canceled without creating any severe budgetary problem * * *.

"There is nothing particularly neutral in the operation of the present tax structure. Relentlessly, year by year, it is pushing us toward collectivism and propertyless uniformity."

B. Secondly, as to the estate and gift taxes: The Dirksen-Gwinn amendment also deprives Congress of the power to impose death and gift taxes and leaves these means of raising revenue exclusively to the States, where they belong and where competition among the States would tend to keep the rates within reasonable bounds.

Under existing laws the tax on the estates of decedents runs to a high of 77 percent, and the tax on gifts to 57.75 percent. These rates are manifestly confiscatory, and they have very harmful economic effects. They not only seriously impair the incentive to work, save and invest in productive enterprise, but they are extremely destructive of capital and, in the long run, will destroy the accumulations of capital that are so necessary for industrial activity and expansion, with the resulting beneficial effects on our economy.

Revenue from death and gift taxes small

Assuredly, the harm done to the economy by the present high rates of death and gift taxes is out of all proportion to the revenue produced, and cannot be justified by any argument based on fiscal needs. Even with the very high rates now in force, the revenue from these taxes is comparatively trivial. It is only about 1½ percent of the total budget—enough to pay the Government's expenses for about 5 days.

QUESTION 2: IF IT IS CONCLUDED THAT OUR PRESENT SYSTEM OF TAXING INCOMES, INHERITANCES AND GIFTS SHOULD BE CHANGED, CAN AN ENDURING CHANGE BE EFFECTED WITHOUT A CONSTITUTIONAL AMENDMENT?

Constitution filled with curbs

The Constitution is filled with curbs on the power of Congress which were placed there to protect the people's rights; such, for example, as freedom of religion, freedom of speech, freedom from unreasonable searches and seizures, and freedom from being deprived of life, liberty or property without due process of law. Excessive taxation would ultimately render many of these rights of little value. For example, what benefit would a citizen derive from the constitutional guaranty that he is not be deprived of his property without due process of law if his property is taken from him or rendered of little value to him by excessive taxation? The freedom of the individual, which is the highest prize of all, is not safe without a curb on the taxing power. Congress should no more have unlimited power over one's property than over his person; for, in the oft-quoted language of Chief Justice Marshall, "The power to tax involves the power to destroy."

It is worthy of note that the constitutions of 19 States contain curbs on the taxing power of their legislatures, and that in 4 of these States the curb relates to taxes on income.

Even if it should be possible to get a Congress to adopt the needed changes in our taxing system, there can be no assurance without a constitutional amendment that the changes would be permanent. A later Congress could overnight eliminate the changes.

QUESTION 3: IF IT IS CONCLUDED THAT OUR PRESENT SYSTEM OF TAXING INCOMES, INHERITANCES AND GIFTS SHOULD BE CHANGED, AND THAT THIS SHOULD BE DONE BY AMENDING THE CONSTITUTION, IS THE PROPOSED AMENDMENT THE RIGHT SORT OF AN AMENDMENT?

At the outset let me correct certain erroneous impressions or inferences regarding the aims and purposes of the proposed amendment and its proponents.

(1) The purpose is not to compel a shift from the income tax to a sales tax, as has been asserted.

Revenue from income tax dependent on size of income as well as rate

The revenue from an income tax is dependent not only on the rate of the tax, but also on the size of the income on which the tax is imposed. Within reasonable limits, lower rates will in due course produce greater revenue than higher rates.

There are two reasons:

(1) The lower rates leave more income in the hands of the taxpayers. This income when invested produces more income, which in turn, when invested, produces still more income, and so on.

(2) The lower rates encourage greater work, greater savings, and greater production of wealth.

The result is to increase the national income on which the tax is imposed, so that with lower tax rates greater revenue will be produced. This is turn makes possible further reductions in rates. At the same time, the increase in the Nation's wealth benefits the people as a whole.

Accordingly any immediate loss in revenue through the elimination of the higher rates would undoubtedly be only temporary. Eventually the lower rates would produce greater revenue than the higher rates.

This view is supported by the actual experience of the Federal Government.

The principle involved is the same as that governing the operation of a successful business, namely, that within certain limits the greatest profits come from charging a low rather than a high price for goods sold. As high prices lessen the ability and incentive to buy, so high tax rates lessen the ability and incentive to work, save, and invest.

The immediate loss in revenue from the individual income tax and the estate and gift taxes occasioned by the adoption of the amendment would amount to only about $8 billion. The case of the corporation tax I shall deal with further on.

Should eliminate waste and competition with private business

Also by eliminating waste and extravagance the Federal budget could undoubtedly be cut by an amount substantially in excess of any immediate loss of revenue occasioned by the proposed amendment. The reports of the Hoover Commission on Organization of the Executive Branch of the Government show how at least $7,500,000,000 could be saved each year through the elimination of waste, without involving any reduction in military strength, any item of useful public works, or any delivered Federal contribution to health, education, and welfare.

Furthermore, the Federal Government is heavily engaged in a great many industries competing with private enterprise. A report of a Subcommittee of the House on Government Operations in 1954 presents a staggering array of government businesses that feed on the tax moneys collected from their business competitors. These businesses cover almost all phases of American enterprise—manufacturing, transportation, services, insurance, credit, retailing, etc.

The Federal Government owns land equal to one-fourth of the area of the 48 States.

The American Progress Foundation, of Los Angeles, Calif., estimates that more than $50 billion is recoverable by selling the properties and facilities of the Federal corporations back to the American people, and that the annual savings in cost of Government would amount to many billions.

Load carried by excise taxes small

I do not wish to imply by anything I have said, however, that I consider the relatively small portion of the tax load carried by excise taxes a sound policy. Taxes on expenditures, i. e., excise or sales taxes, constitute a much more dependable source of revenue than taxes on income, for income fluctuates with the rise and decline of business in a much greater degree than spending.

(2) Another erroneous impression is that the proposed amendment seeks to control Government spending by the left-handed method of limiting a particular source of revenue.

The proposed amendment has nothing whatever to do with spending. This matter is the subject of another amendment known as the Bridges-Byrd-Curtis amendment, which is aimed at compelling the balancing of the Federal budget each year.

Except for the comparatively trivial amount raised by the Federal estate and gift taxes, the proposed amendment does not impair the Government's power to raise needed revenue during either war or peace. It merely limits the degree of income-tax rate progression, which is wholly without justification anyway. It does not prescribe the top rate that Congress may impose.

Effect of reduction of high individual rates

As I have above pointed out, a reduction in the higher bracket rates of the individual income tax would involve a comparatively small loss in revenue, a loss which would undoubtedly soon be made up by an increase in the income base on which the tax is levied. Both reason and our own past experience justify this conclusion.

Cut in corporate rates

A drastic cut in the corporate rates would be more costly, and it would take a longer time to repair the loss. For example, a cut of 7 percent in the top rate, so as to reduce it to 45 percent, just 15 percentage points above the beginning rate of 30 percent, would cost about $3 billion in revenue.

The fact that in the case of corporations the spread of 15 percentage points between the top and bottom rates permitted by the Dirksen-Gwinn amendment is less than the existing spread of 22 percentage points, constitutes no valid objection to the amendment, and, if the budget needs do not warrant it, should not require the lowering of the top rate merely to meet a desired or previously established level for the bottom rate. Instead, the bottom rate could be increased. Certainly as between a substantial reduction in individual income tax rates and a few points reduction in corporate rates, it would seem clear that the stockholders of the small corporations, who are the real parties in interest, would prefer the former. As I have already pointed out, however, the available economies in the budget should render this question academic.

Amendment will not shift tax burden to poor

Certain critics of the proposed amendment refer to it as a "millionaire's amendment," and assert that it will shift the burden of taxation from the rich to the poor, and make the rich richer and the poor poorer. Their criticism implies that the two groups are static—that the rich are always rich and the poor are always poor. Of course, this is not the fact. The poor of today are often the rich of tomorrow, and vice versa. No private or free enterprise system can survive which does not provide an adequate incentive to acquire wealth.

The proposed amendment will not shift the burden of taxation from "the rich to the poor." On the contrary, it will reduce the burden on those with the smaller incomes.

As I have already pointed out, the great bulk of the revenue from the individual income tax comes not from the taxpayers with the larger incomes, but from those with the smaller incomes. This is for the very simple reason that that is where the great bulk of the taxable income is. The only possible way to give relief to the small taxpayers is either (1) by reducing the need of revenue through cutting expenditures, or (2) by increasing revenue through a drastic reduction of the present confiscatory higher bracket rates so as to increase incentive and investment in productive enterprises, thereby increasing the national income, which constitutes the tax base, and as a result increasing the revenue.

Reducing high surtax rates not a discrimination in favor of rich

Reducing the high surtax rates is not a discrimination in favor of the rich, as some assert. It is rather the partial removal of an existing discrimination against the rich of a most extreme character, ranging from 20 percent to 91 percent. This will benefit not only those in the higher brackets, but the people as a whole, as I have pointed out.

Amendment endorsed by many organizations

The Dirksen-Gwinn amendment has been endorsed by a number of organizations, including (1) the American Bar Association, (2) the Committee for Constitutional Government, (3) the Western Tax Council, (4) the National Association of Manufacturers, (5) the American Legion, (6) the National Economic Council, (7) the American Taxpayers Association, (8) the Campaign for the 48 States, (9) We, the People, and (10) For America.

SUMMARY

By the way of summary, therefore, I submit that

(1) The heavy progressive rates of our present income, death, and gift taxes will eventually lead to Government ownership and control of all industry, which is socialism.

(2) The proposed amendment would largely eliminate the socialistic features of our tax system without impairing the Government's power to raise revenue, except by means of death and gift taxes. The revenue from these two sources is comparatively trivial.

(3) The initial loss from any changes in taxes required by the amendment would be substantially less than the savings recommended by the Hoover Commission.

(4) Moreover, such initial loss would soon be made up by the increase in revenue resulting from the lower rates.

(5) Our present system of taxation is dangerously weak in its extreme dependence on income taxes. A much larger proportion of our revenue should be raised by consumption taxes. This of itself would permit a substantial reduction in all income-tax rates.

In conclusion, therefore, I submit

(1) That the present system of taxing incomes, inheritances and gifts should be changed;

(2) That no enduring change can be effected without a constitutional amendment; and

(3) That the proposed Dirksen-Gwinn amendment is a sound and practical means of effecting the needed changes.

PROVIDENCE, R. I., *August 1, 1957.*

Outmoded and Unwarranted Postal Subsidies—Principle of Subsidy-Limiting Amendment

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, there has been considerable comment concerning an amendment which I offered to H. R. 5836, the postal rate readjustment bill passed by the House on August 13. This amendment would limit the Post Office Department's loss on the mailings of any publisher to $100,000 during any one fiscal year. It was adopted by the House on a teller vote shortly before final passage of the postal rate bill.

American taxpayers are just beginning to realize the tremendous cost of these indirect and hidden mail subsidies to a handful of big publishers.

Mr. Speaker, in order to clarify the purpose of my amendment and to explain the basic principles and statistical data which prompted its introduction, I ask that my statement of August 20, 1957, presented to the Senate Post Office and Civil Service Committee in support of my subsidy-limitation amendment, be included in the RECORD:

STATEMENT BY HON. GEORGE M. RHODES, MEMBER OF CONGRESS, 14TH DISTRICT OF PENNSYLVANIA, PRESENTED TO THE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, UNITED STATES SENATE, AUGUST 20, 1957

Mr. Chairman, distinguished members of the committee, I appreciate the opportunity of appearing here to express my views on H. R. 5836, the postal rate readjustment bill as passed by the House last week. Most of my testimony will deal specifically with the amendment which I offered on the House floor to limit the Post Office Department's loss on the mailing of any publisher to $100,000 during any one fiscal year. This amendment may be found in H. R. 5836, beginning at line 25 on page 4 and extending through line 3 on page 6 of the bill.

It was my pleasure to serve on the House Post Office and Civil Service Committee for 8 years, beginning with the 81st Congress and continuing my service through the 84th Congress. I served on the conference committee which produced the last postal rate legislation enacted by the Congress on October 30, 1951 (Public Law 233, 82d Congress). Let me assure the committee that I am not appearing here as an expert on postal rate making, cost ascertainment, or any other phase of the Post Office Department's operations. I do feel, however, that the committee is entitled to share the information which I have compiled relating to the huge losses being incurred by the Department in the handling of publisher's second class mail. This committee is entitled to know the reasons behind my amendment, what it would do, why it is necessary as a principle in postal rate making, why it is administratively feasible, and why I feel that some type of subsidy-limiting amendment should be retained in any postal rate bill reported by this committee.

Mr. Chairman, I will not take the time of this committee to go into a detailed discus-

sion of the bill as reported by the House committee.

FIRST-CLASS MAIL PAYS ITS WAY

As to first-class mail, very briefly I will say that table 100 of the 1956 cost ascertainment report shows first class revenues which are $35.6 million in excess of allocated budgetary expenditures. Table 41 of this same report proves beyond any doubt that first-class mail at 3 cents an ounce is not being handled at a loss by the Department. All types of first-class mail brought into the Department an average revenue of 3.357 cents per piece or 7.22 cents per ounce.

Meanwhile, second-class magazines and periodicals brought in only 1.9 cents per piece or .16 cents per ounce. The 1956 deficit in handling this type of second class mail totaled $65 million.

COMMITTEE-RECOMMENDED SECOND-CLASS INCREASES INADEQUATE

The bill as reported by the House Committee would increase second-class revenues by about $33 million over a 4-year period, or about $8.25 million a year. The net effect would be to reduce the second-class deficit from $252 million to $244 million in the first year of the new rates and to $219 million after the four proposed annual increases. If we count on increased circulation and costs of handling, it may well be that the second-class deficit will not be reduced at all. In effect the committee bill would make more secure these subsidies which go to a handful of big publishers and hide them from the public by reducing the overall postal deficit at the expense of first-class-mail users.

Mr. Chairman, I could not in good conscience vote for an increase in first-class rates, when all of the statistical data shows that first-class mail is more than paying its own way.

POSTAL SUBSIDY LIMITATION NOT NEW IDEA

I supported the Holifield amendment on the House floor. It would have eliminated the 1-cent increase in letter postage. That amendment was defeated. My subsidy-limiting amendment was then adopted by the House. It places a limitation of $100,000 on the amount of subsidy to any user of second-class mail during any one fiscal year. My proposal was originally introduced in the 84th Congress (H. R. 10913). It was offered in the House Committee last year as an amendment to the 1956 postal rate increase bill. Again this year, I introduced the amendment in bill form as H. R. 8275. When approved by the House last week, Members were not voting for some unknown quantity. It had been before the House for well over a year, had been discussed in conversation, offered in Committee, and was finally adopted by the House as an amendment to H. R. 5836.

PUBLISHERS' MAIL DEFICIT

During fiscal 1956, postal revenues for magazines and periodicals were $30.6 million. Allocated budgetary expenditures were $95.4 million, a deficit of some $65 million. The deficit in carrying daily newspapers through the mail amounted to about $61 million. These two produce about half of the total second-class-mail deficit of $252 million.

Other miscellaneous categories of publisherf's second-class mail matter produce another $57 million of the deficit. These include publications with less than 5 percent advertising, newspapers other than dailies, and agricultural, business, professional and similar types of publications produced for profit. Thus, there is a deficit of some $183 million on all types of profit-motivated publications. As Deputy Postmaster General Stans pointed out last Friday, all of the other "exempt" categories of publisher's second-class mail would have produced only $3.1 million in additional revenue if these publications had paid regular rates of postage.

BIG MAGAZINE SUBSIDIES

Members of your committee have undoubtedly seen estimates of the losses incurred by the Department in the handling of a selected list of widely circulated popular magazines. They have been prepared by the Cost Ascertainment Branch, Bureau of Finance, of the Post Office Department and are presented in two different forms. Mr. Chairman, I ask that they be inserted as exhibits 1 and 2 at this point in the record:

EXHIBIT 1.—*Volume, revenues, and estimated handling costs of selected 2d class publications, based on 1 issue for the year 1956*

Publication	Weight (pounds)	Copies	Postage at present rates	Cost of handling	Excess of costs over postage	Estimated annual loss
Life	5,410,000	4,775,000	$144,000	$323,000	$179,000	$9,310,000
Saturday Evening Post	3,095,000	3,106,000	67,000	184,000	117,000	6,087,000
Reader's Digest	3,829,000	9,163,000	90,000	438,000	348,000	4,172,000
Ladies' Home Journal	5,835,000	3,706,000	128,000	287,000	159,000	1,917,000

NOTE.—In all cases costs were based on average cost factors computed for a subgroup of publications applied to volume data for each publication, and not on individual traffic studies and cost factors attributable to each specific publication.

Source: Post Office Department, Bureau of Finance, Division of Cost Analysis, Cost Ascertainment Branch.

EXHIBIT 2.—*U. S. Post Office Department estimated annual revenues and costs of selected leading magazines*

Publication	Revenue [1]	Cost [2]	Difference (cost minus revenue)
Life	$7,485,000	$16,979,000	$9,494,000
Saturday Evening Post	3,488,000	9,557,000	6,069,000
Reader's Digest	1,082,000	5,891,000	4,809,000
Look	1,534,000	5,016,000	3,482,000
Ladies' Home Journal	1,530,000	3,449,000	1,919,000
McCall's magazine	1,097,000	2,604,000	1,507,000
National Geographic	486,000	1,821,000	1,335,000
Good Housekeeping	881,000	2,175,000	1,294,000
Better Homes and Gardens	758,000	1,904,000	1,146,000
American Home magazine	623,000	1,753,000	1,130,000
Total	18,844,000	52,149,000	32,185,000

[1] In general, the revenue estimates are based on data from administrative records covering the mailings of all issues of these publications for the month of March 1956, extended to annual revenues on the basis of the number of issues per year. For Life magazine, revenue estimates were based on mailings of the first 3 issues in March. Revenue and cost estimates for Better Homes and Gardens and Saturday Evening Post are based on issues for the month of November 1954, and for Reader's Digest these estimates are based on the November 1955 issue.

[2] A complete cost analysis of the publications listed in this table would require detailed studies at all points of entry and of the large number of delivery offices. Such analysis would of course be very expensive and time consuming; therefore, the estimates have been developed as outlined below (above).

Source: Division of Cost Analysis, Bureau of Finance, U. S. Post Office Department. The column showing the difference between cost and revenue was computed by the Legislative Reference Service.

These figures have been quoted many times, so I will mention only a few and will not go into all the details. Two estimates of the Post Office Department loss in handling Life magazine were made during 1956. One was based on a single issue, the other based on 3 issues of March 1956. They show that Life magazine received a subsidy from the American taxpayers of somewhere between $9.3 and $9.5 million. Saturday Evening Post received a subsidy in the neighborhood of $6 million; Reader's Digest between $4 million-$5 million and so on. It is true that these estimates were not made on individual traffic studies of each magazine. They are estimates based on selected issues, averaged out for a year, and reinforced by cost ascertainment figures available to the Department. Mr. Stans, in reply to a question by Senator YARBOROUGH last Friday, indicated that these figures are accurate within 10 percent.

Moreover, during the recent hearings in the House Post Office and Civil Service Committee (hearings, p. 854) Mr. Stans pointed out that in 1954 the Department conducted a specific cost study of the cost of handling an issue of the Reader's Digest from the beginning of the time it was put in the mail and going through all the operations for that publication and the results showed a figure very close to the estimate previously made by the Department, the same type of estimate shown in these tables just placed in the record.

LIFE MAGAZINE OPERATIONS

Some very revealing testimony was presented to the House committee last April with respect to Life magazine. This is, of course, published by Time, Inc., which also publishes Time magazine, Fortune, Sports Illustrated, House and Home, Architectural Forum, and various foreign editions of both Time and Life magazines.

Three of these publications are weeklies (Time, Life, Sports Illustrated) while the other three are monthlies (Fortune, Architectural Forum, House and Home). They have a combined circulation per issue totaling 8.75 million copies. Their total annual circulation is approximately 438 million copies, 86 percent of which are carried through the mails at a staggering loss to the American taxpayers.

Since Life is the largest circulation magazine of the group and also received the largest subsidy, according to the 1956 estimates of the Department, let us examine some of its characteristics in greater detail:

1. Circulation: In 1956 Life magazine had a weekly circulation of 5,714,310 copies. Of this total 4,800,000 copies or 84 percent were carried through the mails. This amounts to 249,600,000 copies of Life having a combined weight estimated at more than 280 million pounds, were distributed by postal carriers during the year.

2. Second class postal bill: For this service Life paid about $7.4 million during the year, about 2.9 cents per copy or 2.8 cents per pound. Approximately $144,000 was paid by life in postage per issue in 1956. The Department estimates that it costs the taxpayers about $323,000 per issue to handle and deliver Life to its subscribers, or a difference between revenue paid and costs incurred of about $179,000 per weekly issue. This resulted in a total annual loss to the Department of about $9.4 million just on Life magazine alone.

3. Subscription price versus newstand price: As was pointed out above, about 84 percent of the total Life circulation is on a mail subscription basis. In 1940 only 39

percent of Life's circulation was through the mails; by 1946, 56 percent was going through the mails. The figure has continued to rise each year until the current level of 84 percent has been reached. Newsstand sales of Life have shown a corresponding drop. In 1940, 61 percent of the circulation was newsstand sales; by 1946, this had dropped to 43 percent and now amounts to only 17 percent of total circulation.

In 1940 the newsstand price of Life was 10 cents; the subscription price per year was $4.50; by 1946, the individual copy sold for 15 cents and the subscription was $5.50 a year. In 1956 the single copy of Life sold on the newsstands for 20 cents and the subscription price was $6.75 a year. To buy the 52 issues of Life on a newsstand, it would cost $10.40. Special 3-year subscription rates offered periodically further reduce this latter subscription figure. While the single copy price doubled since 1940, the subscription rate has increased by only slightly more than 25 percent.

4. Advertising revenues: Printers Ink Annual Guide to Advertising for 1956 shows that Life had an advertising revenue of $137.4 million. This was 14.6 percent of the total magazine advertising revenues of $931 million for last year as reported by Advertising Age. For the year Life magazine carried approximately 3,700 pages of editorial matter and 4,400 pages of advertising, or about 54 percent advertising. In 1956 the cost of a full-page black-and-white ad in Life was $20,350. Beginning with the September 9, 1957, issue of Life, the cost for a four-color page ad will be $37,975.

The average weekly issue of Life produced $2,642,000 in advertising revenue alone. Added to this is the subscription revenue on 4.8 million copies per issue or $634,000, plus the newsstand revenue on another 900,000 copies or an estimated $117,000, we see that Life had a total revenue per issue of $3,393,000.

You will recall that Post Office Department estimates that Life only paid $144,000 in postage for a single issue in 1956 and the costs to the Department in handling the issue amounted to $323,000. Thus, if Life had paid its full share of the allocated costs, it still would have had a revenue per issue of $3,070,000, or $159.6 million for the year.

With the increased costs of advertising recently announced by most magazines this source of magazine revenue is expected to be even more profitable in the coming year.

5. Profit picture: Last Friday Deputy Postmaster General Stans told this committee: "Reports in the trade press predict another recordbreaking year in 1957 for both newspapers and magazines. In fact, some publishers are currently boasting of having attained profits unprecedented in the publishing industry."

Time, Inc., is high on the profit ladder in the publishing business. During the past 5 years (which incidentally includes the years when their second-class mail costs were increased by 10 percent a year for the years 1952, 1953, and 1954) the net profits after taxes of Time, Inc. increased from $7,750,000 in 1952 to $13,850,000 in 1956. This latter figure does not include the additional profits realized from the sale of $15 million worth of Houston Oil Co. stock held by Time, Inc.

Mr. Chairman, I would like to read an excerpt from a letter sent by Time, Inc. to its stockholders in January of this year which boasts of profits amounting to $6.75 per share as compared with $4.72 per share in 1955. The letter says that "it was of course profits derived principally from our magazines that made 1956 our best earning year. Time, Life, Fortune, and the international editions of Time all set new earning records." It goes on to say "we believe that the level of earnings attained by Life in 1956 has never been equaled by any other magazine in the history of publishing."

Actually, the letter to stockholders underestimated the extent of Time's profit. Final figures showed that the earnings on a share of stock in Time, Inc. (worth $70) was actually $7.10 during 1956.

Figures furnished the House committee by Time, Inc. reveal that second-class postage costs for all its publications amounted to only 4.8 percent of total publishing expenses during 1956. Based on the 1956 losses of $9.4 million incurred by the Post Office Department in handling Life, the loss would still be $8.3 million after the first year's rate increase provided for in H. R. 5836. This is assuming that postal costs were to remain fixed and circulation remained even. Both these assumptions are not likely to prove valid. As a publisher becomes more successful, as his circulation, advertising revenues, and profits increase, his mailing operations cost the Post Office more and the size of the subsidy received also increases.

OTHER MAGAZINES SUBSIDIZED

Mr. Chairman, the statistical data which I have presented with respect to Life magazine could also be generally applied to other large publishers in this same fashion. However, I will not take the time of the committee to do so. The Legislative Reference Service, at my request, furnished voluminous financial data on many other large publishing companies in addition to Time, Inc.

Permit me to just mention a few of the highlights with respect to other leading publishers. The Curtis Publishing Co., publishers of the Saturday Evening Post, Ladies' Home Journal, Holiday, and other magazines increased their profits after taxes from $4,404,000 in 1952 to $6,234,000 in 1956. The two Curtis publications listed in the post office estimate show a total of $8 million in annual subsidy.

McGraw-Hill Publishing Co., publishers of Business Week and 27 other small circulation business-trade magazines more than doubled its profits after taxes—$3,273,000 in 1952 to $7,871,000 in 1956. Its advertising revenues during this period are not available. Its earnings per share of common stock were $7.40 in 1952. It was split 2 for 1 in 1953, each share earning $4.03 and in 1956 its stock was again split 3 for 1, each share earning $2.98 during that year. Subsidy figures for McGraw-Hill publications are not listed in the post office estimate.

Mr. Chairman, financial data is not available from public sources on such big magazines as Look (which received an estimated subsidy of $3,482,000), Reader's Digest (whose subsidy totaled $4,809,000), based on November 1955 estimates of the Department. This magazine now has the largest circulation of any magazine in the United States—upward of 11 million copies per month. It paid an estimated $90,000 in postage for one issue and cost the Department $438,000 to handle, a subsidy of $348,000 per single issue. Incidentally, a single page four-color ad in Reader's Digest will cost $38,000 beginning next January 1.

No financial data is available for Confidential, Inc., publishers of Confidential, and Whisper magazines currently in the headlines because of libel suits. Confidential has a monthly circulation of 3,442,536 copies.

Data is also unavailable on other magazines such as Newsweek, U. S. News and World Report, American Home, TV Guide, and magazines such as True Confessions, My Romance, Secret Confessions, Startling Detective, Daring Romances, Revealing Romances, Modern Romances, and many other similar-type publications.

AMENDMENT ESTABLISHES FAIR PRINCIPLE

Mr. Chairman, the purpose of my amendment is not to penalize any publisher or to cut his profit margin. A small increased cost of individual publisher's subscription rates could easily offset their higher postal costs. The purpose of my amendment is simply to apply a principle in second-class publisher's mail rates that the annual revenue they pay to the Department for the service they receive should equal the costs to the Department to render that service, less $100,000. The popular magazines which incur such huge deficits in second-class mail do have some "public interest" value in the dissemination of news, helpful household information, political views, and other "educational" material. My amendment merely place a subsidy limitation on these values.

Low second-class mail rates, when originally established in 1879 were meant to provide the types of news services unavailable through any other public media. Today we have radio, television, motion pictures and other sources of more current news and information. Present zone rates, according to Mr. Stans, on the advertising portion of newspapers and magazines are actually less than they were in 1917. This is despite the fact that advertising revenue of magazines was practically nil in 1917, while today they are rapidly approaching the $1 billion mark for a single year.

The principle of limiting subsidies is not unique. Just last week the Congress enacted a law to curb subsidies to industries through the 5-year fast-tax writeoff device. Only recently a $3,000 limit was placed on acreage reserve payments and a $5,000 limit on conservation reserve payments to any farmer participating in the soil-bank program. Abuses in the operation of this program made it possible for a single corporate farmer to receive $209,000 a year for not planting crops. Congress reacted to this by placing a limitation on the payments. Last year in the Senate an amendment to the farm bill, limiting to $100,000 the amount of price-support loans to a single producer was adopted by a vote of 78–11. Is it not fair that this principle of limitation also be applied to big magazine publishers?

MAGAZINES ATTACK SUBSIDIES TO OTHERS

Mr. Chairman, it is interesting to pick up these subsidized publications and to read in them articles attacking subsidies going to other segments of our population. For example, a recent editorial in Life is entitled "King Cotton—the Royal Nonesuch." Let me read to the committee a portion of this editorial:

"If the (cotton) industry was put on a basis of free competition, and our prices left to find their own level * * * the (cotton) business would quickly thin down to efficient operators who could produce all the cotton really needed and at a profit."

Listen to this next part, Mr. Chairman:

"(Cotton subsidies for) the distressed small farmers—no longer makes sense. It keeps them at it when, if left to their own devices, they could go to town and work at a useful job."

The editorial continues:

"We have every sympathy for the marginal, high-cost little fellow who is inexorably being crowded out, but there is any depression to justify keeping him on a dole? There is no likelihood of agricultural shortages either. The longer the 92.7 percent of the rest of us taxpayers keep him there by giving him money to stay in business he can't possibly succeed at, the longer will the whole farm picture stay in a needless and senseless mess."

Thus in this editorial, Life magazine, which received a $9.4 million "dole" itself last year, presumes to prescribe a remedy for the cotton industry. The editorial concludes by saying:

"If enough Americans squawk, something will be done to stop this silly business."

Mr. Chairman, this might also be said of the huge subsidies going to Life magazine and other publications being carried through the mails at such tremendous losses to the American taxpayers.

Or take another example. The Reader's Digest has carried many "planted" articles expressing its views on political issues. One of these articles, entitled "The Biggest Con Game in Politics," written by former Governor Driscoll, of New Jersey, was reprinted and circulated throughout the country. It is a wholesale attack on Federal grants-in-aid programs, but did not mention Federal aid to magazine publishers.

Another more recent Reader's Digest article, written by William Hard, was entitled "Pacific Northwest Stands on Its Own Feet." It was a complete distortion of the issues involved in the fight for a high dam at Hells Canyon, timed to coincide with the consideration of this issue by the Congress. Senators MAGNUSON and JACKSON, and Congressman DON MAGNUSON of Washington effectively destroyed this piece of misleading political propaganda in a letter to the editor of the Reader's Digest, released to the press.

As Mr. A. L. Cole, business manager of the Reader's Digest, admitted during the recent House hearings (hearings, p. 422): "Nothing is published in the magazine that does not reflect their (the editors) views."

POST OFFICE DEPARTMENT'S ATTITUDE

Mr. Chairman, I was disappointed at the cavalier manner in which the principle of my amendment was received by the Postmaster General and his deputy. I was under the impression that the official policy of the administration was to place the Department on a sound businesslike basis. They didn't even see fit to tell this committee the additional revenue which would be produced by the adoption of my subsidy-limitation amendment. I should think that if they are sincerely interested in reducing the second class publisher's deficit, they would at least estimate what it would bring in additional revenue.

Chairman, I trust that this committee will give serious thought to the data I have furnished. The objectives set forth by my amendment offer a fair and workable method of reducing the scandalous subsidies being handed over each year to a few magazine publishers.

When questioned about the amendment, Mr. Stans commented that it would be expensive and difficult but admitted that it would not be impossible to administer. Mr. Chairman, I submit that if there is the will to put a limitation on these subsidies it can be done without great difficulty or inconvenience to the Post Office Department.

AMENDMENT IS WORKABLE

This amendment was not drafted in a vacuum, Mr. Chairman. It was drafted by recognized experts on Post Office Department accounting and cost ascertainment procedures. I was assured well in advance of my introduction of the proposal in bill form and before offering it as an amendment to H. R. 5836 that it was feasible, workable, and capable of being administered. Otherwise, I would not have offered it.

I do not say that this amendment, as adopted by the House, is the only way in which the principle of limiting second class publisher's subsidies can be established. There is no sane reason why a beginning should not be made. This committee in its wisdom and its long experience in this field can undoubtedly put a limitation on these postal subsidies.

If the distinguished members of this committee agree with me in principle a limitation of these subsidies can be accomplished. For example, the circulation of a particular magazine or the amount of its subsidy could be the controlling factor in limiting the loss to a certain percentage of its annual cost of handling.

Mr. Chairman, this amendment is not unworkable. There may be some logic to arguments to amend the amount of the limitation, but how can anyone object to the principle involved? The American people are beginning to learn about postal subsidies. They want Congress to do something about it.

POWERFUL OPPOSITION

Any proposal of this kind will naturally draw fire from those who are the beneficiaries of this type of Federal aid. I am aware, as all of you gentlemen must be, of the great power, wealth and influence behind those seeking to kill this amendment. There is some question that the amendment may bring a lawsuit. There's always such a possibility, since even at present the Department's cost ascertainment system in allocating costs can be challenged by court action.

I contend, and I hope you gentlemen will agree, that if my amendment is right in principle, as Members of Congress, it is our duty to see that steps are taken for its application.

Opponents to my amendment will go so far as to claim that the post office actually makes a profit in handling some second-class matter. Mr. David W. Brumbaugh, vice president of Time, Inc., made the claim that the Post Office Department is actually handling Life magazine at a profit. He boldly attacks the basic principles of the cost ascertainment system of accounting. Deputy Postmaster General Stans prepared an analysis of Mr. Brumbaugh's allegations concerning the proper allocation of Department costs to Life magazine. It is dated April 25, 1957. It completely demolishes the case presented by Time, Inc. On the matter of possible lawsuits through the imposition of any limitation on second-class publisher's subsidies, I am willing to rest my case on the analysis prepared by Mr. Stans, which appears at pages 743–747 of the House hearings on H. R. 5836.

Mr. Chairman, it is obvious that publishers will pass on to subscribers the additional postage costs provided for in any postal-rate law. It is more fair to the general public to let those who want to subscribe to Life, Saturday Evening Post, Reader's Digest, or Confidential pay whatever the publishers of these magazines feel is necessary for them to continue their service and make a profit. It is far more equitable than to continue to tax the many millions of Americans who do not subscribe to these magazines.

Mr. Chairman, I wish to thank you and the committee for the courtesy you have shown me.

For Repeal of Estate and Gift Taxes

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

Mr. GWINN. Mr. Speaker, today I am introducing a bill providing for the repeal of chapters 11 and 12 of the Internal Revenue Code of 1954 relating to the imposition of estate and gift taxes.

These taxes were first imposed in 1917 when we were in World War I and the revenues that year were but $6,076,575.26. Every bit of evidence indicates that the levies upon estates and gifts at that time were considered emergency measures which would be for the war period only.

Andrew Mellon, the Secretary of the Treasury in 1921, in commenting on the adverse effects of estate taxes upon the economy, said:

The continuance in times of peace of the very high estate taxes imposed during the emergency of war should receive serious consideration. There are two chief objections to the present high rates, running as they do up to 25 percent of the net amount of the estate, which should be emphasized.

The first is that taxes at such rates, which seize upon and take away so much of the capital of the country, are fundamentally wrong. The Nation, just as the individual, should not use up its capital in payment of its ordinary expenses. The money which is taken by way of such taxes is, to a large extent, the capital which is in use and necessary in carrying on the business of the country, and just to the extent that the Government seizes upon and takes this capital for its own income its loss must be made good out of the thrift and savings of the people of the country.

In the second place there is the destructive effect upon values. If all the wealth of an estate consisted of money, the evil results of such taxes would be much less. But the wealth of estates does not consist of money, nor, in fact, in most cases of property readily convertible into money. An estate consisting principally of Government bonds or municipal securities is of less real value to the community than the estate that is invested in property in and line of productive industry giving useful employment to large numbers of people. And yet, the estate invested in tax-free securities would be much less affected by the tax than the estate invested in real estate, in manufacturing plants, in merchandising, in farming or in any line of productive industry.

Again when a man actively engaged in business dies, leaving an estate of considerable size, his family is called upon to provide not merely for the payment of the Federal estate tax, but, in many cases, an inheritance tax to the State in which he lived. There is also frequently a tax to be paid to the State where some part of the property is located, and often a tax must be paid upon the value of shares of stock to the State where the company is incorporated. So, there may be as many as four different taxes to be paid upon the same property. In addition there is usually a greater or less amount of indebtedness existing which must be met. These obligations can only be met by payment in money. The estate cannot take its property and simply divide it up, giving to the Nation, to the State, and to the creditors a proportionate share of the actual property. Those ultimately entitled to share in the distribution may take their portions in property, but, before that can be done, actual cash must be found for the payment of taxes and debts, and the larger these are in proportion to the amount of the estate, the more difficult the task becomes. * * * The extent of the shrinkage of values and the losses caused by the forced liquidation of many estates is not generally realized for the present high rates have been in existence but a short time, and their evil effects, which will naturally increase if these rates continue, are only gradually coming to be recognized. * * * A large part of the revenue now derived from the estate tax comes from the more moderate rates.

Mr. Speaker, that was the situation as outlined by the Secretary of the Treasury in 1921. Today the rates on both estate and gift taxes are far above what they were in 1921. In considering the whole picture it is generally agreed among tax experts that estate and gift taxation, can properly be left to the States. They are sorely pressed for revenue sources aside from those already practically monopolized by the Federal Government.

A check of the collections over the past 5 years from estate and gift taxes reveals that out of gross collections of more than $362 billion but $4,776,000,000 came from the levies upon estates and gifts. This amounts to less than 1½ percent on the average of total taxes collected.

They were as follows:

1952	$833,000,000
1953	891,000,000
1954	945,000,000
1955	936,000,000
1956	1,171,000,000
Total	4,776,000,000

This represents but a small amount which could be replaced by economies recommended by the Hoover Commission and still awaiting practial application to the operations of our Government.

Moral Armor for the Atomic Age

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. CRAMER. Mr. Speaker, the graduates of the University of Tampa, Tampa, Fla., on June 6, 1956, were privileged to hear one of the most inspirational commencement addresses ever brought to my attention. It was made by a distinguished engineer and scientist, but the subject with which it dwelt was a stimulating and inspiring moment for those graduates presenting as it did the problem of the great faith we must have today—faith in ourselves and the religious tenets we, as people of free thought, have been taught throughout the years. There were many answers to the questions in the minds of these young people who face a world of great accomplishment and much bewilderment. I think that all Americans can gain inspiration and form a pattern for comfort and spiritual faith from this message. I am proud to ask inclusion in the RECORD of the commencement address delivered by David B. Steinman, internationally noted bridge engineer, scholar, scientist, and founder of the David B. Steinman Foundation for grants to education for research and student aid.

MORAL ARMOR FOR THE ATOMIC AGE

(Address by David B. Steinman)

On August 6, 1945, when the report of an atomic blast over Hiroshima was flashed around the globe, civilization was shaken to its utmost foundations. Individual reactions varied, from "I am scared to death," to "Father, forgive them for they know not what they do." On the whole, the impact was sobering. Men realized that, in one brief moment, the history of the world had been changed. For better or for worse, the story of mankind had entered a new and fateful chapter.

Mortal man stands frightened among the appalling forces he has summoned from the unknown. The dust stirred up by the atomic blast gets into his eyes and obscures his vision; and, in the blinding flash of the explosion, the inner light that should guide him is momentarily obscured. Beholding the nuclear conflagration, man feels himself a child playing with matches—and he grows afraid.

We are living on the edge of an abyss. Any rash act can precipitate our own destruction. Fear of such calamity underlies all our acts and thoughts today.

In the present world crisis, we can at least strive to avoid mad actions and pray to be delivired from blind accidents. Through enlightened public opinion we can prevent those who govern us from lapsing into carelessness. We can see to it that firebrands do not come into power. We need alert yet sober leaders who can and will think their way through the problems that confront us, real statesmen who can judge wisely and act decisively. We can have such leaders if we refuse to settle for less.

Civilized man is feeling the strain. There is a weary feeling of having almost reached the ultimate in the Faustian bargain of man's mastery over nature; and of having glimpsed in atomic power more of mastery—and of death—than man is ready to face.

Perhaps the fear and the soul searching it induces are hopeful signs. Many more people now sense the need of divine guidance, of a moral compass to steer by, if only because they realize that a single blundering act may prove fatal to our civilization, if not to the continuance of the race of man.

The realization grows upon us that the spiritual ideal has ceased to be a luxury and has become an absolute necessity. Today, in a literal sense never before so apparent, the moral law has become the law of survival.

To us, human life is sacred and inviolable. To the Communists, the individual is a cipher, to be exterminated at the will of a cold-blooded autocrat; people are so much brick and mortar for the construction of a soulless utopia. They demolish a human community with as little feeling as if it were an anthill.

In our struggle for the heart of man, we must renew the faith; gain again the flaming emotion of Pitt and Cromwell; of Washington, Lincoln, and the great founders of the Republic; of St. Paul and all the great Christian martyrs who died for their religious beliefs. We must fire political doctrine and spiritual ideals with ardent belief, with the magic of passion; for our own sake and for the decency of mankind.

Daily we pray, "Thy kingdom come." Without a belief in the ultimate good, all we have held sacred becomes meaningless. Without this ringing faith we are lost.

There is no old world to go back to; a new one must be made, and there are tigers in the way. We must breed and nurture a robust vigor to resist the vicious assertion that a state is an autocratic entity with supreme rights; that it need have no morals or obligations, and that its members are creatures to do its soulless bidding regardless of their own instincts of human dignity and of kindliness.

We must cling to honor, to moral courage, to humanitarian ideals—to all the sanctities of life—and defend them, for these are the things our godless adversary would destroy.

There is a tendency to think of all these things in far too small units of time. Many are in panic because we have not solved the problems of the atomic age in the brief span of 10 years. A lifetime is only a second of eternity. All historic time is only a moment in the eternal plan. Mankind is barely emerging from the nursery. He stands bright eyed with new knowledge of his past and, for the first time, with the power and will to mold his own future. We must educate our youth so that they will be strong to resist evil and to fight for the things that endure. With resolute faith and courage, guided by their power for reason, their power for virtue, and the power of spiritual truth, they will make a braver new world.

St. Thomas Aquinas once said that there are only three really important endeavors in life: To have faith in the right things, to hope for the right things, to love the right things in life.

Our faith, hope, and love for the good, the true, and the beautiful find their expression in science, religion, and art. These are the three main pillars of civilization. For man's highest fulfillment, we must revere all three.

Religion, art, and science, representing the everlasting search for the good, the true, the beautiful, constitute a trinity of human aspiration. All three are but different aspects of the same reality, of the same feeling for the sublime, rooted in the supreme mystery of being.

It has been pointed out that there is a common and unifying element—what we identify instinctively as the divine spark—in a Raphael Madonna, a Beethoven symphony, a discovery by Copernicus, Newton, or Einstein. In each instance, inspiration was drawn from some common reservoir of spiritual vitality. In each there were moments of flashing intuition that call to mind the Burning Bush that spoke unto Moses. The experience of sudden inner illumination beyond mere intelligence, the inner light known to mystics, martyrs, and poets, is not unknown to creative scientists and inventors.

Art and religion are related. They flow from the same fount of inspiration in the human soul. We need only to think of the Psalms and the Prophets, or supreme examples of religious music and painting, to see their intimate relationship. And foremost thinkers among scientists and theologians are coming to recognize that science and religion also are closely related. As the horizons of science advance, many of its great leaders become more humble, not less; more reverent, not less.

The more deeply we delve into the heart of nature, the more awestruck we stand in the face of ineluctable mysteries. As the frontiers of science advance, the scientist, the poet, and the religious man meet on common ground—the common ground of the ultimate, the infinite, the eternal.

The man who discovered that electricity and magnetism are related, Hans Christian Oersted, once said, "The Universe is a manifestation of an Infinite Reason and the laws of Nature are the thoughts of God."

From Pythagoras and Euclid to Newton and Einstein, the mathematicians and scientists voyage on enchanted seas, to find new isles of wonder. In the microcosm of the atom and in the universal laws of celestial mechanics, they find the poetry of harmony and perfection. They unveil for man the simple and sublime unity of Creation. In the structure of the universe, they discover the divinest poetry—the grandeur of the infinite.

By godlike magic given to man, linking the infinitesimal to the infinite, the scientist penetrates the atom and he lassos the flying stars. And in the ordered beauty and unity of the cosmos, in its sublime and eternal design, he finds Divinity.

The age-old conflict between science and religion is being resolved. In the first flush of triumph in the laboratory, the scientists of a century ago allowed pride to get the better of them. Twentieth-century scientists, knowing more, are less dogmatic about spiritual matters and less idolatrous in their regard for the sovereignty of physical law. They are discovering that God's universe contains imponderables beyond the reach of test tubes, formulas, and slide rules.

Science is rooted in a moral order of reality it did not create. Where would science be without the passion for truth and its every-

day dedication? Where would it be without the self-denial and splendid integrity of its saints? Whence this spirit of consecration? Whence this passion and honor and devotion? The scientist is under obligation to a higher loyalty, to something regal in the universe which he did not create but must obey. This spirit comes from something greater than science, something in the soul of man.

Science would not have developed as it has in our Western civilization if it had not been for the Judeo-Christian faith which has steeped the minds of scientists with the sense of the worth and significance and eternal importance of human enterprise.

For centuries, scientists believed that matter and energy were distinct entities, mutually nonconvertible; that matter could neither be created nor destroyed. When Einstein set forth his famous conversion formula, he dared to turn his back on three centuries of scientific thinking. Had Einstein's formula remained on paper, the world would have been little impressed. But something did happen over Hiroshima. A city was destroyed because a small group of men were willing to proceed on the assumption that $E=Mc^2$, and now we know that matter and energy are convertible.

The matter which disintegrated first privately over the American desert and then publicly over Japan ceased to exist as matter. We can no longer say, "I am a materialist," now that we know that nothing is ultimately material. We can no longer deny creation. We can no longer insist that material things are more real or more enduring than the intangibles of life and spirit.

In today's world crisis, our only salvation lies in the soul of man. We stand at Armageddon, fighting the forces of godlessness. Man's higher intuitions and ideals have become the key to survival.

We find this ageless message in the Psalms:

"Except the Lord keep the city,
The watchman waketh but in vain."

In the present world situation, we must be constantly on the alert, without panic or hysteria. We must be resolutely prepared to meet aggression if it comes our way. We must maintain our military arms and our preparations for defense at a level of strength that will deter a would-be aggressor. As safeguards for our Nation, these measures are vital to our security.

But we must face the truth that, in the world of today, genuine protection is no longer to be found in material safeguards alone. We have learned that insularity is no protection. The oceans now provide no more immunity to attack than did the trenches and Maginot lines of a generation ago. Guided missiles are piercing the stratosphere; soon they will be able to deliver a cargo of destruction from any spot on this globe to any other.

In this day of fear, fatigue, and frustration, our only invulnerable armor is a genuine spiritual faith and the courage founded thereon.

Each good man has in himself a quiet place in which he lives, however seemingly torn by the turmoil and passions of the world. That is his citadel, which must be kept inviolate against assaults. That quiet place must be founded upon a rock, and the rock must be a belief, a belief in the existence of the ultimate good, and a willingness to put forth his strength against the ultimate evil.

Religion has always served us in this purpose. It is the earliest inspired perception of a higher power, an expression of man's intuitive kinship with the spiritually divine. At first, primitive man mad religion a shield aganst his ignorance of the strange and terrifying happenings by which he found himself surrounded. But now the dangers that confront us are born of man himself. As man first made religion a shield against his ignorance, he now needs, more than ever, religion as a shield against misuse of his knowledge.

Our obligation, even in selfish terms of survival, is not to find a coexistence with evil, but resolutely to oppose it and in the end to overcome it.

We have witnessed the Steam Age, the Atomic Age, the Electronic Age. But the basic moral values are ageless. They are the values distilled from man's total experience.

Precisely because we now have in our hands such immense natural forces capable of uprooting us, we need a sure anchorage in the soul. We need a renewed and revitalized emphasis on the enduring basic elements, such as truth and justice, loyalty and love.

Man must be awakened to the fact that, as never before, he is his brother's keeper. The human race must be made aware that reckless or unscrupulous conduct now amounts to race-suicide—that man's true progress and security are to be found in the principles of universal kindness and universal good will.

Science is coming close to providing a worldwide storehouse of plenty; but that will avail us nothing if the spirit is left starved and our moral armor is neglected.

The one outstanding lesson of the present crisis of the human race is that man must relearn humility, reverence, and spiritual faith. This is the thought I want to leave with you.

Today, both religion and science have vital roles to play. They must play them together in a concerted effort.

The final test of science is not whether its accomplishments add to our comfort, knowledge, and power, but whether it adds to our dignity as men, our perception and reverence for truth and beauty, and our faith in the ultimate good. This is a test science cannot pass alone and unaided. The major burden rests on religion—to show to all men the way to a richer, fuller spiritual life, keyed to eternal moral values.

Proposal To Broaden Widow's Benefits Under Railroad Retirement Act of 1937

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. ASHLEY. Mr. Speaker, I have today introduced a bill to amend the Railroad Retirement Act of 1937 to provide that a widow who loses her widow's insurance benefits by remarriage may again be entitled to such benefits if her second husband dies within 1 year after their marriage.

Under the present provisions of the Railroad Retirement Act, a widow who remarries becomes ineligible for any monthly payments she may have received as the result of her first husband's death. Furthermore, if her second husband dies before they have been married 1 year, she is unable to collect any widow's benefits based on his income.

This bill, Mr. Speaker, would permit her to again collect the widow's insurance benefits she was receiving before her second marriage. In other words, it would restore the benefits she was receiving on the basis of her first husband.

This legislation probably would not be considered of major importance to anyone except the few unfortunate women who have twice become a widow and who, because of a quirk of fate, find themselves deprived of benefits to which they would have been entitled had tragedy not struck them a cruel double blow.

Both the House and the other body took favorable action on similar legislation last year, Mr. Speaker, when a bill was enacted amending our social security laws to allow a widow to claim benefits previously received in the event that her second husband dies within a year after their marriage.

I hope that the measure I have introduced today will receive the same considerate treatment early in the next session of the Congress.

American Tariffs

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. NEAL. Mr. Speaker, in 1934, at the instance of Cordell Hull, then Secretary of State, the Congress passed the Reciprocal Trade Agreements Act as an emergency. This was done in the hope of retrieving some of our losses in international exports resulting from competition with cheap-labor products produced in Japan, Germany, and other European nations, and trade restraints imposed by the enactment of the Smoot-Hawley Tariff Act of 1930. By this act the Congress surrendered its constitutional powers to regulate foreign trade and national economy through the adjustment of duties, imports, and excises to the Tariff Commisison, an agency of the Executive.

Under Mr. Hull's direction, several bilateral trade agreements were made, especially with nations that could export to us strategic materials we needed in our industrial activities. However, the anticipated upsurge in our foreign exports lagged until the second World War clouds began to shower America with orders for arms. The story of America's exports during and following the second World War is common knowledge.

When the rush began to subside, our expanded industrial machine and the international traders prevailed upon the President to liberalize tariff regulations in the hope of maintaining a more extensive export-import trade.

In response to this plea and under the authority of the act of 1934, the President proceeded to setup in 1947 the so-called GATT—General Agreements on Tariffs and Trades—and designated Geneva as its headquarters. This organization continues to function at Geneva and now numbers 34 foreign nations, and acts as a tariff-making body with each member nation having an equal voice. In short, trade tariffs and multilateral agreements are regulated in Geneva where we have 1 vote in 35.

The Congress has never officially recognized GATT, yet the President and his Tariff Commission have the full power to approve or reject specific tariff schedules adopted by this group. Under continual pressure from export-import groups, aided by international financial interests, the President and his Tariff Commission have whittled away our tariffs until we now have virtual free trade.

Under the theory that America must buy from free nations in order that they may secure dollars with which to buy from us, we have succeeded in greatly increasing our exports. In some respects, this policy has been nationally beneficial. This is especially true with heavy industry, agricultural machinery, and household appliances. In that these industries have found outlets for their productive capacity, they have materially augmented full employment for American labor. But while this is true, the American consumer market has been increasingly flooded with foreign-made goods produced abroad under low paid labor conditions that make it all but impossible for American producers to compete pricewise. Hence, reduced demands for American consumer goods has caused hundreds of our manufacturers to slow their output or close entirely, leaving thousands of our own labor force unemployed. This has brought about heavy loss both in plant investment and high standard American labor in industries such as textiles, livestock, mining, crockery, glass, precision instruments, machine tools, chemicals, and many others. Under existing tariff regulations, markets for these products are progressively dwindling as cheaper products produced abroad continue to flood the American market.

In approaching the value of foreign trade to the American economy, we must not forget the fact that it is a two-way street. Following the late World War, the great need abroad for durable goods to restore the productive economy of defeated nations made possible ready markets for the products of big industry which has continued to be subsidized to a great extent through our foreign-aid program. Now that foreign plant capacity has been fully restored, their ability to export begins to challenge American markets here at home as well as in our overseas trade areas.

Hence it becomes obvious that more attention must be directed toward protection of American producers of consumer goods against foreign competitors who, under existing trade and tariff regulations, are extended the freedom to usurp our home markets at the expense of American plant investment and the labor forces involved.

Incidents of injury to and casualties among American small industries and labor groups are becoming altogether too common to be pushed aside as inconsequential by an unsympathetic Tariff Commission.

America no longer enjoys its first rank as an exporting nation. We are facing new conditions under which the old-world-restored industrial competition is beginning to pinch.

The future well-being of the American economy demands that the Tariff Commission revise its schedules upward to prevent unlimited, competing, injurious imports and to respond more readily to pleas of injured American manufacturers when they are able to show just cause.

It is not conceivable that GATT or the proposed OTC, operating in faraway Geneva, can agree upon tariff rates that tend to be beneficial to American manufacturers.

Judging from past experience, injured American industrialists can expect no relief until the Congress recovers its constitutional authority to regulate trade and tariffs and proceeds to require the Tariff Commission to hew to a policy of adequate protection of American industry.

Consumer Borrowing

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

CONSUMERS BORROWING $43 BILLION—INTEREST RATE NOW 6 PERCENT

Mr. GWINN. Mr. Speaker, as of August 15, 1957, the outstanding consumer credit nears the $43 billion mark and banks in many large cities are increasing their interest rates on loans to around 6 percent per annum.

As of June 30 the Department of Commerce reports outstanding consumer credits at $42,245,000,000. Based upon average increases for July and half of August over the past 10 years, the total as of August 15 is in all probability near to $43 billion.

Based upon the population in the continental United States of 167 million the consumer credit outstanding as of August 15 amounts to over $251 per capita or an average of $903.60 for an average family of 3.6 persons.

DEMAND FOR LOANS FROM BANKS INCREASES

The demand for loans from banks and lending institutions throughout the country has become so great that with a tightness of the money market the banks have seized upon the opportunity to advance interest rates. This fact is evidenced by a letter submitted to the Washington News Bulletin by a prominent Washington resident who had a small demand-collateral loan at one of the city's largest banks. The letter, in part, was as follows:

[Name of bank deleted]

AUGUST 15, 1957.

DEAR MR. ———: The general demand for loans throughout the country has continued to be very active. This has caused a further tightness of the money market, and undoubtedly you have noticed in the press the high rates which the United States Treasury was forced to pay on its recent refinancing. Naturally, this reflects in the interest rates which banks must now charge on commercial borrowings, as well as loans on collateral.

We, ourselves, continue to experience a tremendous demand for credit and, together with the other banks of the Nation, we find it necessary to adjust rates on all classes of loans.

We, therefore, are establishing a new rate of 6 percent on your demand collateral loan, now in the amount of ———, effective as of September 1, 1957.

Sincerely yours,

———,
Vice President and Manager.

Minnesota Is Making a Good Record in School Construction

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Minneapolis Star of August 13, 1957:

A GOOD RECORD

Except for some fast-growing suburbs and distressed districts, Minnesota is making excellent progress toward overcoming its shortage of public-school classrooms. The State can be proud of the record of its local districts in meeting this challenge.

In a recent report, Guy O. Tollerud, State director of school building planning and development, pointed out that new school buildings and additions completed in the 1956–57 fiscal year reached a new record value of $67,960,248. Below is the State's spending on units completed since 1950–51:

Fiscal year	Units completed	Total costs
1956–57	215	$67,960,248
1955–56	243	47,173,329
1954–55	231	65,976,138
1953–54	187	32,321,953
1952–53	126	16,282,427
1951–52	109	8,816,888
1950–51	116	7,484,862

New construction last year added 1,715 classrooms in the State, and the average for the last 4 years was 1,235 classrooms built each year. The schools still will need another 3,505 classrooms during the next 4 years, it is estimated, but that could be met by only 3 years of construction at the average rate of the last 4 years, or by only 2 years of building at last year's rate.

With plans already approved for 188 building projects next year, as compared with 136 last year and 166 in 1954–55, the conclusion seems inescapable that the shortage soon will be ended—for most districts in Minnesota.

Unfortunately, some districts still lack the resources to build rapidly enough to meet the growing demand. A district such as Bloomington, for example, relies largely on residential valuations for its tax base, and has little industry. It has built rapidly but hasn't been able to afford to build fast enough to avoid split shifts in its schools.

A district such as McGregor, District No. 4, Aitkin County, also needs additional facilities, but it, too, lacks local resources. It needs a $400,000 building to meet the growing school enrollment, but it can afford only a $275,000 bond issue. And it hasn't been able to market even that.

Congress recently voted down the program of Federal aid for school construction. The $7 million or $8 million a year that Minnesota would have received from the Federal program would have helped the needy dis-

tricts and perhaps would have speeded up construction in other districts, but that annual total still would have been much less than the money spent by Minnesota districts in any 1 of the last 4 years.

In the Nation as a whole, the critical shortage justifies Federal aid, in President Eisenhower's opinion. In Minnesota, however, the local districts are licking their own problem.

FTC Should Have Jurisdiction Over Unfair Trade Practices in the Meatpacking Industry

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. MACK of Illinois. Mr. Speaker, the Subcommittee on Commerce and Finance, of which I have the honor to serve as chairman, has reported favorably on H. R. 5282, which would transfer jurisdiction over unfair trade practises in the meatpacking industry from the Department of Agriculture to the Federal Trade Commission.

Mr. Speaker, I am including an excellent editorial on this subject which appeared in the Washington Post this week. I am also including a letter which indicates that the independent business people of this country are strongly in favor of the enactment of this legislation.

The editorial and letter follow:

PACKERS AND THE FTC

The Senate will have an opportunity today to extend the area of effective policing against monopolistic practices. It is scheduled to consider a bill by Senators O'MAHONEY and WATKINS that would shift jurisdiction over unfair trade practices in the meatpacking industry from the Department of Agriculture to the Federal Trade Commission. Congress assigned this function to Agriculture when it passed the Packers and Stockyards Act in 1921 on the assumption that it would be more vigorously enforced by that Department. This was an illusion. In 36 years the Department has issued only 28 cease-and-desist orders under the act, many of them trivial. No order dealing with monopolistic or unfair trade practices by meatpackers has been issued during the last 19 years. Representative CELLER had a good deal of justification for calling this situation "a supervisory vacuum," despite recent moves to correct it.

The inability of Agriculture to cope with the problem is evident from the fact that its Trade Practices Section is staffed by only two marketing specialists and a stenographer. Probably more important is the fact that the Department relies upon the packers for an assortment of data that go into its reports. Its major interest lies in the regulation of the country's 375 livestock markets, 1,300 commission firms, and 2,000 livestock dealers. It has neither the specialists nor the experience for effective enforcement of the law against unfair trade practices.

Recently another powerful incentive to action on this measure has arisen. The law divesting the FTC of jurisdiction over packers is so sweeping that chain stores may now indulge in unfair trade practices without challenge from the FTC if they buy a packing plant or prepare meats for shipment in interstate commerce. If for no other reason than to arrest this spreading of immunity to antitrust regulation, the law should be promptly amended.

The O'Mahoney-Watkins bill would properly leave regulation of the stockyards in the Department of Agriculture. It would shift to the FTC only the kind of watchdog function it exercises against unfair trade practices in other industries. Indeed, the meatpacking industry, although it is the third largest in the United States, is the only group which effectively escapes such supervision. The meatpackers have no better claim to immunity from FTC supervision than any other food processors.

NATIONAL FEDERATION
OF INDEPENDENT BUSINESS,
Washington, D. C., August 21, 1957.

Hon. PETER F. MACK, Jr.,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN MACK: I note your splendid remarks in the CONGRESSIONAL RECORD made on the floor of the House August 19, pages 13900–13903.

The federation membership was polled on the subject matter, and favored the O'Mahoney-Watkins bill. The result of that poll was 75 percent for, 13 percent against, and 12 percent no vote.

This was a very constructive move and I am sure this action is long overdue to protect independent business in the meat and allied industries through the help of the Federal Trade Commission.

With best regards.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Booker T. Washington Birthplace Shrine

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose herewith a letter from the Roanoke, Va., Times, of August 22, 1957, entitled "Booker T. Washington Birthplace Shrine," showing some new sidelights on the Shrine, in which I thought my colleagues would be interested.

The letter follows:

BOOKER T. WASHINGTON BIRTHPLACE SHRINE

Your editorial of July 30 under the caption, "The Booker T. Washington National Shrine" was possibly of greater interest to me than to many of the thousands who read your fine paper. This is true for several reasons: first, perhaps, because I am the only living child of Booker T. Washington. It is gratifying to me that the American Government should so honor my father as to establish a national monument at his birthplace. It is further gratifying that an outstanding publication like yours should commend this action.

Secondly because it was I who in 1945 appealed to Mr. Sidney J. Phillips to save my father's birthplace when it was put up for sale at public auction. In response to my appeal he borrowed money, purchased the plantation, and organized "The Booker T. Washington Birthplace Memorial" to work toward the establishment of a national monument on the site.

Because the Government's recent action in establishing a national shrine at the birthplace of Booker T. Washington is the direct result of more than 12 years of conscientious effort on the part of Mr. Phillips and those associated with him in the Booker T. Washington Birthplace Memorial, and because this fact was not brought out in your editorial, I am prompted to express gratitude to him for the job he did in making the present generation of Americans conscious of my father's contribution to our national welfare.

For more than 12 years the Booker T. Washington Birthplace Memorial sent out millions of pieces of literature in a national program having the objective "to perpetuate the ideals and teachings of Booker T. Washington." Booker T. Washington speakers from rostrums over the Nation sought to point out to leaders of every race and creed the value of applying Booker T. Washington's teachings to today's problems—particularly to race relationship as stressed in your editorial.

It was this same program of Mr. Phillips that persuaded the Congress to enact legislation which made possible the coinage of the Booker T. Washington and Carver-Washington half dollars. These coins served as messengers of good will that aroused American interest in my father's birthplace. So also did the issuance of the Booker T. Washington centennial stamp, the year-long good will building program conducted by the Booker T. Washington Centennial Commission, and many other national projects instituted and carried out in Mr. Phillips' efforts to channel the American mind toward the establishment of a national shrine to honor Booker T. Washington.

The little fluid in the test tube produced by Dr. Salk was, in itself far too small in volume to save millions of America's children from the dread disease of polio, but it was the key that opened national donors to the production of sufficient vaccine to save America's most precious possessions. Fulton's idea of our first steamboat might have been considered a colossal flop from a dollar-and-cents point of view—but it laid the way for a system of water transportation worth millions. In similar manner the work of the Booker T. Washington Birthplace Memorial, under Mr. Phillips' guidance, did not actually produce a national monument to Booker T. Washington, but it impressed upon the hearts and minds of the American people the fact that such a shrine is definitely in keeping with the finest and best in American tradition and custom. And out of these impressions have come legislation that will establish the shrine for which Mr. Phillips and his associates worked so hard.

PORTIA WASHINGTON PITTMAN.
WASHINGTON, D. C.

Reverse of Foreign Military Convictions

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. MADDEN. Mr. Speaker, the following editorial in the Gary, Indiana, Post Tribune reminds us that the reverse of the American soldiers' offenses on foreign soil has been handled without ceremony and publicity:

A FAIR EXCHANGE

In all the stir over the question who is to have jurisdiction over offenses committed by United States servicemen on foreign soil, there has been little thought given to the

reverse situation—foreign soldiers in trouble in America.

The record actually is sparse. Government officials point out that under present arrangements the total of foreign troops in this country does not go beyond 5,000 at any one time. We have a good many divisions overseas, some of them well concentrated.

Furthermore, it happens that the foreign soldiers on duty in America are a carefully selected group, usually men on special training missions and the like. Consequently the average of their behavior is high.

But the record does show a few instances of convictions in United States courts for traffic violations—one resulting in an 11-month jail sentence. And there have been some cases of passing bad checks and of black-market operations.

On the whole, slim as it is, the record suggests that this country regards offenses committed by foreign soldiers here—even minor matters—as the business of American courts.

Friendly nations acting as hosts to our men aren't asking anything more for themselves.

Radio Broadcast of Tris Coffin

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. FEIGHAN. Mr. Speaker, on Wednesday evening, August 21, Tris Coffin, noted political analyst and radio commentator, reported on an unusual development in our national life on his regular program carried on Station WWDC. Tris Coffin told the story of the remarkable career of Cyril Bath, one of the foremost and outstanding citizens of Cleveland.

Cyril Bath has invented a machine which many experts believe will lead to a new industrial revolution. This invention has a vital bearing to our national defense and offers many exciting possibilities for the American people.

At my request, Tris Coffin provided me with a copy of this unusual broadcast which I am inserting in the RECORD, under leave previously granted:

A few days ago, an extraordinary man came to town. He brought a plan to save Uncle Sam a billion dollars and modernize our defenses.

His name is Cyril Bath, and he is from Solon, Ohio. Bath is an inventive genius who says cheerfully about himself, "I'm just an old-fashioned mechanic. I feel the way about tools that some men do about violins."

After listening to Bath, I have a message for Neil McElroy, the new Secretary of Defense. If I were McElroy, I would bring Bath into my office and keep him there until I had pumped him dry of his unusual fountain of knowledge.

Cyril Bath has started a new industrial revolution, and you and I will hear about it in a few years in the radical designs of new model cars. Right now, he is showing the nations of the free world how to make jet planes and guided missiles cheaper, quicker than the Russians and their satellites. Unfortunately, the Air Force hasn't caught up with Bath's methods and jet-age thinking yet.

His invention is a huge steel giant called a radial draw former. It will take a strip of titanium, stretch it to a plastic state, like pull taffy, and mold it into shape—all in one operation. This machine can turn out 1,350 parts in an hour. One airplane manufacturer reports he can cut costs two-thirds by this supergadget. Others say production time can be cut in half, and that the finished piece is much tougher and able to stand up under the great stresses of supersonic speed.

This invention, and others like it, comes at a crucial time. Reports that drift out of the Pentagon show the United States is not keeping up with its lead in jet planes. Our costs are way too high, the time consumed is dangerously low, and the ability of the planes to stand up under heats of 600 degrees and speeds of 700 miles an hour is not assured. At the same time, Russia is producing some powerful new jet planes.

Our trouble, in part, is that we are still trying to manufacture modern planes with the old presses that stamped out the stream of wings for World War II, or, by machining parts by hand.

The Air Force has been relatively slow in shifting over to new techniques.

Bath is himself an interesting individual. He invented the first working model of the push-button elevator when he was a kid of 15 hanging around his uncle's factory in London.

He ran away from home the next year, because his mother and maiden sisters wanted him to be a missionary and he wanted to be an inventor. His hero was Eli Whitney whose cotton gin revolutionized the textile industry.

The boy spent 3 years in Canada, working in railway shops and tractor stations in the western wheat fields. Then, when he had saved enough money, he took a steamer across Lake Erie. His only possessions were a machinist's kit and a bicycle. His first night in the United States he slept under the Cleveland viaduct wrapped in gunnysacks to keep off the damp cold.

Several years later, he started his own machine shop in the bricked-up end of an arch below a railway bridge. He bought secondhand tools, working at night to recondition them. He sold them during the day.

The idea for the revolutionary system of molding metal came to him about 20 years ago. The manufacturer of a streamlined train of stainless steel brought him a tough problem. The metal would not bend, form, or cut in the presses. So the engineers came to Bath who had the reputation of being a wizard with metals.

He hammered and heated; he cut and forged. But the metal, instead of taking shape in presses, would leap back out like a watchspring or wrinkle up uselessly. One night reading his favorite poetry, the beautiful Rubaiyat of Omar Khayyam he found the answer. It was in these lines:

"For I remember stopping by the way
To watch a potter thumping his wet clay."

Bath saw the potter's wheel shaping the clay as it turned. Couldn't metal be handled that way? He knew that when metal is stretched to a certain point, it becomes pliable. So, Bath sketched a machine. It had steel jaws to clutch and stretch a sheet or strip of metal. Then a die mounted on a rotating table shaped the strip. In 1946, the draw former did its first big job, making intricate, curved parts for a General Motors truck body of new design. Today, all of the big motormakers are using these Bath machines, and the engineers and designers are working on new models to utilize the huge device.

Bath came into the strange new world of Mach (or faster than sound) speeds during the Korean war. A General Electric engineer brought him sheets of the new metal, titanium, for jet-engine casings. It broke like glass in the conventional presses. The GE executive asked, "Can you do anything with this? But, be careful, it costs $28 a pound." It handled perfectly in the draw formers.

A little later, a west-coast manufacturer of jets taught Bath the value of weight in these planes. He said, "If you can save us 4 ounces on 1 part, we'll throw out all our old tools and get yours."

Today, every American jet-plane manufacturer and many NATO allies use Bath's invention. A great 100-ton machine has been ordered to produce the Golden Arrow jet airliner. This adaptation of the potter's wheel produces parts for guided missiles, atomic reactors, helicopters, trains, trucks, buses, cars, refrigerators, and dishwashers, as well.

His mother's ambition has not escaped Cyril Bath entirely. He is still a missionary. He wants to see America better prepared in its defense. He had a revealing experience with the Russians in 1938. This was the year Hitler seized Austria and Czechoslovakia, and Bath saw the war coming. He drew up plans for overhauling and repairing planes in the field, and offered them to our Government. One day 5 Russians walked into his shops outside of Cleveland.

"How soon can you equip five repair plants for us?" a Russian asked.

Bath said the machines needed more research and testing before he could guarantee them or the safety of the planes. The Russian replied, "That's all right. We have plenty of pilots. Let's get on with it."

Recalling this experience, he says, "A spirit of desperate earnestness motivated those people. It startled me then, and it scares me now. Let's get ahead with our job of building a strong defense."

This is why he was in Washington a few days ago.

Curtailment of Oil Imports

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter directed to President Eisenhower by the New England Export Club, Inc., Boston, Mass.:

NEW ENGLAND EXPORT CLUB, INC.,
GOVERNMENT LIAISON COMMITTEE,
Pawtucket, R. I., August 21, 1957.

Re curtailment of oil imports.

President DWIGHT D. EISENHOWER,
Washington, D. C.

DEAR MR. PRESIDENT: The New England Export Club is disturbed over your recent action in asking a voluntary cut in imports of oil to the east coast by 20 percent from the current rate.

First, this restriction will have an immediate and direct effect upon the exports of oil from Venezuela, which is strongly allied with us in her economy and international politics.

Second, this quota on oil imports is contrary to your frequently announced program of trade liberalization.

Third, with reference to the much abused argument of national defense, there is much to be said on the other side; namely, that the using up of our own oil reserves should be reduced rather than expanded.

Fourth, this further example of yielding to protectionist pressures in this country

will contribute to the weakening of our effectiveness in persuading other countries to reduce their protections against our products.

We urge you, Mr. President, to review this matter most carefully in order that you may determine that it is wise to remove these recently announced restrictions on the importation of oil.

Respectfully yours,

IRVING JAY FAIN,
Chairman.

Three Hundred and Twenty-Nine Billion Dollar Purchasing Power Lost

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an editorial from the Omaha, Nebr., World-Herald.

With this creeping inflation all about us, I feel it is time to make a considered study of what has happened to us and what may happen in the years ahead.

Nearly every day I drive past the Archives of the United States of America. To the left of a doorway I read these words, "What is past is prologue." To the right are the words, "Study the past." The thoughts are crystal clear.

I would suggest that each Member of the Congress read the World-Herald editorial which brings into ever sharper focus what has happened and what is happening to our money. Study of the past may well bring us a more clarified vision of the future, to enable us to steer the ship of state through safer passages.

The editorial follows:

[From the Omaha World-Herald of August 21, 1957]

MEASURE OF INFLATION

Everybody knows that inflation has a sharp bite and that no one can escape it, but economists have had some trouble in expressing the actual cost in dollars and cents.

The purchasing power of the dollar has dropped to little more than half of what it was a generation ago. But how to express it in terms people can understand? The Economists' National Committee on Economic Policy believes it has found a way.

In a recent study the committee noted that the money lost in bank deposits from 1921 through 1933 totaled less than $2 billion. The politicians made a great fuss about that loss, which did indeed hit people hard. Out of it grew the Federal Deposit Insurance Corporation and other measures to protect people from the failure of financial institutions.

But this was a trivial item compared with the losses the people have suffered from inflation and the declining purchasing power of the dollar since 1939. The Economists' National Committee totaled up the following items:

1. Average holdings of United States savings bonds. They declined more than $42 billion.

2. Time deposits in banks. These have lost more than $50 billion in purchasing power.

3. Savings and loan associations capital. Purchasing power here has dropped almost $14 billion.

4. Life insurance in force. Since 1940 purchasing power has dropped more than $203 billion.

5. Annuities in force, income of which is important to people in retirement. Purchasing power has shrunk more than $1 billion.

6. Social-security trust and unemployment funds. Purchasing power has declined almost $18 billion in 18 years.

These six categories represent most but not all of the savings of the American people. And in these six categories alone the drop in purchasing power amounts to more than $329 billion.

This is about 97 times the bank deposit loss in the depression and the years preceding. But it is a loss against which there can be no insurance, no remedy, so long as inflation continues. It is purchasing power down the drain, purchasing power stolen from the people's savings. Here is the real measure of inflation and by comparison it makes the bank losses of the depression seem almost insignificant.

Interstate Traffic in Firearms and Ammunition

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. COAD. Mr. Speaker, in the May 3 issue of the Federal Register, there appeared a notice of a proposed revision by the Internal Revenue Service concerning interstate traffic in firearms and ammunition. Normally, a 30-day period is granted for the submission of data, views, or arguments pertaining to the subject before the regulations are adopted. However, in this case the deluge of data, views, and arguments from many of the 14 million citizens who own hunting licenses, from the farmers and ranchers, from the sportsmen, and from the firearms and ammunition dealers was so great that it actually swamped the office of the Director of Alcohol and Tobacco Tax Division. Adoption of the regulations was postponed, and the date of August 27 was fixed to hold a public hearing on the matter.

Mr. Speaker, the ire of the hunter, farmer, rancher, dealer, and sportsman was aroused, and all of the letters did not go to the Director. The following are three typical letters which I have received from my friends in Iowa who are very concerned, as I am, over the question.

BOONE, IOWA, *August 14, 1957.*

Hon. MERWIN COAD,
Member of Congress,
Old House Office Building,
Washington, D. C.

DEAR SIR: I wish to be represented in opposition to the proposed revisions in the Federal firearms regulations.

"177.50. Identification of firearms."

This I am not totally opposed to; I do believe manufacturer's name and serial number should appear for reasons of identification.

But to put marks on all existing guns would very much lessen their value to collectors and be of no real value.

"177.51. Firearms records."

The proposed permanent records is pretty much useless with the usual trading of guns this would be difficult and would place a burden on dealers the very ones who make these items available for sportsmen and citizens to inspect and purchase, why put more burden on them, people are enough.

"177.52. Ammunition records."

This don't sound too good for if anything would result in dealers desiring not to handle ammunition this is it.

I fear this would discourage many dealers from handling ammunition rather than keep such monotonous and completely useless records.

It could result in making ammunition very difficult to purchase. Let's hope this isn't what was in mind.

"177.54. Over the counter sales to individuals."

This is covered fully enough in original form (interstate commerce in firearms and ammunition).

Each State has this covered fully enough by its own legislation. I believe this is sufficient, let it stay this way.

"177.55. Authority to examine records, etc."

I don't like the sound of this at all. It has a ring of similar action that has taken place in one form or another in other countries in the past and failed so miserably.

In a country where we speak of a government of the people, for the people, by the people, this sounds somewhat dictatorial—the idea of just walking in and examining books, papers, records.

I believe, as in the past, records of dealers could be available for inspection. I believe dealers should be requested to present such information when necessary but not in the manner in which this proposal sounds to me.

Wishing your complete support.

Thank you.

DAVID A. JONES.

O'BRIEN, SCHACHT, & COLLINS,
Fort Dodge, Iowa, August 15, 1957.

Representative MERWIN COAD,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE COAD: On May 3, 1957, the United States Treasury Department instituted a series of regulations which foretell a very black day for millions of citizens of America. The regulations to which I refer are found in the Federal Register of May 3, 1957, volume 22, No. 86, page 3153.

The regulations very definitely are a handicap to honest, law-abiding citizens and businessmen. They do not by any stretch of the imagination help catch criminals or serve as an anticrime measure.

In this series of regulations the Treasury Department has taken on itself functions of the Congress of the United States. They have taken over the lawmaking function of the Senate and House by their regulations. It is regulations of this type which lead to bureaucratic control of the country in place of the control of the country being in the hands of the citizens through their elected representatives in Congress.

The new law could eventually lead to more stringent regulations controlling firearms to the point where American citizens will lose their right to possess firearms. Ultimately this could lead to the situation which exists in many foreign countries, such as England, where similar gun laws have completely stopped legitimate traffic in firearms with-

but curbing crime or serving any useful purpose, but only serves to leave a defenseless citizenry.

I would greatly appreciate any assistance which you in your official capacity could give the 20 million sportsmen in this country of yours the consideration which they deserve and which is guaranteed to them in the Constitution and Bill of Rights.

Sincerely yours,

NORMAN A. SCHACHT, M. D.

HUMBOLDT, IOWA, *July 3, 1957.*

Hon. MERWIN COAD,
Washington, D. C.

DEAR MR. COAD: I urge you to please pick up a copy of the Federal Register of May 3, 1957, volume 22, No. 86, which contains a proposed set of Federal firearms regulations. These regulations concern a revision of the Federal Firearms Act passed in 1938 which controls interstate and foreign commerce in all firearms and handgun ammunition.

A part of these regulations now being considered would so cripple the population of the United States in time of war that the enemy would be able to locate every gun in the country simply by seizing a few records. These regulations actually propose that a detailed record of each gun sold be kept. This would mean the abolition of each person's right to protect himself.

Do something.

DICK LANE
(An unhappy citizen).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Both Houses cleared AEC and supplemental appropriations bills for President.

Senate considered bill on statements and reports of witnesses, reaching agreement to limit debate thereon, and passed numerous sundry bills.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 14340–14361

Bills Introduced: 11 bills and 2 resolutions were introduced, as follows: S. 2841–2851; and S. Con. Res. 49–50.

Pages 14341–14342

Bills Reported: Reports were made as follows:

Report of Select Committee on Small Business entitled "Government Procurement—1957" (S. Rept. 1111); (DAILY DIGEST of August 22, p. D815, inadvertently showed H. Con. Res. 215 as bearing S. Rept. 1111, whereas it actually was reported without written report);

H. R. 3028, providing relief for certain female members of the Air Force, with amendment (S. Rept. 1112);

S. 41, authorizing conveyance of certain lands in Tarrant and Wise Counties to Texas, with amendments (S. Rept. 1113);

H. R. 4144, to provide that the commanding general of the militia of D. C. shall hold rank of major general (S. Rept. 1114);

H. R. 896, to provide for the performance of heraldic services for the U. S. by the Quartermaster General (S. Rept. 1115); and

H. R. 6322, to delay dates for submission of plan for future control of property of Menominee Tribe, with amendment (S. Rept. 1116). Page 14341

Bills Referred: Numerous House-passed bills and House-passed resolutions were referred to appropriate committees. Pages 14339–14340, 14369

Bill Placed on Calendar: H. R. 8576, a private bill, was ordered placed on calendar. Page 14369

Indian Hospitals: Senate adopted conference report on H. R. 9023, relating to Indian hospitalization payments to Bernalillo County, N. Mex. Page 14355

Appropriation Bills Cleared for President: The following two appropriation bills were cleared for the President:

Supplemental: H. R. 9131, fiscal 1958 supplemental appropriations (by adoption of conference report and concurrence of Senate in House amendments to Senate amendments Nos. 6 (construction of an additional airport for D. C.), and 54 (providing additional funds for civil functions, Department of Army); and

Atomic Energy Commission: H. R. 9379, fiscal 1958 appropriations for the Atomic Energy Commission (by adoption of conference report). Prior to this action, Senate had passed the bill with committee amendments.

Pages 14362, 14366–14368, 14375–14379

Bills Cleared for President: Two other bills were cleared for White House in the manner indicated:

Mineral land: S. 268, authorizing return by Army to owners of certain mineral interests in land acquired for flood-control purposes (concurrence in House amendments thereto); and

Air carrier loans: S. 2229, to provide for Government guaranty of private loans to certain air carriers for purchase of aircraft and equipment (by adoption of conference report). Pages 14361, 14385–14386

Sundry Bills Passed: Senate took up and passed as indicated 20 sundry bills, as follows:

Without amendment and cleared for President:

Whitney Dam: H. R. 2580, to increase storage capacity of Whitney Dam and Reservoir;

School assistance: H. R. 8679, to provide a 1-year extension of programs of Federal assistance to schools in areas affected by Federal activities;

Virgin Islands: H. R. 8126, to amend section 16 (c) of the Revised Organic Act of the Virgin Islands;

Alaska: H. R. 7864, relating to the establishment of public recreational facilities in Alaska;

Appendix

Address Intended To Have Been Delivered by Hon. Edward Martin of Pennsylvania at Civil Liberties Meeting of the Grand Lodge Convention

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. MARTIN of Pennsylvania. Mr. President, I had hoped to speak at the civil liberties meeting of the grand lodge convention, Improved Benevolent and Protective Order of Elks, in South Philadelphia, this afternoon, but work here in the Senate prevented.

The man in charge of this meeting is a very outstanding Pennsylvanian, the Honorable Hobson R. Reynolds, whose patriotism and leadership have been recognized over the years.

I ask unanimous consent that my proposed address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN OF PENNSYLVANIA, PREPARED FOR DELIVERY AT THE CIVIL LIBERTIES MEETING OF THE GRAND LODGE CONVENTION, IMPROVED BENEVOLENT AND PROTECTIVE ORDER OF ELKS OF THE WORLD, IN THE SOUTH PHILADELPHIA HIGH SCHOOL, MONDAY AFTERNOON, AUGUST 26, 1957

I am highly honored by your invitation to address this important convention.

Your organization has grown great by loyal adherence to American ideals. Throughout its history the Improved Order of Elks has been a powerful influence in the moral and spiritual advancement of our Nation. Belief in Almighty God and loyalty to the flag are the fundamental principles of its doctrine.

You have attained a high place of honor and prestige because you practice and preach brotherhood, good will, tolerance, and helpfulness to the less fortunate. You serve America by your example of good citizenship, civic responsibility, and obedience to the laws of God and man.

I am happy to bid you welcome to this great and historic city of Philadelphia, the center of patriotic inspiration for every American. Here the Liberty Bell is enshrined in honored glory, the sacred symbol of liberty and independence.

To those of you who have come here from distant places, I would humbly offer a suggestion. Be sure to visit Independence Hall. Stand before the Liberty Bell and read its exalted message from the Old Testament:

"Proclaim liberty throughout the land, unto all the inhabitants thereof."

I promise you it will be a most rewarding experience. It will renew and strengthen your faith in the true spirit of America.

Here is the birthplace of the United States of America, where the Founding Fathers pledged "their lives, their fortunes, and their sacred honor" in adopting the Declaration of Independence. In this greatest document of freedom ever written they gave the world a new concept of human worth and dignity, based on the divine truths of the Holy Bible.

The courageous patriots who built the foundation of American freedom believed that each human being is created in the image and likeness of God. This belief was so eloquently expressed when they proclaimed:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

Here, in the city of Philadelphia, the Constitution was adopted to safeguard the citizen in his freedom and to protect this God-given rights against tyranny and oppression by government.

The framers of the Constitution were the wisest men of their day.

They wanted a government operated for the moral, spiritual, and material advancement of all the people, not for the special benefit of any class or section. That means a government of the law and not of men. The American Constitution was planned to extend equal protection to every citizen, rich or poor, great or humble. That protection is one of the bulwarks of our national strength. It is not dependent upon the opinion of any individual or group, no matter how powerful.

Under that plan of government, in less than 200 years of freedom, the American people have transformed a savage wilderness into the greatest Nation the world has ever known.

Under that plan of government the Negro, in spite of difficulties and handicaps, has achieved greater progress in a shorter span of years than any people in all world history.

Your people have succeeded as educators, lawyers, physicians, and clergymen. You have achieved greatness in science, art, and music. You have won a place of increasing importance in business, insurance, and banking. You are represented by outstanding figures in diplomacy and government. As craftsmen and industrial workers you have contributed to the productive strength of our country in peace and war.

The Negroes of America have proven their loyalty and patriotism in every war in which our country has been engaged. From the first shots fired in the Revolution to the conflict in Korea they have given their lives to preserve the ideals of freedom. The loyalty of the Negro has never been questioned.

The great names of Negro achievement are known to all and are honored by every true American—Booker T. Washington, in education, George W. Carver, in science, Ralph J. Bunche in diplomacy and law, to mention a few.

But equal in importance, if less known to fame, are thousands of modest, hard-working, self-respecting Negro men and women who are serving their fellow men with outstanding ability and the highest integrity in many fields.

In every city and town, in every community, their example is an inspiration to their fellow citizens, regardless of color, creed or national origin.

It would serve no useful purpose to discuss at length the details of the legislative battle that has been waged in the Senate on the civil-rights issue.

I agree with the statement of President Eisenhower when he said:

"Rarely in our entire legislative history have so many extraneous issues been introduced into the debate in order to confuse both legislators and the public."

However, the basic principles stand out clear through the fog of confusion which some tried to create. These principles are the foundation of the American way of life, which cannot be fully realized until the blessings of America are open to every citizen who abides by her rules. I have repeatedly asserted my faith in Americanism which, in my opinion, is the right of everyone to enjoy the benefits and opportunities of this great country as long as he obeys its laws. I have always voted in accordance with that firm conviction and shall continue to do so.

The broad general purposes of civil-rights legislation should be:

1. To wipe out the political inequalities that exist because of racial differences.

2. To establish beyond all doubt that we have only one class of citizenship here in the United States.

3. That under our form of Government all citizens have equal rights and equal obligations.

4. That educational and economic opportunities should be shared equally, with no distinction as to color, creed, or national origin.

5. That no force, in or out of Government, can deprive any citizen of those rights which we hold to be of divine origin.

6. That the right to participate in government by the free exercise of the ballot is an inherent right of every law-abiding citizen because here in the United States we, the people, are the Government.

That seems to me to cover the legal aspects of the issue but the moral side embraces many more considerations.

You cannot legislate brotherhood, righteousness, tolerance, and good will into the hearts of men.

Those qualities must be created by a deeper understanding of man's relationship to God. They must be strengthened by adherence to the principles of religion.

Brotherhood springs from the heart. It is a quality that enobles the spirit. It does not thrive under compulsion but flourishes where freemen meet on common ground, equal in prestige and equal in dignity, and stand together for the common good.

The fundamental truths of human progress are everlasting and unchanging. They apply equally to all races of mankind. They are firmly established on the Golden Rule, the Sermon on the Mount, and the teachings of the Holy Bible.

The United States has been called by destiny to leadership for peace, justice, and freedom in the world.

To serve that noble cause we must set before the other nations an example of decency and righteousness.

To go forward in leadership we must first protect the rights and liberties of our own citizens.

Let us hope and pray that our land may be cleansed of bitterness, hate, and prejudice.

Then, we can stand together in fellowship and understanding, respecting the rights of each other, and reaching upward for the finer things of life that bring peace, harmony, and friendship.

Address by Gov. G. Mennen Williams to the Order of Ahepa Convention

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. McNAMARA. Mr. President, on August 21 the distinguished Governor of Michigan, the Honorable G. Mennen Williams, addressed the 31st national convention of the Order of Ahepa in St. Louis, Mo.

In his speech, Governor Williams dealt particularly with the problem of Cyprus and American foreign policy.

I ask unanimous consent that excerpts from his address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY THE HONORABLE G. MENNEN WILLIAMS, GOVERNOR OF MICHIGAN, ORDER OF AHEPA, 31ST NATIONAL CONVENTION BANQUET, ST. LOUIS, MO., AUGUST 21, 1957

Tonight we dine with the Ahepa family.

Truly, I am sorry that my wife, Nancy, could not be here tonight. She would feel perfectly at home at this convention as an active member of the Ahepa family. She is, as many of you know, an enthusiastic member of the Daughters of Penelope. She pays her dues, too, like all the rest of us.

Yes, I am proud to be identified as an Ahepan. This great fraternal organization serves, among other purposes, as a reminder and even a monument, to that eternal debt which the world owes to the Greeks of antiquity. You are the proud namesakes of a great spiritual and cultural legacy—a legacy that has been bequeathed to all mankind; a legacy that is more than a legacy, by the way, as Ypsilanti proved in the last century, and Mussolini and Stalin found out in this.

Today the world is locked in a great struggle—our concept of freedom versus that of totalitarianism. This is not really a new concept. It is but a modern phase of the same struggle which confronted ancient Greece. In that day, the leaders and intellectuals of glorious Greece brought forth, after their struggle, the same basic concepts of freedom which we fight to uphold in the world today. The God-given right of all peoples to be free was first proclaimed by Plato when he declared that men must be free to seek the truth, and that truth would make men free.

This immortal principle and the love of freedom and country sustained Leonidas at Thermopylae, as it fortified George Washington at Valley Forge. It has strengthened and inspired patriots and freedom lovers in every land and every age, not least of all our own.

In addition to today's problem of maintaining freedom throughout the world, we also confront the simultaneous problem of maintaining peace in a world technically equipped to destroy itself through atomic war. The United Nations is still our best hope for peace and survival. All Americans may well pay tribute to Woodrow Wilson and Franklin Delano Roosevelt who were the architects of the League of Nations and of the United Nations. Yes, Woodrow Wilson conceived the League of Nations and Franklin Delano Roosevelt the United Nations; but how many people know that the basic idea of a world organization for peace was originally conceived by the ancient Greeks who founded an institution called the Amphytionic Council? This was the first effort in the long history of mankind to resolve the differences between nations through a world organization. Socrates dramatized the moral idea behind this concept when he said: "I am a citizen, not of Athens nor of Greece alone—but of the entire world."

Today the triumph of the eternal principles of truth, freedom, and peace, depends upon the extent to which each and every one of us takes an active part in the affairs of our Government. Here again the Greeks had a word for it. Pericles' advice to the citizens of Athens was this: "A man who takes no part in public business was called by some a quiet man, but by Athenians he is called useless."

And, fellow Ahepans, there is modern truth in this ancient saying of Pericles. Where public business is not accepted as everybody's business, the public interest suffers—and everybody gets the business.

Ahepans, who are in the tradition of Pericles, know that to be a good citizen it is necessary to be aware of public issues and to be always concerned about the public business.

There is the issue, in our foreign policy, of our attitude toward Cyprus, and its relationship to the principle of self-determination. We have often avowed that principle in the past. Woodrow Wilson enunciated it just 40 years ago. It has been echoed by many other spokesmen for the high ideals of America. Yet our Government has been less than forthright in supporting this principle in regard to Cyprus.

Of course, American policy toward Cyprus must take into consideration the defense and security interests of the free world—and Great Britain is one of the bastions of the free world. So is Turkey. We must maintain our close relations with our ally, Britain, and with Turkey, too. But Greece is also our great and true ally. And a basic principle is involved in the Cyprus issue. We must use our influence to advance the principle of self-determination as far as Cyprus is concerned. The people of Cyprus must have a voice in the determination of their status. And we must support them in this, as we must support the principles of free world security, too. The two can be reconciled, and the interests of Britain and Turkey should be supported, but not at the expense of the freeedom of the people of Cyprus.

A solution must be found, and with the least possible delay. Each day of needless delay worsens the situation and plays into the hands of the enemies of all free peoples—and provides grist for the Communist mill. This is why I was happy 2 years ago to accept your invitation to become a member of your Justice for Cyprus Committee.

While I am talking about our foreign policy, I would like to comment upon a recent statement by Secretary of State Dulles before a congressional committee—a statement which illuminates some of the errors which, in my judgment, have characterized America's foreign policy in recent years.

Secretary Dulles told the Appropriations Committee, when asked whether our foreign aid policy was correctly designed to win friends for the United States, that the foreign policy of the United States is not designed to win friends for America, but rather to serve America's immediate interests.

Naturally I was shocked to read this statement. It reflects a fundamental misunderstanding of both the long-range and the short-range goals of the United States. We need friends in the world today. We cannot have too many of them. Our security depends upon it. Victory for the cause of freedom depends upon it.

The unity of the free world is synonymous with the security of the free world. There is no American interest which is inconsistent with the goal of getting and keeping friends.

To conduct American foreign policy, Secretary Dulles should understand this fundamental truth. If he did, it would result in a clarification of our policy toward Cyprus, and toward many other of the difficult problems which face us in the world today. His lack of understanding of this basic principle has resulted in our losing friends everywhere and in the policy of brag and bluster which has led us so often to the brink of disaster in recent years—the disaster of free world disunity.

Just as we must recognize the principle of the equality of citizens in our own country, we must recognize the principle of the equality of free peoples everywhere.

One of the historic climaxes in the development of American foreign policy—one of the great defeats suffered by the forces of totalitarianism—occurred just 10 years ago when President Harry S. Truman proclaimed the Truman doctrine and saved Greece and Turkey for the free world. When he proclaimed that the United States considered the security of Greece and of Turkey to be essential to American security—and implemented that proclamation with action, he stopped the Communist juggernaut dead in its tracks as it was sweeping across southern and eastern Europe. That was American foreign policy at its finest. That development in our foreign policy, plus the Marshall plan, saved Europe from communism and saved America from isolation and siege.

This is the kind of foreign policy which recognizes principle and friendship, which is true to the best traditions of America. I hope our policy will turn more in this direction in the days ahead—the direction of peace, security, justice, and freedom.

John Shaughnessy's Campaign To Mark Exports "Made in the United States of America"

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the September 1, 1956, issue of the Tablet. The editorial which I ask to have printed in the RECORD comments on the efforts being made by John J. Shaughnessy, of Brooklyn, N. Y., to have our exports marked "Made in the United States of America."

Mr. Shaughnessy is a former civil-service employee of the Army Chemical Corps who is seriously fearful that his separation from Government employment rolls is due to his one-man campaign to implement the "Made in the United States of America" resolution.

THE DISCREDITED ARMY REPLY

The Catholic War Veterans, at its recent national convention in Manchester, N. H., became the latest in a long list of patriotic organizations, individuals and publications to support John J. Shaughnessy, the Brooklynite, whose campaign to have our exports marked "Made in the United States of America" was unanimously adopted by both Houses of Congress and almost as unanimously ignored by the executive branch. The backing by this large and respected organization points up the fact that, to the best of our knowledge, no one who has studied the case has supported the opposition stand by a small but powerful group in the Army.

Mr. Shaughnessy, a civil-service employee of the Army Chemical Corps, says that when he protested that the congressional resolution was being sabotaged by inaction, he was told that his activities were embarrassing to some unnamed higher-up and that he would have to shut up or seek employment elsewhere. He refused and has been seeking employment elsewhere since last September.

A number of patriots throughout the country have protested to the President, the Congress and the Army and received every type of reaction except positive action. Army officials requested an appointment to present its case here, which we granted, only to have them postpone and then cancel it. They put their defense in an impressive sounding form letter. On February 11, we printed Mr. Shaughnessy's point-by-point rebuttal, which seemed to indicate that they were either stupid or dishonest or both.

We then wrote to Hugh M. Milton, Assistant Secretary of the Army, and offered to print its side in the dispute. He referred the letter to Col. W. E. Maulsby, Jr., who replied "Inasmuch as you are already in possession of all the facts regarding Mr. Shaughnessy's case, there is nothing this office could add in the way of comment." He did not deny or correct a single word of Mr. Shaughnessy's charges. Nevertheless, the discredited form letter, on the stationery of the Secretary of the Army, is still being sent to inquirers.

The Army's officials maintain that (1) Mr. Shaughnessy has been offered another job, which he refused; (2) his position was 1 of 27 eliminated for economy reasons; (3) he has received and will continue to receive extraordinary and preferential consideration for available civil-service employment; and (4) he was not separated because of his "mark American" activities.

Here is Mr. Shaughnessy's rebuttal:

(1) Concerning his refusal to accept the other position: "The job offer was made nearly a month before I received my notice of separation; no indication of any kind whatsoever was made that my refusal would result in the termination of my other position; in fact, my immediate superior encouraged me not to make the change."

(2) Concerning the 27 positions allegedly eliminated: 9 were ungraded, that is, not civil-service classified positions, as many people were led to believe; 8 were paper positions, that is, unoccupied at the time they were eliminated; 5 employees were transferred or reassigned; that accounts for 22 of the 27. "Of the other 5, at least 4, to my knowledge, were separated," he says. "It is interesting to note that in a separate action at the same time, four other civilians were hired." The Army later announced that two of the positions were reinstated. It admitted that Mr. Shaughnessy's position was the only one in his branch that was eliminated. In addition, he asserts that 90 percent, if not all, of the other employees were interviewed before their jobs were eliminated. He, however, was fired without benefit of an interview.

(3) Concerning his receiving preferential consideration for available civil-service employment: when civil-service officials in New York attempted to find out if there were any jobs, for which he was qualified and to which he was entitled, being held by employees with less seniority, the Army refused to furnish the list. Mr. Shaughnessy adds that "items in the public press that the Army and other Government agenices are advertising for men in my job classification should be additional evidence of the doubletalk and chicanery to which I and citizens interested in my case have been subjected."

(4) Concerning his separation because of "mark American" activities: "My charge that I was told to stop my efforts or seek employment elsewhere was conveyed to the White House in a letter dated October 19, 1954; to then Secretary of the Army Robert T. Stevens in a letter dated November 11, 1954; and to Lt. Col. D. S. Purl of the Office of the Inspector General, Chemical Corps, in a conversation on or about December 13, 1954. "If any of these people thought I was lying, I could have been brought up on charges and dismissed. Indeed, they would have been obliged to take such action because of the effect of my charges on the morale of other employees and the reputation of the Army. But, as usual, they ignored my charges rather than face them."

If it comes down to a question of veracity between Mr. Shaughnessy and the Army officials, we mustn't overlook the Senate Interstate and Foreign Commerce Committee study which agreed that our exports are not being properly marked and told the Army its testimony was in direct contradiction of the facts. Both independent surveys of the subject also back Mr. Shaughnessy.

The three most unfortunate results of this dispute are: (1) The father of 11 children, who has been charged with nothing except patriotism, is unemployed; (2) the "mark American" program, with its tremendous potential for international good will, is falling short of its mark; (3) in the minds of many citizens, the Army as a whole because of a few people at top level who speak for the Army as a whole, is under the shadow of guilt. For the sake of the reputation of all concerned—including the American people and the Congress—we urge Army officials to clear up this miserably unfair case.

Treatment of Past Presidents

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful editorial which was published in the Staples World, of Staples, Minn.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAST PRESIDENTS

Dwight D. Eisenhower has little more than 2 years remaining as President of the United States. He will then step down from the biggest office in the world.

President Eisenhower will retire, and divide his remaining years among his Gettysburg farm, golf and family. His wish will be to have nothing to say regarding the future executive affairs of the United States. He will undoubtedly be firm in not wishing to step on the toes of his successor.

Ike will then step into oblivion, after acquiring all the knowledge and experience of 8 years as President of the United States.

This country now has two former Presidents retired. From time to time we read a short paragraph about them and their very private lives.

Both Herbert Hoover and Harry Truman served their country in critical periods.

It seems a terrible waste for both these men to be at the helm of the Nation, and then a few years later suddenly be so far removed from the Government that were they to revisit the White House unannounced—their faces already forgotten by the domestic staff—they would risk arrest.

This country sadly neglects its living Presidents. They should not be allowed to retreat into the history books while still alive. Soldiers may fade away, but once the outgoing President shakes hands with the incoming executive on the rostrum after the inauguration, this Government has allowed itself to fall into the bad habit of allowing him to become nonexistent.

Their years of experience in handling top secrets, international negotiations, foreign affairs, internal matters, problems of both war and peace should not be rewarded with nonentity. What was learned is too valuable to be treated lightly and dismissed along with the man, only to be learned again through sweat, trial and error.

The country and the world can profit from the wisdom, experience and judgment of the former executives of free America.

They have earned a rest, but let the Congress bestow upon them a leisurely lifetime position with perhaps a pension. Let the Government recognize them as a voice to be heard for as long as they live. Let their views be invited—requested.

An office of some kind should be created for this country's retired Presidents.—I. S.

The Night Before America

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. NEUBERGER. Mr. President, Congress will not be in session on Columbus Day, but I know of no more fitting way to pay tribute to the valiant admiral of the ocean sea, the man who discovered the wonders of the New World, than to include in the RECORD at this time a stirring poem by Norma Farber entitled "The Night Before America."

This poem originally appeared in the Christian Science Monitor on Columbus Day of last year—October 12, 1956. The distinguished poetess, who in private life is the wife of one of America's most noted physicians, Dr. Sidney Farber, has captured the drama and epic grandeur of the moment in 1492 when the three little caravels, the *Nina* and *Pinta* and *Santa Maria*, stood off the tropical shores of San Salvador.

I ask unanimous consent that Norma Farber's poem, The Night Before America, from the Christian Science Monitor of October 12, 1956, be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE NIGHT BEFORE AMERICA

All the night they heard birds passing,
navigating air southwestward,

flying wing routes into darkness,
over the slack and strain of rigging,
over the faint hearts, over the night fears,
over the Admiral Don Cristóbal
pledged to land, island or mainland,
four weeks out of sight of tierra,
thirty days out of Canaries
into the predicate of westward
Indies, westward into the Indies,
goal of the keel, clue to the voyage,
purpose of helm, the sail's finale,
all through the darkness, toda la noche
sound of flyways flapping arrival,
fledging closer to coastal country
tremulous with immient landing,
inkling trees and branchy shadow,
shade-to-be for sailors listening,
chins uplifted, ears as wide as
night with listening, hearing passing
birds: oyeron pasar los pájaros
all that mariner night of noises
mingling into avian passage
pinion-tacking over the caravels.

All the night, the whole night-roundness
global as earth, the rotund planet,
birds and ships where heard in passage,
birds by ships, and ships by fishes
marveling under cloven waters
where the *Pinta* spattered the fathom,
narrow the *Nina* startled the dolphin,
longer *Maria* with more of footage
freshened the seas with silver issue.
All that night they sailed the roundness,
heard that roundness birdlike passing
all the curving night above them,
while they sought awry an orient,
found false orient and trued it,
roaded error into finding,
found Cathay amid Antilles,
found a verity of roundness,
founded earth, its right conformance,
found their west and steered upon it,
sailed within its arcing wholeness,
heard it roundly and completely
swelling up their ears with passage:
listening men become enlarged with
truth, for they had held it total
filling them.

Landing is logical
after ocean, is the passage
come to moment-haven, anchor
lowered after weeks of water
leaning westward meaning eastward,
landing a navigator shoreward,
furrowing earthward through Atlantic
under night-clandestine plumage
pointing ships to candid harbor,
out of watches terse with passage
where all night they listened deeply
learning landing like an answer
waiting on their sea of question,
seizing lineage of America,
taking hemisphere, a moorage
early in the breaking morning.

What is shore if not a passage,
firm conveyance to the interior,
farther trek to more of coastline,
into other surf and travel,
new Pacific, nameless landfalls
still equivocal for mapping?
What is westward if the world is
all around, within, without us,
over us and turning under us,
beckoning ships and men in transit
as the birds that seethe the darkness
flash and beacon us with alary
brightness by their fringing passage
toward the dawn-watch of discovery?

How the flight of bird-fine music
floats its silken passage over us,
sweetens us with tone and tidings,
smartens us for terra firma
after journeys salt-encrusted,
wind-abraded, longing-weakened.
How the land is loosed from ocean:
Asia same and seeming counter,
Africa envisioned backwards,
paradoxes sighted proudly,
continents by morning kindled,
seas released beyond their boundaries,
further lands, and further fathoms,
upward, outward, reaching roundward
where cartographers go lightly
guessing contour and conclusion.

And we passengers in transience
from familiar to invention
in a latter-day connaissance,
like Columbian explorers
latitudinal as orbits
keeping orderly their courses:
we who pass the night of coursing,
rafted through the nightfall crossing,
realize our long intention
by the breaching light of morning.
And we mark our seas and spaces,
note our heralds, how in passage
they confirm the distant passage
closing in for our acquaintance,
bringing firmament beside us:
intimate and boldly slated
sequence of our nightsome vagrance
ending now in glim and portent
as of birds that once were passing
over men from Palos harbor,
as of land beyond all ocean
all that night before America,
all the night they heard birds passing.

—*Norma Farber.*

Lindbergh's Role in World War II

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article which was published in the Washington Post and Times Herald of August 25, 1957. The title of this article is "Lindbergh's War II Role Is Revealed."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LINDBERGH'S WAR II ROLE IS REVEALED

Charles A. Lindbergh shot down at least one Japanese plane, was nearly shot down himself in another flight in the Pacific, and was instrumental in increasing the combat range of P–38's in World War II.

Gen. George C. Kenney, United States Air Force, retired, head of the Allied Air Forces in the Pacific under Gen. Douglas MacArthur, revealed these facts, some previously reported, in a copyrighted International News Service story.

General Kenney said that in the summer of 1944, Lindbergh appeared in Australia without authorization. He had only authorization from the Navy to make observations in the South Pacific for some aviation companies seeking to determine the efficiency in combat of single- and two-engined fighter planes. Legal status was obtained from General MacArthur and Lindbergh was asked by General Kenney to teach P–38 pilots to obtain more range from their planes.

RANGE INCREASED

Lindbergh flew with the P–38 squadrons for 6 weeks. "He preached and practiced his technique of economical operation of engines," Kenney said. The range was increased from 400 miles to 600 miles, and there was talk of the possibility of increasing the range to 800 miles, Kenney said.

Lindbergh shot down an enemy plane in August 1944 over the island of Ceram. Kenney had told him that in a matter of self-defense, he could fire. Lindbergh put in no claim for credit and the downed plane was never listed officially. The plane had appeared in front of Lindbergh's while he was observing a raid on a Japanese oil depot on the island.

That same month, a Japanese plane got behind Lindbergh's over the island of Babelthuap. Other planes in the flight shot down the tailing plane and several others.

Kenney said he told Lindbergh he should return home. "I owed him a debt of real gratitude for increasing the combat range of our fighter planes. * * * It was going to pay heavy dividends for the rest of the war, and I appreciated what he had done. But, I was getting worried for fear he would be shot down. If that happened, it would hurt the Air Force and it would certainly bring down a lot of criticism on MacArthur and me for permitting him to go out on such missions."

PLEDGED TO SILENCE

Lindbergh agreed to silence on his part in the war and has never broken it, Kenney said. Kenney himself has answered questions about Lindbergh's wartime activities with the words: "There is no official record of Lindbergh ever having flown a combat mission in the Southwest Pacific area."

Kenney said he sees no reason now to deny that "so far as I am concerned, Charles Augustus Lindbergh was one of the unsung heroes of World War II."

"I know that he shot down one Japanese plane over Ceram. I know that he nearly got shot down during a flight to Palau just before I sent him home. As far as I know, those are the only combats he ever got into, although there may have been others that the grapevine did not communicate to me. I didn't ask too many questions about it during the war and I haven't since," said Kenney.

In February 1954, President Eisenhower commissioned Lindbergh a brigadier general in the Air Force Reserve. It served as recognition of his service to the Air Force and his country over a 27-year period.

Lt. Gen. Albert C. Wedemeyer, commander of the Air Force in China during World War II, last month stated Lindbergh had shot down a plane and also had dropped bombs from a fighter plane on an enemy gun installation in the Pacific.

The Outstanding Reputation of the State of Wisconsin—No Hidden Taxes Increase the Cost of Doing Business

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. WILEY. Mr. President, in recent months the Nation has noted with sadness a series of scandals involving public officials in various States of the Union.

HANDS IN THE PUBLIC POCKET

Without in any way criticizing the States as a whole, the facts are that there have been a serious State insurance scandal in Texas; a highway commission scandal in Indiana; a State

uditing scandal in Illinois, and a series of other indications elsewhere that umerous public officials have had their ands inside the public pocket for all hey could get.

This fact came to mind the other day hen I read a column by Mr. John Wyngaard, State capitol correspondent for number of leading Wisconsin newspapers. He devoted the column to a ondition in contrast to the one I have ust mentioned—the outstanding reputation of the Badger State for the complete integrity of its State and municipal perations.

Throughout the country, there is none o dispute that, fortunately, the State f Wisconsin has been about as unmarred by scandals in public office as irtually any other State of the Union.

We, of Wisconsin, have a tradition for ntegrity in public office which we prize.

Our newspapers are particularly alert n helping to serve as civic consciences. The slightest infraction by a public servant is liable to end up on the front pages f Wisconsin dailies. And the slightest infraction will result in immediate disciplinary action and/or removal.

O HIDDEN TAX OF CORRUPTION IN WISCONSIN

Let me say that we, of Wisconsin, do not boast vainly or arrogantly about this spotless reputation. We are, however, humbly proud of it. And we do cite it n extending a hand of welcome to industries outside our own borders.

We advise them that if they want to establish factories within the Badger State, they are not going to have to pay under the table for various kinds of State or local licenses or permits.

They are not going to have to pay off official inspectors. They are not going o have to add a 5 or 10 percent hidden tax to grease the palms of greedy officials.

The fact of the matter is that in many cities and States across the country, private business has been so plagued by the payoff problem that it ups its costs by 5 or 10 percent simply to provide leeway for all the public officials who will come, palms outstretched for a payoff.

This alarming situation has been described in a whole series of newspaper and magazine exposés in all corners of the country.

But there is no such hidden tax in the State of Wisconsin. There is no such tradition that you have to pay off to anyone.

NEEDED: INCORRUPTIBLE CIVIL SERVICE

We, of the Badger State, are determined to maintain this tradition. And we earnestly hope that States which do not have the tradition of an incorruptible civil service will exert their best efforts to establish it.

I send to the desk the text of Mr. Wyngaard's column of August 23, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HONESTY OF WISCONSIN'S GOVERNMENT AMAZES LESS FORTUNATE NEIGHBORS

(By John Wyngaard)

MADISON.—The sales agent who came to Madison to get the big contract that was advertised by a State agency said meaningfully to the department head: "What do I do?"

"You sharpen your pencil and figure the lowest bid posisble," quietly replied the Administrator. The sales agent looked incredulous for a moment, then picked up his hat and left. His bid has not been received thus far, but he is now pretty sure that it will be accepted or rejected purely on the basis of its competition with others, and without any gifts to public officials, threats of political pressure, or the other devices employed in the more cynical political jurisdictions of the land.

At a time when there appear to be almost daily revelations around the country about betrayals of trust and bribery and thievery in public and quasi-public affairs, it may be refreshing for the people of Wisconsin to be reminded again that their own State government is operated according to ethical standards that sometimes bring gasps of amazement from politicians and journalists of other States.

CONTRASTS

There are as many sensitive agencies in the Wisconsin capital—and indeed in local governments—as there are in comparable jurisdictions elsewhere. State regulatory agencies have powers that involve millions of dollars of profit or loss in private enterprise. The State highway department is now entrusted with spending what would have brought gasps from the taxpayers a generation ago. The investment commission, the parole board, the governor's office, the industrial commission are daily making decisions profoundly important to the persons and organizations affected.

In other States there are periodical explosions of scandal. One of this State's immediate neighbors is notorious in that respect. In other States the auditor is a combination detective and prosecutor, a famous man as a consequence. In Wisconsin he works in virtual anonymity, although J. J. Keliher is as persistent and thorough an auditor of the State's financial dealings as probably can be had.

A free-wheeling operator recently called at the State department of public welfare to announce that he intended to represent a prison inmate interested in a parole. It was plain that he was accustomed to liberties in his native habitat in a neighboring State.

But in the Wisconsin capital he was promptly given his comeuppance. He departed and hasn't returned.

ASSET

To some persons it has a trite sound when the governor or a legislative committee declares that this State's habits of cleanliness in governmental affairs is an asset, in recruiting new business enterprise for example.

But it is true, nevertheless. In Wisconsin there are no hidden taxes, whatever may be the comparative rank of taxes on the record.

It is idle to dispute about the reasons for that distinction. They relate to many factors. It is important to recognize the fact and to resolve that it will be sustained.

Nomination of Maxwell H. Gluck To Be Ambassador to Ceylon

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have just received from Miss Judy Norrell. Miss Norrell is in Madras, India, on a Government scholarship.

Miss Norrell was an outstanding student from my State, and I am sure she will represent our country in a creditable manner in India. She is the daughter of Representative and Mrs. NORRELL, of Monticello, Ark. I believe my colleagues will be interested in her comments.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MADRAS, INDIA, *August 21, 1597.*

DEAR SENATOR FULBRIGHT: I am writing to refer to you the enclosed clipping from the Madras Hindu newspaper concerning the appointment of Mr. Gluck. I'm sure that you have seen Mr. Lippmann's statement, but I thought you might be interested in knowing the coverage of the Gluck case in India, and more particularly in a paper like the Hindu.

I should like to congratulate you upon your stand on Mr. Gluck's appointment and assure you that this kind of appointment does very much injure our standing in this part of the world. I was questioned by many of the students as to how we could think of sending out a man to be our representative who so obviously lacked the background for the job. I would hope that the publicity surrounding the appointment of Mr. Gluck would point up the necessity for more careful consideration of our ambassadors, and that some good would come from this case.

For your information this case has been widely covered in all the Indian newspapers I have seen, and there has been a great deal of comment by the Indian press concerning the appointment of Mr. Gluck. I was very happy to see Mr. Lippmann's statement given the coverage it has been, because I think it will help our position to have represented some self-criticism.

I'm well settled now in Madras and am attending lectures in Indian philosophy at Madras University under Dr. T. M. P. Mahadevan. I'm living at the women's hostel of the Madras Christian College, and finding the entire experience a challenge. India in reality is far different from my impressions of it from home, and each day I'm learning more about the complexity of this culture and the so-called Indian mind. I am very impressed by the need here for more work so far as relating the aims of the United States to India. The Russian publicity here is amazing, and I'm afraid that we have much to learn concerning the use of Voice of America, etc.

I should like to thank you for your efforts on my behalf prior to my leaving Washington. I have found since my arrival that there was a great deal of confusion about the notification of Fulbright grantees to India, and that my case was by no means the most irregular. I'm very grateful, however, that you were able to inquire for me and that the notification came through when it did.

I shall be eager to talk with you upon my return home about my reactions to India and impressions of this year. I think this will be one of the most worthwhile years of my life, and I am, indeed, of the opinion that international study is one of the most important things for any real education.

I am reminded of the quote you used from H. G. Welles when you spoke some years back at Ohio Wesleyan University commenting that civilization is a race between catastrophe and education. That seems more true to me today than ever.

I hope that Congress is about to adjourn and that you will be able to enjoy a restful summer. My best regards to Mrs. Fulbright, and again my thanks for your efforts on my behalf.

Sincerely yours,

JUDY NORRELL.

Unit of Measurement for Grains

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Minnesota Farmer. The title of this article is "Bushel versus Hundredweight." This is an informative article, and therefore it will be of value to the readers of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSHEL VERSUS HUNDREDWEIGHT

The subject of bushel versus hundredweight as a unit of measurement for grains and other farm commodities has been discussed by farmers and debated by students of the grain trade for many years.

Within the past month the official United States Department of Agriculture answer to the question, without a definite conclusion, has come to our desk in the form of a marketing research bulletin. This bulletin contains 4,740 words, some of them very long technical words, but after studying the manuscript from beginning to end—the question, "should the trading unit be changed from the bushel to the hundredweight basis" remains unsolved.

The yearlong study was made and the report prepared by agricultural economists of the Marketing Research Division, Agricultural Marketing Service, United States Department of Agriculture. Information was gathered from 3 national farm organizations, 3 grain exchanges, 5 financial institutions, 400 elevator operators, 300 feed and flour mills, 100 brokers and jobbers, 100 commission men, 50 grain processors, 40 State departments of agriculture, and all affected agencies in the United States Department of Agriculture.

Findings of these economists should be of interest to every farmer in Minnesota since the subject deals with the measurement of commodities produced on farms.

In summary, the following is a concentration of the 4,740-word report:

Probable effects of a shift from the bushel to the hundredweight measure in the grain industry would be that advantages and disadvantages would vary in degree depending upon the group concerned. The advantages would be permanent. Disadvantages would be more numerous but not insurmountable.

Principal advantages were found to be:

1. Conversion of quantities of grain from bushels to pounds and vice versa, now necessary in many cases, would be largely eliminated, with a probable serving in time and work and the possibility of a reduction of errors in such computations;

2. Comparisons by farmers and traders of prices and relative feeding values of grains would be facilitated by keeping the different grains on an equal-weight basis rather than on the basis of bushels that vary widely in weight.

Principal disadvantages were:

1. The required adjustment in habits of thinking in the grain trade, from the bushel unit to the hundredweight;

2. Changes in legislation that would be necessary;

3. Changes in forms and office procedures;

4. Revisions of historical data;

5. Changes in trading practices.

There was general agreement among the groups interviewed in this study that the disadvantages of the change, although they involve some statistical work, would prevail only during the transitional period and generally would disappear after the period of adjustment to the hundredweight basis. The problem of adjusting the thinking of those in the grain trade to the new basis was regarded as the most important one; but that difficulty would be offset at least in several segments of the trade, by the simplicity of making comparisons on a uniform basis.

Although there was no general agreement on the best time of year for the change to take effect, most groups contacted suggested that, if the shift in trading unit were made, wintertime or January 1 would be the preferred time. It was generally agreed that the intention to make the shift should be announced at least 1 year before its effective date. Some groups indicated that considerably more than a year might be needed to make some of the necessary preparations for the shift, particularly for the revision of legislation.

In regard to views obtained from representatives of farm organizations, the only major disadvantage that would be expected to relate directly to farmers would be the changes in patterns of thought that would be necessary. Farmers' experiences generally are based on the bushel unit. The change would necessitate their adjustment to an unfamiliar basis of reckoning. For some time rice, grain sorghums, dry beans, dry peas, and many seed crops have been traded on a hundredweight basis, and in several Western States all grains are traded in hundredweights.

Views as reported by farm organizations are:

American Farm Bureau Federation: Adopted a resolution December 1955 that "we favor adoption of the hundredweight as a uniform standard of measurement for grain."

National Grange: Adopted this resolution November 1956: "As the standard of measurement in both purchases and sales, we favor the use of the hundredweight or ton measurement instead of the bushel for all grains, feed, and seeds, and instead of the bale of hay."

National Farmers Union: "The proposed shift would be expected to lessen the possibility of errors through elimination of the many conversions needed at present. It also would facilitate comparisons between the feeding values and the price of various grains. For example, farmers must now compare the feeding value of oats at, say, 70 cents a bushel, with corn at $1.30 a bushel; while on a hundredweight basis the comparison would be $2.19 for oats with a $2.30 for corn."

The secretary of the National Council of Farmer Cooperatives says: "At this time the National Council of Farmer Cooperatives recommends that a study be made in order that its members interested in the grain and feed trade may have before them the information necessary to give adequate consideration to the question."

There you have it—advantages and disadvantages if the trading unit should be changed from bushel to hundredweight. But the question still remains: Should the change be made?

Texas Rose Festival

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. YARBOROUGH. Mr. President, one of our Nation's most beautiful pageants is the Texas Rose Festival, held annually at Tyler, Tex. The setting for such festivities could not be more prudently chosen, for Tyler is the rose capital of the world and has long been known as the "rose garden of America." Each year, of the more than 30 million rose bushes sold throughout the Nation, over half of them come from the Tyler area. In 20 years, over 3 million visitors have flocked to the Texas Rose Festival at Tyler.

This year, during the period October 17, 18, 19, and 20, the 20th annual Texas Rose Festival will be held in Tyler.

Mr. President, I have a personal pride in this festival, for I was reared only a few miles from Tyler, and attended Tyler High School.

This spectacular display of flowers is something I wish each of my Senate colleagues could see, and I invite each and all of you, on behalf of the Texas Rose Festival Association, to visit this year's show.

In my opinion, the Tyler Rose Festival is the most beautiful exhibition of any type held in the great Southwest. I have been on three continents and I have never seen anything more beautiful than the rose fields of east Texas, in bloom, growing on white sand, and framed by green pine trees.

A small pamphlet has been prepared which will vouch for the splendor of the pageant and which provided information pertaining to this season's festival.

Mr. President, I ask unanimous consent that this material be printed in the Appendix of the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

THREE MILLION VISITORS IN 20 YEARS

HERE'S WHAT OTHERS SAY

Saturday Evening Post: "If you can imagine 15 million rose bushes flowering madly for 6 months, snow-white roses, rich cream roses, yellow, coral-pink, and deep, deep red roses, you can understand why Tyler, Tex., is the center of the world's most amazing rose garden."

Adm. Robert B. Carney, Chief, United States Naval Operations: "The Texas Rose Festival is one of our Nation's great floral pageants, well worth seeing."

The Wall Street Journal: "Around Tyler, where two-thirds of the Nation's field-grown rose bushes are produced growers are giving the rose, universal symbol of beauty, the glamor treatment in the form of attractive packaging, lavish promotions, and floral festivals."

The New York Times: "Of all the rose bushes planted outdoors every year—and this is not less than 30 million—two-thirds are grown in the vicinity of Tyler, Tex. In the past 12 months, there were only 15 days when the Tyler Municipal Rose Garden (22 acres with 20,000 plants in 300 varieties) was out of bloom."

Texas Industry magazine: "Tyler's Municipal Rose Garden is one of the Nation's largest. The picturesque section around the city is covered with thousands of acres of blooming roses—a $7-million-a-year crop."

Gen. James H. Doolittle, United States Army: "The Texas Rose Festival is a floral spectacle never to be forgotten."

John Sherman Cooper, Ambassador to India: "The friendliness of Tyler and the beauty of the Texas Rose Festival deserves a visit."

Since the festival was started in tribute to the giant rose-growing industry, upwards of 150,000 persons have been thrilled each

ar by the gala activities and gorgeous ses. It is the combined effort of more than 00 people working for 12 months to make ch festival better than the one before.

The festival was begun in 1933 as an aborate tribute to the rose-growing indus- y and, except for an interim of 4 war years, has become an annual event of growing portance.

Gorgeous floats, spectacular regal corona- ns, mammoth rose show displays, queen's lls and fiestas have given the Texas Rose stival a place among the Nation's big three rose celebrations, alongside those at Port- nd, Oreg., and Pasadena, Calif.

More than half of some 30 million rose- shes sold annually throughout the Nation ve their beginnings in the productive hite sandy loam within a 50-mile radius Tyler.

Visitors are also thrilled by the breath- king view of Tyler's Municipal Rose Gar- en, one of the Nation's finest, with more an 24,000 bushes in over 300 varieties.

The festival is a gorgeous spectacle that ce seen can never be forgotten.

FESTIVAL HIGHLIGHTS

Rose spectacular: A million gorgeous rose ooms are massed in a majestic multi-col- ed display which is open to all during the -day festival. Hundreds of varieties, gor- ous specimens, artistic niches.

Coronation: In a spectacular ceremony set gainst a background of Texas flowers, Her ajesty, Kay Howard, the Queen of the oses, will be crowned.

Rose parade: Two-mile-long procession of se-adorned floats bearing the rose queen d her court, a dreamland of feminine love- ness, a grand processional of bands, drill ams and celebrities, ending in a gorgeous ammoth display at Rose Stadium.

Fiesta night: An elaborate entertainment ith a nationally famous orchestra provid- g the musical backdrop. Rose Festival isitors will be treated to an open-aid show top-notch professionals in the amphi- heater at Rose Stadium.

Rose vesper service: The finest voices om the choirs of Tyler's churches joined a mighty chorus, and an inspiring speaker lected by the Tyler Ministerial Alliance at Tise Auditorium, College Campus.

Rose field tours: Scheduled sight-seeing aravans will give visitors a look at the vast cres of blooming roses that have made yler the Rose Garden of America.

Queen's tea: One of the social highlights f the festival will be held amidst the floral eauty of Rose Park where the queen and er family and the 1957 court will receive uests.

Queen's coronation ball: Presented by the rder of the Rose in honor of the queen nd her court with nationally famous or- hestra and entertainment.

Minnesota Firm Builds Balloons for Air Force Research

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. THYE. Mr. President, during the past week the press of the Nation has given considerable attention to the rec- ord balloon assent made by an Air Force officer, Maj. David Simons. Major Simons' 32-hour balloon flight which took him 19 miles above the earth, repre- sents another advance in the Air Force study of the upper atmosphere and its effects on man.

The balloon which carried Major Simons to his record balloon height and returned him safely to earth after 32 hours was designed and built by Winzen Research, of Bloomington, Minn. The success of this perilous research trip was largely due to the fine work which has been done by this Minnesota concern.

I ask unanimous consent to have printed in the Appendix of the RECORD an account of this historic flight, published in the Minneapolis Morning Tribune.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Morning Tribune, August 20, 1957]

IN AIR FORCE PROJECT, DOCTOR RIDES BALLOON 19 MILES ABOVE STATE

(By Victor Cohn)

A flying doctor—dangling from a balloon 100,000 feet over the upper Midwest—became the first man in the world, Monday, to go that high and stay more than a moment.

Moving along at 15 or 16 miles an hour at the dead-quiet edge of outer space, Air Force Maj. David G. Simons was "feeling wonderful."

As night fell, his balloon looked like a new star in the sky. It was seen shining in the west even from Minneapolis, though at 9 p. m., he was south of Fergus Falls, Minn., and 160 miles away.

"The sky is a dark purplish black, a color I have not seen before, and can't really describe," came the report by radio as the 6-foot doctor peered through the tiny glass portholes of his 8-foot enclosed capsule.

"The temperature inside here is 64 degrees and very comfortable. I can see Lake Michigan through the clouds."

Ground crew men of Winzen Research, Inc., Bloomington, reported "everything going smoothly," and Simons "operating at peak efficiency, busy as a bee." He seemed well on the way to his goal: hanging in the stratosphere some 24 hours.

The lonely doctor was launched at 9:25 a. m., yesterday by the Winzen crew just outside Crosby, Minn. The launchsite was the M. A. Hanna Portsmouth open-pit iron mine—a below-ground site to gain calm to protect the thin plastic balloon.

At that point he had already been in his little aluminum prison 10½ hours. He was put in it in Minneapolis, Sunday night, to begin breathing its artificial atmosphere and eliminate nitrogen from his bloodstream.

With overrapid altitude changes, nitrogen can cause bubbles in the bloodstream and the deadly bends.

Then he was carried by truck to Crosby.

Once up, first he moved southeast, rising at a swift 1,200 feet a minute. Then he started to move west as he rose higher. Quickly his 280-foot long, 200-foot wide balloon was just a silver dot.

About 11:25 a. m. he reached approximately 100,000 feet, more than 19 miles up. He was then just about over the southeast corner of Mille Lacs Lake.

This was 4,000 feet higher than the 96,000 feet that Capt. Joseph W. Kittinger reached June 2 in a test flight for this Air Force project. Kittinger stayed there an hour and 50 minutes.

Air Force Capt. Ivan Kincheloe reached 126,000 feet for a few moments in an X–2 rocket plane last September.

But Major Simons—34 and cool as an ice cube—had to stay up far longer to achieve his objective, which is collecting knowledge.

Project Man High is intended to gather facts about high-up man and the high-up atmosphere to pave the way for regular high-altitude aviation.

Simons is chief of the space biology branch of the aero-medical field laboratory, Alamogordo, N. Mex.

A plane, two helicopters, a radio van and other vehicles followed his course last night. He hoped to come down sometime today in the vicinity of Miles City, Mont.

The Air Force pointed out that substantiation of his record would have to await check of his instruments.

[From the Minneapolis Morning Tribune of August 21, 1957]

BALLOON LANDS IN SOUTH DAKOTA WITH NEW ALTITUDE RECORD

(By Victor Cohn)

FARGO, N. DAK.—After soaring more than 100,000 feet to a new altitude record for manned balloons, a dead-tired Maj. David G. Simons returned safely to earth Tuesday as living proof that man can survive conditions on the edge of space.

The 280-foot-long plastic balloon that lifted Simons at least 19 miles into the air, landed near Elm Lake on the North Dakota-South Dakota border about 30 miles due north of Aberdeen, S. Dak. It was aloft more than 32 hours.

The flight, which began at 9:22 a. m. Monday from a deep mine pit at Crosby, Minn., ended in an alfalfa field at 5:28 p. m. yesterday. An Air Force helicopter brought Simons here—too weary and spent by the 32-hour, almost sleepless flight to talk but a moment to reporters.

Col. John Stapp, Air Force chief of aeromedicine at the Alamogordo, N. Mex., research center and director of the record-breaking balloon flight, rode here with Simons.

"He's dead on his feet," Stapp said, "but he is in good physical condition except for a slight abrasion on his neck from his tight pressure suit."

Stapp said the flight answered some of the vital questions it was designed to probe—can man tolerate the airless reaches of the upper atmosphere?

"He was above 90,000 feet for 26 hours," Stapp said. "He proved the livability of a space cabin. Human performance in an environment equivalent to space is now known to be possible."

Stapp explained that instruments attached to Simons' body radioed information about his physical condition.

"He was above 99.6 percent of the earth's atmosphere for most of the trip,'" Stapp explained. "His heartbeat and respiration were normal all during the flight, except once, when the carbon dioxide level in the cabin got too high, but he corrected this quickly."

Upon reaching the Fargo Ariport, Simons washed and shaved, then phoned his wife, Libby, at Alamogordo. He said he had slept a little, in brief snatches, Monday night. He ate very little, although he had been sealed into the capsule since 11 p. m. Sunday for the purposes of acclimatization.

He was to be flown to Minneapolis last night to get the 36-hours sleep prescribed by Stapp.

The balloon had reached its record height within a few hours after takeoff. It had been thought it would descend near Billings, Mont., earlier yesterday, but unsettled weather conditions delayed the landing.

At about noon yesterday, Simons started dropping from the upper stratosphere. Around 3 p. m., a ground observer corps member at Ashley, N. Dak., spotted the glistening plastic balloon with binoculars during a routine sky watch.

Shortly thereafter, it became visible to the naked eye. Residents of North Dakota, South Dakota, and Minnesota within a 100-mile radius watched its descent.

At 5:02 p. m., Simons was heard on his radio, reporting rate of descent. He then asked in a tired, strained voice:

"I'm at 20,000. Otto, shall I drop ballast now, or just before landing?"

Otto Winzen, head of the Bloomington firm that made the balloon for the Air Force research project, told him to hold the ballast.

Winzen was with Stapp and other members of the ground party which had tracked the balloon's flight in two C47's, a helicopter, and a ground communications van.

At 3,200 feet, Simons said he was dropping ballast.

From the private plane in which I was riding, I could see the lead shot streaming from the gondola.

[From the Minneapolis Morning Tribune of August 22, 1957]

LUCK AND SKILL SAVE DOCTOR ON BALLOON TRIP

(By Victor Cohn)

A new Lone Eagle told his story here Wednesday night.

Rested and laughing after his 32-hour balloon flight to the stratosphere, Maj. David E. Simons told a modest, restrained story of ton, used that word.

But the striking fact, it became clear last night, was that with less skill—and less luck—the flight might have ended in death.

No one at a news conference at headquarters of Winzen Research, Inc., in Bloomington, used that word.

But the fact that for some time he was in real danger nonetheless emerged about this air force doctor who ballooned 100,000 feet up from northern Minnesota Monday morning.

His enemy—his and his thin plastic balloon's—was a thunderstorm that began Monday night and continued over much of the area near him during the day Tuesday.

"I experienced some concern," was what the slim 34-year-old himself said on this subject last night.

However, Otto C. Winzen, the Bloomington balloon firm's head, reported:

"We had a very critical and very dangerous weather situation. A very severe thunderstorm came up which was entirely unexpected.

"This caused him to come down to 70,000 feet at night, for the cloud layer meant that his balloon sank lower and lower. It's the reflected heat from the ground that maintains a gas-filled balloon at altitude during the night.

"Then—and no one had ever heard of such a situation—the effects, some of the turbulence of the thunderstorm reached him at 70,000 feet. No one had ever heard of a thunderstorm reaching higher than 40,000 feet—this was always considered 'the top of the weather.'

"So we learned something new and very important, which is the purpose of research. But this gave us very great concern for Dave's safety."

Winzen, who advised Simons by voice radio all during the flight, went on to tell how the storm, and concern, continued into the day.

"It was necessary to keep Dave up," he said, "rather than letting him start his descent about 9 a. m., as expected. And he couldn't start down till 2 in the afternoon.

"He needed to make westerly headway to get ahead of the very severe weather situation."

B. D. (Duke) Gildenberg—Air Force meteorologist whom Winzen called one of the best in the country—told how, on the ground in the traveling Winzen van, he tried to work out a descent plan that would put Simons "a safe" 50 miles away from the nearest "weather."

"We had to settle at 20 miles," he said. "And that period was the period of real strain."

Col. John P. Stapp finally called it "that perilous descent."

Supt. Thomas J. Williams and Crater Lake National Park

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. NEUBERGER. Mr. President, we of the State of Oregon are proud of our lone national park, for it is one of the great scenic wonders of the globe. This is the lake which lies within the extinct volcanic cone of Mount Mazama—Crater Lake National Park. The lake is 2,000 feet in depth.

One of my favorite writers about the American scene, William E. Bohn, has written for the New Leader of August 26, 1957, a gleaming tribute to the grandeur of Crater Lake and to Supt. Thomas J. Williams of the National Park Service, who exercises custody over the park, along with his associates. Mr. Bohn and his wife recently visited Crater Lake.

Crater Lake is located along the rim of the Cascade Range in southern Oregon. It may be reached via either Medford or Klamath Falls. It is one of the most incredibly blue lakes of the world, as Mr. Bohn emphasizes. Basaltic formations make evident its volcanic origins.

I believe that my colleagues will want to read of Oregon's No. 1 outdoor marvel—which also belongs to the entire United States, of course—and I ask unanimous consent that Mr. Bohn's article, entitled "The Lake on Top of a Volcano," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LAKE ON TOP OF A VOLCANO

(By William E. Bohn)

Last week I wrote that California's Yosemite Valley is unlike any other place on earth. I may sound fickle this week when I proclaim that Oregon's Crater Lake is surpassingly beautiful and completely unique. There may be some body of water like it in some far place of Asia or Africa, but if there is I have never heard of it. The most exceptional thing about this lake is not that—6 miles wide and 2,000 feet deep—it lies on the top of a mountain completely cut off from outside water except for rain and snow. Its main distinction is not even the fact that it lies in the crater of an extinct volcano and is completely surrounded by lava cliffs rising from 500 to 2,000 feet above the water level. Its real distinction is its breathtaking beauty.

As I sit in my room in the lodge of Crater Lake National Park, I look down upon a surface of heavenly blue which all of the ladies in solid phalanx assembled have tried in vain to describe. They have called it delphinium blue, Maxfield Parrish blue, purple blue, Mediterranean blue—and finally have acknowledged their defeat by describing it as Crater Lake blue. The water immediately below me has a color which is so intense that it seems to be impregnated with some deep, deep dye. Farther off, toward the opposite shore, it turns to a lighter, gayer, more sky-like hue. All viewers of this waterscape agree that they have never seen anything distantly resembling it. It gives the onlooker a sense of infinite elevation, perhaps because this vision is beyond reach. The gazing beholder cannot swim in this water, cannot even touch it.

The average visitor says almost automatically that the inexpressible color is produced by reflection of the sky. In a sense, and to a certain extent, this is true. The real fact is said to be that the rays of the sun are separated by refraction from the unusually pure water much as they would be by a prismatic glass. And the blue shade being singled out and sent up from the surface of the lake, gives the effect of a deep blue body of water.

The untechnical, rough-and-ready way of explaining how a fine lake could come into existence on the top of a mountain is to say that the mountain blew its top and then the rain and the snow filled the resulting cavity with water. What actually happened is so complex and interesting that Howell Williams, professor of geology at the University of California, has published a detailed book on it. What especially fascinates me is his account of the great, jagged rim which hems in the sheet of water. The rocks which compose it are of different sorts and have come to rest at various angles. Basing their calculations on the positions of these masses and on the glacial scratches on their surfaces, the scientists can determine the height and shape of the original peak.

My interest right now is centered in another man named Williams, Thomas J. Williams, the superintendent of this exceptionally interesting park. He came from a dirty little mining town in the East and found the West big and clean and hospitable. In the National Park Service, he has had a chance to help preserve and expand the features of the country he loves. "The job has a romantic side," he said to me. "We are trying to make people better by giving them a feeling for a mountain or a range of mountains. We have the opportunity to live in an ideal environment and to preserve and improve it. I really feel ashamed to take my pay."

The first purpose of the Park Service, Superintendent Williams explained, is to preserve the beauties of these regions which have been set aside by Congress. The second is to provide enjoyment and recreation for millions of people who have paid for these areas and who own them. The third is to increase their intelligence painlessly while they are having fun. "These three purposes," Mr. Williams drawled as we sat before the great log fire in the camp lodge, "are not separate. Through education and appreciation you secure wise usage which results in preservation. You can't get anywhere by playing the policeman. Put over the idea that the parks belong to the people and they will help to defend them."

Crater Lake impressed me as being an especially lovely place to spend a vacation. Wild flowers cover the meadows and play an especially prominent part in the community life. On this mountaintop, the evening air is too cool for the campfire talks which are a leading feature of activity in other national parks. Instead, there are talks in the Sinnott Memorial, a fine stone structure halfway down the great rim. This place allows the speaker to point out the rocky features of his environment as he goes along. Then, every evening in the lobby of the lodge there is an informal talk on some feature of the region. The cheerful tone of the occasion is set by short and amusing programs given by young college people, who do a good deal of the work about the camp. There is about the whole project a feeling of hearty enjoyment as of people come together for a good time in their own home.

Herbert Hoover: Triumph of Integrity

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the August 3 issue of Human Events:

HERBERT HOOVER: TRIUMPH OF INTEGRITY
(By Eugene Lyons)

Nearly a decade ago I wrote a short biography of Herbert Hover which I called Our Unknown ex-President. I was alluding, of course, to what seemed to me the tragic failure of the American people to comprehend the human being behind the masks.

The falsest and cruelest of these masks had been deliberately fabricated by partisan malice. For some 15 years hordes of propagandists labored zealously on the myth of a monster who caused a depression and then did nothing to alleviate its horrors. In utter contempt of fact and logic, they brainwashed the country—and especially the new generation that had little personal memory of Hoover's epic humanitarian achievements before he came to the White House—into accepting him as symbol of the very things he most abhorred: fascism, reaction, depression, complacency in the face of human suffering.

Another mask had been imposed by his own introverted nature, by his essential shyness and distaste for personal ballyhoo. Uniquely among political leaders, Hoover was compelled by his innermost character to build walls between his private and his public personalities. He succeeded in concealing, as I wrote at the time, the warm, whimsical and tender Hoover known to his intimates, the very human and deeply humane Quaker behind the solemn facade.

Unhappily, this native mask greatly facilitated the job of ungallant and dirty-minded little men in big places who were fashioning the grotesque myth. For one thing, had the people had a better understanding of the real man they would not so readily have surrendered their commonsense by accepting the propaganda hoax. For another, Hoover, was inhibited by his sensibilities from putting up a robust and effective self defense. He would not, indeed could not, descend to the level of demagogic mudgunning, and so left a clear field for mischievous vilification.

But even before my book came off the press its title began to lose some of its validity. Around 1947 it became evident that Hoover's long ordeal by abuse was drawing to an end. With the passing of the New Deal era more and more Americans were becoming ashamed of its self-righteous immorality and its zeal for smearing critics. And the public rehabilitation of our 31st President, once started, proceeded with dramatic swiftness.

The speed and completeness of the collapse of the ugly myth is a remarkable episode in our national history. Republican politicians who had long sought to disown Hoover were suddenly treating him as one of the party's important assets. Even the so-called liberal press turned deferential. Those who continued to distrust Hoover's views were awed by his moral stature. In the renewed esteem for the man, in the revived pride in his greatness, there was a strong element of plain remorse. The country recognized that in persecuting Hoover it had dishonored itself, and to this day the injustice visited upon him weighs on the national conscience.

It was naturally assumed, in the years of his eclipse, that Hoover was embittered. The assumption was false. He was saddened and profoundly hurt, but calm and tolerant. Upon the mudgunners he looked not in hatred but in pity. His humility is inborn. Quakerish, but too genuine to be alloyed with false modesty. In the midst of his ordeal he knew, with an engineer's knowledge of reality, that time inevitably would straighten out the record.

It was this that helped him to remain equable under the hail of insults. He stood where he had always stood, for it was not in him to make compromises. He did not catch up with the people—the people were streaming back to him shamefaced and penitent, after their hectic wanderings.

Fortunately for himself and his friends, the inevitable change came while he was still alive. Fortunately for the country, it came while his amazing abilities and energies were undiminished, so that he could carry out more great enterprises in benevolence and public service. The fact that popular admiration and affection for Hoover continue to grow attests, I think, the core of simple decency at the heart of America. His life adds up to a classic triumph of integrity.

The one thing that his partisans and detractors always agreed upon is that Hoover is no politician. The implication is not that he is deficient in sound political judgment, but that he lacks dexterity in selling himself and his policies to the crowd, in playing on mass emotion. There simply is not enough flexibility, not enough gift for cutting moral corners, in his makeup. Ideas to him are not externals to be adjusted to current fashions. The professionals in the political game could never feel at their ease with this stern amateur and his moral imperatives.

The cynical Charles Michelson, who had made Hoover-baiting his life's work for a fee, used to write abou the Hoover organization. He wasn't referring to a conventional political machine fueled by patronage and self-interests. Hoover could not have built such a machine if he had tried. Michelson was referring to groups of Hoover's dedicated friends, none of them politicians—"the small but efficient army * * * that still calls him Chief and is ready to mobilize at a word." Actually they mobilized without a word. Having come to know him intimately as his associates in public service, they remained forever after reserve officers in that extraordinary army disciplined only by love of one man and faith in his integrity.

Normally great men are less heoric to their intimates than to the public at large. Hoover is the supreme exception. Ten years ago I wrote that "Hoover has a multitude of enemies but no ex-friends." Nothing has happened since then to change this. Not one of the men and women who worked closely with him, through all the decades of his immense and varied activities, has ever turned against him. Their devotion to him comes close to adoration and has in it, too, an element of protectiveness, as if he needed to be shielded against the pettiness and connivings of lesser men.

Today, at 83, Hoover's public personality is warmer, less austere than in the past; but it is still separate from the private Hoover. The original mask, the one imposed by his own nature, has not been wholly removed. Myriad episodes in his career and qualities in his character that point up his nobility remain the esoteric inside knowledge of those who call him chief. Future generations no doubt will take fuller and more accurate measure of the man.

Already, however, the country senses the wholeness, the genuineness of Herbert Hoover. It sees in him, as in a mirror, the best in its own character and history. He has been the instrument of America's most humane and disinterested impulses in relation to the rest of mankind—a personification of charity joined with efficiency that is somehow peculiarly American.

There is nothing spurious, nothing petty, in the Hoover story. He has not lived, like most of his contemporaries, with an eye on opinion polls and intellectual fashions. His philosophy of life has not been an improvisation of expediency or a rationalization of self-interest, but has been wholly integral with the man.

Herbert Hoover is a great monolithic figure. Rarely has such a capacious intelligence as his been combined with such a great heart and robust spirit. In honoring him on his 83d birthday, August 10, we his countrymen honor ourselves. For his career is deep rooted in the American soil and integral with our national heritage.

Firearms Regulations

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement to be presented on August 27, tomorrow, to the Alcohol and Tobacco Tax Unit of the Treasury Department, by Mr. George A. Carrico, of Chicago, Ill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PRESENTATION BY GEORGE A. CARRICO IN OPPOSITION TO NEW REGULATIONS PROPOSED BY THE ALCOHOL AND TOBACCO TAX UNIT OF THE INTERNAL REVENUE DEPARTMENT OF THE UNITED STATES TREASURY, AUGUST 27, 1957

As president of the National Muzzle Loading Rifle Association and the National Gun Alliance, it is my studied conclusion that I reflect the thinking and feelings of millions of Americans with respect to certain new regulations proposed by the Alcohol and Tobacco Tax Unit. These regulations, in part, are as follows:

"Paragraph 177.50, identification of firearms: Each licensed manufacturer and importer of a firearm shall identify it by stamping (impressing) or otherwise conspicuously placing or causing to be stamped, impressed, or placed thereon, in a manner not susceptible of being readily obliterated or altered, the name and location of the manufacturer or importer, and the serial number, caliber, and model of the firearm. * * *

"Paragraph 177.51, firearms records: Each licensed manufacturer or dealer shall maintain complete and adequate records reflecting the receipt (whether by manufacture, importation, acquisition from other licensees, or otherwise) and the disposition, at wholesale or retail, of all firearms (including firearms in an unassembled condition, but not including miscellaneous parts thereof) physically or constructively received or disposed of in the course of his business. * * *

"The records prescribed by this section shall be in permanent form, separate and distinct from records pertaining to other merchandise handled by the licensee, and shall be retained permanently on the business premises until discontinuance of business by the licensee. Where the business is discontinued and succeeded by a new li-

censee, the records will appropriately reflect such facts and will be delivered to the successor. Where discontinuance of the business is absolute, the records will appropriately reflect that fact and will be delivered to the Director for permanent retention. The records shall show and include:

"(a) A full and adequate description of each firearm, including (1) the manufacturer thereof; (2) the manufacturer's serial number stamped thereon; (3) the caliber or gage of the firearm; (4) the model and type of firearm; and

"(b) The name and address of each person from whom each firearm (if not the manufacturer's own product) was received together with the date of acquisition; and

"(c) The disposition made of each firearm including the name and address of the person to whom sold and the date of disposition.

"Paragraphs 177.52, ammunition records: Each manufacturer and dealer shall maintain, on the licensed premises, complete and adequate records reflecting the production or receipt and the disposition at wholesale or retail of all pistol or revolver ammunition. The ammunition shall be described as to manufacturer, type, caliber and quantity, and the identity of the persons from whom received and to whom sold must be shown.

"Paragraph 177.54, over the counter sales to individuals: Where disposition of firearms or ammunition is made by over the counter sale or distribution to individuals, the persons to whom the firearms or ammunition are sold, distributed, or delivered will be required to acknowledge receipt thereof in their own handwriting in the record prescribed by this subpart.

"Paragraph 177.55, authority to examine records, etc.: Any internal revenue officer designated by the Director shall have authority to examine the books, papers, and records kept by a licensee pursuant to the regulations in this part, and to examine his premises and stock, during regular business hours in the daytime. When such premises are open at night, such authorized officers may enter them while so open, in the performance of such authorized official duties."

First. The regulations are based on acts of the National Congress which in themselves are unconstitutional. In the hearings held in 1934 on the proposed National Firearms Act, the Attorney General of the United States admitted he was prohibited by constitutional safeguards from a direct approach on firearms control. He therefore proposed to use interstate commerce provisions, use of the mails avenues or the power of taxation. When confronted with a direct question by a member of the committee who asked how we escaped that provision in the Constitution, the Attorney General answered, "Oh, we do not attempt to escape it. We are dealing with another power; namely, the power of taxation and of regulation under the interstate commerce clause. You see, if we made a statute absolutely forbidding any human being to have a machinegun, you might say there is some constitutional question involved. But when you say, "We will tax the machinegun," and when you say that the absence of a license showing payment of the tax has been made indicates that a crime has been perpetrated, you are easily within the law. Here we have the Attorney General of the United States proposing the abrogation of constitutional safeguards by devious methods, means and routes that perhaps in themselves would be lawful until and unless they accomplished a purpose that in effect infringed or nullified constitutional rights. In one breath he admits that a law directly infringing on the "right of the people to keep and bear arms shall not be infringed" would be unconstitutional and in the next breath advocates using the taxing powers of the Government to deprive the people of this very same constitutional right. The taxing power was given the Federal Government for the sole purpose of raising money to defray the expense of Government and was not intended to be used to deprive, restrict, or infringe the constitutional rights of the people. It naturally follows, then, that the taxing power terminates where the specific constitutional right of the citizen begins and cannot legally be used to infringe or curtail the "right of the people to keep and bear arms."

Second. Each of the proposed new regulations add additional useless burdens to the citizen. They would entail the permanent preservation of millions, yes even billions of records, requiring untold man-hours of preparation and an infinite amount of space for permanent storage. To adequately check such records would require an army of thousands of additional governmental employees for that purpose alone. A monumental task which would aid no one but yet would be an additional burden on the already overburdened citizen and taxpayer.

Third. Yet first in importance is the deleterious effect each of these proposed regulations would have on the protection of the American home and the proper and adequate civilian defense of the Nation itself. A vast majority of reputable, law abiding citizens would resent the requirement of registration of the purchase or ownership of arms and ammunition to the point of denying themselves the privilege of ownership under those conditions. This feeling stems from the fact that most citizens of this country have learned of the result of registration of arms in other countries. How an invader upon entering a community sought, first, to secure the records of registered firearms and ammunition and immediately sent troops to collect and destroy them. Those refusing or unable to turn over such registered weapons or ammunition were summarily executed. Just a few days ago our newspapers carried the story of the execution of a priest in Hungary by invading forces for the terrible crime of having hidden a few arms so they (the invader) could not confiscate and destroy them. Our own troops, in the last great war, followed the same pattern, going immediately to the records, then to the individuals known to possess guns and immediately confiscating and destroying them.

Long before our invasion of the continent of Europe our armies dumped thousands of tons of makeshift arms stamped out on machines, each with four cartridges, behind the lines for the use of the workers in the underground in their efforts for liberation.

We must not do anything that will even remotely aid an invader in the subjugation and enslavement of our own citizens and loved ones.

There is no question about the possibility of our own cities and towns being bombed at any time. Our military experts have even calculated the cost of human life in the bombing of a city like Chicago as reaching into the hundreds of thousands in the first hour. The same military experts tell us that even the bombing of our cities and towns is not sufficient to subjugate and enslave us, but that the bombing would necessarily be followed by paratroopers, dropped from the sky, carrying machineguns and grenade to force that which was left of a decimated, torn and bleeding populace into their slave labor camps or, as has been done to hundreds of thousands over the last few years, deportation into distant lands to end their days in chains, filth, degradation and dishonor.

Why cannot we, who are so anxious to help and protect others, take a lesson from a page of their book? Why should we not profit by the costly experiences of others who have drunk deep of the pain, misery, and agony that has been the lot of those who through their own stupidity or carelessness have awakened to find the hand of a ruthless and sadistic invader ripping and tearing at their very vitals. Look for a moment at the predicament of an England, shorn of weapons in the hands of her citizens by the stupid restrictions of the antigun fanatics and subversives, the iron fist of an invader smashing at her door. Hear again her pitiful plea: "Send a gun to defend a British home. British civilians, faced with the threat of invasion, desperately need arms for the defense of their homes." How short can our memories be? These appeals appeared all over our country during the last great war. To whom can we turn at the last moment with such a plea after our citizens have been disarmed? The answer could be but the echo of our wailing cry.

On the 12th of August last I was honored by being present at the home of a friend in a city near my home town of Chicago. The gathering was for the purpose of honoring a grand lady, born to the nobility of a nation now behind the iron curtain. Honors were not being paid because of the guest's membership in the nobility, but rather because of her activities in the underground, the aid she had given to more than a hundred of our airmen to escape after being shot down behind the enemy lines. She, too, had lost everything, along with her people, to a nation who came in the guise of liberator but remains as a tryannical and ruthless invader. This noble lady told of the abject misery and hopeless condition of her people. A lady who was present asked, "Why don't they revolt and throw out the invader?" To which came the reply, "With what, our bare hands?" Don't, through thoughtless acts of little or no benefit today, place the citizenry of our own country in such a hopeless situation as this.

It is contended by the proponents of registration and restrictive measures that it is for the purpose of curbing the criminal. In fact, that was the sole purpose of the Congress in the enactment of the legislation in 1934, now known as the National Firearms Act. To quote a member of the Ways and Means Committee of the House of Representatives, during the hearings that were held on the subject, "The man against whom we are trying to legislate is Dillinger and men of his type." That, then, was the intent of Congress. There was and is, no intention on the part of Congress, to restrict, hamper, curtail, or infringe the right of the law abiding and reputable citizens to keep and bear arms. Since such is the case, let us get down to a realistic approach to the problem which Congress originally wished to solve. Certainly no one can be so naive as to think that the criminal would put his own name and address on any register for the purchase or possession of a gun or ammunition. No, the criminal would use the weapon stolen from others. Two recent homicides committed in Chicago were perpetrated with guns stolen or forcibly taken from police officers. The records are replete with instances of crimes committed with stolen weapons. What, then, is the proper and effective method of eradication of the criminal use of firearms of any class, kind, or description? The answer can only be the enactment of legislation designed to penalize the criminal use of firearms, such as:

A mandatory penalty of 10 years in prison for any person possessing a firearm who has been convicted of a felonious crime of violence.

A mandatory penalty of 10 years for any person who purchases a firearm of any kind who has been convicted of a felonious crime of violence.

A mandatory penalty of 20 years imprisonment for any person who commits a crime of violence in the commission of which a firearm of any class, kind or description or any

imitation thereof is employed in any manner. Such penalty to be in addition to any penalty for the crime perpetrated.

That no right of parole or pardon attach to any such penalties for the illegal or criminal use of a firearm.

In contrast to this legislation to curb the criminal and penalize the criminal use of firearms, let us legislate to educate the reputable and law abiding citizen in the proper exercise of his constitutional rights to "Keep and bear arms."

Let us establish adequate range facilities of the latest and most modern design and safety in every city, town, county, State, and Territory under the flag of the United States of America.

Let us employ adequate and competent persons to operate such range facilities for the use of every reputable and law abiding citizen of the United States physically able to fire a firearm and who is not a member of any organization that has as any part of its program the overthrow of the Government of the United States by force or violence.

Let us require, as one of the requisites of citizenship, that all reputable and law abiding citizens attend sufficient classes conducted by competent instructors to insure their complete knowledge of the safe, sane and effective handling of firearms, at the range, in the field and in the home.

The enactment of the above basic principles into law and the repeal of existing unconstitutional infringements on the rights of the people to keep and bear arms will result in the progressive lessening of the criminal use of firearms, the accident toll of firearms in the hands of those ignorant of their proper and safe use, and the reestablishment of a Nation of free men properly versed in the use of the weapons they possess, weapons that helped to make them free and will maintain this Nation and its people, under God, in freedom and liberty and make of us the envy of all the people of the earth.

Respectfully submitted.

GEO. A. CARRICO,
President, the National Muzzle Loading Rifle Association, and President, of the National Gun Alliance.

Interstate Traffic in Firearms and Ammunition

SPEECH

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

The SPEAKER. Under previous order, the gentleman from Texas [Mr. KILDAY] is recognized for 20 minutes.

(Mr. KILDAY asked and was given permission to revise and extend his remarks.)

Mr. KILDAY. Mr. Speaker, in the Federal Register of July 10, 1957, the Department of the Treasury published proposed regulations on the interstate traffic in firearms and ammunition, and at that time announced than on August 27 the Alcohol and Tobacco Tax Division of the Internal Revenue Service of the Treasury Department would hold hearings with reference to those proposed regulations.

The regulations cover a number of subjects. Some of them are very desirable and should be adopted. A good many of those regulations already exist in either law or regulation and these constitute some revision or amendment thereto. However, there are a number of proposed regulations which should not be adopted. The National Rifle Association and practically all sportsmen in the United States who are informed of this proposal are in strong opposition to these specific portions of the proposed regulations. I shall enumerate them:

First. The proposal that each manufacturer or importer of a firearm shall identify it by stamping, in a manner not readily obliterated or altered, the name and location of the manufacturer or importer and the serial number, caliber, and model of the firearm.

Second. The proposal that dealers' records of importation, shipment, and disposal of firearms must be retained permanently on the premises until discontinuance of business by the licensee.

Third. The proposal that manufacturers and dealers maintain records reflecting the production or receipt and the disposition at wholesale or retail of all pistol and revolver ammunition; such ammunition to be described as to manufacturer, type, caliber, quantity, and the identity of the person from whom received and to whom sold.

Fourth. The proposal that a person purchasing a firearm or pistol or revolver ammunition in over-the-counter sale or distribution must acknowledge receipt thereof in his own handwriting in the prescribed dealer's records.

Fifth. The proposal that any Internal Revenue officer shall have authority to examine the books, papers, and records kept by a manufacturer or dealer, and to examine his premises and stock during regular business hours in the daytime or whenever such premises may be open at night.

Mr. Speaker, these constitute attempts at this time to institute a system of registration of firearms. For a period of more than 30 years various elements in the United States have attempted to pass legislation or secure administrative regulation for the registration of firearms.

The constitution guarantees to the people of this country the right to keep and bear arms. Registration of firearms is the first step of infringement of that right.

It is evident, or should be, to all that registration will be observed by the law abiding. The lawless will pay it no heed.

I take the position, as do others who oppose these regulations, that all laws with reference to the control, registration and what not of firearms must remain within the jurisdiction of the respective States. Disarming the law-abiding citizen is of no value. I point to the fact that the State of New York has the most stringent law on the possession of firearms of any State in the Union and even the casual reader of the daily press can see that even delinquent juveniles in the State of New York seem to have ready access to firearms and other weapons. For a period of 15 years, and up until 1941, bills had been pending here to provide for the registration of firearms. In 1941, while the Congress was engaged in a frenzied effort to prepare for a war which most of us knew was inevitable, there came before the Congress the bill (S. 1579) to authorize the President of the United States to requisition property required for the defense of the United States. When that Senate bill was being considered by the Committee on Military Affairs, of which I was a member at that time, I developed from Judge Patterson, the Under Secretary of War, that the language was intended to include, and did include, firearms and they were particularly interested in the question of shotguns. Judge Patterson at that time stated that they had already made their plans for registration of firearms and particularly of shotguns. In the Committee on Military Affairs, I offered an amendment to the Senate bill which read:

> That nothing herein contained shall be construed to authorize the requisition, or require the registration, of firearms possessed by any individual for his personal protection or safety (and the possession of which is not prohibited or the registration thereof required) nor shall this act in any manner impair or infringe the right of any individual to keep and bear arms.

When that bill passed the House, it contained the amendment which I had offered in committee. When it came back to the House from the other body in the conference report, my amendment had been eliminated from the bill and substituted in place thereof was a provision "that nothing in the act shall be construed to impair or infringe in any manner the right of any individual to keep and bear arms." In other words, the Senate had repeated the language of the Constitution. That conference report was considered in the House of Representatives on the 13th day of August 1941. Opposition was made to the conference report because it had eliminated the language of the amendment that I had placed in the bill to prevent the registration of firearms and the requisitioning of firearms. A motion to recommit the conference report was made here with instructions to include the House amendments, and upon a rollcall, the conference report was recommitted by a vote of 255 to 51, exactly 5 to 1. When the conference report came back to the House, it contained the almost identical language of the original House amendment. Thereupon that conference report was adopted. I want to point out that there have been other efforts to secure legislation or regulation for the registration of firearms. In 1947, the Department of Justice attempted to secure such a regulation. It is now clear that having failed in all of the previous attempts for a period of more than 30 years to secure legislation to require the registration of firearms of sportsmen, they are now attempting to acquire it by administrative action and I hope it will not be overlooked by the officer holding the hearings on the 27th day of August that the Congress of the United States even in the excitement and the frenzy of preparation for war by a vote of 5 to 1 rejected a provision which would have permitted exactly what is now attempted to be done by the Treasury Department by regulation.

Mr. IKARD. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. IKARD. Like the distinguished gentleman from Texas, I have shared his great concern over the proposed regulations. It seems to me that as he has so ably pointed out and largely through his interest and others here in the House, the Congress has repeatedly indicated clearly that it was not the intention of any legislation that was considered or passed here that there would be any registration.

The proposed serial numbers that may be required under these regulations are certainly not in keeping with the intent of the law. As my distinguished colleague has so ably pointed out, this is simply an attempt to do by administrative procedure that which could not be done through normal legislative procedure. It seems to me that if these regulations were put into effect they would drastically hamper and penalize every sportsman and law-abiding citizen of this country, every dealer and every manufacturer of firearms. They would utterly fail to deter the criminal element. I congratulate my distinguished fellow Texan in calling this to the attention of the House.

Mr. KILDAY. I thank the gentleman.

Since he has pointed out the serial-number question, I want to make it clear that approximately one-half the shotguns and two-thirds of all rifles manufactured in the United States are manufactured and sold without a serial number. With the antique weapons which might be transferred, it would be necessary that they be defaced in order to include such a serial number to comply with such regulation.

Mr. CUNNINGHAM of Iowa. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. CUNNINGHAM of Iowa. I wish to thank the gentleman for bringing this matter up. I wish to associate myself with the splendid remarks the gentleman has made. I have received many communications from sportsmen, in opposition to this proposed regulation by the Department. If that regulation goes into effect, a farmer cannot buy a shotgun or a rifle for use on his farm without its being registered and he having to sign a receipt and giving information as to what he intends to use it for and the same with the ammunition which he buys for that gun.

Mr. KILDAY. The gentleman is exactly correct. Actually there would not be much objection on the part of the farmers, but for a period of 3 years there has been an attempt to get this registration provision. It was always rejected. We cannot expect them to come in with a straight-out registration which they actually want; but, to begin with they propose an apparently reasonable provision such as this. In other words, they are attempting to do indirectly what they cannot do directly by act of Congress.

Mr. CUNNINGHAM of Iowa. Does not the gentleman feel that it is an attempt to place this regulation over our protest, and it will be the duty of the United States to pass legislation to prevent it?

Mr. KILDAY. Definitely. Congress will have to take action.

Mr. PELLY. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. PELLY. I think the gentleman has made a very splendid statement. I have a great many complaints from my constituents regarding the imposition of these unnecessary regulations. Out of his long background I think the gentleman has contributed a great deal, and I shall look forward to rereading his statement and passing it on to my constituents.

Mr. KILDAY. I thank the gentleman.

Mr. DINGELL. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. DINGELL. I would like to associate myself with the remarks of the distinguished gentleman from Texas. I would like further to state to the gentleman and to this House that on the 27th of this month a number of bureaucrats in the Alcohol Tax Unit are going to get together and try to saddle the sportsmen and hunters of this country with regulations which may go a long way toward eliminating hunting and the possession of firearms by the people of this country under our Constitution, which confers on them the right to hold such firearms and such ammunition. I would like to associate myself with the remarks of the gentleman in condemning the great load that this is going to place on the ammunition manufacturers, sporting goods dealers, hardware dealers across this country who handle firearms. It may well prevent these people from selling supplies.

Mr. BREEDING. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. BREEDING. I want also to associate myself with the remarks of my colleague from Texas. I, too, have received many letters of protest against this ruling from constituents. I have sent them down to the Department of Internal Revenue.

I hope that if this regulation is issued Congress will take some action to nullify it, because my people do not want to have to be registered to get guns to shoot rabbits, coyotes, and things like that.

Mr. KILDAY. I thank the gentleman.

Mr. WILSON of Indiana. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. WILSON of Indiana. I wish to join my colleagues in expressing my appreciation to the gentleman from Texas for what he is doing and the fine statement he has made. It may be just a coincidence, but it happens that right now in Vandalia, Ohio, they are having their great annual shoot. It has been going on for a week, but today is the big day, and while I am here, my heart is out there.

I know that all those shooters are unalterably opposed to this regulation. They are opposed to it on the ground that it would practically make it impossible to continue their wonderful sport of trapshooting; and the regulation will serve no useful purpose when it is enacted. It would be more likely to help the criminal than the other fellow. The other fellow is the one who needs to be protected, yet he is not protected. I think, therefore, it would defeat its own purpose.

Mr. KILDAY. I thank the gentleman from Indiana.

Mr. LANHAM. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. LANHAM. I, too, Mr. Speaker, have received many protests against these proposed regulations. I trust that if they are issued that the gentleman from Texas and his committee will bring out legislation nullifying them.

Mr. KILDAY. I thank the gentleman from Georgia.

Mr. PILLION. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. PILLION. I wish to associate myself with the gentleman from Texas in his remarks. I wonder if the gentleman can give us his opinion as to whether or not the Department presently has authority to enact these proposed regulations for the registration of firearms?

Mr. KILDAY. There are two laws involved; one is the National Firearms Act of 1934, the other is the Federal Firearms Act of 1938. The National Firearms Act is a tax act designed to eliminate the submachinegun, the sawed-off shotgun, and the traditional weapons of gangsters. The Federal Firearms Act has to do with regulations concerning the interstate transportation of firearms. This latter law applies to practically all firearms and ammunition.

These laws do grant to the Department power to make regulations for their enforcement. The provisions to which I have referred specifically are only a few of a number contained in the proposed regulations. In my opinion they are neither authorized, justified, nor desirable as regulations within the power delegated by the Congress to the Department to make regulations.

Mr. THOMSON of Wyoming. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Wyoming.

Mr. THOMSON of Wyoming. I wish to associate myself with the remarks of the gentleman from Texas. I, too, represent an area of the West which is known for its hunting, its sport, and recreation, and also the hunting of game as a business, which is important to the people.

I have looked into the proposed regulations very carefully. It seems to me particularly that the regulations requiring the keeping of permanent records forever is a very stringent one, and that it would be particularly serious to both the makers and users of ammunition and firearms.

I congratulate the gentleman and agree with him.

Mr. KILDAY. I thank the gentleman from Wyoming.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield.

Mr. JENSEN. I, too, wish to associate myself with the position taken by the gentleman from Texas. I always appreciate the positions taken by the gentleman because in many matters in which we have been associated I have always found his opinion sound. Understandably I have a high regard for him, and I am glad to associate myself with him in the solution of this important matter.

Mr. KILDAY. It is needless for me to say that I appreciate the gentleman's remarks.

Mr. BROOKS of Texas. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Texas.

Mr. BROOKS of Texas. I, too, would like to associate myself with the very fine statement the gentleman has made and to congratulate him on his concise, forthright statement of the legislative history of this matter. I hope it will be of considerable benefit to the Members of the House and I trust that the Alcohol Tax Division of the Department of Internal Revenue will read it and consider it in the light in which it is offered.

Mr. KILDAY. I will make it available to them, I can assure the gentleman. The hearing officer will have it on the 27th.

Mr. YOUNG. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Texas.

Mr. YOUNG. I would like to commend my colleague from Texas on the fine statement he has made and I should like to associate myself with him in this matter.

Mr. KILDAY. I thank my colleague.

Mr. COAD. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from Iowa.

Mr. COAD. I would like to associate myself with the remarks made by the gentleman from Texas. I may say that many thousands and thousands of sportsmen across the land are protesting this action taken by the Department in this proposed rule. I feel that as Members of the House, as Members of the Congress, it is our duty to point out to the administrative agency the inaccuracy of their action at this time.

Mr. BALDWIN. Mr. Speaker, will the gentleman yield?

Mr. KILDAY. I yield to the gentleman from California.

Mr. BALDWIN. I would like to congratulate the gentleman for bringing up this subject at the present time and I hope the Department of Internal Revenue will give serious consideration to the remarks the gentleman from Texas has just made.

Mr. KILDAY. I thank the gentleman.

As I have said, these proposed regulations are opposed by sportsmen. Their opposition is entitled to great weight. Show me a sportsman who loves guns and you have shown me a man I can trust and tie to. For you have shown me a man who loves God's great outdoors, his family, and his home. He is, inevitably, a man who has retained the pioneer spirit of the Americans who built this Nation and extended its frontiers from the Atlantic to the Pacific.

Mr. Speaker, the registration of firearms is only the first step. If secured it will be followed by other infringements of the right to keep and bear arms until finally the right is gone. It is no shallow pretext. The right to keep and bear arms is a substantial and valuable right to a free people, and it should be preserved. Those portions of the proposed regulations which I have mentioned should not be adopted.

Annual Roundup at Pendleton, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 26, 1957

Mr. NEUBERGER. Mr. President, no rodeo is more justly famous than the celebrated roundup which is held each fall in the Oregon city of Pendleton. The roundup is traditional to Pendleton in particular and to the eastern Oregon region in general. Furthermore, Pendleton is a progressive community, with splendid schools, a keen spirit of civic pride, and with the ability to meet the difficult challenges of the future. Its nearby wheat and pea ranches are rich in production.

In the Reader's Digest for September 1957 an outstanding and colorful article about the Pendleton Roundup has been written under the title of "Out Where the Old West Lives On." Author of the article is Leverett G. Richards, an able reporter who serves on the staff of the Oregonian, of Portland, Oreg.

Because the annual Pendleton Roundup is soon to be held in the roundup arena on the outskirts of Pendleton, I ask unanimous consent that the article about this notable event by Leverett G. Richards be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUT WHERE THE OLD WEST LIVES ON

(By Leverett G. Richards)

(Condensed from the American Mercury)

There was a scuffling of boots on the barroom floor. The tinkling piano halted midtune, and the squeals of dancehall girls stilled. The sound of six-guns shattered the silence. Strapping Johnny Spain fell to the floor, his shoulder torn by hot lead.

But Johnny Spain was tough. He had just won the world's bucking-horse championship at Pendleton, Oreg. No gun battle was going to stop him from riding in the parade next day or from "setting them up" at the St. George's bar on Saturday night.

The month was September, the year 1910—the birth date of the now world-famous Pendleton Roundup. Spain later lost his right hand roping a longhorn steer—caught it in the daily as he looped his lariat around his saddle horn—but he came back year after year to ride one-handed in cowboy bucking-horse championships.

Spirit like that made the Pendleton Roundup, and the roundup made Pendleton.

Ther was no wilder town in all the Wild West than Pendleton at the turn of the century. This rough, tough cowtown of the old Oregon Trail was the sin and six-gun capital of the eastern Oregon cow country, and proud of it. Still a cowboy capital, surrounded by ranch country and Indian reservations, Pendleton today is known as a city of sun, fun, and civic virtue. Descendants of citizens who used to shoot on sight now belong to the same PTA and boast of their city's traffic safety and low crime rate. Storekeepers who used to gyp the wranglers for all they could get now give months of time and thousands of dollars to make this a model community.

The roundup played the leading role in this transformation. It is a national phenomenon, one of the top three rodeos in the country. It is also a community project, still run by the people who conceived and created it—the townspeople, Indian chiefs and cowboys. No paid executive bosses this big-time spread. The people of Pendleton, now 15,000 strong, do the whole job with their own hands, heads, and hearts.

This frontier spectacle was born of a revolt against the worst of the life of those early days. Feuding factions, tired of violence and civic strife that reached a climax in the city election of 1909, were shocked into burying the hatchet. Mellowed by a few rounds of red-eye, they decided to hold a civic blowout. The result was something bigger than themselves.

That first celebration in September 1910 was a rodeo simply because that was what came naturally. Ranchers from 100 miles around brought their best bucking horses, their orneriest calves and meanest steers. There was no lack of cowpunchers to rope and ride them. They held the rodeo on a gravel bar down by the river, the same spot used today. "The rocks just helped to hold down the dust," Finis Kirkpatrick, last year's president of the Roundup Association, recalls. "We did bruise up a few cowboys. But cowboys heal fast."

The turnout that first year was some 4,000, about the population of Pendleton at the time. The directors used the profits, plus $12,500 in donations, to build a grandstand and bleachers to accommodate 10,000. They then deeded it to the city.

The new grandstand barely took care of the crowd the next year, and in 1912 the roundup was overwhelmed by an army of excitement-eager spectators, some from as far away as New York and Chicago, that totaled 40,000. There were few hotel rooms, and the citizens threw open their homes to the visitors. Crowds have run from 30,000 to 50,000 ever since. Reservations often are made from 3 to 4 years in advance, and every year some of the overflow has to be accommodated in private homes in nearby towns—Umatilla, La Grande, and Walla Walla, Wash., 50 miles or more away.

"We woke up to find we had a bull by the horns," one oldtimer says, "and we've never been able to let go of it." Pendleton had its chance to let go in 1940, when the old wooden grandstand burned just a month before opening day. By morning a new grandstand had started to rise from the ashes. Donations flowed in, some $40,000 in a week, and a contractor offered to do the job without profit. The concrete was hardly dry when the big day came, but the show went on. It took World War II, with its restrictions on big gatherings and its demands on Pendleton as a troop-training center, to halt the show for 2 years, 1942 and 1943. But it was on again in 1944.

The fame of the Pendleton Roundup has spread around the world, primarily because it remains true to the old west. All mechanical contraptions are banned; only critters with 4 feet—or 2—can enter the arena or

join the westward ho parade along the old Oregon Trail, which once wound its way through the present-day roundup grounds to the ford on the lazy Umatilla River.

To see the sun rise over the rimrock when it's roundup time in Pendleton is to see the wild west of story and song born again. The smell of ham and sourdough hot cakes—the cowboy's breakfast provided by Veterans of Foreign Wars in a downtown park—scents the air. Wranglers shoe their horses in the middle of the street, which is roped off for the occasion. Packers throw diamond hitches on their pack mules. Cowboy bands, western singers, square dancers, medicine men, calliopes, and cowboy clowns perform among the crowds. Down on the riverbank near the roundup grounds the smoke of 200 campfires hangs hazily over the Indian village—where canvas and lodgepole-pine tepees point their heads gracefully like a range of mystic mountains against a grove of cottonwoods.

The roundup always starts on Wednesday of the second full week of September, and ends Saturday, and the show has changed little in 47 years. The bucking, riding, and roping events move faster. For there is a time limit now—10 seconds for bucking broncs and 8 seconds for bareback riders—whereas the cowboys originally rode until the judges were satisfied. The almost lost art of roping longhorn steers (forbidden by law in some States) is still practiced by the few remaining masters. The steers for this event are bought in Mexico, where they grow lean and mean enough to survive the snap of a rope which sometimes jerks them several feet in the air to land on their sides. The cowhand then has to dismount, run to the downed steer while his horse keeps the rope taut, and tie 3 of the critter's 4 feet together.

For 19 years the roundup featured a women's championship bucking contest, too. But Pendleton's rodeo is a little rougher than most, and after Bonnie McCarroll, one of Pendleton's prettiest cowgirls, was killed in 1929, women were forbidden to ride bucking horses here again. They still hold their own in the relay races, however, competing with the best of the men.

The Indians joined the show the second year of the roundup and have been a part of it ever since. They help swell the ranks of the grand mounted parade with which every rodeo opens, and during the half-time intermission they put on their tribal dances in a great circle before the grandstand while their ankutty tillicums—the old, old men—beat the big cowhide drum. Johnny Moses, who rode with Buffalo Bill, is chief drummer.

But the Indians really come into their glory each night when the pageant called Happy Canyon is presented—almost as compelling a thing to see as the roundup itself. A copyrighted show which cannot be duplicated anywhere, Happy Canyon (the name is that of an old dance hall) was originated in 1914 by Roy Raley, a young Pendleton attorney who comes as close as anyone to being the father of the roundup. Raley conceived the pageant as a reenactment of the days when the West was the Indian's happy hunting ground, of the coming of the white man and the war between the two, followed by peace and the lusty life of the frontier.

The Indians have forgotten who wrote the pageant. The story has become their story, and their actions become so real that they seem to live again the days when the red man owned this land and could kill the buffalo and the deer at will. (He still carries his fresh kill into camp on the opening night of each pageant; no one asks where he got it.)

No direction is necessary for the Indians. The songs are their ancient tribal songs, and they tell their own story. The Indians follow the song, dancing the savage war dance, the easy social dance, or the impassioned wedding dance as the beat of the drums and the chanting of the old men dictate. They learned the action as children, and now they teach it to their children. The pageant's story has literally become part of their tribal lore.

There was a time, when the West was a little wilder, when the climax to the Happy Canyon pageant was a runaway steer—a live, loco steer right off the range—turned loose on the main street of the town without warning. Strollers dived through the doors of the nearest bar, bank, or boardinghouse in dead earnest, while cowboys taunted the beast or bulldogged him afoot. Too many people were hurt in the excitement, however, and this form of Pendleton roulette has been consigned to the limbo of lost arts of the frontier.

Not one of the roundup's 18 directors has ever drawn a cent of compensation. They even have to pay for their seats at the show. That is one reason they have commanded the wholehearted cooperation of the community. "That way," explains E. N. "Pinky" Boylen, arena director for 20 years, "we never hesitate to ask anyone else to give anything we need." Their only compensation is a specially designed belt buckle—the DSC of the cow country—which admits them to the roundup grounds.

These directors, representing a united community, have changed the character of the city. Some of the first profits of the roundup, after purchase of the property and construction of the grandstand, went into beautification of the remaining 40 acres for a city park, including a natatorium built in 1916. The arena was turfed and lighted in 1952 to make it a year-round sports center for baseball, Scout camporees and other community events. The city schools lease the arena for $5,000 annually.

This year the last of the Wild West will be brought not to thousands but to millions. For the first time America can sit at home and see riding, roping and bulldogging by the world's top hands in the outdoor arena, unrehearsed, untamed and unpredictable, on live television.[1] The waddies will be doing their durndest not only for the TV cameras but for the purses. With the $12,500 being paid by General Mills to the Rodeo Cowboy Association for TV rights, Pendleton will offer the highest total purse ever put up for an outdoor rodeo.

The only concern of the hardworking volunteers whose labor of love perpetuates the Pendleton Roundup is: "What in the world are we going to do with all the folks that will be stampeding into town next roundup?"

Monorail at the Texas State Fair

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. YARBOROUGH. Mr. President, the State Fair at Dallas, Tex., has the distinction of displaying a suspended monorail train. This unique method of transportation will be available to the public for use and demonstration not only during the fair this fall, but will operate the year around for all the people who visit Dallas

The State Fair of Texas at Dallas is the largest State fair in the United States, and I am glad to report that it and Texas have been selected as a place to test and demonstrate this new method of transportation.

This monorail train at Dallas is the only monorail transportation in the North American Continent, except the United States Senate underground monorail highway that links the Senate Office Building with the National Capitol Building here in Washington, D. C., which we Senators use every day. The United States Senate and the State Fair of Texas now operate in Washington and Dallas, respectively, the only monorail transportation on the North American Continent.

The monorail cars here in Washington are patronized with zest, pleasure and appreciation by countless thousands of visitors to Washington and they are indispensable timesavers for Senators assistants, pages, and other Government officers and employees.

I believe the people visiting Dallas will enjoy this overhead suspension monorail transportation as much as visitors to Washington enjoy the Senate's own underground monorail railroad.

A most interesting story of the operations of monorail at the Dallas, Tex., State Fair was published in the Berkeley (Calif.) Daily Gazette on June 22, 1957, and I ask unanimous consent that this account be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONORAIL AND OUR RAPID TRANSIT PROBLEMS—IT MAY BE ANSWER FOR TRAFFIC PLAGUE

(By J. R. "Kacy" Ward)

The San Francisco Bay area has one of the worst mass transportation problems in the entire country. There is no single system to link sprawling suburbia with the metropolitan downtown districts, and with the passing of the Key System trains East Bay interurban transit will depend entirely upon buses—a far cry from the speedy commuter train and subway service that flash in and out of Manhattan.

The infant Alameda-Contra Costa Transit District, still in its swaddling clothes, financially speaking, is taking its first tentative steps toward solving the transportation tangle in the East Bay. The newly authorized bay area transit district is years away from an acceptable operating system for the entire area.

Purchase of the Key System—if taken over as a tax-supported district operation—will not solve the East Bay's problems. It is not equipped to furnish the speedy, safe express service the voters anticipated in approving formation of the transit body; it does not even serve a large section of the area within confines of the district.

Some means of providing for a fast flow of passenger traffic between all parts of the East Bay and, eventually, all of the bay area must be found.

Is monorail the answer?

So far, slight attention has been given here to the feasibility of a fast single-rail system. However, it is catching the attention of engineers and traffic experts in other parts of the country.

A tour of many of the major metropolitan centers of the United States offers convincing proof that freeways are not the answer to mass movement of residents in congested areas, such as the bay area. The creeping,

crawling bumper-to-bumper snarls on broad multilane Los Angeles throughways during the commuter hours readily show the futility of attempting to provide sufficient roadway for individuals to drive their own cars to and from work. The era of the through-city freeway has already passed its peak; some means of speedy mass transit must be used unless the big cities are to smother in their own exhaust fumes.

Whether old-fashioned two- or third-rail train systems such as keep Manhattan alive, or monorail will provide the ultimate answer remains to be seen.

Murel Goodell, president of Monorail, Inc., of Houston, Tex., is convinced his product is the solution to rapid transit problems. It is out of the dream stage and actually being tested by the public.

After riding New York City's fast electrified interurban trains and fighting the terrifying 5 o'clock auto traffic congestion in Washington, D. C., and Miami, we made a special trip to Dallas to see what the only suspended monorail system in operation in this country has to offer.

We found what may be the opening to a new era in transportation history on the vast Texas State Fair grounds. A green and gray spaceshiplike car of fiberglass and steel that floats passengers along 1,600 feet of single rail, gliding noiselessly over the top of vehicular traffic 14 feet below.

Riding over traffic on sky hooks was interesting but hardly a thrill, for there is little or no sense of motion in the coach and it is virtually free of vibration. Whether the system—the inverted "J" metal pillars, the overhead single rail and the streamlined coach—is pleasing to the eye or unattractive depends upon individual esthetic tastes. To us it was too new and startling for immediate personal decision; much as, say, the first glance at the swept-wing appearance of some of the new automobiles. It was graceful and appealing, however, in comparison to the bulky structures that carry the noisy trains overhead in New York's Bronx and the solid, massive overhead concrete roadways that form the East Bay approaches to the San Francisco Bay Bridge.

So far, several hundred thousand Texans have paid to take 3-minute round trip rides on the Skyway, as the pilot line is called. Of more interest to Monorail, Inc., are the transit experts who have ridden the pilot line and feel it may be the answer to their traffic problems, for it is through them that monorail hopes to prove it is the successor to jammed highways, freeways, and other means of long distance commuter surface travel.

Just what can monorail do?

Its backers point out that electricity and gasoline engines revolutionized transportation so that cities grew—fed by autos, buses, trains, and trolley cars until they have become choked with traffic. They claim monorail can give cities new hope by providing a traffic-free, accident-free, worry-free route. Skyway, they assert, is designed so the coaches can travel singly, or in strings, tandem style; that with sufficient coaches one line can handle as much traffic as a 24-lane superhighway.

They do not claim monorail will mean the end of bus and trolley service. It is designed to integrate with other types of transit. To be used for express travel it will require feeder service.

But they do visualize it as relieving the pressure on other types of transit systems; creating a free flow of passenger traffic that would benefit downtown and suburban business, real estate development, industry, and the home owner. It isn't too fantastic to think of the Orinda-Lafayette area within 10 minutes travel time of downtown Berkeley, or of local residents being shuttled to and from San Francisco in 15 minutes.

The Dallas installation has a ground-level loading station at one end and at the other an elevated loading platform is suspended from a big parabolic archway. The coach runs on a single track which is supported by inverted J-shaped towers about 100 feet apart. The towers are approximately 30 feet high, so the bottom of the coach is 14 feet above ground level. It is pointed out monorail can parallel and cross deserts, rivers or valleys, can be used above expressways, over city streets, in open country and along railroad rights-of-way. It can travel underground, overhead, or on the ground.

The coach itself runs on eight pneumatic tires and employs a gyroscope balance, providing a noiseless, smooth ride. The control equipment and driver's compartment are above the track. Fifty-four feet long, 8 feet wide, 7 feet high inside, the coach weighs approximately 26,700 pounds. This is about 400 pounds per passenger, as compared to 2,500 pounds for a railroad car, 1,000 pounds for a bus.

Inside the coach is equipped with 55 modern plastic seats placed diagonally with respect to each other, allowing for more space for each passenger. It is considered the roomiest and most comfortable of any in use in mass transportation systems today.

While the Skyway coach is powered by two 305-horsepower engines, the firm's engineers say it can be adapted to diesels, gas turbines, or electric motors without difficulty. Brakes and operating equipment are easily accessible and repairs can be made quickly. Should one of the pneumatic tires blow out, auxiliary steel wheels instantly would take over.

Backers emphatically insist that monorail is safe. It has been safety inspected by the National Safety Council and been subjected to rigid safety inspection by engineers of the Aetna Insurance Co. The Skyway installation uses fundamentally the same principle as the monorail at Wuppertal, Germany, a line that has carried 900 million passengers since 1903 without a single fatal accident—a record never equalled in mass transportation.

Monorail is relatively cheap rapid transit in comparison with costs of other systems. It is estimated it can be built at $500,000 a mile, compared to several million dollars a mile for auto freeway and $7 million to $11 million per mile for subways.

Whether it develops as a satisfactory public utility is likely to be tested within a relatively short time. While some engineering and other problems are likely to develop, it is felt they can be met in actual experience.

Once the first commercial installation has been made, it is felt others will follow, if it can be proven financially and structurally satisfactory. Monorail, Inc., it is reported, has recently secured a firm commitment for long-term financing of installations.

While we were in Dallas last month to inspect the pilot installation, the firm was opening discussion with the city council of Orlando, Fla., offering to build the new type mass transportation system there at no cost to the city. It anticipates a line that would provide coach service up to 90 miles an hour, each coach carrying 80 to 144 passengers.

Robert E. Pierson, sales director of the firm, said it would need a franchise to operate and about 3 square feet of right-of-way every 125 feet on the group to sink its steel pylons into concrete footings. Citing the $500,000-a-mile cost figures, he said monorail in Orlando would make its own arrangements for financing.

President Goodell, of Monorail, Inc., is a former longtime resident of San Francisco and has followed the mass transportation discussion in this area for many years.

"It is our opinion," he says, "that the only way to correctly bring monorail to the bay area is to install a line—1, 2 or 3 miles maximum—where right-of-way and franchise to operate are immediately available without any long discussion, build and operate such a system for several months to show the people its merits.

"Having carried over 300,000 people in our own Houston and Dallas installations, we are beginning to learn the real problems of monorail, overcome these problems, and win the public's acceptance."

The Opportunity To Participate in Government

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. SMITH of New Jersey. Mr. President, recently in an address before the graduating class of 1957 at Newark Academy in Newark, N. J., the Honorable Edward K. Mills, Jr., Deputy Administrator of the General Services Administration, delivered an outstanding address to these young graduates on the subject of The Opportunity To Participate in Government. Mr. Mills is one of our distinguished New Jersey citizens, and he is rendering a fine public service in his work for the General Services Administration.

I ask unanimous consent that this noteworthy address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE OPPORTUNITY TO PARTICIPATE IN GOVERNMENT

(Address by Hon. Edward K. Mills, Jr., Deputy Administrator, General Services Administration, before the graduating class of 1957 of Newark Academy)

I am honored to be here tonight to share with you this important moment in your lives.

I admire your generation which has had to adjust its life and thinking so drastically in the interest of its country. You have succeeded admirably in fitting into the cold war philosophy, or existence, which has been forced upon us for national survival. I take my hat off to you.

I have two nephews—not a great deal older than you—who recently graduated from college. One of them is a jet pilot in the Air Force—a husband—and the father of a 10 months old baby daughter. The other is an ensign in the Navy now on a destroyer somewhere in the trouble area in the Mediterranean. This interruption in their lives did not upset them—they took it in stride, without complaint—and when they are through with military service, they feel that they will be the better citizens for it. I admire them, and you, for accepting these present-day sacrifices with such understanding and good grace.

Strangely enough, I do not feel very remote from your generation—except perhaps in terms of years. The problems of your day and mine are still basically the same—getting a good education, finding a good job, earning a good living, having a successful career, marrying a fine woman, having a good home, rearing some fine children,

and perhaps leaving some small imprint of yourself on your country, or your community, or your friends and family. That's why in talking to you tonight, I do not feel any remoteness between us. I am going through the mill race at one end—and you are beginning at the other.

Let me tell you a story which I believe to be true. A prominent New Jerseyan of some years ago, Dwight Morrow—who was the father of Anne Morrow Lindbergh—was riding on a train to a strange town to deliver an important speech. Mr. Morrow was a man of great mental capacity and power of concentration, who sometimes became preoccupied or absent minded as a result of wrestling with some major problem, and as he rode on the train, he devoted his thoughts to what he was soon going to say in his address. Suddenly the conductor interrupted his concentration with a loud "Tickets, please" and Mr. Morrow, pulling out his wallet, hastily rummaged through it and his pockets. But nowhere could he find his ticket.

"That's all right, Mr. Morrow," said the conductor, understandingly, "it doesn't matter."

"The devil it doesn't matter," replied Mr. Morrow, "I don't know where I'm going."

Perhaps some of you already know where you are going. Perhaps you are driven by a deep urge to be a doctor, a teacher, or a minister—with all the financial sacrifices that those dedicated careers entail. Perhaps others of you plan to be businessmen or bankers or corporate executives—with all the hopes of wealth that those positions hold. Still others of you may have talents in the arts—for writing, music, or the theater—with all the financial hazards that such careers involve. They are all good and challenging ways of life, and you should strive to scale the heights of whichever career you choose.

But regardless of your chosen profession or means of livelihood, there is also an opportunity in all your lives for still another type of service. Most of you must necessarily go out for it like an extra-curricular pursuit—but let me emphasize that it is an opportunity, more than a duty. In Princeton it is called: Princeton in the Nation's Service. Woodrow Wilson coined the phrase, and it simply means those graduates of Princeton who serve their country by participation in its Government. Newark Academy also has its Government honor roll of graduates—men like Raymond Del Tufo, charter Commissioner for city of Newark and former United States attorney; W. P. Findley (Tommy) Tompkins, Assistant Attorney General to Herbert Brownell; Ferdinand Eberstadt, distinguished Government service during war; Joseph M. Byrne, Jr., former commissioner for city of Newark and member of Port of New York Authority; Charles W. Holton, mayor of Essex Falls for 30 years. Distinguished judges: Joseph E. Conlon, John O. Bigelow, Richard Hartshorne, and Arthur C. Dunn.

The country in which we live can only be as sound as the citizens who run it. Our Founding Father recognized this fact and made Government one of their chief concerns and primary interests. Their great talents, so liberally bestowed, gave us the framework within which we have lived and prospered for almost 200 years, and we of today must continue that tradition of participation in Government, lest by indifference and indolence we lose our heritage. Nothing is more important than that all of us—especially those of us with the benefit of fine educations such as yours—carry on the tradition of giving Government our firsthand attention.

Participation in government can run the gamut of endeavor from just plain voting to high elective office. Let us all subscribe to one small pledge tonight. When the responsibility of voting becomes yours, you will always vote—at every election—at least, once. When I ran for mayor of Morristown some years ago, I remember how hurt I was that some of my friends played golf on election day. "You don't need our vote—you're in," they said—but I wasn't quite so sure—and their indifference and complacency upset me. For the first time I realized what a vote really meant in personal terms—at least to the candidate concerned. Many important elections—like the famous Dewey defeat of 1948—have been lost by just such indifference, multiplied by a few hundred people in a few hundred towns.

I know you will exercise your voting privilege when the time comes—it is your primary source of strength in the affairs of your country. But, to use your vote wisely, you should continue, during the next few years, to acquaint yourselves with our governmental processes, with the predominant principles for which each party stands, with the records and political philosophies of the individual candidates, and with the current domestic and foreign issues which are in contest. Then, when the time comes to vote, your ballot will reflect an intelligent, sensible, unemotional point of view. You will personally feel better knowing where you stand politically and being willing and able to speak up intelligently and be counted as a responsible member of society.

As a contributing member to the American community, you will also undoubtedly serve on one or more civic boards or commissions. If you do, you will be participating in an important phase of government which can produce a great deal of satisfaction to you, and, at the same time, be of substantial benefit to your fellow citizens. Municipal and county planning boards for the orderly development of our communities—boards of education for a better public-school system, boards of health, and recreation, parking, and housing authorities—all need men of your caliber and training. No public service can more intimately affect your homes, your communities, and your children than these diversified and important local governmental bodies. The old expression of indifference "Let George do it" no longer makes community sense. Like our Founding Fathers, we had better do it ourselves if we want it to be done right.

There are two other types of Government service where opportunity abounds. One is the elective field—the field of public office. It is a field which, fortunately, attracts many outstanding and dedicated citizens such as H. Alexander Smith and Clifford Case who are serving the people of New Jersey with distinction in the United States Senate. We are fortunate to have men of such stature and devotion there.

Holding public office is a grueling and difficult assignment—one of the hardest I know—because you must learn to deal competently with many difficult problems and many varieties of people and motivation. But it is a job—whether in local, State, or Federal Government—which can bring a man close to full stature in a relatively short period of time and, in many cases, at a relatively young age. It is full of interest, and opportunity, and challenge. True, campaigning for elective office is a rugged struggle with tremendous demands on your time and vitality, but, if elected, you can benefit more people by intelligent, honest service than any other activity I know. For those with the temperament and dedication, there is no greater avenue of contribution to the well-being of our country.

The other type of government participation is the more secure, and less exhaustive, one of civil service in which you do not constantly run the risk of being thrown out of office at regular intervals by your constituents. These government career servants—protected by civil service—provide a much-needed continuity of knowledge and experience between, and during, the regimes of the two political parties. Without them, there would be dangerous lost motion and confusion in the stable administration and smooth flow of government. If your flare is not for the public rostrum, you might well consider the rewards and diversified opportunities of a career Government servant. A man like Livingston Merchant, formerly of Morristown, who left a Wall Street investment firm to become a career civil servant in the State Department, and was later appointed Ambassador to Canada, is a good example.

If, later in your lives, high appointive office is offered to you, be sure to accept it, regardless of the so-called sacrifices of government service. Actually, the sacrifices are small when weighed against the full measure of a meaningful and useful life. Certainly, Jerseyans like William J. Brennan, Jr., of the United States Supreme Court; Bernard M. Shanley, Secretary to the President; James P. Mitchell, Secretary of Labor; Donald A. Quarles, Deputy Secretary of the Department of Defense; Percival F. Brundage, Director of the Bureau of the Budget; and Percy Rappaport, Assistant Director of the Budget—certainly these men do not gauge their government careers in terms of sacrifice, or a dollars-and-cents equation. They have availed themselves, on a high level, of the opportunity to participate in government.

Government is basically a management operation—the largest in the world—and one of the challenges about it is the diversity of its activities and the magnitude of its responsibilities. As an example, and because I am familiar with it, let us take a little-known independent agency like the General Services Administration. It is composed of 27,000 people, representing 150 different skills and professions, conducting a multitude of important services for the other civilian agencies of Government. Except for the Department of Defense, it is the world's largest realtor, managing, and leasing some 5,500 pieces of property for the Government. It operates one of the world's largest supply systems. It is the world's largest purchaser of strategic and critical materials, with a stockpile for our national defense worth $7 billion. It serves as the Government's adviser on transportation and public-utilities matters. It is responsible for keeping the current records of the Government, as well as for the custody and protection of historical national documents, including the original Declaration of Independence and the Constitution of the United States. One cannot help but broaden and grow wiser by reason of such varied and stimulating Government experience. It is an opportunity which is difficult to measure.

If you do participate in government, you should live by certain standards which are generally higher than those in other walks of life.

You must be honest—honest to the point of bending over backward in your personal and official conduct. First of all, when you accept a Government appointive position you must avoid what is called a conflict of interest—a pitfall into which many a naive fellow falls and is destroyed. When I served as a young attorney with the Civil Aeronautics Board, I was engaged in legal work relating to the airmail compensation to be paid the airlines. If a favorable airmail rate was granted, it would inevitably affect the value of that company's stock. Even though I, in my lowly legal position, did not decide the rate, and even though I only owned a handful of airline shares, I sold them all. As a consequence, I lost twice as much money as I earned in 2 years of hard work. But I slept at night.

To be effective in government—or in any other walk of life, for that matter—you

must be able to make decisions—prompt decisions on difficult matters. It is surprising that many government officials and industry executives—unlike their wives—cannot make up their minds. They balk at a decision like a horse refusing a water jump and thereby destroy their effectiveness and stall their organizations. Many decisions in public office are difficult to make, and no matter how a problem is resolved, it will antagonize a lot of people. Be sure that your decision is sound, and legally and morally right—and then let the chips fall where they may. In that way, the decision of this year will not rise up to haunt you next year, or 5 years from now. You can live with it forever.

In reaching sound decisions in government or business, you should establish a formula from which you never deviate. First, you should assemble and marshal all the facts that even remotely bear on the problem. Study those facts, sleep with them, tear them apart. If you have preconceived notions on the question or the answers, cast them aside. If you have prejudices, or likes or dislikes, rule them out. Analyze all the facts—coldly and objectively—without passion or prejudice—and then make up your mind and stick to it. A year later, if a congressional committee or other investigating group comes after you, you won't curl up your toes and die of fright. You will be in a position to convince the committee that you were right, or, if they can't agree, at least that your motives were honorable and your reasoning was sound and valid.

To make it worthwhile to participate in government and to leave your small imprint, you must, of course, have a purpose. Surely, you do not want to be a high government official just to have a low license number or to be called in your old age Mr. Ambassador, Mr. Secretary, or Senator. You must want to have stood for something worthwhile and fought for it—be it civil rights, a balanced budget, lower taxes, or any other issue. You must want to have improved your government—be it municipal, State, or Federal. You must want to have made it better—more efficient—cheaper to run—more useful to the taxpayers. You must want to have opposed, and exposed, prejudice, stupidity, and false practices. You must want to have improved the social and economic lot of every citizen, regardless of his race, creed, or color.

Participation in government is not a bed of roses. You live in a glass house, and hence people will throw stones. If you are thin-skinned, you will be hurt by flying glass. Some few people will cast aspersions at you, or even want to destroy you, but that should not deter you. If you have lived by the public standards which I have mentioned, those people cannot long hurt you. Instinctively, public opinion will rally to your support and protect you from the false and unfounded.

The people in high Government positions today do not regard it as a sacrifice to serve their country. To be sure, they may be giving up some salary, some leisure, and some luxuries—but they regard it as a privilege to participate in Government. Just a few weeks ago when the very able and universally respected George Humphrey resigned as Secretary of the Treasury, he said that his years in the Government had been "the most wonderful experience of my life." And he called the relatively young Robert Anderson (then 46 years old) "the best young man I know to carry on the duties of Secretary of the Treasury." Continuity of high-caliber people in Government is essential, and it should be the purpose of the older generation to discover and develop young talent. That is one reason why I am talking to you on this subject tonight.

Only by the broad participation of people like you in public affairs can our representative form of government prosper and survive. As I have said, our Government and country can only be as good as those who run it. In the years ahead I urge you to avail yourselves of the opportunity to participate in public affairs—be they municipal, State, or Federal, or be it on a part-time, full-time, or occasional basis. By reason of your background, training, and education here at Newark Academy, you will have much to contribute to your country in the years ahead, and your life, in turn, will be the richer for the experience.

Congratulations on your graduation and good luck to all of you in the years to come.

Miss Patricia Allen, of Grants Pass, and American Friends Service Committee

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr. NEUBERGER. Mr. President, this summer 11 young people from my State have been engaged in service and work projects conducted under the auspices of the American Friends Service Committee. In its August 19, 1957, issue the Oregonian, a daily newspaper published in Portland, Oreg., carried an article describing the experience of one of these volunteers—Miss Patricia Allen, of Grants Pass, Oreg.

Miss Allen, a sophomore at the University of Oregon, served during the summer at the American Friends Service Committee work camp at San Simon Atzitzintla, Mexico, where she assisted in inoculating and vaccinating Mexican children to better protect them from disease, supervised recreation, and helped instruct craft classes.

Because Miss Allen's comments so cogently indicate the beneficial objectives achieved through these summer programs—both for the student worker and those who are the recipients of their efforts—I ask unanimous consent that the Oregonian story of August 19 be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON GIRL ACTIVE IN FRIENDS SERVICE—MEXICAN NATIVES WELCOME PROGRAM OF VACCINATION AGAINST SMALLPOX

(By Dora Morandi)

"We're continuing the vaccination program this afternoon," said Patricia "Pepper" Allen, seated in the doorway of a small adobe house. She and other volunteers from the American Friends Service committee work camp at San Simon Atzitzintla, Mexico, were resting briefly before plunging into another half day of hard work.

"This morning we vaccinated more than 150 boys and girls here in Tlacotepec under the direction of the local nurse and one of our group who is also a nurse," Patricia said.

"The village authorities have been most cooperative and helped us set up the 'clinic' in one room of the school. In this way we were able to bring the children directly from the classroom into the clinic. This afternoon we will continue the smallpox vaccinations of the adults."

The 18-year-old miss from Grants Pass, Oreg., pointed out the snow-capped outline of the volcano Ixtlaccihuatl. San Simon, about half a mile from Tlacotepec, in the state of Puebla east of Mexico City, is headquarters of the Friends Service committee work camp. It is an agricultural village with about 850 population located at the foothills of the volcano.

LAND PRODUCTIVE

Corn and other vegetables are abundant, for there is an abundant water supply, and the land is fertile.

Patricia Allen is 1 of 11 young people working out of the Oregon office of the American Friends Service committee this summer on service and work projects, according to Robert A. Carlson, program assistant.

Only one other Oregonian is serving overseas. Nancy Terrell, of McMinnville, is appointed to an American Friends Service committee work camp in Italy.

A sophomore at the University of Oregon, Patricia hopes to major in journalism. Though not a Friend, she feels that serving in the Friends work camp in Mexico will help her learn more about people and to develop an understanding and sympathy for people that will help her in her journalistic career.

"While inoculations and vacinations for smallpox, whooping cough and typhoid are a large part of our program," Patricia pointed out "we are also doing many other things."

During the morning, most of the girls including Patricia work with the children, either by assisting the Mexican schoolteachers in the classrooms or supervising recreation periods. Arts and crafts classes are held in the afternoon.

"I think even more popular than recreaiton periods or the crafts classes is our library hour," said Patricia. "We have a large selection of brightly colored children's books which boys and girls are permitted to take to their homes. For many of them this is an undreamed of joy. Some of them have never seen any books other than the few they use in their classrooms. We also have a story hour which draws crowds of children."

The eight boys in the work camp have been working with the villagers to help complete the new addition to the school, and also co-operating with a program of latrine building.

QUARTERS IN SCHOOL

"The villagers of San Simon have been wonderful to us," Patricia continued. "The second day we were here the president of the village invited us to his home for dinner—all 18 of us. Some of the young men of the village have come to our casa to serenade us, and we have also held joint songfests. I might add that we are in a very accessible spot—the school.

"The quarters the villagers were preparing for us were not ready when we were due to arrive, rather than ask us to come later or even next year, they fixed up a couple of rooms of the school for a girl's dormitory and a kitchen-dining room."

Before Patricia could add more, the church bells began to ring. It was the signal for the men and women of the village to gather at the clinic, and it was no more siesta for the American volunteers.

Opening United States Statements at 10th World Health Assembly Delivered by Dr. Leroy E. Burney, Chairman, United States Delegation, and Representative John E. Fogarty

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, the 10th World Health Assembly convened at Geneva, Switzerland, during the month of May 1957. It was a conference that brought together representatives from more than 80 nations. Great and lasting good resulted from the meeting together of this distinguished and outstanding group of men and women interested in promoting the health of the world.

It was a privilege for me to have the opportunity of attending this World Assembly as a congressional representative with the United States delegation, together with the Honorable JOHN E. FOGARTY. It is a pleasure to report that the United States delegation took a leading and important part in the deliberations of the assembly under the leadership of Dr. Leroy E. Burney, Surgeon General of the United States, as chairman of the delegation.

I wish that every Member of Congress—indeed every citizen of the United States—could have had the close view of this great organization that I had. No one could come away from such an experience without a sense of deep satisfaction in what we Americans are doing through this organization to relieve misery and suffering among hundreds of millions of our fellowmen. And one could not help being astounded at how much is being accomplished with so little money. Hundreds and hundreds of important health projects are being carried out even in the remotest corners of the world under the stimulus and technical guidance of this organization. I know of no money that is being spent with greater effect than the small resources of the WHO. Truly, it is changing the world for the better, building a strong and more resourceful human race.

Mr. Speaker, in accordance with the unanimous consent granted, I hereby include as part of my remarks the statements delivered by Dr. Burney and Representative FOGARTY at the opening of the Assembly, as follows:

STATEMENT BY DR. LEROY E. BURNEY

Mr. President and distinguished delegates, it is a pleasure for me to come again to the World Health Assembly, the truly impressive annual meeting of the health leaders of the world. I had the opportunity to be a member of the United States delegation to the World Health Assembly in Mexico in 1955. I am now having the pleasant and rewarding experience of renewing many old friendships and of making new ones.

The World Health Assembly is a unique meeting, and uniquely important. President Eisenhower has, on several occasions, emphasized the great value of the work of the World Health Organization in lifting the burden of disease which still afflicts mankind. The President has pointed to the World Health Organization as one of the highly successful specialized agencies of the United Nations in which international cooperations has truly benefited mankind. We who are members of national health administrations in our own countries are necessarily concerned for much of the time with health programs and problems within our borders, yet we have all found that health is essentially international, perhaps one of the most international of all fields of human endeavor. To leave Washington, D. C., on one afternoon and to be in Geneva the next brings home in an immediate personal way the closeness of countries. Even more basically, we in the United States are grateful for the opportunity to cooperate with other countries to help raise the levels of health, including those of our own people and of all peoples. These annual World Health Assemblies demonstrate the serious wish of nations to pool the necessary resources for this purpose. In the World Health Organization we have, by working together, built an effective means for fighting for better health. The annual report which the director general has put before us is, as usual, an interesting and a most stimulating document. Perhaps this year it is more than usually instructive, reporting as it does the activities of the World Health Organization in the 10th year from the founding of the Interim Commission for WHO. It demonstrates that the Organization has become a successfully established institution. It can still mature, but it has thrived through the early years of trial and conclusively proved its worth as an agency for international cooperation in health. Its potentialities for helping to improve health levels further are great.

I am proud that our United States delegation to this Assembly includes two distinguished Members of the United States Congress. They have both shown great insight into health needs and programs in the United States. Likewise, they have played a leading part in the passage of the legislation which has enabled the United States to support the steady, orderly growth of this Organization. They come to this Assembly as good friends of WHO of long standing. At this time I am privileged to be able to call on one of these distinguished gentleman, Congressmen JOHN FOGARTY, a longtime friend and supporter of public health and medical research. Congressman FOGARTY will make a statement on behalf of the United States delegation.

The PRESIDENT. Thank you, Dr. Burney. May I call on Congressman FOGARTY? You have the floor, sir.

STATEMENT BY JOHN E. FOGARTY

Mr. President, distinguished delegates, ladies and gentlemen, I am grateful for Dr. Burney's kind words applying to Congressman WOLVERTON and myself. At the same time, I can claim no special virtue in being in favor of good health. We in the United States Congress are all in favor of better health for the people of our country and for all peoples. Our Congress has shown by its actions its realization that improving world health conditions is a basic part of building a more peaceful and stable world, the goal for which we all strive and pray.

We have watched with the greatest interest and satisfaction the steady growth of the World Health Organization. Its constructive work now reaches into every corner of the world. No international organization is doing more important work day in and day out. The growth of WHO has been continuous and orderly, in pace with the increasing experience and competence of its excellent staff. It is our feeling that its orderly growth should be continued. I feel that I can assure you quite confidently that the people of the United States and their representatives in Congress will continue to support orderly expansion of this great work. On the other hand, as one who believes deeply in the importance of your mission, I feel I should let you know that in my personal view there would be some real concern among my colleagues in the Congress of the United States if the Organization attempted to expand too rapidly, beyond its demonstrated ability to maintain high levels of accomplishment. Orderly growth provides for sound growth, and it is sound growth we all want in WHO.

Next year, 1958, will be the 10th anniversary of the coming-into-force of the Constitution of the 10th World Health Organization. With this in mind, the United States Congress last year on its own initiative prepared and adopted a joint resolution of the United States Senate and House of Representatives. With your permission, Mr. President, I should like to read parts of this resolution. The Congress declared among other things, that "the year 1958 is considered particularly appropriate for holding the Assembly in the United States since that year will mark the decennial anniversary of the entry-into-force of the constitution of the World Health Organization, which was originally drawn up and signed in New York City"; and that "the Assembly will focus public attention in the United States on the important work of the World Health Organization as an integral part of the economic and social program of the United Nations and as a constructive work contributing to better international appreciation and world peace." The Congress therefore authorized an appropriation to enable the United States to invite the World Health Organization to hold the 11th World Health Assembly, in 1958, in the United States of America.

I am happy to inform you that this invitation has gone from our Secretary of State to your Director-General of WHO, and that the matter will therefore come before you for your consideration. The United States will be highly honored if it is decided to hold the 11th World Health Assembly in our country, and we shall do all we can to make the occasion an auspicious and most successful one.

Opening Statement by Dr. James R. Reuling at the Meeting of the Program and Budget Committee, 10th World Health Assembly, May 13, 1957, at Geneva, Switzerland

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, the United States Delegation to the 10th World Health Assembly, held at Geneva, Switzerland, during the month of May 1957, was highly honored to have as a member Dr. James R. Reuling, a distinguished practitioner of medicine for many years in the State of New York, and now residing in the State of Florida.

Dr. Reuling by his friendly manner and wise counsel exerted a great influence among the delegates from the other

nations. His service as a United States delegate, representing the American Medical Association, was highly beneficial and helpful to his own delegation in the important part it took in the work of the Assembly, as well as in all the activities of the Assembly itself.

On May 13, 1957, Dr. Reuling delivered the opening United States statement to the Program and Budget Committee. As part of my remarks, I include a summary of his remarks as recorded in the minutes of the committee:

REMARKS BY DR. JAMES R. REULING ON MAY 13, 1957, IN PROGRAM AND BUDGET COMMITTEE, 10TH WORLD HEALTH ASSEMBLY

Dr. Reuling (United States of America) expressed his personal pleasure at again taking part in the World Health Assembly and his delegation's appreciation of the progress achieved in 1956 as evidenced in the Director-General's annual report. He added that the Members of the United States Congress present at the Health Assembly were deeply concerned with WHO's work to improve world health. Particularly worthy of note were the Organization's assistance for the organization of local health services, especially in rural areas, and its activities to promote the expansion of laboratory services, especially in connection with the reduction of infant mortality, the control of leprosy and trachoma, and research on the vectors of bilharziasis. His delegation was also particularly interested in the work on malaria eradication, and proposed later to present a special report on that matter.

Darling Medal and Prize Awarded to Dr. Paul F. Russell

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, at the seventh plenary meeting of the Tenth World Health Assembly, on May 13, 1957, at the Palace of Nations, Geneva, Switzerland, an honor was paid to an outstanding and distinguished American doctor of medicine, of such magnitude that it should not be permitted to pass unnoticed. I refer to the awarding of the Darling medal and prize to Dr. Paul F. Russell in recognition of his great achievements in the control of malaria. No man has ever stood higher or been more generally recognized as a leader in this particular field of activity than Dr. Russell.

In accordance with the unanimous consent granted, I hereby include with pleasure and great pride the address delivered by the President of the World Health Assembly and the reply made by Dr. Russell, as follows:

PRESENTATION OF THE DARLING FOUNDATION MEDAL AND PRIZE

The PRESIDENT. The meeting is called to order.

The Assembly will recall that the Darling Foundation prize is awarded for outstanding achievements in the pathology, etiology, epidemiology, therapy, prophylaxis, or control of malaria. According to the regulations of the foundation, the Darling Foundation Committee is empowered to take the final decision with regard to the award of the medal and prize, and recommends to the Executive Board of the World Health Organization the mode of presentation of the said award.

This prize, established by the Darling Foundation, a foundation created by private subscriptions, is periodically granted not only to honor eminent malariologists who distinguished themselves particularly in their work, but also to honor the memory of Dr. Samuel Taylor Darling, a man who set up a tradition of continuing inquiry and research constantly focused on a single primary objective—the control of disease, particularly the control of malaria—and who was killed by accident during a study mission of the Malaria Commission of the League of Nations.

The first award was given to Col. S. P. James in 1932; the second to Prof. H. N. Swellengrebel in 1937; the third to Prof. H. E. Shortt and Prof. P. C. C. Garnham in 1951; and the fourth award to Dr. G. Coatney and Prof. G. Macdonald in 1954.

This year, the Darling Foundation Committee decided that the medal and prize of the fifth award be presented to Dr. P. F. Russell. The executive board at its 19th session, in conformity with the regulations of the foundation, concurred that the presentation be given a most solemn character before an audience of worldwide importance, and requested the Director General to arrange for presentation of the medal and prize by the president of the 10th assembly during the plenary session of that assembly.

Today is a particularly appropriate day for the presentation of an award connected with work in the field of malaria, for 100 years ago today was born the man who later became known to us as Sir Ronald Ross, who, as the Director General recalled in his introductory statement, first saw and recognized, in August 1897, zygotes in the stomach walls of a mosquito, and who thereafter first demonstrated the cycle of avian malaria, from which was deduced a similar cycle in human malaria, a deduction very soon proved by the Italian workers Grassi, Bastianelli, and Bignami.

On this most fitting occasion the award is being made to one who is renowned for his outstanding achievements in the control of malaria, and, indeed, for his contributions to the whole subject of malariology and who, it is particularly interesting to note, drew his inspiration directly from Dr. S. T. Darling, working as his assistant at the Leesburg Field Laboratory, Ga., shortly after joining the Rockefeller Foundation in 1923.

Dr. Paul F. Russell, born in 1894, is an American citizen. He holds the bachelor of arts degree of Boston University, the doctor of medicine degree of Cornell University, and the master of public health degree of Harvard University. He joined the Rockefeller Foundation in 1923, and has been associated with the health work of that foundation ever since, particularly in the field of malaria. Most of his working life has been spent outside his native land, for he was assigned to Malaya from 1925 to 1928, to the Philippines from 1929 to 1934, to India from 1934 to 1942, to Venezuela from 1946 to 1947, to Rome from 1950 to 1952, and to Paris from 1952 to 1953, while from 1942 to 1946 he served with the United States Army overseas, and in 1954 and 1955 he was loaned to the World Health Organization, acting as special consultant here in Geneva and visiting a number of countries in Asia and the Middle East.

Dr. Russell has made outstanding contributions to the epidemiology and control of malaria. His brilliant studies in connection with malaria transmitted by Anopheles culicifacies in South India constituted one of the earliest demonstrations of the possibility of controlling malaria through insecticidal attack on the adult vector, paving the way to the similar use of residual insecticides—a technique which, as we all know, is the mainstay of modern malaria eradication programs.

Dr. Russell is the author or co-author of a number of books on malaria and of a long list of scientific papers. The title of his latest book, "Man's Mastery of Malaria," excellently epitomizes the philosophy of which Dr. Russell has been so strong a protagonist, a philosophy which guides also this organization in its work of mastering the problem of malaria in the world.

Dr. Russell has been closely associated with the World Health Organization since its inception, and as a member of the Expert Advisory Panel on Malaria, has served on the Expert Committee on Malaria on five occasions. In addition, on several occasions the organization has greatly benefited from the advice of Dr. Russell when he agreed to serve as a consultant to the organization.

Dr. Russell, it is with pleasure that I present you with this medal and prize of the Darling Foundation. Please accept my personal congratulations. [Applause.]

Dr. RUSSELL. Mr. President, distinguished delegates, ladies and gentlemen, standing here before this notable assembly on this occasion, I find my emotions a mixture of pride, humility and reminiscence. I am proud to have been recommended for this honor by an expert committee of outstanding malariologists, and I am very proud indeed to receive it from you, Mr. President, on behalf of the Darling Foundation and in the presence of this assembly. No other organization in all history has had a greater world-wide influence toward the eradication of a major disease than has the World Health Organization in respect of malaria during the past few years. This organization has been the activating catalyst and motivating mainspring, the international demonstrator and coordinator, in the development of a global assault on malaria. I have no doubt that WHO will continue to apply increasing power to the attack until this plague has been vanquished.

I also feel humble at this time, first because of my debt to a great many collaborators over the years and in many countries; and secondly, because my own acquaintance with current malariology makes clear to me that this award might so properly have gone to any one of several colleagues who have contributed notably to the subject in recent years.

But even stronger than these feelings of pride and of humility, there is this morning a flood of reminiscence stemming back a third of a century to the time when I had intimate personal and professional association with Samuel Taylor Darling, whom we honor today. In October 1923 I was sent to Leesburg, Ga., for a routine 2-week training course at the Rockefeller Foundation's Malaria Field Station, of which Darling was the director. But such was Darling's magnetism, and so thoroughly and quickly did he stir in me a desire to specialize in malariology, that I stayed at his side for 15 months as a student-assistant. Darling's influence was irresistible and to this very day malaria has attracted me more strongly than any other aspect of medicine. Of Darling, uniquely among all of my teachers, I can say most sincerely in the words of the oath of Hippocrates, "I shall look upon him who shall have taught me this art even as on mine own parents."

Darling had a robust personality, a pertinacious curiosity, abounding energy and a wealth of wisdom. He had a notable record in the Panama Canal Zone as pathologist under General Gorgas. There, as Darling several times related to me, he met Ronald Ross, the hundredth anniversary of whose birth we note today. These two Titans had great respect for each other.

After Panama, Darling joined the staff of the Rockefeller Foundation, and brilliantly carried out studies in Malaya, Java, Fiji, Brazil and the United States. His tragic death occurred in the hills above Beirut on May 20, 1925, while he was on a tour for the Malaria Commission of the Health Organization of the League of Nations.

The great lesson consistently expounded by Darling was that in public health activities, concomitant field and laboratory research is essential to sound practice. Darling would have given hearty endorsement to the emphasis placed on this subject by Professor Parisot in his notable address last week, and to the words of your very practical and distinguished Director General in his review of the work of WHO in 1956, where Dr. Candau states that research is "the real backbone of the various activities through which the Organization is striving to promote world health." As regards malaria, I believe that without noncomitant fundamental investigations, worldwide eradication would not be possible. It is indeed fortunate that this principle, so tenaciously held by Darling, has been accepted, and that WHO is today stimulating, coodinating and assisting malaria studies throughout the world.

Finally, Mr. President, I have great pleasure in accepting this Darling Foundation medal and prize that commemorates a famous research malariologist, a superb teacher and a close friend. Thank you. [Applause.]

The PRESIDENT. Thank you, Dr. Russell.

Statement by L. Wyatt, Division of the United States Public Health Service, on Behalf of the United States Delegation in the Program and Budget Committee, 10th World Health Assembly, May 14, 1957

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, the United States Public Health Service has at all times taken a very great interest in the activities of the National Committee on Vital and Health Statistics.

As part of my remarks, I wish to include statements made by Mr. L. Wyatt, of the Division of International Health, Bureau of State Services, of the United States Public Health Service, at meetings of the Program and Budget Committee, 10th World Health Assembly, on May 14 and May 18, 1957, at Geneva, Switzerland, as follows:

STATEMENT BY UNITED STATES DELEGATION ON SECTION OF DIRECTOR GENERAL'S REPORT FOR 1956, RELATING TO HEALTH STATISTICS, GIVEN BY MR. WYATT IN PROGRAM AND BUDGET COMMITTEE, 10TH WORLD HEALTH ASSEMBLY, MAY 14, 1957

Mr. Chairman, the United States delegation has had a continuing interest in the activities of the national committees on vital and health statistics. The United States delegation reaffirms its support for national committees because of their value and their potentials in achieving technical developments in national and international statistics on health.

The United States national committee on vital and health statistics laid the groundwork for the national health survey, which goes into the field this month to collect, on a continuing basis, information on the health of the American people. Health surveys have been made by our colleagues in other countries, notably in Canada, Denmark, England, and Japan. However, many of the techniques of conducting health surveys are still in the experimental stage. The United States is keenly interested in the systematic interchange of experience and views on methods and procedures in the conduct of health surveys.

The United States delegation notes in the 1956 report of the Director General that the WHO Expert Committee on Health Statistics met last December to discuss problems in modbidity statistics. The United States delegation concurs in the conclusion of the expert committee that it is premature to make any extensive series of recommendations for international adoption. However, Mr. Chairman, the United States delegation hopes that WHO will increase its emphasis on the necessary services for the exchange of technical information in the development of health statistics, and give increased attention to laying the groundwork for future international standards in the field of morbidity statistics. We also note with satisfaction the provision in the program for a handbook on principles for a health statistics system complementing the United Nations handbook, Principles for a Vital Statistics System. This handbook can provide an excellent basis for discussion and should prove valuable to all countries in improving their statistical services.

We likewise note with satisfaction the contribution of the Expert Committees on Health Statistics. The contributions in the field of classification of diseases and causes of death have been particularly outstanding. The international adoption of the disease classification and other definitions will do much toward promoting the comparability of health statistics which is so essential in the assessment of health conditions. However, in addition to specific technical questions, these committees might consider also the means to accelerate all the varied aspects of the program of national and international development of health statistics.

The Director General's report for 1956 points out the difficulties in evaluating health conditions in various parts of the world because of the inadequacy of national statistics. These inadequacies arise from social and administrative problems, as well as from technical considerations. International standards constitute important goals for many countries, but there are also numerous procedural problems involved in establishing sound systems of vital and health statistics which will fit the varied social and administrative frameworks of different countries. The World Health Organization can be of invaluable assistance by developing, in cooperation with member nations, a broad, integrated, and positive program based on an appraisal and synthesis of national, technical, and administrative methods, on the analysis and interchange of national experience, and on the further development of international standards in health statistics.

In order to determine the ways and means of achieving a balanced program of this type within the operating framework of WHO, the United States delegation recommends that this question be considered by the Director General and the Executive Board, and will submit a formal resolution to that effect during this Committee's consideration of the proposed program and budget for 1958. Thank you.

STATEMENT BY UNITED STATES DELEGATION INTRODUCING RESOLUTION ON HEALTH STATISTICS GIVEN BY MR. WYATT IN PROGRAM AND BUDGET COMMITTEE, 10TH WORLD HEALTH ASSEMBLY, MAY 18, 1957

Mr. Chairman, on behalf of the United States delegation, I should like to thank the Assistant Director General for Central Technical Services for his clear forecast of activities in that field planned for 1958. We are particularly pleased to hear of the proposed work on the international comparability of morbidity statistics, the proposed seminar to be held in southeast Asia, and the consideration which will be given to epidemiological methodology. We are also glad to learn of the continued progress being made in the International Pharmacopoeia, since we understand that the recommended specifications have already proved useful to many countries.

During the discussion in this Committee of the Director General's report for 1956, the United States delegation joined with several other delegations, notably those of the United Kingdom and Canada, in making a few brief remarks about the activities of WHO in health and vital statistics. The gist of these remarks was in appreciation of what WHO has already accomplished in this field, and a hope that the activities of WHO in this field might be able in the future to take on a broader scope. During that discussion, we stated that we would introduce a resolution on the subject during this Committee's consideration of the future program of WHO.

* * * * *

If I may add one more comment, Mr. Chairman, we believe it would be helpful if the Director General could include in his study a consideration of the feasibility of making a greater use of specialized subcommittees of the Expert Committee on Health Statistics in the initial stage of preparation of definitions, recommendations, and suggestions, and also greater use of consultation with specialized experts in the various countries. The field of health and vital statistics has so many specialized phases that such a broadening of the procedures might considerably strengthen the WHO activities in promoting international standards or uniform practices.

Training Activities of World Health Organization as Presented to Program and Budget Committee, 10th World Health Assembly, Geneva, Switzerland, by Dr. Ernest L. Stebbins on May 14, 1957

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, the 10th World Health Assembly, held at Geneva, Switzerland, had many and varied activities relating to the work of the organization. The United States was fortunate to have a delegation of individuals each of whom was outstanding and highly respected in his respective line of endeavor. The delegation was particularly fortunate to have as a member, Dr. Ernest L. Stebbins, director, School of Hygiene and Public Health of

the Johns Hopkins University. Dr. Stebbins is a man who is known throughout the world for the work he has done in the school of which he is director. It was surprising, as well as pleasing, to realize that many of the delegates from other nations throughout the world had attended the Johns Hopkins University School of Hygiene and Public Health.

Mr. Speaker, I wish to include as part of my remarks, in accordance with the unanimous consent granted, a copy of the recorded minutes of the Program and Budget Committee of the 10th World Health Assembly, held on May 14, 1957, relating to the remarks of Dr. Stebbins to the committee. The recorded minutes read as follows:

MINUTES OF PROGRAM AND BUDGET COMMITTEE, MAY 14, 1957

Dr. Stebbins (United States of America) wished to commend the Director-General and his staff for the important and far-reaching program of education and training so effectively carried out during the past years. It was becoming increasingly apparent that the organization's objectives could be attained only if there was a significant increase in training activities. The magnitude of the task was such that no single organization could be expected to meet all training requirements. He was therefore glad that emphasis was being placed on training teachers and supporting existing training schools as well as on establishing new schools in various parts of the world. He regretted that no statistical analysis of WHO's fellowship program had been included in the report. He welcomed the efforts being made to encourage and expand training facilities within the regions where the need for training was greatest; that development had many advantages, among which were the facts that it saved money and insured that the training was more practical. The development of faculty exchange programs, such as those in operation in the western Pacific and southeast Asia regions, seemed to provide a most effective means of strengthening local educational institutions.

There were some health disciplines which were of particular importance for solving the health problems of underdeveloped countries. Of those problems the most urgent were the need for trained engineers and sanitarians, of whom there was an acute shortage. Even more significant was the difficulty of providing qualified counterpart personnel in most of the countries where sanitation problems required urgent action. To solve that difficulty new national or regional education facilities must be provided. Perhaps as a first step an analytical catalog might be made of the training schools at present in existence.

There was also a great shortage of public-health nurses. The effectiveness of public-health programs depended largely on the maintenance of contact between the family in the home and the public health nurse (that was particularly true of rural areas). Too frequently the importance of the nurse to overall health programs was overlooked. It was necessary to provide greater encouragement and support for public-health nursing education in a large part of the world.

It should not be forgotten that public-health work was teamwork and that the educational program should be arranged accordingly. Emphasis should be placed on the need for making a multidiscipline approach to health problems. And in general, WHO should grant greater priority to education and training.

Remarks by Dr. Lester W. Burkett on May 18, 1957, in the Program and Budget Committee, 10th World Health Assembly

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, the United States delegation to the 10th World Health Assembly was privileged to have as a member the distinguished dean of the Dental School of the University of Pennsylvania, Dr. Lester W. Burkett.

Dr. Burkett was active in the work of the Assembly and contributed greatly to its success. On May 18, 1957, he expressed some thoughts in a meeting of the program and budget committee that made a most favorable impression. The minutes of the committee record the views presented to the committee by Dr. Burkett, as follows:

MINUTES OF COMMITTEE ON PROGRAM AND BUDGET, MAY 18, 1957

Dr. Burkett (United States of America) endorsed the statements of the previous speakers on the need for more detailed statistical information on the question of cancer. However, he wished to speak on a different, though in some ways related, problem.

A number of delegations to the Health Assembly had in the past stressed the need for greater emphasis on dental health. The problem of dental diseases existed in all countries regardless of the level of development of public health services and also to some extent of the standard of living. Though the effects of diseases of the teeth and their supporting structures were rarely evident in mortality tables, they represented an aggravating and complicating factor in a variety of morbid conditions.

Dental health activities deserving serious consideration included epidemiological studies, preventive programs, and educational programs at all levels. The fullest use should be made of the established preventive measures now available. Emphasis on treatment should be confined essentially to cases where diseases of the teeth and jaw represented the limiting factor in rendering effective general health care. In that connection he must emphasize that good general health was impossible unless all the organs of the body were healthy, and the state of oral health was often quite disregarded. Dental health activities should be implemented as an integrated part of the general public health program. The organization should seriously consider appointing a full-time dental health officer to the staff of each of the regional offices in addition to using the services of dental consultants and expert committees on specific dental health problems.

Remarks by Dr. Eugene P. Campbell on May 20, 1957, at a Meeting of the Program and Budget Committee, of the 10th World Health Assembly on the Subject of United States Interest in Malaria Eradication

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, one of the most active members of the United States delegation attending the 10th World Health Assembly was Dr. Eugene P. Campbell, Deputy Chief, Public Health Division, International Cooperation Administration.

Dr. Campbell brought to the Assembly a wide experience that enabled him to be not only exceedingly helpful but also influential in the decisions of the assembly.

On May 20, 1957, Dr. Campbell addressed the program and budget committee of the Assembly on the subject of the United States interest in malaria eradication. The remarks of Dr. Campbell were of great importance and, consequently, received the serious consideration of the delegates. Because of their importance and the general approval accorded them, it is my desire to include them as a part of my remarks under the leave granted to me. They are as follows:

REMARKS OF DR. EUGENE P. CAMPBELL ON MAY 20, 1957, IN THE PROGRAM AND BUDGET COMMITTEE OF THE 10TH WORLD HEALTH ASSEMBLY ON THE SUBJECT, UNITED STATES INTEREST IN MALARIA ERADICATION

Mr. Chairman and fellow delegates, the United States delegation was prepared to make a statement concerning malaria eradication which contained a number of questions requiring clarification. In a report issued during the past few days entitled "Malaria Eradication: Report on Implementation of Resolutions WHA 8.30 and WHA 9.61, Documents A10/P&B/11," many of these questions have been answered.

We note with satisfaction the reports by other delegates on malaria eradication such, for example, as those from Venezuela, Thailand, Vietnam, Ceylon, India, Philippines, Guatemala, Liberia, Iran, Indonesia, and many others. No one could have attended these various sessions without gaining the impression that malaria eradication as an activity in WHO and in the various countries is of very great interest to everyone. The possibilities and prospects of malaria eradication have captured the enthusiastic support and interest of our profession and of people around the world.

Mr. Chairman, turning directly to the subject of this agenda item, we should like to accent the remarks of Dr. Paul Russell, when he stated in his speech of acceptance of the Darling Foundation medal and prize, "No other organization in all history has had a greater worldwide influence toward the eradication of a major disease than has the World

Health Organization in respect to malaria during the past few years. This organization has been the activating catalyst, and motivating mainspring, the international demonstrator and coordinator, in the development of a global assault on malaria."

In the Director General's report referred to above, one can see with great satisfaction some of the efforts of WHO in the field of technical support and advice to member nations. Several teams of experts have made surveys in important areas. The promotion of international coordination has been advanced by subregional, regional, and interregional meetings like the one held in Athens. The training of personnel at all levels has been good but the needs already demand a vastly speeded up program. The exchange of epidemiologic information is gaining momentum.

With regard to basic research, the remarks by the Director General in the introduction to his report are very important, but, since he has touched on this matter at one of the previous sessions of this committee and stressed the funding limitations of the WHO, we would like to see a statement of policy with regard to research in the field of malaria.

Many of us feel that the greatest obstacle to the success of this global project will be our inability to outwit the wily mosquito and our inertia in keeping up with the mutative processes both in the mosquito and in the plasmodia of human malaria. Research is costly; it requires, on occasion, great sacrifices; it cannot be carried out in an assembly-line fashion. For these and other reasons, we believe a comprehensive statement of policy is of utmost importance. We believe, also, that a system of research intelligence would do much to promote and stimulate useful research by organizations and individuals outside the international field.

The Director General has reported that the success of the malaria eradication special account has not been sufficient to be of substantial help. It should be noted, however, that the figure given us last week is nearly twice that of a month ago. One is encouraged to think that a year and a half is a short time in the budgeting cycle of most countries and it might be that some improvement can be expected in the near future.

Whatever the factors are that cause the special account to be ineffective, we believe some good suggestions will come from the delegations to this Assembly. It should be pointed out that there exist specialists in the art of collecting funds who might be contacted to provide consultation on this matter.

During the first plenary session of this Assembly, Dr. Almeida, representing the UNICEF, gave an informative account of the activities of this organization. In one place he indicated that it had been determined that UNICEF would make substantial contributions to malaria eradication through 1959. These contributions to be in the order of magnitude of $9 million a year as a maximum figure. He gave the impression that the bilateral programs are contributing many times this sum for this purpose.

Several delegates have asked me to clarify this point and since I have had the good fortune to work for the bilateral cooperative programs since their inception in 1942, I feel that it would be helpful to give a short account of what ICA and its predecessor agencies (point 4, ECA, IIAA) have done in the antimalaria campaign.

From 1942 to 1950 the bilateral programs jointly carried on intensive and extensive antimalaria activities in the western hemisphere and in Greece and Turkey. With the introduction of the point 4 concept United States bilateral activities were extended to many countries in the eastern Mediterranean, south Asia and western Pacific areas. At the same time many of the bilateral malaria programs in the western hemisphere were being carried on solely by the host governments.

At the present time the United States is cooperating in antimalaria programs in 20 of its 42 bilateral health programs, with the United States spending in 1956 $12 million on this work. The national governments of these 20 countries are spending much larger amounts, of course. The United States contribution to these bilateral programs has been used for employing experts, the purchase of materials and supplies, training of personnel and some research.

During the past 3 months the United States through the ICA made a grant of $1.5 million to the PASO's special malaria fund and we have been informed by Dr. Soper and the delegates from Venezuela and the Dominican Republic that their governments have also made substantial contributions to this same special fund.

I have often been asked the following question by my United States colleagues: Since the United States of America has no more malaria, why do we have such an expensive interest in the problem?

It is not necessary to inform the delegates at this Assembly of the many and serious malaria epidemics that have blackened our history in the United States of America. It will suffice to say that during the 1930's and 1940's the United States Government, in concert with the governments of the various States, came to a full recognition of the fact that malaria was causing a drain upon our economy in sickness, deaths, and loss of productive capacity of about $500 million a year. The knowledge of this tremendous cost was made known to us through the persistent and untiring efforts of Dr. Louis Williams, of the United States Public Health Service. It was largely through his efforts that we carried out from 1942 through 1946 a big push to rid ourselves of this costly scourge. Today, we can say that for a decade we have been free from malaria which fact represents a yearly gain in our own economy of at least $500 million a year. Thus, having demonstrated to ourselves the economic and social benefits of such an effort, we have been willing to use some of our savings to assist others toward this same end.

This tangible economic value of malaria eradication has been studied by experts in many countries such as the Philippines, India, Afghanistan, Brazil, Venezuela, El Salvador, Ceylon, and many others. Through Dr. Pampana we have learned of many of these studies, all telling the same story of improvement in the local economy following the eradication of malaria.

This leads me to my final point, which is that through detailed studies by UNICEF, the International Development Advisory Board, the World Health Organization, and others, the overall cost of eradication is considered to be in the order of magnitude of $500 million to $750 million for a 5-year period. This represents a very large amount of money, but more than the money, such a project will require teamwork, cooperation, sacrifice, and collaboration beyond that which exists at this time between the governments in countries with malaria, the governments in countries with no malaria, international and other intergovernmental organizations.

We in this delegation believe that this project is technically, administratively, and financially possible. "To succeed, however, the various technical, administrative, and financial resources must be coordinated into an organic whole," to borrow a phrase from Dr. Evang. We believe that with the leadership already demonstrated by WHO, it will be possible to achieve success.

We hope that the impressive studies of the economic value of malaria eradication over malaria control will stimulate countries to increase their internal expenditures to allow for conversion of control programs to eradication. In several countries this will be very difficult not only for financial reasons but for technical reasons as well. It is possible that a modified program such as has been proposed by Dr. Pampana for some areas may ease this problem.

It seems inappropriate to recite before this group the vastness of the malaria problem, or discuss at length the peculiar problems which exist in certain areas such as Africa. Furthermore, it would not seem profitable to go over again the long arguments about control versus eradication, physiologic versus behavioral resistance, the place of therapeutic agents in eradication and dozens of other matters. I believe that for the limited time we have at hand it is most important to discuss the ways and means of creating the organic and secure bonds between the various elements of this complex project such as, for example, the coordination between the major international and inter-governmental organizations—the WHO, UNICEF, UNTA, ICA, and others. Regionalization of efforts will assist with the problems of political boundaries so that each country can do its share towards preventing the spread from one country to another. Certain types of meetings held by Dr. Soper in the Americas and by Dr. Mann in South Asia seem to have been particularly helpful in relation to these aspects. The Athens meeting was particularly fruitful in helping us all to more clearly define our problems. Again, we note there is demonstrated leadership along these lines and we are proud to follow it.

Mr. Chairman and fellow delegates, the coming decade presents a golden moment in our profession. At no time in history has such an opportunity been presented to us and we are proud to be identified with this great undertaking.

We may, however, be dealing with a phenomenon like that of a comet whose trajectory brings it close to the earth for a short time and, unless we take the opportunity to study its nature at that short time, we may never again have the chance.

So it might happen with malaria eradication, because of resistance or some other unforeseen obstacle, we might lose our chance unless we strike now.

We, as the United States delegation, wish to affirm to all that we believe malaria eradication is technically, administratively, and financially feasible. We also hope and aspire to interpret this project to our Government so it will continue and, if possible, increase our support for this great undertaking.

Remarks of Dr. H. van Zile Hyde on May 22, 1957, at a Meeting of the Program and Budget Committee, 10th World Health Assembly on the Subject, United States Interest in Malaria Eradication

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, during the entire session of the 10th World Health Assembly held at Geneva,

Switzerland, during the month of May 1957, Dr. H. van Zile Hyde was extremely active in the work of the Assembly and its committees. On May 22, 1957, he announced to the Committee on Program and Budget evidence of United States interest in malaria eradication. His remarks while brief were nevertheless highly important to the work of the Assembly and encouraging to the representatives of other nations in attendance.

I wish to include his statement as part of my remarks. It is as follows:

Mr. Chairman; the United States delegation wishes to transmit to this committee some information which has just been made available. In accordance with the procedures normally followed by the United States Government, the President of the United States yesterday transmitted a message to the United States Congress setting forth the general nature of the requests for funds he will be making in respect of the following year. The committee will be interested to learn that the President has made a special reference to malaria eradication. I will read the passage in his message:

"Malaria is today the world's foremost health problem. Each year it attacks 200 million people, bringing death to 2 million and causing enormous suffering and economic loss in many areas. Today it is practicable to end this scourge in large areas of the world. I propose that the United States join with other nations and organizations which are already spending over $50 million a year on antimalaria activities. In 5 years activities are expected to eradicate this disease."

If the President of the United States is successful in his request for funds, it is to be hoped that the United States will as a result be able to make an additional contribution to WHO and to PASO for malaria eradication, as well as to intensify its activities in that field under bilateral programs. As the previous speaker has stated, it is to be hoped that WHO will assume the leadership of such coordinated work for malaria eradication.

Remarks of Blucher Poole on May 21, 1957, in the Meeting of the Program and Budget Committee, 10th World Health Assembly, at Geneva, Switzerland

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, there is no subject more important nor more generally discussed than peaceful uses of atomic energy. I wish to include as part of my remarks, under the leave granted, the address delivered by Mr. Blucher Poole, chief, bureau of environmental sanitation, State Board of Health of Indiana, on May 21, 1957, at a meeting of the Program and Budget Committee, 10th World Health Assembly. The address delivered is as follows:

REMARKS OF BLUCHER POOLE: PEACEFUL USES OF ATOMIC ENERGY

Mr. Chairman, the delegation of the United States of America notes with satisfaction the Director General's report of the activities of the World Health Organization in connection with the peaceful uses of atomic energy. We are pleased that the WHO has taken the lead in developing a program in the health aspects of atomic energy. Likewise, the program outlined for 1958 appears to be realistic and in accord with WHO's responsibilities.

The World Health Organization has an important role to play in the health aspects of the peaceful uses of atomic energy. The activities by which it can discharge its responsibilities to governments include the following:

1. Assistance to national health services in the development of competences in this field through the training of specialists, and public health administrators, as well as the medical users of radioistopes.

2. The collection and dissemination of information on the medical use of radioisotopes, and the dissemination of standards of radiation protection.

3. Technical assistance and consultation on the health problems resulting from operation of reactors and radioactive waste disposal.

4. Stimulation and coordination of medical research.

We also support close cooperation including, in due course, the development of an agreement, between the World Health Organization and the International Atomic Energy Agency when it is established. We hope that any such cooperation and agreement will fully recognize the responsibility of the World Health Organization, as outlined above. The WHO should carry out those functions in which it has special competence and effectiveness and there should be particular efforts to avoid duplication in this field in which there is such a limited number of internationally qualified experts.

It is recognized that the International Atomic Energy Agency will become the natural focus for international activity in the field of atomic energy. Other specialized agencies also have certain areas of interest in the development of the peaceful uses of atomic energy. However, it must also be recognized that the health administrator for decades has been responsible for monitoring the use of X-radiation before the new sources of radiation were available.

As the industrial use of atomic energy expands, and as the use of sources of radiation for diagnostic and treatment purposes increases, the public will look to the authorities traditionally concerned with the protection of health for advice on measures of safety and protection. At present not all health authorities have individuals capable of advising on these matters. Since the World Health Organization has the inescapable responsibility for programs designed to strengthen health administration, its efforts in this field should be aimed primarily at assisting ministries in developing competences in environmental sanitation, disposal of radioactive wastes, the long-range effects of radiation, and the control of medical uses of radiation sources.

In view of its affiliation with the International Commissions on Radiological Protection, and Radiological Units, the WHO is in a good position to advise governments on the establishment of standards of protection. The close link of the WHO, through its regional organizations, to the responsible health authorities of the world places it in a preeminent position for the dissemination of information involving the health aspects of the development of atomic energy. In addition, through its affiliated nongovernmental organizations, it has a direct channel to the physicians, sanitary engineers, and other health groups who will be responsible for the health aspects of atomic energy throughout the world.

Again, let me say that we are gratified that the WHO is recognizing its responsibilities in this field.

Remarks by Dr. Leroy E. Burney, Chairman, United States Delegation in Committee on Administration, Finance, and Legal Matters, May 23, 1957, Extending The United States Invitation To Hold 11th World Health Assembly in the United States

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, I have been greatly impressed with the importance of the splendid results that have been achieved by the World Health Organization since its inauguration 10 years ago.

I believe it would be a great honor to have the 11th World Health Assembly meet in the United States. I therefore desire to include as part of my remarks the invitation extended by Dr. Burney, Surgeon General of the United States to hold the next assembly in the United States. It was as follows:

REMARKS OF DR. BURNEY EXTENDING INVITATION TO WORLD HEALTH ASSEMBLY TO MEET NEXT YEAR, 1958, IN THE UNITED STATES

Dr. Burney (United States of America) said that the United States delegation had very great pleasure in reiterating the invitation of the United States Government for the holding of the 11th World Health Assembly in their country. Members of the Health Assembly would all be aware of the invitation and would recall the remarks on it made by a Member of the United States Congress at the fourth plenary meeting. We would therefore only remind the committee that the invitation had been extended and assure the committee that the United States Government would do its utmost to ensure that the assembly and the special anniversary session would be both successful and very pleasant. The invitation also included the meeting of the executive board immediately after the 11th World Health Assembly.

He added that, if the invitation were accepted, the United States Government would enter into appropriate arrangements with the organization, giving assurance that the United States Government stood prepared, in accordancec with pertinent legislation, to bear the additional cost involved in holding the Assembly away from headquarters, and that the United States would place at the disposal of the Organization all necessary facilities for the work of those meetings. WHO enjoyed the benefits of the International Organizations Immunities Act which was adopted by the United States Congress in 1948. The provisions of that act, together with other relevant United States legislative and executive measures, were ample to permit the successful conduct of the 11th Health Assembly and the other meetings. No further arrangements between WHO and the United States Government appeared to be necessary with respect to the status, privileges, immunities, and exemptions of persons attending those meetings.

The United States Government would consider it a great honor to be the host of the 11th World Health Assembly. It was its intention to make the visit pleasant and successful and it would work in the closest collaboration with the officers of WHO in making all necessary arrangements.

Remarks of Congressman Wolverton, Broadcast From Geneva, Switzerland, on May 17, 1957, on United Nations Radio on the Subject of the World Health Organization and International Understanding

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, as I have previously expressed, it was a great privilege for me to attend the sessions of the 10th World Health Assembly, held during the month of May 1957 at Geneva, Switzerland.

During my attendance at the sessions of the Assembly I was struck with the sincerity that pervaded the entire Assembly. The representatives from the several countries talked and acted like men dedicated to a high calling. Their evident sincerity was contagious. I felt that as I listened to the expression of views and the definite objectives sought to be attained, that health and the work done to bring its blessings to mankind throughout the world could well be a connecting link to bind the nations of the world together in a common endeavor for peace.

Because of these views, I considered it an honor to be invited to broadcast an address over the United Nations Radio, at Geneva, Switzerland, on May 17, 1957, on the subject of the World Health Organization and international understanding. It was as follows:

REMARKS BY REPRESENTATIVE CHARLES A. WOLVERTON, MEMBER, UNITED STATES DELEGATION TO 10TH WORLD HEALTH ASSEMBLY, ON UNITED NATIONS RADIO, MAY 17, 1957, GENEVA, SWITZERLAND

This World Health Assembly has impressed me forcefully. My foremost impression is of the atmosphere which exists of warm goodwill and friendship among the delegates. It is clear that health is a common denominator which brings all people together. Eighty member countries of the World Health Organization have sent delegations consisting of physicians, administrators, public health experts, and others to this assembly. Despite their highly varied national and political backgrounds, these delegates speak the same language on health matters. They all share a determination to work through WHO to help all countries improve the health of their people.

They know that health is truly international, that disease knows no frontiers, that for half of mankind poor health is still the normal condition of life, that so long as major diseases exist anywhere they are a threat to people everywhere.

I have stressed this aspect of WHO, that it provides a means through which the Governments and people of nearly all countries work together on a constructive and friendly basis with the common aim of better health. The splendid work of WHO is not nearly as well known as it should be, and in particular, this aspect of it—that here in this organization there is a very large measure of international understanding. Over the years I am convinced that this characteristic of WHO will contribute to the building in other fields also of the more peaceful and better relations between countries which are essential for our survival.

The health programs of the World Health Organization also deserve to be much better known. I do not believe that any international organization is accomplishing more for the welfare of mankind in relation to the funds which it expends. Characteristic of the farsighted leadership which WHO exercises on health programs throughout the world is the present drive to eradicate malaria from the world. Two hundred million people a year still suffer from malaria—more than the total population of the United States. Working through WHO, and with stimulation and technical guidance from WHO, many countries are now working together to wipe out malaria. Since mosquitoes and airplanes cross frontiers, this must be done on an international basis. WHO is able to provide the necessary coordination of plans. I am very happy that the International Cooperation Administration of the United States is cooperating fully with WHO in this drive to remove malaria for good.

The fight against malaria and other infectious diseases is, of course, only one phase of the wide-ranging WHO activities for better health. By sending health experts to aid countries to build health programs, and by providing fellowships, WHO is helping to lower the number of deaths among infants and small children, which have been appallingly high in many parts of the world. The organization is helping to improve the health of mothers, of the working population and of older people. The activities of the World Health Organization are almost universal in geographical scope and respond to a universal human need. In the Constitution of WHO the nations have declared that all peoples have the right to the highest possible level of health. WHO is helping them to achieve this rightful condition and in so doing it is bringing mankind closer together.

GENEVA, *May 17, 1957.*

Supplemental Report of Congressman Charles A. Wolverton Relating to Proceedings of 10th World Health Assembly, Geneva, Switzerland, and With Reference to Dr. Leroy E. Burney, Surgeon General, and Dr. H. van Zile Hyde, Chief, Division of International Health, United States Public Health Service, and Members of the United States Delegation

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. WOLVERTON. Mr. Speaker, as a congressional representative attending the 10th World Health Assembly, held at Geneva, Switzerland, I wish to attest to the splendid and effectual work that was done by the United States delegation as a group and individually. They were collectively and individually a credit to our Nation. And one of the most gratifying experiences that I enjoyed was to realize the wide influence the members of the delegation exerted in the many activities of the Assembly, including the work of the committees.

In the success that attended their efforts each member of the delegation played a part—and important part. Dr. Burney, Surgeon General of the United States served as chairman of the United States delegation; and Dr. H. van Zile Hyde, Chief, Division of International Health, United States Public Health Service, was a tower of strength because of his long years of service in the work of the World Health Organization and the numerous friends he had made over a period of years from every country represented in the Assembly. These two men led the delegation with rare ability and great skill at all times.

The members of the delegation were as follows:

DELEGATION OF UNITED STATES OF AMERICA TO 10TH WORLD HEALTH ASSEMBLY

CHIEF DELEGATE

Dr. L. E. Burney, Surgeon General, United States Public Health Service, Department of Health, Education, and Welfare.

DELEGATES

Dr. H. van Zile Hyde, Chief, Division of International Health Bureau of State Services, United States Public Health Service, Department of Health, Education, and Welfare.

Dr. J. R. Reuling, American Medical Association.

ALTERNATES

Mr. H. B. Calderwood, Office of International Economic and Social Affairs, Department of State.

Dr. A. C. McGuinness, special assistant for Health and Medical Affairs, Department of Health, Education, and Welfare.

CONGRESSIONAL ADVISORS

Mr. J. E. FOGARTY, House of Representatives, United States Congress.

Mr. C. A. WOLVERTON, House of Representatives, United States Congress.

ADVISERS

Dr. L. W. Burket, dean, Dental School, University of Pennsylvania.

Col. R. L. Callison, Office of Surgeon General, Department of the Army.

Dr. E. P. Campbell, Deputy Chief, Public Health Division, International Cooperation Administration.

Dr. E. L. Crosby, director, American Hospital Association.

Dr. R. K. C. Lee, president, board of health, Honolulu, T. H.

Mrs. V. R. Pinanski, consultant to the National Advisory Neurological Diseases and Blindness Council, National Institutes of Health, United States Public Health Service.

Mr. B. A. Poole, chief, bureau of environmental sanitation, State Board of Health, Indianapolis, Ind.

Mr. D. H. Popper, acting United States representative to International Organizations, United States resident delegation and Consulate General, Geneva.

Dr. E. L. Stebbins, director, School of Hygiene and Public Health, the Johns Hopkins University.

Mr. R. Olaf Waring, Office of International Administration, Department of State.

Mr. L. Wyatt, Division of International Health, Bureau of State Services, United States Public Health Service, Department of Health, Education, and Welfare.

Dr. F. D. Yoder, president, Association of State and Territorial Health Officers, Cheyenne, Wyo.

Resources of the State of Wyoming

EXTENSION OF REMARKS
OF
HON. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. THOMSON of Wyoming. Mr. Speaker, on many occasions, particularly when we were considering the upper Colorado River projects legislation, I have had occasion to point out the valuable resources of the State of Wyoming, which it is my privilege to represent in the Congress, that can and should be made available to the people of the Nation through development. In this regard I was very pleased to note an editorial that recently appeared in the Rocky Mountain News of Denver, Colo. I was also pleased that it recognized the abilities and the contributions of Wyoming's fine Governor, Milward L. Simpson. Because this editorial calls attention to the opportunities in Wyoming, and the contribution that it can make to the economy of the Nation as a whole as a supplier of much needed resources and raw materials, I am pleased to call the attention of my colleagues in the House to the editorial which follows:

(By Jack Foster)

CHEYENNE, July 27.—A young man asked Gov. Milward Simpson where he should go to establish himself professionally when he had finished college.

"Stay right here," the quick spoken Simpson replied, "Your future lies where you were born. The bluebird has settled in Wyoming."

Governor Simpson believes implicitly that the bluebird of happiness and achievement has, indeed, come to stay in the State of which he is a third generation citizen.

In his simple office in Wyoming's capitol, Governor Simpson looked through a large blue-tinted window on grounds teeming with visitors attracted by Frontier Days, and said: "Wyoming is on the eve of the greatest industrial development in her history. Our State is a storehouse of immeasurable natural resources. Capital is coming from many places to develop these riches."

TACONITE

As an example, Governor Simpson cited taconite. This tough material is a form of iron that until recently could not be processed satisfactorily. In Wyoming's Fremont County there are vast deposits that are of proven 35-year duration.

Carloads of taconite have been sent to Duluth where processing has produced an excellent form of steel. Said Governor Simpson: "Geneva Steel, a Utah subsidiary of U. S. Steel, as you know, will make a final decision by January 1 as to whether to go ahead with full-fledged operation."

He talked as if he had little doubt that the answer would be "Yes."

"But this is just one of the industrial milestones that lie ahead of us," Governor Simpson continued. "Our natural resources have scarcely been touched, and their eventual wealth has hardly been measured."

HIGHLIGHTS

He listed these other industrial highlights shining in Wyoming's future:

Soda ash deposits. The Intermountain Chemical Co. already has $100 million in Southwestern Wyoming, and its soda ash development is steadily increasing.

Iron ore deposits. The State has unbelievably large deposits. Samples from Iron Mountain have been sent to the Krupp works in Germany for experimentation. Results of the tests are very good.

Uranium. Two mills—Western Nuclear and Lucky Mc—already are in operation, and two more in all likelihood will be built.

Oil shale. Wyoming's deposits are comparable with these in Colorado. If shale oil ever becomes a commercial certainly enormous quantities of this processed oil will begin to flow along with natural petroleum from Wyoming.

Power. Pacific Light & Power Co., Southwest Utilities, and Utah Light & Power Co. all have indicated they would establish a grid tieup if they can count on a return flow of power. This, Governor Simpson believes, will be worked out.

DIVERSIFIED

"I could go on like this, citing one prospect after another," Governor Simpson continued. "I could cite developments such as the Reynolds Aluminum Co. in the Big Horn Basin which I believe will be duplicated over and over again in Wyoming's future.

"The industrial bluebird is here all right. Our economy, which has been based primarily on cattle and sheep raising, will be expanded and diversified.

"We saw this coming. And we have prepared for it. We are ready, for example, for the Government's great road program. We already had our own interhighway program established. We were not left behind."

Governor Simpson is now in his third year as Republican chief executive. A son of an old Wyoming family, a great athlete at the University of Wyoming, a distinguished lawyer and cattleman, Mil Simpson was one of the State's best known citizens before he ran for top political office.

He has proved to be one of the smartest and toughest executives that the State has ever had.

He pushed through the legislature a sweeping reorganization bill that consolidated 28 vagrant money-spending agencies into 1 department at a savings of millions to the taxpayers. He looks out upon a State that has no financial crisis and a low mill levy.

MEDIATOR

Yet, despite the toughness of his administration, Mil Simpson is a man who spends much time in meditation and examination of himself.

Every morning he reads a page from a series of thoughts published by Unity.

In the drawer of his desk he has a clipping that reminds him: "I perform my tasks this day with a light and easy touch * * * I do what is before me with steady quietness * * *."

And on the top of his desk is a framed prayer, "Good morning, God," and nearby is a copy of the Book of Common Prayer.

Gov. Milward Simpson seems always to be at ease with himself—and with his job.

Will he run for Governor again in 1958? Answers Governor Simpson:

"I have not made up my mind. I will run for office again only if I am convinced that there are jobs left undone that I must finish."

His many supporters believe that there will be a lot of such jobs.

A Report to the Farmers

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. VURSELL. Mr. Speaker, today I want to make a brief report to the farmers discussing important legislation considered in this session which affects agriculture.

There has been so much discussion over the Federal budget. I feel what we have done in reducing it will be of interest to the farmers.

BUDGET REDUCED

Some will claim greater reductions and some may claim less; however, as nearly as I can determine, as a member of the Appropriations Committee, it appears that the Congress, with the help of the President from the latest estimate, has reduced the budget request by about $3.5 billion, in real cuts that can and will be sustained.

Budget cutting is not new to me, as I have been voting to reduce Federal budgets for the past 15 years. I helped to cut the last Truman budget of $78 billion several billions, which he said could not be reduced.

Politics should have no consideration in trying to reduce cost of Government. I have made my greatest effort to reduce the present budget request of $71.8 billion in this session.

As the ranking Republican member of the Independent Offices Subcommittee on Appropriations, I helped to reduce the budget of 18 agencies of Government coming before us by $537,993,300—the largest reduction of those agencies ever made by this committee.

On another subcommittee on which I served, we reduced that budget by $272,556,860—making a total reduction in my two subcommittees of $810½ million. In addition, I helped reduce every budget that came before us.

There has been so much criticism of what the press terms "The President's Budget." I believe we should admit that those who are largely responsible for the present budget are the Members of Congress who pass the laws, and they generally pass them under pressure from the people.

DEMOCRATS CONTROL CONGRESS

In dicussing the budget, we must keep in mind that President Eisenhower has had a majority of his own party in the Congress only the first 2 years; that the Democratic Party has controlled Congress by a majority of over 30 in the House, and a majority in the Senate throughout 1955, 1956, 1957.

We must realize that more laws mean more Federal employees, more office space, more equipment, more supplies, more salaries, larger pension funds and more benefits, which add up to bigger budgets and higher taxes. In fact, no money can be spent by the President un-

less it is appropriated or authorized by Congress.

SPENDERS WHO BUILT UP BUREAUCRACY NOW SHOUT ECONOMY

Since the budget of $71.8 billion is about $2.4 billion more than the $69.4 billion spent last year to operate the Government, the people became concerned about this sharp increase in the cost of Government. I think the people should have the facts as to where the responsibility lies for the $2.4 billion increase in Government expense.

Unfortunately, there is a large group in Congress that for years has been liberal in spending the taxpayers' money, which has helped to expand and build up the present bureaucracy and cost of Government—largely resulting in this big budget.

These same spenders are now branding it as "the Eisenhower budget." The people should know that in many instances these Members in the last two Congresses have passed new laws which greatly added to the cost of Government, and passed them over the opposition of the President—which expense is reflected in the $71.8 billion budget. Yet, they shout about economy in Government.

A FEW OF MANY INSTANCES WHERE BUDGET WAS INCREASED ABOVE THE PRESIDENT'S REQUEST

First. Last year Senate Democratic leaders insisted upon increasing the Air Force budget over $900,000,000. Secretary of Defense Wilson and other officials opposed it. Nevertheless, they increased the budget by that amount.

Second. That same Congress, with a heavy Democratic vote, passed a flood-insurance indemnity bill, which put the Government into the flood-insurance business obligating the Government to insure risks along the rivers and streams that regular insurance agencies would not insure, which could have cost the Government $5 billion. To get this program started, they asked for $50 million in this session.

As the ranking Member of a Subcommittee on Appropriations, I, along with others refused to approve the $50 million, and we were sustained by a House vote.

The legislation went to the Senate where this amount, $50 million, was written in, and came back to the House on a Conference Committee vote. We beat it again, saving $50 million, and I think we have killed the 10-year program in this legislation, which would ultimately cost $500 million plus insurance risks that could run to $5 billion.

Third. Last year, the same Democratic-controlled Congress, by a heavy vote of that body, over the opposition of myself and others, voted to spend $500 million in 10 years—in giveaway—to help communities build sewage-disposal plants.

I led the fight to help cut out the $50 million in this budget required to put the program into effect. We were defeated, as the record will shaw, by a heavy Democrat majority while a majority of Republicans voted against it.

Fourth. The Congress, last year, by amending the Social Security Act increased the Government's part of participation by $108 million above the President's recommendation.

Fifth. Last year, the Congress added appropriations for more than 50 new reinstated flood-control projects, which involved direct and future expenditures in excess of $700 million. This figure would have been over $1 billion had the President not vetoed H. R. 12080, another flood-control bill which saved the taxpayers, by his veto, $530 million.

I point out these few of many instances where the budget was increased over the President's requests by over $2 billion.

ONE BILLION IN PUBLIC HOUSING PASSED OVER PRESIDENT'S OBJECTION

The following table will show where over $1 billion should have been saved by the Congress in housing authorizations when legislation was passed in this session:

The President requested $975 million.

The House bill increased it to $2,475,000,000.

The Senate bill reduced it to $1,350,000,000.

The House and Senate report of the conferees authorized $1,990,000,000 which is $1,015,000,000 more than the President requested.

I made an earnest fight to reduce these expenditures when the bill was before the House. It would have been greatly reduced had it not been for the opposition of the Democratic majority in the House and Senate. Members of this same party over the years in supporting this legislation have wasted billions of the people's tax money.

Fortunately, outside of such instances to which I have referred, I am glad to say we have had the support of many of the Democrats in this session in reducing appropriations.

The CONGRESSIONAL RECORD of Monday, June 3, 1957, contains a speech in which I pointed out that millions, yes, billions, have been and were still being given away in grants of tax money collected from all of the people which was taken out of the Treasury under the urban renewal and public housing bill for the purpose of rebuilding the large cities.

I showed that there had been allocated to New York City $92 million; to Chicago, $74 million; Philadelphia, $54 million; and large amounts to many cities throughout the Nation; that there was being allocated in the bill before the House a total of $1¼ billion in grant money, or gifts, to do a facelifting job, so to speak, improving large cities at the expense of every taxpayer in every congressional district in the United States. Of course, I voted against the bill.

REA INTEREST RATES

On May 14 I spoke against an amendment which would raise REA loan interest rates.

I will quote a couple of paragraphs of my talk:

The REA is organized by farmers at the grassroots, who put in millions of dollars worth of extra time without any cost. They have managed this great organization so well there are only 3 or 4 small cooperatives that are in financial trouble.

May I say further the Treasury has had a cushion for the last 2 or 3 years of about $40 million in total paid by the cooperatives in advance of the due date which the Government has been able to use.

The REA at 2 percent interest with the low money rates of the past years, and with their advance payments, has made the Government a profit even at the present 2 percent rate. The best financial brains in this country say we cannot increase these rates as provided in this amendment without destroying the financial structure and the services of REA in the future.

We defeated the amendment.

REA LOANS

For REA light and power, we approved budget estimate of $179 million for REA loans, and $60 million for telephone loans in addition to the $200 million loan authorization contained in the Second Deficiency Appropriations Act of 1957.

OTHER FARM LEGISLATION

I supported the soil-bank legislation, and when the bill came before the House to carry out the mandate of the farmers' vote for increased corn acreage, I supported the legislation.

May I quote a paragraph or two from my remarks on March 14, appearing on page 3180 of the CONGRESSIONAL RECORD:

We can give the farmers in the Harrison bill, which has been endorsed by the Farm Bureau Federation of 1,500,000 farmers, and by the Illinois Agricultural Association of my State with 200,000 members, what they voted for. The passage of this bill will make an effective attack to reduce surpluses that have been depressing all phases of agriculture. It, I repeat, will give the farmers either plan they voted for in the corn referendum last December.

This legislation was defeated by the representatives of the cotton farmers and the wheat farmers led by the gentleman from North Carolina [Mr. COOLEY], chairman of the Committee on Agriculture, and the gentleman from Texas [Mr. POAGE], vice chairman of that committee—both Democrats.

SCHOOL LUNCH PROGRAM

We provided $100 million in cash payment to the school lunch program, and for the use of farm commodities in the amount of $185 million—making a total contribution of about $285 million.

PUBLIC LAW 480

We extended Public Law 480 which has been so effective in helping to reduce surpluses and to increase our farm exports to the highest volume in our history without which the economic condition of the farmers would be much worse than they are today.

SOIL CONSERVATION

We provided ample appropriations for the small watershed conservation program, and for every phase of soil conservation including $250 million for the ASC programs.

We increased appropriations for the eradication of brucellosis—great progress is being made against this disease nationwide.

H. R. 7244

We defeated House Resolution 7244, a bill to check-off a certain amount from the proceeds of sales of livestock. This bill was opposed by the American Farm

reau and the Illinois Agricultural sociation. I spoke against the bill d took an active part in bringing about defeat.

FEDERAL SCHOOL CONSTRUCTION

I spoke in opposition to the Federal hool construction bill which was also posed by the Illinois Agricultural Asso- ation, and helped to bring about its de- at.

FARM PRICES

The drop in farm prices which began 1948 was stopped in December 1955. nce then, prices have gradually gone 7 percent. Figures for the first 5 nths indicate the income of farmers Illinois for 1957 will be $200 million ater than in 1956.

Current cattle prices from $20 to $27 as mpared with $17 to $23 last year; hog ices from $18 to $21 as compared to 5 or $16 last year help to increase the oss and net farm income.

The regaining of our farm export ade—now the highest in the history of e Nation—is a stimulating factor in lding up farm commodity prices.

I regret the farmers have not received eir full share of the unprecedented osperity during the past 4 years largely e to the tremendous accumulation of rpluses that depressed all farm prices.

I believe that the passage of Public w 480 and other legislation, and our nstant efforts to remove farm surpluses fer a more optimistic future for the rmers.

ALANCED BUDGETS, NATIONAL DEBT REDUCED, TAXES CUT

Deficit financing has been stopped. hree budgets will be balanced in suc- ession for the first time in 25 years.

A $3.8 billion reduction in the public ebt was made during fiscal years 1956 nd 1957. We will balance the budget gain next year, with a substantial sur- lus to be applied to either a tax reduc- ion, or another payment on the public ebt.

These balanced budgets and public- ebt reductions came about after a Re- ublican Congress in 1953 voted tax re- uctions which have saved American tax- ayers in 4 years $29.6 billion. Not one ax reduction by the Federal Govern- ent has been restored. If taxes are igher, it is the result of higher State nd local rates. Cuts of about $800 mil- ion per year were made in Federal excise axes.

You cannot put a price on freedom. To odernize and build our strongest mili- ary power for peace in our history has equired billions of dollars which are eflected in this budget. We all appre- iate that we have had peace since Presi- ent Eisenhower ended the Korean war.

Our diplomacy and military force have ept Russia from starting another war. We must keep the pressure on her be- ause with the cooperation of the free ations of the world which contain our irbases surrounding her, she is being orced constantly toward world peace. Nothing is of greater importance to the American people.

To Protect the Files of the FBI and Other Government Agencies

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. KEATING. Mr. Speaker, under leave previously granted, I insert editorials from all over the Nation emphasizing the need to enact legislation to protect the files of the FBI and other Government agencies:

[From the Washington Daily News of August 12, 1957]

SPIES AND TRAITORS

The death chamber is the logical end for the career of Col. Rudolf Ivanovich Abel of the Soviet intelligence service. His life is forfeit through the fortunes of the cold war which placed him in a foreign land as a spy. Rigid enforcement of extreme penalties is necessary to discourage espionage, the purpose of which is the military destruction of the United States.

But, however evil his purpose, Colonel Abel is in a class apart from other Soviet spies with whom we have had to deal since the end of the last war. A great many of these have been American citizens, hence traitors as well as spies.

Colonel Abel has at least been loyal, in his own twisted way, to the imperialistic plot of his Kremlin masters. There is no element of even such degraded loyalty in those who would betray their own country and their own kind for a few pieces of silver.

The search for these traitors has been impeded by the fifth amendment takers. Their prosecution has been handicapped by recent Supreme Court decisions, notably in the Jencks case opening up raw FBI files to inspection by defense counsel. Under this decision there is even some question whether Abel can be effectively prosecuted.

A bill to protect the FBI files, by Representative KENNETH B. KEATING, of New York, was approved by the House Judiciary Committee several weeks ago but has stalled, apparently by the civil-rights bill debates. New arrests of both spies and traitors should alert Congress to the pressing necessity for action on this bill.

[From the New York Herald Tribune of June 5, 1957]

A BLOW AT THE FBI

The Supreme Court, in the Jencks case, has laid down a new rule of law with a lot of startling ramifications.

The charge against Clinton E. Jencks, a former official in the International Union of Mine, Mill and Smelter Workers, an outfit long ago expelled from organized labor as Communist dominated, was that he filed a false non-Communist affidavit with the National Labor Relations Board. Jencks was convicted and got a 5-year sentence, but the defense contended that the Federal Bureau of Investigaiton should have been compelled to submit informers' reports in order that Jencks might compare this secret information with the trial testimony of the aforesaid informers.

This argument has been upheld by the Supreme Court, which ordered a new trial. But the disturbing part is that Justice Brennan's majority opinion, in which four of the Court brethren concurred, strikes down the principle that FBI records are confidential and inviolate. Hereafter the Government must either allow the accused to inspect relevant files or let the case go hang. "The burden," says Justice Brennan, "is the Government's, not to be shifted to the trial judge, to decide whether the public prejudice of allowing the crime to go unpunished is greater than that attendant upon the possible disclosure of state secrets and other confidential information in the Government's possession."

Of course there can be no quarreling with the thesis that the Government, even though it is the prosecutor, is rigorously obliged to see that justice is done in criminal cases. Therefore the longstanding rule has been that it is up to the trial judge to determine whether the defendants shall be allowed to examine relevant reports. It should be noted that this was the thinking of Justices Burton and Frankfurter in sending the Jencks case back. But this is quite different from the Brennan decision that FBI files dealing with the subject matter of a trial must be produced for the defense's benefit unless the Government prefers to have the action dismissed.

The point, as the dissenting Justice Clark explains in extensive quotation from Mr. J. Edgar Hoover, is that the FBI materials are both wheat and chaff. They are investigative notes, unevaluated and certainly subject to gross misinterpretation if haphazardly disclosed. In fact, the whole structure of the FBI and its strength and stature depend upon its completely confidential character. Yet the Supreme Court is in effect destroying the essence of the FBI. As Justice Clark says, "those intelligence agencies of our Government engaged in law enforcement may as well close up shop, for the Court has opened their files to the criminal and thus afforded him a Roman holiday for rummaging through confidential information as well as vital national secrets."

With all due respect for the Supreme Court majority, it is hard to see where the public interest is served by crippling the FBI in its effective watch. There is clearly a repair job for Congress to do, and the sooner the better.

[From the Waterloo (Iowa) Daily Courier of June 5, 1957]

COURT RULE HAMPERS FBI LAW ENFORCEMENT

The United States Supreme Court this week handed down a decision which will gravely hamper the effectiveness of the FBI and, presumably, other law-enforcement agencies. It ruled that the defense in a criminal case must be allowed to examine the secret and confidential files of the FBI bearing on the case.

Any law-enforcement agency obtains some of its information about law violations from informers who often have valid reasons for keeping their indentities secret. If there is a chance that their names will be disclosed, they simply will not come forward with the information.

No defendant can be convicted unless sufficient evidence is presented in open court. The source of the original tip has no bearing on the guilt or innocence of the accused.

[From the Pawtucket (R. I.) Times of June 6, 1957]

CONGRESS AND THE FBI FILES

The Supreme Court decision which denies the inviolability of the files of the FBI places on Congress a new duty. The task of restoring a greater degree of secrecy to the data of the investigative agency is one that should not be long delayed.

The Supreme Court ruled the FBI should have been compelled to submit informers'

reports to permit defense counsel to compare the secret information with the trial testimony of the informers. Under that ruling the FBI must submit its relevant records to inspection or the Department of Justice must drop the case.

The relevant records may not be entirely relevant. Dossiers in the FBI files are not always as clear cut as some Justices assumed. The files of an individual contain everything Federal agents gather. Some of the information is false. Some of it is true, for agents accept rumor and gossip in the full knowledge that it is rumor or gossip. Much of this information is not considered evidence because of the great margin of error. Therefore the desirability of keeping such information secret.

The right of the accused citizen to have complete justice may, in the opinion of the Supreme Court, transcend the security of the FBI files. The right of the citizen to prove his innocence by all available data is ordained, even if that includes the right to show by the FBI files that in one instance the witness told one story and contradicted himself in another instance.

Rather than permit civilian lawyers to embark on a fishing expedition in the FBI files, rules should be promulgated to grant to defense counsel only the right to ask and obtain specific confidential information in the Government's possession.

Unless Congress establishes particular rules on the availability of FBI data injustice can be visited upon all the citizens, while the accused individual receives a protection to which he is not entitled.

The question is this: Is the public interest served by crippling the FBI? The answer to that must be given by Congress, in view of the new Supreme Court ruling.

[From the Nashville Banner of June 6, 1957]

THERE ARE SECRETS TO KEEP

Extreme interpeetation of the Supreme Court decree, opening FBI files and similar secret data having to do with criminal cases—notably the prosecution of suspected subversives—could handicap a detail of law enforcement addressed directly to internal security.

The machinery of law functions with meticulous regard for the rights of the accused; and that is as it should be, a proper concern for justice. Star chamber proceedings, or convictions without trial, or judicial farces, are operations practiced in the totalitarian lands; not in America.

Rights have been maintained in this particular, no less uniformly, when the characters on trial were part of a conspiracy to overthrow the government by violence.

There are secret data bearing on security considerations deemed too important to subject to general inspection—or to the scrutiny of suspects who could tip off confederates on specific measures of counter-espionage. There are varieties of crime and degrees of crime, and none could say that in the defense of the Nation from treasonable conspiracy the law can marshal too many legal weapons.

The FBI has been a major asset in perfecting these cases. It has operated well within statute.

The sharp dissent of Justice Tom Clark from this majority court decision was eloquently expressed of national concern: Law enforcement agencies, he said might as well go out of business, if criminals are given a Roman holiday of rummaging through national secrets.

[From the Nashville (Tenn.) Banner of June 13, 1957]

A SAFEGUARD NEEDED

It was the Federal Bureau of Investigation that assembled documented evidence supporting the charge that the Communist Party teaches and advocates the overthrow of the United States Government by force and violence. Neecssarily a lot of the facts adding up to that confirmatory conclusion are in its files. The Communist Party has disputed the facts stated, but the denial does not change them.

The Communist vehicle is a conspiratorial agency, a creature of Soviet Russia, secret in most of its activities—refusing to disclose its own records, even of membership, and relying on the fifth amendment many times to conceal pertinent facts concerning its membership and manipulations.

Where would internal security be just now if the FBI had not operated as it did to compile this evidence?

The Supreme Court has ruled in effect that in certain circumstances the confidential files of the Government must be opened to persons charged with crimes. What is the stopping point of that? What does it do to kindred intelligence units?

It is time for the Congress to be asking itself some of these questions—for Congress is the legislative agency.

America can afford no backward steps weakening law enforcement in a field of operations so essential to national security.

Congress can spell out some needed safeguards not subject to erosion by interpretation.

Settling Our Own Problems

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. DAVIS of Georgia. Mr. Speaker, the Honorable JOHN BELL WILLIAMS, of Mississippi, participated in a television program on last Monday in the course of which he was asked for his opinion regarding the disturbance which has been in progress for some days at Levittown, Pa. Mr. WILLIAM's response was characteristic of his usual statesmanlike conduct of congressional affairs. The Vicksburg (Miss.) Post on August 21 carried an editorial which appropriately compliments Congressman WILLIAMS. I insert the editorial herewith:

SETTLING OUR PROBLEMS

We were quite proud of Congressman JOHN BELL WILLIAMS when, in response to a question put to him on a television program Monday night about the situation in Levittown, Pa., he replied, he felt that was the business of the people of Levittown and of Pennsylvania, and he would not presume to advise them as to their proper procedure. He added he felt that was their problem to work out in their own manner, and he firmly believed the same attitude should be displayed toward the people of the South—to be left to settle their own problems.

It is particularly odd that so many people throughout the length and breadth of America, have become authorities on the Southern problem. Of course, the greatest segment of the population so intensely interested in helping us solve our problem, really are trying to impose their own will upon us, without even the slightest knowledge of what our problem is. Mainly, such people come under the general classification of politicians, but they have ranted and raved enough to completely convince a good many other people, who, though sincere, still are completely ignorant of the facts.

Congressman WILLIAMS is one of a stur body of southerners who will fight to u last ditch for the preservation of that a important civil right—the right of States t handle their own affairs without interfe ence from the Federal Government. Th Constitution guarantees that. The civ rights advocates deny it. A great play coul be made in the South over the Levittow situation, but frankly the general attitud is one of regret that such a situation ha come to pass, and certainly the good peopl of the South are opposed at all times to an type of violence. We feel, as Mr. WILLIAM so eloquently stated, that theirs is a prob lem to be solved without outside help, jus as our own problems must be solved withi our own communities and States, and w do not need the outside help to solve them

Civil-rights bills to the contrary notwith standing, the only American way to solve problem is to be left alone with it, and the it can be settled to the mutual benefit o all. Levittown only emphasizes the fact tha the problem is not confined to the South

---

Ambassador Walter Christian Ploeser

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. RIVERS. Mr. Speaker, it is mos gratifying when we learn that a former distinguished Member of the greates parliamentary body on earth, has been selected to represent this Nation in one of our most important diplomatic posts Recently, the President appointed and the Senate confirmed Walter C. Ploeser Ambassador to one of our great South American neighboring countries, Paraguay. Mr. Speaker, in that vast embrace of neighborly and friendly country to the south of us known as South America we have many friends whose loyalty cordial and deep-seated friendship with this Nation extend over a long period of a great number of years. Since the inception of the Monroe Doctrine and the implementation of that great policy enunciated by the late and distinguished Secretary of State, Cordell Hull, known as the good neighbor policy, we have found the value of the friendship of our southern neighbors. One of the greatest amongst the peoples of South America are those of Paraguay. Mr. Ploeser is a peculiarly well fitted and a natural selection to represent this Nation in Paraguay.

His qualifications are many and varied. He served with distinction in our branch of the Congress where he was one of the most influential and well-informed members of that great Committee on Appropriations. Having had a rich background in business, extending over a period of well over 30 years, Mr. Ploeser, at the age of 50, has lived a life replete with civic, political, and business activity. A distinguished Mason, a distinguished leader in the field of insurance and a man who has risen to the very pinnacle in his chosen profession, Walter Ploeser now enters the diplomatic field knowing the vicissi-

tudes of almost every walk of civic, political, and economic life.

While it is unusual for a Democrat to praise a Republican, Mr. Speaker, we are all Americans; Mr. Ploeser is as ardently devoted to the philosophy of the Republican Party as I am to the constitutional Democratic Party; being a Southerner and from that conservative and great city of Charleston, S. C., I have much in common with the conservative outlook of Mr. Ploeser. This has made him and me, and many of us in Congress, unconscious and natural believers in much and the same basic philosophies. Mr. Ploeser goes to South America eager and virile and at the peak of his physical and mental development. As a distinguished public speaker, he is qualified to defend and enunciate the policy laid down by our great Nation.

Mr. Speaker, I look for a magnificent performance in the diplomatic field by Walter Ploeser. He will, in the finest traditions of this Nation, speak for us in the councils of that great Republic to which he is sent. We will earn friends by his cordial and genial approach to the problems which will confront him; he will endear himself to all South Americans whose traditional background is that of friendliness. He will implement and strengthen the philosophy of the good neighbor policy, and when his job will have been completed, he will return to this Nation leaving behind him in South America legions of friends and compiling a record in the State Department which, I confidently predict, will be equal to that of any who have gone before him to any council any place on earth.

Mr. Speaker, as a Democrat and as an American, I congratulate President Eisenhower on the selection of this distinguished young American. Mr. Speaker, I congratulate America for producing a man of his caliber and of his character. Mr. Speaker I pride myself in having served in the Congress with Walter Ploeser and I wish him, along with many of my other colleagues, well in this assignment. I know that he will fulfill any expectation we have of him in this important and critical position during this difficult period in our Nation's fight for survival when we are called upon to lead the world and defend democracy everywhere on earth. Mr. Speaker, South America is one of the most important places in the universe to defend democracy. Walter Ploeser will fulfill his responsibility.

Industrial Development in Illinois

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. ARENDS. Mr. Speaker, at the governors' conference recently President Eisenhower emphasized the great need for the individual State governments to assume major social and economic responsibilities rather than making constand demands upon the Federal Government. An important part of this administration's program is to return to the States and local communities duties and responsibilities rightfully theirs under our system of Government.

In this connection I take pride in calling your attention to the program for industrial development being carried on in my home State of Illinois. Local groups, such as chambers of commerce, industrial councils, and various civic organizations, have assumed the initiative for local improvements and progress as a coordinated effort, free from Federal aid or assistance.

Through a national advertising program, made possible by a pooling of their financial resources and help of the Illinois State Division of Industrial Planning and Development, the industrial leaders learn of possible site locations for plants and new business opportunities. James H. Stupka, of Kankakee, Ill., a personal friend of mine of long standing and a prominent leader in Illinois, heads up this program. He is the man who developed this idea of a coordinate advertising program for those communities who want to help themselves. He has put into effect a program of teamwork between the State and local governments.

I believe that Mr. Stupka and his board of outstanding civic leaders deserve a great deal of credit and real commendation for what they have undertaken, entirely without pay, and for what they have accomplished. I also believe those communities who have been participating in this program, and not looking to the State or to the Federal Government to do the job for them, deserve commendation. They are Murphysboro, Pinckneyville, DuQuoin, Benton, West Frankfort, Zeigler, Mount Vernon, Kankakee, Savanna, Galesburg, Hillsboro, Monmouth, Gibson City, Belleville, Canton, Beardstown, Rantoul, Carterville, and Chicago. These are communities worth visiting. You will see for yourself the spirit of self-reliance and all that is being accomplished in this coordinate effort for self-improvement.

A Resolution To Amend the Constitution With Respect to the Power of Treaies

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. MASON. Mr. Speaker, I have introduced a joint resolution to amend the Constitution with respect to the power of treaties. This resolution is House Joint Resolution 375, and it reads as follows:

ARTICLE —

SECTION 1. Clause 2 of article VI of the Constitution is amended to read as follows:

"This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding; except that no treaty shall have greater effect within the United States than if it were a law of the United States, and any international agreement, other than a treaty, shall have effect within the United States only to the extent provided by a law of the United States."

I want the RECORD to show the reason for proposing this text, and to contain a brief explanation of its terms.

The adoption of this amendment is vitally necessary to the preservation of the constitutional rights of every American citizen. It has long been evident that some amendment to curb the power of treaties is needed.

At the same time it is necessary to act responsibly. The baby ought not to be thrown out with the bath water. It is not the statesmanlike thing to insist that because international agreements can be abused they ought to be narrowly restricted or be abolished altogether.

I have sought rather to propose an amendment to the Constitution which will redefine and limit the power of treaties, as opposed to the treatymaking power. House Joint Resolution 375 cuts down and limits the power of treaties only to the extent that if an appropriately negotiated treaty or executive agreement is ever found to conflict with a constitutional right of an American, the treaty must give way.

The treatymaking power is, on the other hand, not affected. All the capability for good inherent in these forms of international compact has been retained. Neither the representatives of the President in negotiating an agreement nor the Senate in ratifying need fear that the scope of matters subject to adjustment by such means has been limited. On the contrary, they can be assured that no unintended application of their efforts can operate to deprive an American of his rights.

In addition, this amendment to the Constitution will, for the first time, give formal recognition in that document to the executive agreement.

The sixth article of the Constitution sets up three classes of legal mandates which shall be the "supreme law of the land": the Constitution itself, laws made "in pursuance of" the Constitution, and treaties made "under the authority of" the United States.

It will be seen that if a conflict should arise between the Constitution and a law, the mandate of the Constitution must prevail, for only laws made "in pursuance of" the Constitution are the supreme law of the land. The Supreme Court has so held from the beginning of the last century.

But this is not so in the case of treaties. A treaty need only be made by the President and Senate to be the supreme law of the land. Which is to prevail when it is repugnant to the Constitution? Three times in this century—

in the Holland, Pink, and Girard cases—the Supreme Court has ruled, in effect, that the treaty is supreme over the Constitution.

My amendment will check this damaging interpretation. Since it is already established that a law is subrodinate to the Constitution, a treaty cannot be superior to the Constitution if it has no greater effect than if it were a law.

The effect of this statement is limited to "within the United States" because there are matters outside that limit with which a law would not be able to deal, while a treaty can. To tie the effect of a treaty to that of a law outside the United States might seriously impair the function of one of our instruments of foreign policy, and such a result would be far from my purpose of improving the protection given this country and its citizens.

It would be impossible to achieve the result of subordinating treaties to the Constitution by adding a clause requiring them to be made "in pursuance of" the Constitution, because, as appears from Justice Holmes' opinion in the Holland case, a treaty made by the President and the Senate is now made "in pursuance of" the Constitution.

It might make matters worse to attempt to overcome this difficulty by deleting the existing phrase "under the authority of the United States" and adding a pursuance clause. The courts might still decide no change had been made except to cast doubt on the continuing validity of treaties made before the Constitution was adopted.

The second part of my amendment to article VI of the Constitution is intended to limit the effect of executive agreements. These agreements, which are made by the President or one of his subordinates with a foreign power, are not mentioned in the Constitution. However the Supreme Court has decided that they, too, are "the supreme law of the land," and can be mandates superior to the Constitution itself.

Whether or not an executive agreement is secretly made, and whether or not its provisions are good, I am convinced that one-man law has no place in America. If the provisions of an executive agreement should be effective legal mandates within the United States, they should be made so because they are embodied in a treaty or in a law.

To make that necessarily so is the purpose of the second clause of my amendment.

Let me also point out that this clause will not curb the effect of executive agreements abroad. The power of the President to carry on the legitimate foreign affairs of this country will, as it should, remain unabridged.

It is not necessary to have an additional clause requiring the provisions of an executive agreement to conform to the Constitution, because they will have effect in the United States only insofar as enacted into law—and a law must be made in pursuance of the Constitution.

Mr. Speaker, this amendment speaks in simple words to answer a great need. It will not hobble executive power in the exercise of its legitimate responsibilities in the conduct of our Nation's foreign affairs, but it will assure to our citizens those cherished safeguards of the Constitution which are now in jeopardy. I earnestly solicit support for House Joint Resolution 375.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter which I released today:

K-E-E-N-O-T-E-S

(By Representative ELIZABETH KEE, of West Virginia)

The Washington newspapers reported the incident this past week of three teen-age boys living in this area who deliberately set fire to a friendly dog. The animal, a valuable boxer belonging to a neighbor, had incurred the youngsters' displeasure because, allegedly "it followed them around and broke some shrubbery." So they coated its back with a paint solvent and set it afire.

The incident—even if it were an isolated one—would be alarming enough as an example of juvenile sadism and savagery loose in a civilized society, but it is not isolated. If memory serves me correctly, a similar occurrence was reported as having happened in the area of Charleston, W. Va., within recent months. Wanton cruelty of this nature is but a step away from the kind of depravity that led to the Richard Nathan-Leopold Loeb crime which rocked the Nation a generation or so ago. The next victim of these young sadists—or some others—may not be a hapless dumb brute—but a helpless child.

What is happening in our present-day society to produce the juvenile criminals and delinquents whose hardened crimes are reported daily in the press throughout the Nation? In New York City an entire neighborhood is terrorized by gangs of young hoodlums whose criminal records include armed robbery, mayhem, rape, and murder. In other metropolitan areas, the same pattern is repeated, while in smaller communities one hears of patricide, kidnappings, holdups on the open road, vandalism, and violence.

This is not, believe me, an indictment of modern youth. To offset the grim picture of juvenile delinquency in America, we have such child wonders as the young physicists, atomic scientists, and financial wizards as have recently electrified TV audiences from coast to coast. We have innumerable fine youth organizations—the 4–H Clubs, the Boy Scouts and the Campfire Girls, the Future Farmers of America, the Boys Clubs of America, and others too numerous to mention. In fact, throughout the Nation, we have a preponderance of fine, upstanding young Americans eagerly knocking on the doors of our schools and colleges and preparing themselves for their future responsibilities as homemakers, earners, and good citizens of the United States.

But we also have persistent and serious juvenile delinquency over which PTA's, law-enforcement bodies and Congress itself have been deeply concerned during the past few years. To cope with the problem, juvenile courts have been established at the local level, and nationally, Congress set up a Special Committee To Investigate Juvenile Delinquency. Still the rolls of youthful lawbreakers grow longer. Reform schools and receiving homes for teen-agers and even younger children awaiting trial or sentence, are filled and overflowing.

Where have we failed these children?

Poverty, deprivation and slums are, of course, fertile breeding beds of crime. But many of our youthful criminals come from better than average homes. The three boys, 14, 15, and 16 years old, who committed the atrocity upon the unfortunate boxer—who, incidentally, is reported to be recovering from his wounds—reside in a prosperous suburban community just outside of Washington. What is wrong then with their families, their schools, their community, that they could commit an act of such deliberate cruelty with no other qualms, presumably, than the fear of being caught?

To find the answers to these questions, we must, I feel, examine our own consciences. What kinds of example have we set for them? What moral standards do we uphold, what ideals do we cherish and strive to achieve? What sort of world have we created for them to live in and do we live in it ourselves in accordance with the precepts that we preach?

The mirror, I am sorry to say, does not reflect back a very flattering image of today's adult world.

Every school, every classroom in the Washington area is hopelessly overcrowded. But the school aid bill was defeated by petty, partisan politics. There is a critical teacher shortage, but the teaching profession attracts fewer followers each year because we refuse to pay our teachers an adequate living wage—much less what they are worth.

Still thinking of that tortured dog, how humane have we grown-ups shown ourselves to be? Not very, I fear. After years of trying, animal protective leagues have finally pressured a House committee to report out a bill, H. R. 8308, providing for the humane slaughter of the animals that feed the Nation's dinner tables. The bill is now before the Rules Committee awaiting the granting of a rule before it can be acted upon by the House. In these closing days of the session, it has only a slim change of passage.

Last year 40,000 human beings were killed in car accidents in the United States. Yet the automobile industry continues to turn out faster and faster cars—practically anyone can possess something on wheels so long as he can keep up the payments to the finance companies—teen-agers dash about the roads in hot rods, jeopardizing the lives and limbs of citizens—and the sale of intoxicants, tranquilizers and drug stimulants steadily rises.

When the first atomic bomb was dropped on Hiroshima in World War II, a gasp of dismay and moral indignation went up from the American people. Even though we realized that it would shorten the war and save precious American lives, we still had moral scruples over using this horrible weapon against defenseless civilians. Today, we casually debate whether radioactive fallout will cause sterility and deformity in future generations and gamble the future happiness of our children in the mad race to develop still more hideous weapons of destruction.

And then there is the foreign-aid program and our relations with other peoples of the world. At the close of World War II, first UNRRA and then the Marshall plan came into existence to help friend and conquered foe, alike, to recover from the devastation of the conflict. Incidental to our warmhearted desire to save starving children, to resettle displaced peoples, to repair the havoc and ruin, to comfort and solace war-torn lives, was the thought of our own security and of halting the spread of communism.

True to our traditions as a great and generous people, we won friends because we cared first about human beings. We became

world leaders—not because of our power—but because of our kindness. When on March 12, 1947, President Truman went before a joint session of Congress to ask for a military and economic aid program to preserve the independence of Turkey and Greece, the sum he requested was $400 million. It was not how much we gave, but how we gave it.

Today, foreign aid has become solely a tool of our diplomats and the State Department. The justification for the billions of dollars requested for military and foreign aid in this fiscal year is that any reduction in the amounts of money requested would be dangerously eroding to our own security policies—to our own interests.

Perhaps so. But Americans, who are openhanded when their hearts are appealed to, can become mighty tightfisted when they think they are buying something. We are more than willing to help people—not to buy them.

It is, I feel, because of this change of attitude in our foreign policies and in our foreign relations—it is because our selfish interests are being stressed—that we have lost our moral influence and friends abroad and dimmed the idealism and altruism which have heretofore always characterized us as a nation. In their place we have substituted cynicism, skepticism, and pursuit of the almighty dollar.

If some of our children are misled into following in our own footsteps, the best way to set them back in the paths of righteousness is by first mending our own ways.

Personnel Management as a Service to Agency Operations

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 26, 1957

Mr JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Personnel Management as a Service to Agency Operations" by William G. Torpey, which appeared in the June issue of Social Science.

Dr. Torpey is well known for his knowledge of Government personnel matters, and I ask that Senators pay particular attention to the part headed "Role of Legislative and Top Executive Officials."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERSONNEL MANAGEMENT AS A SERVICE TO AGENCY OPERATIONS

(By William G. Torpey)[1]

The concept of personnel management as a service to Government agency operations means that a personnel organization exists to give direct and positive assistance to the fulfillment of the mission of the Government agency. Emphasis on this concept reflects a development in personnel administration which is being accelerated during the last half of the 20th century. The concept is in sharp contrast to the 19th century philosophy of personnel administration which, in a negative way, sought to impose strict controls upon agency operations in an effort to keep the rascals out.

EXERCISE OF DISCRETION

Today, a fundamental measure of the effectiveness of a personnel office is the degree to which the execution of individual personnel functions on the part of the personnel office helps the rank and file supervisors to carry out their line tasks.

In some phases of personnel management there is much discretion to be exercised by personnel officials and in such instances it may be a relatively simple task for the personnel office to render a service to supervisors. Thus, with the latitude normally provided with respect to the training function, a training program may be readily carried out to the real benefit of the agency. The general lack of legal controls with respect to the training function and the resultant broad opportunity afforded line and staff officials to create and administer worthwhile training programs are conditions which facilitate the service concept.

In certain other phases of personnel management, however, legislative and/or higher executive authority is imposed upon personnel officials in such a restrictive fashion that little or no chance is provided for the personnel official to supplement basic authority and to provide needed service to the line. Hence, pay regulations are often grounded in a legislative mandate so inflexible that the personnel official's role in individual cases may be merely one of carrying out details precisely as contained in the legislation.

It is apparent that the challenge confronting the personnel official who strives to inculcate in his staff the service concept varies in difficulty, not only because of the nature of the particular personnal function involved, but also because of the legal framework upon which the function is based.

ROLE OF LEGISLATIVE AND TOP EXECUTIVE OFFICIALS

Legislative and top executive officials of a jurisdiction must play an active role in the field of public personnel management if the service concept is to become fully effective in Government personnel offices. For example, with respect to professional personnel in the Federal Government, there is now a drastic need for additional pay as well as for improved fringe benefits if the Federal Government is to attract and retain a fair share of the relatively inadequate national supply of scientists and engineers. Surveys indicate that industry, in comparison with government, is offering more for comparable scientific and engineering skills, not only in terms of money but also in terms of fringe benefits.

Many government personnel officials are unable to render the service which they aspire to give in the recruitment area because of the force of competitive factors at work in the Nation's employment market. Various legislative members and administrative officials are giving serious consideration to the problem of salary increases for public personnel; other pending measures would, if adopted, provide for a health insurance program and increase other fringe benefits. Government personnel officials believe the need for positive legislation on these points is urgent. Until such problems are resolved, personnel officials will be seriously handicapped in their efforts to render maximum service to line supervisors.

My experience and observations are that members of the legislature and top executive officials are anxious to assist in the execution of public personnel management. However, they often have insufficient information upon which to base their decisions affecting personnel management. Frankly, I believe key officials in our legislative and executive branches of government are not always provided with sufficient data upon which to base their judgments in the field of personnel administration. Part of the responsibility to provide meaningful information rests squarely upon personnel officials.

Under the concept of personnel management as a service to line operations, personnel officials may be required to take the initiative to reflect the basic personnel needs of their organization, through appropriate channels, to appropriate legislative and higher executive authority. The exercise of such initiative may be necessary to promote positive personnel practices as well as to seek or modify or eliminate outmoded personnel rules.

HUMAN RELATIONS APPROACH

In the field of human relations, personnel officials, in my opinion, can and should render much greater assistance to agency supervisors. By the human relations approach I mean the practice of applying psychology principles of group behavior to employees in a work situation. An effective human relations program constitutes one of the most practical methods by which a personnel office may promote the service concept.[2] Usually, special legislative or top executive action is not necessary in order for personnel officials to act to improve their human relations programs. As a matter of fact, it appears, unfortunately, that some personnel officials give very little, if any, consideration to the human relations aspect of personnel management. Without sharp focus on the human aspects of rules and regulations, it is difficult to visualize a personnel program which can realistically aid agency operations.

Personnel officials, too, have a responsibility for continuous orientation of their staffs in the service concept. Such orientation should embrace, among other items, not only the use of illustrations from individuals cases occurring in a personnel office but also emphasis on fundamental principles related to the role of personnel management in the administrative process. The fact that, like other offices, personnel offices are subject to frequent turnover points up the necessity for periodic action in this respect. Each employee of a personnel office must have an honest appreciation of the service concept if the total personnel program is to be effective.

NEED FOR SERVICE CONCEPT

Personnel offices are in a vital position to contribute to the success (or failure) of their agencies. In addition to such factors as a systematic plan for personnel files and records, a set of progressive rules and regulations, and attractive physical aspects of a personnel office there is the need, on the part of the personnel office, for the sincere adoption of the concept of service to line operations. The service concept is not new, but personnel operations of public personnel offices often seem to be carried out without recognition of its import. Without this concept, the personnel office loses the basis for its existence.

---

[1] Dr. Torpey, formerly personnel officer of the Naval Research Laboratory, Washington, D. C., is currently consultant to the President's Committee on Scientists and Engineers. He is also a part-time faculty member in the School of Government of George Washington University.

Footnotes at end of speech.

A Last Salute

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ontario-Upland (Calif.) Daily Report of Friday, May 3, 1957:

A LAST SALUTE

Senator Joseph R. McCarthy's unexpected death at Bethesda Naval Hospital marked far more than merely the end of a stormy and colorful political career. It was the death of the man that Communists both here and abroad had come to fear and hate more than any other elected official. Death yesterday closed the last chapter in the life story of a man whose drive, determination, and action put the fear of God into the hearts of Communists everywhere as only a handful of men have ever been able to do.

One Washington correspondent wrote that "the ex-marine and uncompromising Red hunter died at age 47, before the voters of Wisconsin—much less the perspective of history—could pass judgment on his spectacular and stormy Senate career." Curiously enough, Joseph McCarthy's place in American history never will depend upon what the voters of Wisconsin, or any other normal Americans, might have thought of his actions and objectives.

What spelled out Joseph McCarthy's importance as a major figure in this era's history was what the leaders of world communism thought of him. They feared him as they now fear only one living man, Director J. Edgar Hoover of the FBI. Proof of this appeared in the New York Daily Worker, official Communist Party organ, on August 25, 1954, at the height of the concerted worldwide drive by the Communist organization to get McCarthy. There the Reds' two arch enemies appeared in a Daily Worker cartoon—both looking like thugs, of course—as part of the all-out push for Senate censure of the Wisconsin Senator which the Communists finally got later that year.

Day after day, week after week Communist publications, such as the Daily Worker, whipped up the party's members, fellow travelers and dupes in a frenzy of hatred for this man who threatened to wreck the whole Communist conspiracy in America. Nobody who ever saw copies of the Daily Worker, or its West Coast counterpart, the People's World, during that period ever would be likely to forget the frothing front page attacks upon this man, or the Communists' wild appeals to everyone who ever had a soft spot for communism or socialism to do everything in his power to mobilize a crushing counterattack against the Senator. Those headlines in the Daily Worker and the People's World answered in full the question of whether Senator McCarthy's anti-Red activities were really valid, effective and actually important. They were a source of moral fear throughout the Communist world.

Hard, ruthless and devasting, Joe McCarthy dealt the Communists sledge hammer blows in a language and a manner they understood clearly and feared accordingly. Senator McCarthy knew them for what they were and pointed them out openly, fearlessly and relentlessly. As early as May 4, 1950, the national secretary of the Communist Party sent an urgent message to all Communist Party members through the Daily Worker: "I urge all Communist Party members, and all antifascists, to yield second place to none in the fight to rid our country of the fascist poison of McCarthyism." Communists were the first to understand what a deadly threat this Wisconsin Senator was to Communists and their plans.

Four years later, on March 17, 1954, this "get McCarthy" program was nearing its climax. In a byline article in the New York Daily Worker, none other than William Z. Foster, longtime United States Communist Party chairman, declared: "McCarthy will have many other powerful supporters. But the President and his Wall Street backers should not be allowed to get away with this * * * McCarthy must be driven out of American public life completely. That would be an appetizer to a real head-on attack upon the main body of the threatening Fascist movement in this country." Anyone even moderately familiar with Communist lingo knows to substitute the term "anti-Communist" for that word "Fascist" in any Communist writing. Appetizer indeed.

Significantly, the United States Communists admitted in the party's theoretical monthly magazine, Political Affairs, that "an organic part of the fight against McCarthyism is the fight to defend the Communists now being indicted and tried under the Smith, McCarran, and sedition laws." In short, it was a fight to the death so far as the Communists in America were concerned and they used every weapon they could lay their hands on to kill off the Senator from Wisconsin. Yet only a few Americans, sitting comfortably and seemingly secure in their pleasant homes, seemed to understand that fact. Senator McCarthy understood it, however, and in consequence refused to modify or slack off in his relentless anti-Communist drive.

Ultimately, of course, pro-Communists aided by an astounding number of unwitting dupes, finally broke Senator McCarthy's political power as a leader in the anti-Communist war. Such was the vilification heaped upon him by both the knowing and the unknowing in saving the Communist Party from disaster that even historians will be misled on the sort of man he really was and the fervor that motivated his actions.

As Edmund Burke, the great British statesman, said in his eulogy of a public figure in another era comparable with Joseph McCarthy: "He well knows that snares are spread about his path, from personal animosity * * * and possibly from popular delusion. But he has put to hazard his ease, his security, his interest, his power, even his * * * popularity. * * * He is traduced and abused for his supposed motives. He will remember that obloquy is a necessary ingredient in the composition of all true glory; he will remember * * * that calumny and abuse are essential parts of triumph."

Although many of them will never realize it now, Senator McCarthy deserves a last salute from every American who, as did Joseph McCarthy, has placed his country and its welfare above all else.

Italy's Comeback Started Under Marshall Plan Initiated by President Truman

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an excerpt of an article written by Drew Pearson, which appeared in the Washington Post and Times Herald on August 26, 1957:

Unlike Maxwell Gluck, the much publicized political ambassador to Ceylon, James D. Zellerbach, Ike's new Ambassador to Italy, knows a whale of a lot about the country to which he is appointed. Zellerbach contributes to the Republican Party, but he also spent several years in Italy, appointed by Truman to administer the Marshall plan. He knows Italy intimately, has a genuine affection for its people.

Home on leave at his own expense, Ambassador Zellerbach paid tribute to the old pro-democrat leaders of Italy, including the late Premier de Gasperi, for starting Italy's comeback.

"It started under the Marshall plan," he explained. "At the time I left Italy there were over 120 'bonification' plans which provided for erosion control, irrigation, reforestation, and housing. I have recently visited some of the projects that we started when we were there with the Marshall plan, and they have done great things for Italy."

We Must Clarify the Situation Created by the Jencks Decision

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include several excellent editorials from newspapers dealing with the importance of early action on the bill to protect the files of the FBI and other investigative agencies. It is essential that action be taken on this legislation before adjournment. If that is not done, scores of criminals and enemies of the country will go scot free before January when we reconvene:

[From the Schenectady (N. Y.) Union Star of August 15, 1957]

FBI FILE INSPECTION CLARIFICATION A MUST

Shortly after the Supreme Court decisions in which individual rights were so strongly stressed as to rouse a fear in some quarters that protecting ourselves against subversion might be jeopardized, this newspaper commented that if the Court had swung too far in guarding such rights, public opinion and Congress could rectify that overzealousness. The arrest of an alleged Russian master spy has given urgency for such correction, since there is a possibility that rather than open FBI files the case might not be prosecuted and the spy merely deported.

Two bills are before Congress restricting the opening of FBI files. A House bill, introduced by Representative WALTERS, Pennsylvania Democrat, was feared so strong as to be unconstitutional, and Congressman KEATING, Rochester Republican, offered an amendment leaving to judges decision on what in the files is relevant to fair defense. In the Senate, Senator O'MAHONEY, Wyoming Democrat, sponsored a somewhat more liberal bill, but one he hopes would prevent fishing expeditions into FBI reports.

What has been going on is uncertain interpretation of the Court's ruling. Clarifying that is what is really before Congress. Tempered opinion seems to be building up for the moderate Keating amendment. At any rate

ion should be taken before adjournment, eduled for late this month.

---

om the Jamestown (N. Y.) Post-Journal of August 16, 1957]

HOOVER WARNS CONGRESS

Press association dispatches from Washing- indicate Congress may adjourn without ing action on a bill to limit the access a endant may have to secret files of the FBI taining information against him. It is redible that the Senate and House would in their duty to overcome as far as may legally possible the unfortuante and wide- criticized decision of the Supreme Court, nded down under the leadership of the ra liberal Chief Justice Earl Warren. It o exaggeration to state that never in the tory of the Nation's highest tribunal has a ing been so sharply criticized by lawyers, men, and the press.

J. Edgar Hoover, the brilliant and dedicated der of the Federal Bureau of Investigation, s just pointed out how extremely urgent is need of corrective legislation. In a let- to former Speaker JOSEPH W. MARTIN, publican leader of the House of Repre- tatives, Mr. Hoover has disclosed that al- dy the Department of Justice had had to n loose on society persons charged with deral offenses rather than open FBI files. reover, informants have already stopped ing information that the agency needs in rying out its investigation of Communist bversion and other major crimes.

In his communication to Mr. MARTIN about e pending corrective legislation, Mr. Hoover ote: "The need is urgent, I can assure u. Its enactment is vital to the future ility of the FBI to carry out its internal curity and law-enforcement responsibili- s."

"Already," Mr. Hoover revealed, "we have d the revolting experience of witnessing rsons charged with violations of Federal w turned loose when the Government was ed with the dilemma of either disclosing e contents of its investigative reports or ndoning a prosecution. This situation uld have been avoided had it been possible present records and documents to the urt for a private inspection to safeguard e rights of the defendant as is provided the legisaltion presently before Congress." Adjournment is not so pressing that Con- ss should refuse to take what time may be quired for protecting FBI files vital to the tional security. The committee on com- nism of the American Bar Association in recent call upon Congress to pass leg- ation safeguarding FBI files, properly ressed the fact that "it is traditional and ht that our courts are zealous in pro- cting individual rights," but it also em- asizes that "it is equally necessary that e executive and legisaltive branches take fective action to gird our country against mmunist infiltration and aggression."

And significantly the committee of dis- guished lawyers sounded a warning that forts of the Government to combat Com- nist infiltration may be endangered "if e courts lean too far backward in the intenance of theoretical civil rights."

---

rom the Long Beach (Calif.) Independent Press-Telegram of August 15, 1957]

FBI FEELS EFFECT OF COURT RULING

On June 3 the United States Supreme urt handed down a ruling that the Gov- nment must produce, for inspection by e defense, any secret reports to the FBI ade by prosecution witnesses.

This was tantamount to telling the Gov- nment it must reveal its sources or give up e case.

The Court decision has had its effect with- t delay, as noted by FBI Director J. Edgar Hoover in a recent letter to Representative MARTIN, the House minority leader.

"The fact that prior to June 3, 1957, informed people knew that our files were inviolate had been a powerful factor in our ability to secure information. Since the Jencks decision, however, we have faced one obstacle after another. We have experienced instance after instance where sources of information have been closed to our agents because of the fear that the confidence we could once guarantee could no longer be assured. We have also experienced a reluctance on the part of numerous citizens to cooperate as freely as they once did."

As Justice Tom C. Clark said in his dissenting opinion on the Jencks case, the intelligence agencies engaged in law enforcement may as well close up shop if Congress fails to plug up the loopholes created by the majority opinion of the Court.

Perhaps the letter from Mr. Hoover will help dramatize to Congress the urgency of such legislation. A bill has been approved by the House Judiciary Committee. Unless floor action is taken within the next few days, hope for a remedial law will be suspended until the next session.

This is one piece of legislation Congress can ill afford to brush aside in the final big rush to clear the decks before adjournment. It involves the Nation's security.

[From the New Haven (Conn.) Register of August 16, 1957]

SAFEGUARDING THE FBI

Few Americans are delighted at the prospect of Federal Bureau of Investigation files being thrown open for inspection by defendants in subversion cases.

The Supreme Court of the United States recently decided, nevertheless, that such defendants should enjoy access to FBI files—evidently thinking more of individual rights in such cases than of the entire Nation's right to security.

The harm that could be wrought if Communists or their fellow travelers were allowed to learn the identities of FBI informers can be readily imagined.

Those files have been closely guarded—necessarily and properly—in the past, because the Bureau by the very nature of its work must and does rely on information by persons who are required to do much of their work in secret.

Congress should not adjourn, therefore, without enacting legislation to safeguard FBI files from exposure to Communists—or anyone else.

One spur to congressional action on this vital measure, one would suppose, would be speculation that the Government might even prefer to drop its case against the alleged Russian spy, Col. Rudolf Ivanovich Abel, rather than allow the defense to see the relevant files.

Congress needs to pass such a safeguard measure if for no better reason than to demonstrate its continuing support for FBI Director J. Edgar Hoover.

Mr. Hoover, in his annual report of July 28, reminded Congress and the country that "the very basis of our success is the FBI's assurance to this country's citizens that the information they give will be maintained in the strictest confidence in our files."

We applaud that statement.

But the applause one hears for the Supreme Court's ruling that America's enemies should be privileged to pore over the FBI's confidential material is faint indeed.

[From the Hartford (Conn.) Courant of August 13, 1957]

THE FBI AND THE ABEL CASE

The case of Col. Rudolf Ivanovich Abel, a Soviet master spy, brings sharply in focus the present status of the FBI as a consequence of the recent Supreme Court ruling. It is believed by many that the trial of this case will show a direct line from Colonel Abel to the Soviet. But under the ruling of the Supreme Court the FBI may have to open its files to defense counsel revealing valuable sources of information.

The Justice Department has already withdrawn prosecution in a half dozen cases since the decision in the Jencks case and others have been dismissed by the court because of the reluctance of the FBI to produce their records. Thus an intolerable situation will, in the important Abel case, become disastrous unless Congress moves to correct the situation.

Traditionally the law of the Anglo-Saxon countries has tried to achieve a nice balance between individual rights and the group security. But it is fundamental to all law that every government has a right to secure its own well-being by legislation that protects against its enemies. Thus, while the Supreme Court interprets the law, Congress makes it. And Congress has the right to pass any law that does not contravene the basic law of the Constitution.

There is a reasonable middle ground that will protect the defendant's rights and that will also protect against what Justice Clark described as "A Roman holiday of rummaging" through the files of the FBI. The Abel case proves that the FBI can never relax its vigilance. That organization is the front-line protection against spies and saboteurs. The reality of that danger will be demonstrated in the trial of Colonel Abel. Meanwhile the least the country can do is to back up the FBI by appropriate legislation permitting the trial justice to rule on the admissibility in evidence of FBI file material.

[From the Stamford (Conn.) Advocate of August 14, 1957]

SECURITY FIRST

The civil-rights bill has run into difficulty in the House. This delay may have an unfortunate effect on the security of the Nation unless public opinion is aroused. In a decision concerning a man named Jencks, the Supreme Court made a new bit of law which has destroyed the effectiveness of the FBI. While fuzzy-minded liberals laud the decision which opens the files of the security agency to the Communist Party as a victory for the individual the safety of the Nation is endangered.

The courts have, as a result of this decision, ordered the FBI and other Federal agencies to provide full investigative reports to defense counsel even before trial starts. This has now raised doubt whether the Government can successfully prosecute such a master spy as Rudolph Abel. J. Edgar Hoover has appealed to Representative JOSEPH MARTIN to pass legislation protecting FBI files from Communist raids.

His reason is twofold. First, as a law agent, Mr. Hoover naturally finds it revolting to see persons he knows to be guilty of crime go free because of this decision. But the second reason is more important. Before the Jencks decision the FBI files were known to be inviolate. It was possible for FBI agents to get information from some persons because these persons knew that their confidence would be respected. Now, whole lines of communication have been cut off between the FBI and criminal groups because agents can no longer guarantee that confidence will be kept. There is a reluctance on the part of citizens to cooperate freely. In the case of the Communist conspiracy it is impossible to get the unsupported hints which in the past have led to valuable discoveries.

It would be well to point out that the recent decisions of the Supreme Court have made it difficult, if not impossible, for congressional investigations to successfully fight

the Communist menace. The first amendment has been added to the fifth as an escape for those who would hide the extent of their past treasons. State law bodies have been prevented from protecting the public against the Communist conspiracy. This left only the FBI to protect the Nation. The Jencks case has made it almost impossible for the FBI to operate. The victory for the Communist is almost complete.

The Congress can clarify the court decision so as to enable the Nation to protect itself. Mr. Hoover says "passage of this bill is absolutely essential if we are to prevent sabotage of our national security." Mr. Hoover has not in the past been an alarmist. Our Congressmen will fail in their duty if they for any reason fail to pass this bill before Congress goes on its summer vacation.

Hon. Harry L. Gandy

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. BERRY. Mr. Speaker, it is my privilege to insert in the Appendix of the RECORD an editorial from the Gate City—Rapid City, S. Dak.—Guide on the life and service of the Honorable Harry L. Gandy, a former Representative of the Second Congressional District of South Dakota.

Many of my colleagues are acquainted with the editor and publisher of the Gate City Guide, the Honorable Theodore—Dates—B. Werner, who himself served as a Member of Congress from the Second Congressional District of South Dakota for two terms.

It was my privilege to pay tribute on the floor of this House to the Honorable Harry L. Gandy on the day that funeral services were held for him, and it is now my privilege to pay tribute to another former colleague and the fine service he rendered to western South Dakota during his days in Congress, the Honorable Theodore B. Werner, whose editorial on the life of Harry L. Gandy is as follows:

HON. HARRY L. GANDY

Older residents throughout the western part of South Dakota were grieved at the news of the death of former Congressman H. L. Gandy in California on Thursday, August 15, 2 days after he celebrated his 76th birthday. He had been in ill health for some months, suffering from a diabetic condition, but the cause of death was a heart attack.

Harry Gandy came to Rapid City from Indiana in 1907 and engaged in newspaper work. He followed this for 2 years, establishing himself in the weekly newspaper field at Wasta where he published the Gazette. He was active in politics and in 1910 was elected to the State Senate from this county, defeating a Republican wheelhorse and a strongly entrenched Republican machine. He made an enviable record in the State Senate and his party drafted him to be its candidate for Congress in the newly established third district. He made a hard campaign and lost by a small margin, greatly reducing the GOP majority.

He again was a candidate in 1914 and in this campaign he was successful, defeating Judge Wm. G. Rice, of Deadwood, by a handsome majority. He took his seat in Congress in March 1915. It was not long before Congressman Gandy's services were recognized throughout the district. No homesteader who wrote the new Congressman failed to get a sympathetic hearing and as a result he was twice reelected, in 1916 and 1918, serving during the trying period of the First World War.

In 1920 he was defeated by a small vote in spite of his party's unpopularity due to the war which had ended in victory, but left many of our fine citizens still imbued with deep sympathies with the fatherland.

After his services as Congressman ended Mr. Gandy served in positions of high responsibilities in national scope, which prevented his return to Rapid City. He kept his legal residence here and never lost a personal interest in western South Dakota.

During his 25 years of actual residence in this area he left his impress. In public service he gave a full measure of devotion. He learned the art of politics on the knee of such illustrious Democrats and statesmen as Thomas R. Marshall, Vice President in the Woodrow Wilson reign, and held true to the ideals of Grover Cleveland that "a public office is a public trust." Gandy was a servant of the people and as such he functioned in every public office he was honored to hold. There was none of the bureaucrat in his makeup * * * he was ever mindful of his duty and responsibilities to the people. That is what made him a fine public official.

He was appointed a member of the Custer State park board by Gov. Tom Berry and served during the rebuilding and development of the Sylvan Lake resort in Custer State Park. Mr. Gandy spent much of his time from 1932 to 1936 in South Dakota, and here in Rapid City he maintained his home and residence. Only a few years back he sold his residential property on South Street, which for many years was the Gandy home. His tenure of office as park board member ended with the election of a Republican governor.

Harry Gandy was a man of ability and resource. He was of the old school in thought—he worked himself up the hard way. Nothing came easy, but he always contended that what was worthwhile was worth working for. He was a hard worker—he could and did carry a heavy load of work.

Today we could almost refer to him as an old-timer. The younger generation is quite unfamiliar with the vicissitudes of the homesteader of the early 1900's; of their troubles with the Federal land investigators and of their need, too, for a real friend. Every harassed homesteader in trouble had a friend in Congressman Gandy. He was at their side when they needed help to fight the big bad Government (or rather the bureacrats of those days—only they were not called that then).

Today his earthly remains are being lowered into the soil of Mountain View Cemetery where the gentle breezes will forever sing a requiem for him and his friends of yesteryear whom he now joins. His work ended, and his last wish carried out, let there be peace and rest for one who in past years worked so faithfully and hard for others.

Harry Gandy may have been a statesman, a fine administrator, and a keen business executive, but to one who has been a friend of more than a half century he will always be "a printer," one of the old school, of the Fourth Estate—when this was more than just a name or a title. As we dip our pen once again to record the passing of one of the faithful we are of heavy heart. It is not without sorrow that we affix "30" to this column on Harry L. Gandy.

For now, it is farewell.

Heavy Damage From Floods on Red Riv

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. BROOKS of Louisiana. M Speaker, this year has witnessed one the most devastating floods the Re River Valley has ever had. The flo waters reached the Louisiana portion the Red River in tremendous volume a spread out over the countryside. O people fought for their lives and the property to hold back the damagi effects of these waters coming down t Red from its upper reaches. The anom alous situation presented is that mo of the water which choked up the Re River from the Arkansas line to t mouth came from areas far north an west of Louisiana. It was water fro Texas, Oklahoma, New Mexico, an Arkansas which was seeking its wa down to the Gulf of Mexico. We L Louisiana had to contend with this si uation.

Since the floodwaters have receded the State of Louisiana advises me tha it has made a survey of the damage don to the banks and levees of Red River i Louisiana. The total amount of mone required to repair the banks and leve of the damage done during this flood i Louisiana is $1,610,500. The Honorabl Lorris Wimberly, State director of publi works has headed the State group whic has made the extensive study. While know that Director Wimberly has don his best to be accurate in his estimates o the needed bank stabilization work, I be lieve he is very conservative in his figur and I am presenting the original letter o August 20, 1957, from Director Wimber to our two Senators, to my colleague Congressman LONG, and to myself, tha the Congress may be aware of the tre mendous amount of destruction i Louisiana because of the floods of thi current year.

I also am taking this opportunity o presenting herewith a copy of the lette of August 20, 1957, from the State o Louisiana by Lorris Wimberly, director of public welfare, the original of whic was addressed to Col. William H. Lewi district engineer, New Orleans, La., out lining in detail the damage done and the cost of repairing the damages for bank stabilization in Louisiana. I am asking that this document also be extended in the RECORD that this Congress may know the heavy burden which Louisiana bears in channeling the floodwaters from other areas through our State on their way to the Gulf of Mexico.

Of course, it is too late in the year to include appropriations of this sort in a flood control appropriation bill. I trust, however, that all of the members of the Appropriations Committee of the House of Representatives and the Senate will read these two documents carefully and having read them, I am sure they will be responsive when requests come fo

propriations to repair this damage er the first of the year. These docu- nts are as follows:

STATE OF LOUISIANA,
DEPARTMENT OF PUBLIC WORKS,
Baton Rouge, August 20, 1957.

n. ALLEN J. ELLENDER,
n. RUSSELL B. LONG,
United States Senate,
Washington, D. C.

n. OVERTON BROOKS,
n. GEORGE S. LONG,
House of Representatives,
Washington, D. C.

DEAR SENATORS ELLENDER AND LONG, AND NGRESSMEN BROOKS AND LONG: During y and June of this year Louisiana suf- ed from not one but two devastating ds on Red River. Because of their long ation these floods caused serious and ex- sive damage to the bank protection ks along Red River. As soon as the ers receded and it was possible to make tailed inspection, the department of blic works made a survey of the cost of airing, replacing, and extending existing k protection works and the cost of the essary extensions to protect bank sta- ation works now in place. The total ount of money required would be 10,500.

these funds are not made available it mean not only the loss of large sums money already expended on bank pro- tion works, but the loss of valuable farm ds and improvements along the river as ll.

ttached is a copy of a letter to Col. lliam H. Lewis, district engineer, New leans District, Corps of Engineers, United tes Army, outlining this situation and ing the repairs, replacements, and exten- s that are needed together with their esti- ted costs. Knowing of your keen inter- in the welfare and continued develop- nt of the Red River Valley we are nishing the pertinent data on this sit- ion and requesting that you do every- ng possible to see that the funds required made available. If there is anything t this department can do to assist you your efforts we will only be too glad to so.

The department of public works appre- tes your continued interest in the flood ntrol, bank stabilization and navigation grams of our State.

Sincerely,

LORRIS M. WIMBERLY,
Director.

STATE OF LOUISIANA,
DEPARTMENT OF PUBLIC WORKS,
Baton Rouge, August 20, 1957.

. WILLIAM H. LEWIS,
District Engineer, New Orleans Dis- trict, Corps of Engineers, United States Army, New Orleans, La.

DEAR COLONEL LEWIS: Since 1945 the Corps Engineers has made great progress in the k protection program on Red River from Louisiana-Arkansas line to Moncla, La. e money expended on bank protection rks has paid great dividends in prevent- the loss of valuable farmlands and in protection of highways, railroads, and uable improvements which border the er.

During April, May, and June of this year uisiana suffered not 1 but 2 major floods Red River. This situation caused its nks to be subjected to caving stages, not y during the periods of the two major ods, but also during the time required to pty the Denison and Texarkana Reser- rs—or a total of 117 days. These high ges resulted in extensive damage to the tments and dike systems, and serious ving both above and below existing bank- tection works.

It is imperative that the damage to the existing bank-protection works be repaired promptly and that the necessary upstream and downstream extensions be installed to protect the present channel stabilization works. If this work is not done a greater part of the progress which has been made on this very effective bank-protection program will be lost.

The levee boards along Red River are making every effort to repair and correct minor damages to the bank stabilization work but are not financially able to furnish the funds necessary to repair the tremendous damages caused by this flood.

Mr. D. V. Cresap, district engineer for the department of public works, has made a careful inspection of all of the bank-protection installations along Red River and has prepared the following cost estimate of the necessary emergency repair work.

Estimates of costs for repairing, replacing, or extending dikes and standard board revetment from Arkansas-Louisiana State line to Boyce, La.

1. Uni, pile dikes, Caddo Parish	$46,700
2. Cash Bend, standard board revetment, Caddo Parish	14,400
3. Brownlee Bend, standard board revetment, Bossier Parish	9,000
4. Twelve Mile Bayou Bend, standard board revetment, Caddo Parish	36,000
5. Twelve Mile Bayou Bend, pile dikes, Caddo Parish	161,300
6. Honore Bend, pile dikes, Bossier Parish	9,900
7. Douglas Island Bend, pile dikes, Caddo Parish	155,400
8. Eagle Bend, standard board revetment, Caddo Parish	162,000
9. Curtis Bend, standard board revement, Bossier Parish	43,000
10. Lucas Bend, standard board revetment, Caddo Parish	129,900
11. Lucas Bend, pile dikes, Caddo Parish	32,600
12. Gahagan Bend, pile dikes, Red River Parish	2,100
13. Armistead, standard board revetment, Red River Parish	118,200
14. Hanna, pile dikes, Red River Parish	85,000
15. Colfax, pile dikes, Grant Parish	85,700
16. McNeely Bend, standard board revetment, Grant Parish	15,000
Total	1,106,200

Estimate of cost for repairing, replacing, or extending dikes and standard board revetment from Boyce to Moncla, La.

1. Boyce, pile dikes, Rapides Parish	$20,400
2. Bertrand, pile dikes, Rapides Parish	4,300
3. Hudson, standard board revetment, Rapides Parish	20,500
4. Roxanna Bend, standard board revetment, Rapides Parish	29,600
5. Richardson Point, pile dikes, Rapides Parish	52,500
6. Echo, pile dikes, Rapides Parish	52,200
7. Cologne Bend, pile dikes, Rapides Parish	112,500
8. Egg Bend, pile dikes, Avoyelles Parish	40,400
9. Bringol, pile dikes, Avoyelles Parish	29,900
10. Choctaw, pile dikes, Avoyelles Parish	68,900
11. Hudson, standard board revetment, Avoyelles Parish	20,500
12. Roxana, standard board revetment, Avoyelles Parish	29,600
13. Ryland, standard board revetment, Avoyelles Parish	23,000
Total	504,300

We have just learned that $750,000 will be made available for bank-protection works on Red River in fiscal year 1958. This amount of money is not sufficient to pursue the ordinary program of bank-protection work properly to say nothing of repairing the damages of the 1957 flood. We, therefore, urge that the Chief of Engineers be requested to make available from emergency funds $1,500,000 in order that the existing bank-protection works may be repaired and that the necessary protection upstream and downstream extensions can be installed.

We wish to compliment the Corps of Engineers on the effectiveness of the bank-protection works which have been constructed on Red River and urge that every effort be made to protect the invaluable progress which has been made in this program.

Yours very truly,

LORRIS M. WIMBERLY,
Director.

Proceedings Against Frank Grumman

SPEECH
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. WILLIS. Mr. Speaker, the witness under consideration, Frank Grumman, is a radio operator trained in the various codes used in the transmission of messages. Mr. Grumman having been identified by another witness at the hearing as having been a member of the Communist Party, was questioned regarding his Communist Party membership, the presence of Communists in the American Communications Association, and the vital communications industry of the Nation.

The witness did not invoke the privilege of the fifth amendment, but instead refused to answer questions on the basis of the decision of the Supreme Court in the Watkins case. That has already been explained.

The Supreme Court in the Watkins case held that exposure for the sake of exposure is wrong. We all, of course, accept that statement. The Supreme Court, however, I am quite sure, did not mean to hold, or I hope they did not mean to hold, that if in the course of the work of a committee properly constituted and having a legislative purpose and conducting hearings consistent with that legislative purpose, exposure should result incidentally, I say I hope the Supreme Court did not mean to say that the committee must cease functioning.

Unfortunately, however, the decision was an open invitation for witnesses to say, and they are now practically all saying to us in effect: "Well, the Supreme Court said exposure for the sake of exposure is wrong. We say you mean to expose us; therefore, we refuse to answer, period."

That is the trend of some of these witnesses now on the basis of that decision.

Likewise, the Supreme Court said in that case that, of course, a congressional committee must have a legislative purpose. I am quite sure the Supreme Court did not mean to say that, having a legislative purpose, the committee cannot conduct hearings and ask pertinent questions.

Unfortunately again, however, on the basis of that decision these witnesses are interpreting it and twisting it into telling us the Supreme Court said: "You must have a legislative purpose. We maintain you have no legislative purpose; and, therefore, we refuse to answer."

That is the basis of this particular privileged motion seeking contempt proceedings against this witness, Mr. Grumman.

Legislative purpose was spelled out to him. We made every effort to comply with the ritual of the Supreme Court in the Watkins case.

I submit in this instance as in the other case just considered the motion for the contempt citation should be adopted.

Mr. WILLIS. Mr. Speaker, will the gentleman yield?

Mr. WALTER. I yield to the gentleman from Louisiana.

Mr. WILLIS. The bill in connection with correction of the Supreme Court decision in the Jencks case was offered by the gentleman from Pennsylvania and reported out of a subcommittee of the Committee on the Judiciary of which I happen to be chairman.

I not only express the hope but the expectation that action will be taken on that bill this year, certainly under suspension of the rules if in no other way.

Senator Yarborough Demands End to Bungling, Resignation of Dulles

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. BROOKS of Texas. Mr. Speaker, I feel sure that many Members of the House have seen or heard news reports of the stirring address delivered by our colleague Senator RALPH YARBOROUGH, of Texas, before the convention of the Affiliated Young Democrats of New York City on August 22.

In his speech Senator YARBOROUGH summarized the accomplishments of the 1st session of the 85th Congress for all the people of our country on the one hand, and in calling for the resignation of Secretary of State Dulles he outlined in bold detail the bungling of the administration's foreign policy on the other.

I have received reports that the press in the free world around the globe has praised Senator YARBOROUGH'S ringing declaration of friendship for our allies who are fighting the growing influence of communism and to make his comments available for every Member of Congress, under unanimous consent I include his address in today's CONGRESSIONAL RECORD.

The address follows:

TEXT OF AN ADDRESS BY SENATOR RALPH YARBOROUGH AT NEW YORK CITY TO THE CONVENTION OF AFFILIATED YOUNG DEMOCRATS OF NEW YORK CITY, AT HOTEL PICADILLY, AUGUST 22, 1957

Mr. President, fellow Democrats, fellow Americans, I want to thank you for your kind words. Your generosity of words is exceeded only by your generosity in deeds, in inviting me to speak here tonight.

Returning to New York is always a thrill.

I well remember my first trip here 38 years ago, when, as a cadet at West Point, we came down the Hudson on a cold, gray November Saturday to tangle with the Navy at the Polo Grounds in the annual Army-Navy game. And twice in my life, I have been thrilled by seeing the Staue of Liberty from the deck of an incoming ship, once in my teens as I worked my way back from Europe on a cattle boat, and again at the end of the great crusade for liberty in World War II, when the Infantry division in which I served came up the harbor for redeployment to the Pacific before the A-bomb had ended the war. And in those and all other trips when I have been back here, New York is always an inspiration. It always has a quality of the sameness and yet it is never the same. It is always different. These changing moods of the leading city in the history of mankind inspire the visitor whether he come in winter's cold or the heat of summer.

This is my first time to talk with a group in New York City since I became a United States Senator 110 days ago. But the short 110 days that I've served in the Senate is plenty of time to learn that things are not always what they seem, and that many really significant acts are too unspectacular to attract much attention at the moment.

Much has been written in the press of the budget cuts. Little has been written of the increased appropriations for things that really touch the greatest of human needs.

On coming to the Senate, I reflected on the many avenues of service open to a Senator and I wondered what I should devote most of my time to. The lessons of a third-grade geography class came back to me. My teacher taught us that the three basic needs of mankind were food, clothing, and shelter. Modern man has added a fourth need: health; so I decided I would devote most of my time to those measures dealing with the need of man for food, clothing, shelter, and health.

On the health problem, we have made progress in this session of Congress. The Democratic Party is the party with a heart. We voted nearly $200 million for research, which we hope will help find a cure for six diseases—cancer, heart disease, arthritis, mental disease, allergy and neurology, and blindness. We increased the cancer research appropriation from $48 million in 1956 to $56 million in 1957, an increase of 16 percent. Similiarly, we increased the appropriations for heart disease, mental health, arthritis, allergy and neurology, and blindness studies.

And in the fields of dental research, public health, research in tuberculosis, and other communicable diseases, we have voted substantially higher appropriations than for last year.

In the enforcement of the pure food and drug law, we voted an increase of 37 percent in funds for enforcement over the 1956 appropriation. This will allow the employment of 162 additional personnel, 115 of them as field inspectors to help stop the adulteration and pollution of food.

For food and clothing needs, we have voted a 10-percent increase in disabled veterans pensions. We are working on pension increases for retired Government personnel and retired railway workers. And I have voted for and helped bring out of the subcommittee and the full committee the bills for an increase in the postal workers' pay and in the Federal classified employees' pay. Those bills for pay increases are pending on the floor of the Senate. We Democrats are working hard for their passage.

We have done something about housing, too. The Housing Act of 1957 lowers the downpayment on FHA Government-insured loans so that people in the modest-income brackets can build or buy a $10,000 home with a $300 downpayment and they can build or buy a $12,000 home with $600 downpayment, and so on up the scale.

Unfortunately, the administration has crippled the efforts of Congress by raising the interest rates on FHA loans after Congress had passed the bill. And the Housing Act of 1957 had other provisions, too. It carried provisions for urban renewal or slum clearance and I voted for expanded Federal participation in these programs. We Democrats fought for liberalized urban renewal or slum clearance, but the Republicans voted liberalization down. Urban renewal is included in the bill, but not in the higher percentage we Democrats sought. I voted, also, for the Gore amendment to increase the amount of the Federal National Mortgage Association secondary mortgage mon for home loans. We Democrats worked ha in the past and will continue to work these necessary measures; for better hom better pay, better health. These are goals of the new democracy.

I believe more gains are ahead on domestic front. After 4 years of high int est rates and hard-money policy, at last S retary of Treasury Humphrey has return to private industry to see whether he make money faster there than he did Secretary of the Treasury. While in Government, his holdings increased in val threefold.

You have probably heard the new so I Lost My Head Over John Foster Dull What is needed now is a song for the farm entitled "I Lost My Shirt Under Ezra T Benson," and one for the small-busine man called I Lost My Shoes to George Humphrey

Humphrey is gone and we hope that M Benson and Mr. Dulles are going, going.

The Democrats in Congress are worki for improvement, but there are many fie where our influence is being thwarte Such a field is in the conduct of forei policy.

In this field, we Democrats have acted wi restraint and with responsibility, somethi I am sure the Republicans find it diffic to understand.

Last December, the Democrats in the Se ate gave thought to a complete and searc ing investigation of the bungling in t Middle East. However, after some reflecti the Democrats decided not to conduct th investigation. We decided to give Mr. Dull an opportunity.

We tried to bury the past in the hope restoring vigor to the westeran alliance.

Unfortunately, the State Department, its conduct of affairs, not only failed to store vigor; it permitted, and even uncon sciously aided, the erosion of good will wi our neighbors. Alliances, unless they evol and grow stronger, tend to drift to dissolu tion.

Today, our relations with our natural a traditional ally, Britain, are distant and fo mal. We have lost North Vietnam to th Communists. India is a neutral at be Egypt is playing footsie with the Soviets.

France, which has been unable to achie a strong and stable government, has show distrust of American policy. Germany still divided. Yugoslavia shows signs drifting back into the Soviet sphere.

Failure of the Dulles policy to develop cr ative and determined leadership has pe mitted the initiative to pass to the forces iniquity. This abdication, as one British observed, produced inertia, muddle, mi understanding, and disorientation. My di tinguished Democratic colleague, Senat FULBRIGHT, has stated that not since the tur of the century have our relations with th other people of the free world been so strained.

John Foster Dulles, the cocksure rath than the humble, the clever but not wis Secretary of State, has been at the hel during this period. His irregular policy, indeed it can be called that, has been mark with recklessness, forced withdrawals, sua boastfulness, and short-term compromises.

Let's take a brief look at Mr. Dulles' re ord:

He told Europeans that unless they ea acted the European Defense Communit Congress might abandon foreign aid. H thereby seemed to use our money as a wea on against our allies.

He told the Germans the defeat of Ad nauer by voters would be disastrous, there adding to the impression that the Unite States unblushingly interferes in the inte nal politics of other nations.

He suggested revision of our pro-Italia Trieste policy, thereby angering Italy with out appreciably pleasing Yugoslavia.

He canceled aid to Israel and then, after a visit from a Republican candidate for mayor of New York City, reinstated it, thereby appearing to tie United States policy to the needs of local politics.

He called the city of Goa a province, thereby siding with the Portuguese and colonialists and deeply angering India's 400 million proud people. By denying them union with their own people, he denied us their friendship.

He gave Egypt's General Naguib a silver pistol from President Eisenhower, the fatal symbolism of which could not be missed by every other nation in the world.

In Karachi he spoke of the need for building up local forces to resist aggression, thereby antagonizing India.

In New Delhi he guaranteed that India would find the United States on India's side if Pakistan attacked, thereby antagonizing Pakistan.

He led such a fantastic, zigzag course in the tragic Aswan Dam policy that he permitted Russia to walk through to the Suez Canal.

He invented the Baghdad Treaty presumably to frustrate Russian intervention. But instead of including Afghanistan, already allied with Iran, Iraq, and Turkey in the ineffective Saadabab Pact, we chose Pakistan. This irked India as well as Afghanistan, encouraging both to neutralism.

He allowed a situation to develop in the Egyptian crisis that caused Britain and France, our oldest and best friends, to act secretly and desperately.

He lined up with Communist Russia in the United Nations in condemning our oldest friends and demanding they withdraw their troops from Egypt to save a dictator's neck.

He did not, however, see fit to demand and insist that Russian troops withdraw from Hungary and be replaced by U. N. forces to conduct a free election.

He and President Eisenhower handed over the initiative of power threats to Moscow by telling Bulganin at the Geneva Big Four summit conference: "I believe Russia wants peace as sincerely as we do." This certificate of good conduct was beyond estimate of value to Moscow. At this conference, America and the Soviets reached a mutual recognition that atomic war was not to be a solution of our differences. Moscow, however, was prepared to risk the gamble of smaller wars, and we were not.

From Geneva in July until Geneva in October 1956, while we basked in bland phrases of coexistence, the Soviets took this certificate of good conduct and went to town. When the Big Four gathered in October, the Soviets had:

First, established diplomatic relations with West Germany so as to negotiate directly with Bonn instead of through Washington.

Second, launched a new so-called peace offensive to undermine the North Atlantic Treaty Organization.

Third, made an arms deal with Egypt.

Thus, at the second meeting, NATO was weaker, a Russian ambassador was on the Rhine and Russian technicians were on the Nile.

We could go on and on with this rollcall of bungling. But Americans—and unfortunately Russians too—are well aware of these failures. My friends, this is not policy. This is a course of stupidity—dynamic, massive, instant, and agonizing stupidity. In recent days we have witnessed the latest blunder.

Here, mind you, is what Mr. Dulles, this world figure, the symbol of American foreign policy, said recently:

"Not for 1 minute do I think the purpose of the State Department is to make friends. The purpose of the State Department is to look out for the interests of the United States. Whether we make friends, I do not care."

Is it any wonder that already the nations that do not like us are screaming these words around the world?

It is a good thing for Mr. Dulles' personal feelings that he does not care whether he makes friends. Because in the entire period since he has been Secretary of State he has not made one friend in all this world.

Joseph Alsop, writing from Paris the other day, said Mr. Dulles is now the most disliked man in Europe since Joseph Stalin.

I want to give this message to the other nations of the world tonight:

Mr. Dulles does not represent the attitude of the American people. We say this to our friends around the world. The people of America certainly do care about your friendship.

We Americans do not try to buy the friendship of people with money, with gifts, or loans. Such precious things of the spirit as friendship, are not commodities for sale, vended like loaves of bread in the market place.

The Book of Books teaches that of faith, hope, and charity, the greatest is charity. But the gift without the giver is bare and foreign aid without a true spirit of friendship is no aid at all.

We need friends and we want friends in all of the four corners of the earth. I believe that the future of the human race on this planet lies not in belligerency, not in combat, not in mutual misunderstanding and hatred, but in friendship between all peoples.

I think that we should cultivate friendship abroad with all the peoples who are friendly with us and with some who are not too friendly. Courtesy is its own reward and friendship begets friendship. Fair treatment may bring fair treatment in return, but a cold, heartless, unfriendly treatment is certain to breed resentment in any portion of the world.

As the Proverbs say, "Pride goeth before destruction and a haughty spirit before a fall."

The latest manifestation of the utter collapse of the Dulles' policy is Syria. The effects of this coup in Syria are tragic. The devilishly clever Communist policy of selling low-cost weapons to nations astride petroleum delivery routes—Egypt which controls cheap waterborne transit and Syria which controls overland pipelines—has completely outwitted Mr. Dulles.

Last Sunday, America received the word that the Communists have taken over the Syrian Army, which is the principal power in that Arab State.

It will be interesting to see how Life and the other Republican news magazines translate this crushing defeat into another smashing victory for Mr. Dulles' bold brand of diplomacy.

Syria's alliance with the Reds means the Communists now outflank Turkey and the Baghdad Pact.

Jordan is further endangered.

The oil supplies for the Western European defense are jeopardized.

The entire Middle East is in peril of falling to the Communists.

We Democrats have been gentle in our criticism of the foreign policy. Although we have been locked out of policy decisions by the Dulles refusal to reinstate bipartisan foreign policy, the Democrats have tried to cooperate where possible.

But with Syria's tragic fall, we have no choice but to call for the only reasonable step. America cannot afford to lose her friends across the world. America cannot afford the disintegration of NATO. America cannot afford loud but hollow bluffs followed by timid backdowns. America, my friends, cannot afford John Foster Dulles.

I demand, for the sake of the Nation and mankind, that Mr. Dulles resign.

We do not question, as the Republicans did, the loyalty or the desire for peace of a Secretary of State. Mr. Dulles is loyal but he is a bungler. He wants peace, but does not have a policy to achieve it. He is, in short, a tragic failure as Secretary of State.

We recall with sadness his empty and cynical campaign phrases. He would roll back the Iron Curtain. He would liberate the captive peoples. He would unleash Chiang Kai-shek; he would seize the initiative; he would agonizingly reappraise; he would instantly retaliate; he would have a dynamic, as opposed to static, policy.

The heroes of Hungary, crushed in blood, are mute testimony to the emptiness of Dulles' cynical, vote-getting boasts about liberating the captive peoples. Mr. Dulles insulted Israel and dissolved the grand alliance.

Mr. Dulles' timid, tiptoeing, retreating actions have proved the hollowness of every other slogan he has used.

The Communist menace is greater than ever today. The times call for greatness, not slogans.

We must get rid of this symbol of defeat, frustration, boastfulness, selfishness, and exasperation.

There stands here in New York Harbor the greatest beacon light to liberty in all this earth. The Statue of Liberty is a gift from the people of France to the people of the United States. We have fought four wars with the French people as our allies; our Revolutionary War, the War of 1812, and both World Wars. Does this ancient friendship mean nothing? Does the comradeship of Lafayette and Washington mean nothing? Do the French fleet and two French armies at Yorktown mean nothing? Do all the American boys sleeping on French soil mean nothing? No, Mr. Dulles, your formula of the unimportance of friendship is not the American formula. It is repugnant to our way of life. We are a friendly, gregarious people, liking each other and other people, and wanting them to like us in return.

We are a people of action, not vainglorious, not a boastful, arrogant people. The one word that characterizes an American above any other single word is "friendliness." Mr. Dulles' declaration would destroy our national character. We are not a sullen, surly, angry, unfriendly people.

Let us, then, extend anew the hand of genuine friendship and affection to all our old friends and allies, and to all our new friends, too. Let us make friendship the keystone of our foreign policy, as it is now of our national character.

Mr. Dulles is out of step with America; he must step out. Under new leadership, we will make American good will our frontline of defense. We will so treat our neighbors as to cause all the free world to glow again with the old warmth; we will make American kindness and friendship the true mark of The New Democracy. In that faith let us face the future unafraid. With love and hope and friendship in our hearts, the future is America's.

Protect the FBI Files

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

PROTECT FBI FILES

With the decision of the Supreme Court in the Jencks case, law enforcement by the FBI has been seriously hampered.

It will be remembered that the Jencks decision involved the conviction of Clinton E. Jencks, New Mexico labor leader, for filing a false non-Communist oath. Its effect was that when a witness testifies regarding any material contained in FBI reports, these reports must be supplied to the defendant.

This means that FBI files could be thrown open at any and all times. This can bring about a dangerous situation and seriously hamper law enforcement.

As FBI Director J. Edgar Hoover has pointed out, these files contain a medley of information. The file is filed as information is gathered. Some of the material is erroneous, some spite talk. When the information is evaluated, the immaterial is kept buried.

There is no question but that the Supreme Court interpreted existing laws regarding trial of cases in their true meaning.

Here's where Congress comes in. There is now a bill before the House introduced by Representative KENNETH KEATING, Republican, of New York, which has been approved by the Judiciary Committee. This bill would permit the judge in each case to determine what FBI information should be disclosed to the defendant in the interest of justice.

It is to be hoped that Congress will give this bill its close attention. Failure now to remedy the FBI's predicament could become serious, in both the protection of the people of this country and for the protectors.

Closing Days of the Session

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. BURDICK. Mr. Speaker, a good many years ago the Government built a dam on the Little Kanawha River in West Virginia, which was equipped with locks for river navigation. The navigation came to an end and the dam deteriorated. The Government decided to abandon it, but the people of that area found that it raised their water level and sought to have it fixed up for water and recreation. The Army Engineers thought the dam could be cleaned out for $50,000 and the committee having the bill in charge favored the plan of the local people to make use of a dam that was already there, and recommended an appropriation of $112,000. The bill was debated here yesterday afternoon and the only opposition to it was that the time had arrived for the Government to economize. A heated debate continued until finally a motion was made to recommit it. The economy-minded Members made this motion, but the majority said "No." Looking around, I found these present economizers on $112,000 for local people to be the same Members who voted over $3 billion for foreign aid. This looked a trifle inconsistent to me, as it did to the others who saved the project.

You can see what Congress is busying itself with these days, waiting for a chance to take a final vote on the civil-rights bill. I do not know how long this seesaw battle on civil rights is going to keep on, but one thing certain is that I am not going to sit around here till Christmas, waiting for HOWARD SMITH, of Virginia, to call a meeting of the Rules Committee. The sentiment of the people is unsettled on the side of the workers for the bill, but there is not an unsettled condition among those who oppose it. Some of the proponents say that any bill would be better than no bill, while many of the Negro organizations want a bill with teeth in it, or no bill at all.

We are merely dangling on a string attached to the civil-rights bill. For example, today, Wednesday, there will be no voting—nothing in sight for tomorrow or Friday, and probably nothing before Monday. After Monday, it looks like another week of waiting, the same as this week. One of these days I am going to adjourn Congress as far as I am concerned, and beat it for home. I should have done that 2 weeks ago—but did not realize it was possible to waste the time of Congress for weeks, on political jockeying for the elections in 1958. Many bills are stuck in the Rules Committee, and they are important, but the committee refuses to act, or even meet, for fear that the civil-rights bill might be voted out on the floor. The Congress is supposed to be a deliberating body, but just now it appears to be a deliberate body, refusing to move either way on the civil-rights bill.

U. S. S. "Ranger" West Coast Home Port: Why Not Long Beach?

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. HOSMER. Mr. Speaker, hitting the nail on the head again, columnist Virginia Kelly has posed some cogent reasons why the U. S. S. *Ranger* should be home-ported at Long Beach, Calif. Destined for Pacific Fleet duty next summer following her shakedown, the giant new aircraft carrier will carry the flag in troubled spots in the Pacific area. Consideration of the advantages to her crew and their families should be given in selecting the ship's west-coast home port. In this regard, Long Beach should stand at the top of the selection list.

The Kelly column discussing the *Ranger* is as follows:

FLYING, LIVING CONDITIONS MAKE LONG BEACH LOGICAL PORT FOR DRYDOCKING "RANGER"

Although the Secretary of the Navy has announced that the new *Forrestal* class carrier, *Ranger*, will go to the Pacific Fleet in the summer of 1958, no announcement has been made as to her home port or which west-coast cities she will visit.

Some in Washington have assumed that the *Ranger* will go to San Francisco because of the drydocking there.

It may not be nationally known but Long Beach has as satisfactory dry-docking facilities for *Forrestal* class carriers as are now in existence on the west coast. Both Long Beach and San Francisco have drydocks that are 8 feet wider than the largest drydock in Bremerton. It should be emphasized that there are no west coast drydocks that could take the *Ranger* in a badly damaged condition.

Long Beach has better operational and flying conditions than San Francisco. Long Beach offers better living conditions to Navy families than San Francisco.

Many hope that Long Beach city officials will formally invite the *Ranger* to Long Beach and that the request will be carefully weighed by the Navy Secretary, the Chief of Naval Operations, and the commander in chief Pacific.

Trying to get information on the crucial drydocking situation, this reporter again experienced an interesting and amusing example of what is and is not classified. Terming the matter "sensitive," the Navy would give only minimal information.

Only a few days ago, however, the military construction hearings before the Sheppard subcommittee of the House Appropriations Committee were made public. A meticulous reading gives much information:

For example, the two Bremerton drydocks capable of receiving the *Ranger* in undamaged condition would have only 1 foot inches clearance. The Long Beach and San Francisco drydocks are 8 feet wider.

Representative SHEPPARD, Democrat, of California, asked why the Navy proposes to spend $38 million for a new drydock in Bremerton instead of in San Francisco when many factors are considered including congested conditions and harbor entrance.

Capt. John Ailes (recently selected for rear admiral) replied that the CNO had decided that 2 new drydocks for the *Forrestal* class carriers on the west coast and 1 on the east coast were needed. First priority was given to Bremerton, said Captain Ailes, because "we thought we should fix up the worst one first."

H. Earl Cook, Chairman, FDIC, To Retire September 6

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. BETTS. Mr. Speaker, H. Earl Cook, Chairman of the Federal Deposit Insurance Corporation, has announced that he is retiring at the end of his present term on September 6 of this year.

Mr. Cook brought to this position a lifetime of experience. Originally a banker in Bucyrus, Ohio, he was at one time president of the Ohio Bankers Association. He later served as superintendent of the Department of Banks of Ohio under governors of both political parties.

On April 10, 1947, he was appointed by President Truman to be a Director of the Federal Deposit Insurance Corporation, and on May 9, 1953, President Eisenhower designated him as Chairman of the Board.

This bipartisan demand for his services was, of course, a recognition of merit and ability. As Mr. Cook leaves his present position, I wish to pay tribute to the outstanding service he has contributed to his State and Nation. The Eighth Congressional District of Ohio, which I have the honor to represent, is justly proud of Earl Cook as one of its native sons who rose to national promi-

nence as a distinguished public servant. I know I speak for all of his many friends who wish him well.

Tomorrow's Airplanes and Your Airports

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Tomorrow's Airplanes and Your Airports," by Donald W. Douglas, president-board chairman, Douglas Aircraft Co., Inc., Santa Monica, Calif., before the American Society of Newspaper Editors, Fairmont Hotel, San Francisco, Calif., July 12, 1957:

It is a rare privilege indeed for me to be invited to address so distinguished a group as the American Society of Newspaper Editors. There is the added opportunity, which I deeply appreciate, of being able to speak through you to millions of newspaper readers throughout America. For I know that if there is any merit or message in what I have to say today, my thoughts in due time will be transmitted to your readers. This may be accomplished directly in the news columns, in editorial comment or as background information which may help you determine editorial policy or news play. I have the greatest respect for the integrity of the American press and for its ability to maintain a free flow of information and opinion. Given this, the people can make their own decisions as to the proper course of action in any given situation. This applies to issues which may arise in the world of aviation just as it does to other spheres of our national interests and activity.

The press has been generous to aviation and deserves much of the credit for the tremendous progress we have made in the air since the early days of this century. I can think of only one dereliction and I bring it up today only by way of contrast. An event of considerable importance to aviation occurred one December day in 1903 on the bleak sands at Kitty Hawk in North Carolina. But for days after this event readers of most newspapers were oblivious of the fact that the long-sought goal of powered flight had been attained. Most editors either hadn't heard about it, didn't believe it, or failed to understand its significance. It is true that the residents of Dayton were at least informed by the local newspaper that the Wright boys were going to be home for Christmas after completing their experiments at Kitty Hawk. It has been recorded that one of the first scientific accounts of the flights appeared in a magazine called Gleanings in Bee Culture. Perhaps the Wright brothers could have used a public-relations man.

I mention this historic oversight only for emphasis. It probably is the last time on record that the American press ever failed to give a significant aviation event its just due. The diligent coverage and consistent support of the American press have made it aviation's most powerful champion. And now, in asking me to discuss "Tomorrow's Airplanes and Your Airports," you have demonstrated once again your awareness of the trends, accomplishments and problems in our industry. It is typical that you should want to be fully informed well ahead of time about developments which will profoundly affect the cities you serve.

Before we peer into the future at tomorrow's airplanes and airports, let us take a brief look at the status of commercial aviation as we have known it up until now. There is no need to hark back this time to the days of the Wright brothers. Air transportation as we know it today is a comparatively recent development, even though it is the direct outgrowth of pioneering effort by many people through many decades. In some of these efforts I have been privileged to play a part, and must necessarily draw upon some of my own experiences and those of my company in this discussion. Therefore, I hope you will be forebearing if from time to time the name of Douglas unavoidably pops up in my remarks. Perhaps you will be charitable and put it down not so much to vanity or salesmanship as to the fact that this happens to be the company with which I am best acquainted. Of course there is no escaping the fact—and being only human I am proud of it—that slightly more than 50 percent of all the aircraft operated by airlines throughout the world are Douglas-built. Our views and conclusions, therefore, have a broad basis of experience and information.

Our first significant entry into the transport field dates from August 2, 1932. Many aviation historians regard the events set in motion on that date as marking the real beginnings of practical air transportation. That was the day on which my friend Jack Frye, then vice-president in charge of operations for Transcontinental and Western Air, happened to write me a letter. He wanted to know if we would be interested in building a new type of airline transport for the newly developing transcontinental routes. We were interested and we did build one. It was the DC–1, first of the Douglas Commercial series.

This was followed immediately by the DC–2 and then the DC–3. Including military versions, we ultimately built more than 11,000 DC–3's. Thousands of them are still in service. Over the years people all over the world have told us that without question the DC–3 is the best known and most beloved of all airplanes. In giving our company the exceptional service award, the Air Force said the DC–3 ranks as "the best single airplane ever built."

The thing about all this that is pertinent to my talk today is the fact that the DC–3 largely shaped one of the three important periods of air transportation growth. Since the DC–3 at one time carried 90 percent of the world's passenger traffic, airline route patterns were developed between 1933 and 1941 to conform to the capabilities of this airplane. Traffic during this period expanded by a factor of 5—from 406 million to over 2 billion passenger-miles.

The next significant period came during the war. The 4-engined DC–4 made overwater flights a routine experience for thousands of operational crews and passengers. New routes were established everywhere because a new airplane made them feasible. This is a pattern that keeps recurring, and will do so in the future.

The third important period, from the end of the war to the present, was made possible by the manufacture of greatly improved, pressurized 300-mile-per-hour airplanes such as the DC–6 series and the Constellation. In the last 3½ years cruising speeds have been stepped up to 365 miles per hour in our DC–7 and DC–7C series of aircraft. These postwar land-based planes have enabled the airlines to establish a worldwide network of commercial trunk routes for efficient overland and overwater operations.

As a result, world air traffic has increased from 9½ billion passenger-miles in 1946 to more than 40 billion today. And the end is not yet in sight, as I shall tell you a little later. Before going further, however, let us examine some of the factors which have brought about this amazing growth in air travel. I think you will find that most of them are linked to the performance characteristics and other features of the airplanes themselves, together with ground facilities necessary to their operation. This is an extremely important point to keep in mind in the light of the revolution in airline equipment which the various types of jet aircraft will bring to pass in the next 2 or 3 years.

The advantage of speed, of course, is one of the most obvious reasons for the remarkable increase in travel by air. But it is far from being the only one. Economy is another important factor. Even though the value of the dollar today is a little less than half that of 1934, airline fare actually had declined from 5.9 cents per mile to 5.3 cents. If dollar values were equal, the fare today would be 2.6 cents per mile as compared to 5.9 in 1934.

Any of you who traveled by air before the war should be well aware of the advances in another aspect, that of comfort. Pressurized cabins now make it possible for you to fly at high altitudes where gust frequency, or bumpiness, is greatly reduced or completely eliminated. There is air conditioning, room to move around, and a reduction in the noise level, among numerous other refinements.

Reliability has been vastly improved. Now you can make appointments dependent upon arrival by air and expect to keep them. The old slogan, "If you've time to spare, go by air," no longer applies. Ranges have been extended greatly so that nonstop flights across both continents and oceans have become routine. Since introduction of the DC–7 in 1953, nonstop flights in either direction between the Pacific coast and New York have played their part in stepping up airline traffic. The DC–7C has performed the same function across the North Atlantic in providing nonstop service in both directions between New York and major cities of Europe beginning a little over a year ago. The Lockheed 1649–H, now going into service, also is capable of similar long-range overwater flights. A few weeks ago a DC–7C delivery flight carried a group of notables and extra crews from Long Beach, Calif., to Paris nonstop for a journey of more than 6,000 miles, arriving on a prearranged schedule in time for a preview of the "Spirit of St. Louis" motion picture in a Paris theater.

In addition to range, we have seen a great improvement in what we may call the factor of destination. Now the passenger can schedule a trip to any section of our country or to any country of the free world and plan to get there by air.

All of this has been accomplished in a little more than 20 years principally by a process of evolution in which reciprocating engines of the same basic type, with periodic improvements, have been used.

Now we are about to take the big leap into an entirely different type of propulsion. Let me point out one way to grasp the significance of the change to jet-propelled aircraft. In the 20-year period between the DC–3 and the DC–7, which I have been discussing, cruising speeds were gradually increased in the amount of about 200 miles per hour. The DC–8 jet transport, which will begin its test flights next year, in one step will accomplish the same speed gain which took us 20 years to achieve previously. It will cruise at 550 miles per hour and will be capable of top speeds approaching 600 miles per hour. Transcontinental trips will require 4½ hours. Gains in comfort and quietness fully comparable to the advances in speed also will be accomplished.

What effect then will jet aircraft have in generating new airline traffic? This obvious-

ly will be an important consideration in determining the requirements for future airport facilities. First of all, we must bear in mind that even during the balance of this decade, before the jets go into wide use, there will be substantial increases in passenger traffic. We anticipate that by 1960 air travel will increase from the present worldwide figure of somewhat more than 40 billion passenger-miles to a total of 60 billion. In 1970, after a decade of jet operation, world passenger traffic should increase to a total of at least 90 billion passenger-miles. We believe this estimate to be well on the conservative side since no attempt is made to project any increase in the rate of growth during this decade. Even so, what I am saying boils down to the fact that traffic will double at the very least in a little more than 10 years.

My discussion so far has dealt only with passenger traffic. I have pointed out how the new type powerplants have made possible the increased speed, dependability, and economy so essential to the growth of air travel. I also want to emphasize that these same engine developments, both turbojet and turboprop, offer great new opportunities in the field of commercial air cargo.

Turboprop airplanes now in existence as well as those which may easily be flying late next year can carry products never before dreamed to be within the capability of aircraft. They can do this at much greater speeds and at an actual saving of 40 percent in direct operating costs.

These airplanes can help us achieve the goal of freer and more expanded world trade which President Eisenhower recently advocated.

Flying freighters of this type promise to change our whole concept of domestic and international trade. They will be the means of establishing a new, more healthy business relationship with our friends all over the world. In this way we can help those countries which the President spoke of as "having a hard time making a living."

Furthermore, and in line with our subject today, these new aircraft will present no new problems where ground facilities are concerned.

In discussing airport facilities, we must remember that they are actually as much a part of this expanded passenger and cargo traffic which we anticipate as are the new airplanes themselves.

The interrelation of many factors in governing the progress of air travel has been well described by Lt. Gen. Joe Smith, who had much experience in this field as commander of the Military Air Transport Service. General Smith said this:

"In the satisfaction and enthusiasm of developing new and revolutionary aircraft, we all too often lose sight of one very major point. Air transportation depends upon more than just transport aircraft. Air transportation depends upon an integrated air transportation system composed of aircraft, personnel, airfields, weather forecasting, communicatons, navigation facilities, ground handling, air traffic control facilities, logistic support, maintenance standards and procedure, rules and regulations and, above all, good judgment. The whole system must develop and grow with the aircraft. The potentiality of an aircraft out of phase with the rest of the system is never fully realized."

Perhaps no one in our company ever expressed this thought quite as succinctly as General Smith but you can be sure that we have been aware of this interrelationship for many years. And I am sure we are not unique in the industry in that respect. In other words, airplanes are not designed by dreamers in ivory towers. At all times we must and do take into consideration the environment in which the aircraft must operate. The jet airplane must be capable of an orderly integration into existing airport facilities or those already in process of planning and development. I am convinced there has been an undue amount of concern about our readiness for the jet age. Continuing improvement of our airports is a matter of national policy which usually receives strong support at the community level, and which, in general, is proceeding very well. It is erroneous to say that we must initiate a crash program in order to beat some arbitrary deadline associated with the advent of jet aircraft. I think generally it is correct to say that the cities which are scheduled to have jet service initially will be ready when the time comes. Extension to other cities will come in a gradual and orderly manner.

If you think I am unduly optimistic about this, I would like to cite the recently expressed opinion of James T. Pyle, CAA Administrator, a man who is very much concerned with this matter. Speaking to the jet age airport conference of the American Society of Engineers, Mr. Pyle listed some of the more pressing problems facing the Civil Aeronautics Administration. He then said:

"Because I feel that we have a reasonably good national system of airports and have been enjoying the benefits of a program of Federal aid for many years, I would place airports as the final problem of the jet age."

It is significant that he listed the CAA's primary problems as those of meeting the existing and long-range needs of air traffic control. I think all of us in the industry, or associated with it, are conscious of the need for improvement in this area. Many of you have commented on it editorially in recent months. I am confident of our ability to solve this airspace problem, just as we have solved other technical problems in the past, but it must be attacked promptly and vigorously on a national and international scale. The publications you direct can and undoubtedly will do a good job on this.

In discussing airport requirements, I realize that you gentlemen would like for me to get down to specifics. You would like to take something back with you of a concrete nature which could be applied to your own community. There are so many variables involved, however, that no such blanket approach is possible. Each airport must be studied individually and appropriate action taken from the points of view of the airline operator, the airport management, and the traveling public.

A few general principles can be expressed, however, which might be of value to you. Runway lengths are a subject of frequent concern because of the cost of acquiring additional land, if, indeed, there is only available at all in many cities. It should be remembered in this connection that the most critical factor where long ranges are involved is the takeoff requirement because the airplane is heavily loaded with fuel at this point. The amount of fuel carried is determined by the length of the flight. This in turn is governed by the volume of traffic, which, in turn, depends upon population.

Therefore, nonstop transcontinental and intercontinental flights originate at major terminals, most of which already have adequate runways. Intermediate point airports, where flights of shorter lengths originate, also are presently equipped to handle DC–8's with the lighter fuel requirement.

In general, airports with 7,000- to 9,000-foot runways can expect to handle the DC–8 adequately. The higher limit of this bracket will be needed only in cities where the longest flights originate. These cities already have or soon will have runways of this length, or greater.

Extreme lengths, you may have heard mentioned, ranging up to 13,000 or 14,000 feet are required only where there is a combination of maximum range, high airport elevation and high temperature. No cities in the United States combine high elevation with high temperature such as we find in places like Johannesburg or Mexico City.

One point to keep in mind about the big jet transports, both the DC–8 and the Boeing, 707 is that they will be used initially only over routes that generate a large volume of traffic. The DC–8 for example, will carry anywhere from 118 to 179 persons depending on its seating arrangement. A high load factor will be sought to justify the large investment which each jet aircraft represents. This brings me to another phase of the airport situation.

Economic opeartion of the big jets will require that ground time be kept to a minimum. Therefore, there will be a definite need for improved aircraft servicing and passenger handling facilities at our major airports if maximum utilization of the airplanes is to be achieved. Some of these requirements can be met by the airline operators themselves. In other cases changes in fixed installations probably will be necessary. Some refinements can come later after the jets are in operation.

Studies conducted by the Douglas company indicate that a complete turn-around of the DC–8 can be accomplished in 30 minutes. This survey covered operational practices at several airports. It was followed by experimental tests in the airplane mockup constructed at our Santa Monica plant. The servicing operation has been expedited by the inclusion in our jet transport of 2 passenger doors, 2 buffet service doors, 4 cargo compartment doors and underwing pressure refueling. Fueling may be accomplished through 4 connections at the rate of 1,500 gallons per minute.

To provide all this simultaneous servicing, however, would require 19 pieces of mobile equipment, our survey showed. This has been a problem even with current aircraft. The cost of the equipment and the space it occupies are steadily mounting. Damage as the result of collision with such equipment has reached the sum of $1 million annually in the case of one airline. Obviously, extreme caution will be a necessity.

Some of this mobile equipment has been eliminated at new airports by such fixed installations as fueling hydrants, ground electrical power supply and air conditioning. A further major reduction can be made by providing a water supply, sewage lines for servicing lavatories and an air source for pneumatic power to start the jet engines.

Our studies show that new airport facilities could include one feature that I am sure passengers would welcome. The door at the forward end of the cabin in the new airplanes will make it possible to keep the passengers out of the weather if airport designers take advantage of this feature. A nose dock, which incidentally could be added to existing structures, will make it possible for passengers to walk directly into the terminal at door level, without passenger stairs. We believe unloading at the same level can be accomplished as quickly through 1 door as it can through 2 when stairs are required. Another welcome feature of such installations will be a conveyor which will carry luggage to the claim area before the passengers arrive there.

Taxiing in to the passenger ramp is simplified in the case of the DC–8 by having the aft wheels of the bogie landing gear castered. This means that in a 180° turn the wing tip will swing on a radius of about 90 feet. This is only a little more than the 81-foot requirement for the DC–7C.

Landing gear design also takes care of any possible problems associated with the weight of a fully loaded jet airplane, which will be twice as great as that of the largest current transports. In the case of the DC–8, there are four main wheels on each side and a dual nose wheel. The use of so many wheels has the effect of reducing runway bearing pressures per square inch to a level comparable to or less than those of present

aircraft. In other words, there need be no change in runway thickness requirements. At comparable range-weight values the DC-8 actually requires less runway strength than the DC-7C.

Some concern has been expressed that jet aircraft will not be able to take their place in the holding and landing traffic control patterns. Such fears are unfounded because in this respect, also, environment factors have been taken into consideration in the design of the airplane. The fuel capacity is such that the jets can join the parade of other aircraft. Despite the high cruising speeds of these airplanes, wing and flap design make it possible to reduce holding and landing speeds to conform to those of present-day aircraft.

Another feature of the jets is the use of thrust reverser installations. These will be used on jet aircraft to reduce landing roll but we have not included their effect in establishing runway requirements. This provides an added margin of safety. For example, with 40 percent reverse thrust on 4 engines and no braking, the DC-8 can be stopped in a 4,450-foot ground run at maximum landing weight of 190,500 pounds. This is at sea level and with zero wind conditions.

Any discussion of jet aircraft inevitably leads to the subject of external noise, which may well be the greatest problem we have to face. There are two types of noise associated with jet engines. One is the high-pitched whine of the compressor, coming from the nose of the engine, which is heard only in taxiing operations. The other is the roar of the exhaust, most noticeable during the takeoff run. One noise which happily is not associated with commercial jet aircraft is the roar of the afterburner used on military jets. I am convinced that most of the alarm in the public mind over jet aircraft noise is related to these military aircraft. Few people in this country have heard the sound of a commercial jet transport and no one, except those concerned with the development, has heard jet engines with sound-suppression devices.

When the jet aircraft go into operation, they very definitely will have sound suppressors. This problem of noise is being given high priority by Douglas and Boeing; the engine manufacturers, Pratt & Whitney and Rolls-Royce, and many other manufacturers and Government research agencies.

I can assure you substantial progress already has been made. Our test program, and those of others, have been advancing on schedule—and I am confident that the sound will be reduced to a level acceptable to the public by the time the jets go into operation.

In summary, I would like to say that the technical problems associated with the operation of jet aircraft, while not to be minimized, can and will be surmounted. Many of the fears that have been expressed are based on invalid assumptions, as I have tried to point out. The problems that do exist are being vigorously attacked by many companies and many agencies. I am sure that with faith and patience we shall achieve success in solving them.

Far overshadowing the problems, in my opinion, are the tremendous gains which the jet age of commercial aircraft will bring to the world. The swift movement of people throughout our country and to all parts of the globe are important in themselves. But this in fact is only a means toward an end. That end is a new era of international understanding and world peace, which may very well receive tremendous impetus from the increasing mobility we are about to experience and pass on to the world. At least those of us in the business of manufacturing aircraft can fervently hope that at long last the full potential of the airplane as an agency of peace and progress, instead of war and destruction will be realized.

The American press can play a deciding role in making this dream a reality.

Seminoles Adopt a Constitution

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. HALEY. Mr. Speaker, for some years the Seminole Indians of Florida have been at odds with the United States. Although relatively few in numbers, approximately 825, they have been separated into four groups; those living on each of the three reservations, Brighton, Big Cypress, and Dania, and those living along the Tamiami Trail west of Miami. Not only have they had troubles with the Federal Government but among themselves as well.

Within the past 3 years, however, positive steps have been taken by the Indians, the State of Florida, and the Bureau of Indian Affairs to iron out their differences and to draft a constitution and organize a business corporation. At an election held on August 22, 1957, both proposals were passed by overwhelming majorities. It is interesting to note that as expected, the Tamiami Trail group, which has appealed directly to the President of the United States for recognition and threatened to take their case to the United Nations, boycotted the election.

I am pleased to report the outcome of the election and believe that the Seminole problem in Florida is on its way to solution.

I include in the CONGRESSIONAL RECORD the following report on the Seminole election which appeared in the Washington Evening Star for August 22, 1957:

FLORIDA SEMINOLES VOTE THEIR OWN CONSTITUTION

DANIA, FLA., August 22.—Florida's reservation Seminoles have ordained and established a tribal constitution which will bring a new formality to their system of government.

Complete with preamble and couched in legal terminology, the constitution was approved, 223 to 5, yesterday. Most of the ballots were cast by reservation dwellers. Eligible to vote were 448 Indians.

The so-called Tamiami Trail Indians, the largest group of off-reservation Seminoles, boycotted the election. They recently won State approval for a constitution of their own.

Only 22 ballots—17 of them absentee votes which are yet to be counted—were cast by Indians living off the reservations. All five of those which were tabulated favored the constitution.

A separate vote, with only reservation Indians eligible to cast ballots, was held on the question of whether to set up a business corporation to represent the tribesmen. The plan was approved, 218 to 5. The corporation will be known as the Seminols Tribe of Florida, Inc.

Oldsters among the voters showed up at polling places garbed in the traditional Seminole costume made of hundreds of tiny pieces of brightly colored material painstakingly stitched together. The younger Indians wore ordinary attire.

The new constitution provides for election of an 8-member tribal council within 30 days. Council elections will be held every 2 years. Everyone who has reached 18 will be eligible to vote in future ballotings.

Yesterday's election was limited to those 21 and over.

Protect the Files of the FBI

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. KEATING. Mr. Speaker, under leave previously granted, I insert editorial comment from various papers all over the country endorsing legislation to protect the files of the FBI:

[From the New York Daily News of August 21, 1957]

MAKE IT A MUST

It is 6 weeks since the House Judiciary Committee O.K.'d the bill by Representative KENNETH B. KEATING, Republican, of New York, to reverse the Earl Warren Supreme Court's decision opening Federal Bureau of Investigation files to defendants in subversive and other criminal cases.

Since then, Congress has done nothing about the bill. Representative KEATING is shouting that the measure should be passed at this session—which is almost over.

We'll second Keating's motion that the bill, or something much like it, be made a must.

If Congress bypasses it, the Government will continue partially paralyzed in its fight against the criminal Communist conspiracy, and the FBI will find it more and more difficult to get possible informants to tell what they know about traitors.

You'd think the above-mentioned Boris Morros' revelations concerning big Russian spy networks in this country would alone be enough to spur Congress to act.

[From the Springfield (Mass.) Union of June 5, 1957]

PROTECTION WITHDRAWN

While the Supreme Court's decision divorcing Du Pont and General Motors Monday gained the biggest headlines, the tribunal's ruling on the use of secret FBI reports may have a far more lasting—and more adverse—effect. The Court agreed, 7 to 1, that the defense may demand confidential FBI reports made by informers whom the Government uses as witnesses in criminal proceedings.

It presented the opinion in ordering a new trial for a labor leader convicted of filing a false non-Communist affidavit. The notorious turnabout witness, Harvey Matusow, was one of the FBI informers against the defendant.

The idea of informing is repugnant to a great many people who can see little reason for the Government affording protection to informers. However, informers are of great value to law enforcement, particularly in so delicate and complex a field as the battle against communism. The full revelation of the informer's methods in his secret reports, made public in criminal trials, would seriously weaken his value to the FBI. It appears inevitable that it also would make in-

forming too dangerous a practice to sustain, with the result that law enforcement officers would be deprived of a great deal of inside information previously available to them. Informers well might become reluctant witnesses, hence, hostile witnesses, instead of cooperators in Government prosecutions.

It is well not to take the implicit threat of reprisals against informers too lightly. The Government's case against the perpetrators of the attack which blinded Victor Riesel collapsed because prosecution witnesses refused to present their testimony, presumably through fear of the consequences to themselves.

[From the Washington (D. C.) Evening Star of June 5, 1957]

OPENING THE FBI FILES

Justice Clark says that the Supreme Court's decision in the Jencks case means that "those intelligence agencies of our Government engaged in law enforcement may as well close up shop for the Court has opened their files to the criminal and thus afforded him a Roman holiday for rummaging through confidential information as well as vital national secrets."

This, perhaps, is an extreme view. It seems clear, however, that the Court has gone much further than it needed to go if its purpose was merely to insure justice for criminal defendants.

Jencks, an official of a left-wing union, was convicted of perjury in filing an affidavit that he was not a Communist. At the trial, the prosecution relied largely on the testimony of two FBI undercover agents, one of whom has since been discredited. These agents had submitted reports to the FBI, and the lawyers for Jencks asked the trial judge to examine the statements to determine whether there was any material conflict between them and the testimony given by the agents at the trial. The judge refused on the ground that there had been no showing of inconsistency.

The Supreme Court might have ruled that the trial judge should have examined the reports and, if material inconsistencies were found, permitted the defendant to use them in attempting to impeach the testimony of the agents. This would have protected the FBI files from indiscriminate disclosure and, at the same time, would have adequately safeguarded the right of the defendant to a fair trial, assuming that our trial judges are to be trusted.

But the Court went much further. Apparently reversing one of its own 1942 rulings, it held that the trial judge should have permitted the defendant to examine the documents in the FBI file and that then, and only then, could the judge determine whether any material in the documents could be used by the defense. In other words, this ruling opens the files to a criminal, or a Communist, even though there may be nothing in them that he can use in his own defense. We do not know what constructive purpose this serves. It could compromise the FBI files without serving the ends of justice in any way. Why not let the judge examine the documents in the first instance, and decide whether there is anything in them which the defense should be permitted to use? He will have to decide this in the end, anyway.

The best that can be said for this decision is that it is ambiguous. There is language in it which indicates that the ruling should be narrowly applied. And there is other language which indicates that it should be broadly applied. Its meaning needs to be clarified, and Congress should clarify it if the Court will not.

[From the Kalamazoo (Mich.) Gazette of June 10, 1957]

PROTECTING THE FBI FILES

In protecting the rights of the individual, perhaps its highest function, the United States Supreme Court has at times seemed to be leaning over backward. It unquestionably did so in ordering a retrial of Clinton E. Jencks, a former official of the International Union of Mine, Mill and Smelter Workers, an outfit long ago expelled by organized labor as Communist-dominated. In fact, it toppled over and, in falling, may have done serious damage to the FBI, an organization that rightly stands at the very peak in popular esteem.

What the Court did was to strike down the long-established principle that the FBI files must always be held confidential and inviolate. It ruled that FBI secret documents related to the actual testimony of Government witnesses in the Jencks case should have been opened up for inspection by the defense. The prisoner's rights, the Justices affirmed, were infringed by the inability of his counsel to compare the Government's evidence with the witnesses' confidential reports to the FBI.

Under the time-honored practice tossed out by the Court, it was up to the trial judge to determine whether the public interest would be better served by letting a crime go unpunished than by the disclosure of state secrets and other confidential information in the Government files. Yet the whole structure of the FBI and its strength and stature in the eyes of the general public depended on its completely confidential character, and until the Court handed down its decision that view, so stoutly defended by J. Edgar Hoover, seemed to have acquired the status of an unwritten law. Now, unless Congress changes the Court's stand, as it has the constitutional power to do, the Government will have to permit defense inspection of its files, or "let the case go hang."

Supreme Court Justice Clark who, as a former United States Attorney General, understands the scrupulous care the FBI takes never to infringe the civil rights of any citizen, felt so strongly about this point that in his vigorously worded dissenting opinion he declared our "law-enforcement agencies may as well close up shop, for the Court's decision has opened their files to criminals and thus afforded them a Roman holiday for rummaging through confidential information as well as vital national secrets."

Instead of closing up shop, however, the FBI and its congressional supporters lost no time in beginning a study "to see just how big a hole the Court had poked in the wall guarding the FBI files." Like them, we do not see where the public interest can possibly be served by hamstringing the FBI. Their purpose is to draft proposed amendments which would reverse the Court's opinion and restore the traditional safeguards around the investigators' confidential reports. Clearly Congress in this matter faces a major repair job, one that will close, permanently, that breach in the FBI's protective barrier.

[From the Washington (D. C.) Daily News of June 11, 1957]

PROTECT FBI FILES

The time is short, the issue vital, and therefore, it seems to us, Congress should move quickly to find out just how the United States Supreme Court's decision in the Jencks case must be applied, or overruled by a new law.

This is the case in which the High Court appears to have ruled that under certain circumstances the Government's confidential FBI files shall be opened to persons charged with crime and to the public generally. The alternative apparently is for the Government to drop its prosecutions.

Protection of the confidential files of Government intelligence agencies is, in our view, basic.

Reports of confusion among Federal district attorneys about the effect of the decision are numerous.

Associate Justice Tom Clark of the Supreme Court said that the intelligence agencies of the Government might as well "close up shop" if the Court's decision stands. He said it would permit criminals to rummage through confidential information "as well as vital national secrets."

The trial judge in the case, Ewing Thomason of El Paso, has said the ruling is the "greatest comfort to guilty defendants in many a year. * * * I am in agreement with Justice Tom Clark."

The Justice Department is making a major study of the effects of the decision. But Congress should start its own inquiry with immediate hearings.

Congress should not await the Justice Department's findings.

Congress makes the laws.

In this case, it seems to us, it better make a law quick, or find convincing evidence that the Supreme Court's ruling is not as dangerous as Justice Clark says it is.

[From the Norfolk (Va.) Ledger-Dispatch of August 16, 1957]

HANDICAP FOR THE FBI

The Supreme Court's ruling on the right of a defendant in Federal cases to see certain confidential Government files had aroused a great deal of concern among United States prosecutors, FBI men, and others even before the arrest of Rudolf Abel, charged with directing Soviet espionage activities in this country. This development has made the Jencks case ruling an issue of even more pressing importance, with some observers openly speculating that the FBI may drop its spy charges against Abel if there is a risk of exposing its secret files.

Admittedly, there is still a great deal of confusion over how far the principle laid down in the case of Clinton E. Jencks (New Mexico labor leader charged with filing a false non-Communist affidavit) can be extended. In that instance, the high court specifically ruled that the FBI had to produce reports that formed the basis of Government witnesses' testimony.

The FBI, which has long considered it vital to keep such reports entirely secret, would, therefore, be required (according to some interpretations) to permit a good deal of indiscriminate exposure of sources and methods of operations. According to others, the opening of files would extend only to matters directly involving the right of the accused to defend himself. In either case, it seems likely that, rather than impair its operations, the FBI would be tempted to withhold prosecution or go to court under a handicap. And, of course, one of the great dangers is that defendants will exploit this reluctance by demanding files the FBI doesn't wish to release.

In the case of a man such as Colonel Abel of the Soviet intelligence service, it would be tragic indeed if he should be able to reduce the future effectiveness of the FBI or should escape punishment merely because of the possibility that he may demand critical secret reports.

This danger has led House Republican Leader MARTIN to demand that Congress do something to soften the impact of the Court ruling, before the lawmakers adjourn. One

of the most promising of the proposals for meeting the new problem is a bill to give judges the right to screen the raw files demanded by a defendant, thus preventing the disclosure of confidential information and FBI techniques. Certainly there is now a great deal of urgency n providing this or some similar shield for the agency charged with protecting the country against subversion.

The Santa Monica Sheltered Workshop

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. JACKSON. Mr. Speaker, one of the most difficult things in the world to whip is personal discouragement. The conflict is compounded when one suffers a physical handicap which militates against regular employment and takes from one the self-respect which flows from independence. It is a simple matter for one so afflicted to give up the struggle and become a willing victim of what appears to be the inevitability of life's unthinking forces. In such cases, the name of the depressed and unhappy human shows up on the rolls of those receiving public assistance in one form or another. All incentive is lost, as is all desire to seek and achieve the sense of well-being attaching to honest reward for honest labor.

Santa Monica is a booming California city. During the past decade, it has shared in the phenomenal growth which is adding a new permanent resident for California every 55 seconds. Together with its stories of growth, industrial progress, high employment, and general well-being, there were, and are, many good people who for one reason or another found themselves unable to keep the pace required by modern technology and the demands of business and industry. These were the handicapped—those in wheelchairs, in braces, missing one or more members, the blind, the halt. But, one thing they shared in common was the desire to be self-supporting. They wanted an opportunity to learn and to put their sound intelligences to constructive purposes. They desired deeply to work and to have the quality of their workmanship known and appreciated. Mostly, they had no skills, but in depriving these citizens of sight, or hearing, or a limb, nature had followed the immutable law of compensation. For everything taken from each, something new had been added. The blind developed a deftness of fingers and a keener hearing. The eyes of the deaf were as good, or better, than average. Twisted fingers could be made to perform a useful function, and wheelchairs proved no obstacle to perfect workmanship when the occupant brought determination to the job at hand.

And, out of a welter of disability was born the Santa Monica Sheltered Workshop. In spite of doubts, hardships, heartaches, and financial droughts, a few men and women of vision and determination embarked upon what has become a model operation in vocational rehabilitation. What started as a hesitant venture in 1951, has turned out to be, in 1957, a success in every way. Nor, has the success been limited to those who initiated the sheltered workshop, nor to those who have found a new life because of its activities.

The handicapped who comprise the working force of the workshop have demonstrated that physical drawbacks can be overcome. Those who ventured timidly through the office door of the original shack, stayed to gain not only knowledge, but comradeship, confidence, and a new spirit. They defeated not only their own problem, but became, in turn, part of the answer to those who have followed them. The pay check became a reality to many who could previously have hoped for nothing but a meager subsistence check, labeled "Department of Charities, County of Los Angeles."

Out of day-to-day association with others equally handicapped, came a new sense of belonging, a new spirit, a new challenge, and for many, a new life.

The contractors and subcontractors who utilize the skills of the Sheltered Workshop have saved on capital investments. Wrapping, mailing, shipping, addressing, and assembly of complex electronic devices in the shop have saved valuable plant floor space for more urgent needs. Taxes, labor turnover, supervision, have all benefited by the presence in the community of a work force willing and able to tackle any job, no matter how big or small, on an instant's notice. To this time, the Sheltered Workshop has performed work for a long list of industrial and business organizations, including Acme Press; Aircraft Valve Manufacturing Co.; Air Transport Manufacturing Co.; Albin Enterprises; American Sample Co.; Athearn, I. R. Co.; Bay Cities Engineering Co.; Betwill Co.; Boulevard Camera Shop; Braunson Electronics, Inc.; Burton, John Originals, Inc.; Carruthers & Fernandez, Inc.; Celco Corp.; Consolidated Precision Products; Dixon Ceramics; Douglas Aircraft Co.; Ed's Micro Service; Evans Supply Co.; Fisher, John Lumber Co.; Forrest Stationers; Frantz Industries; Ferro Cast Corp.; Heinley Mastercraft Products; Henshey Co.; Highland Engineering Co.; H M Chemical Co., Ltd.; Jellins Co.; J. W. Robinson Co.; Kaye & Miller Machine Co.; Lear, Inc.; Magna Books, Inc.; Masters Printing & Stationery Co.; Michael's Car Washer; Midway Stamping & Die Works; Mission Packing Co.; Monarch Die Casting Corp.; M R M Enamelers; North American Aviation, Inc.; North American Piston Co.; Pacific Business Forms; Pastorius, F. R. & Co.; Pacific Jewelry Manufacturing; Propulsion Research Corp.; R & E Engineering Co.; Reynolds Industries; Riker Laboratories, Inc.; Sanford Aircraft, Inc.; Santa Monica Products Co.; Santasox; Scott & Scott; Seeco Tool Co., Inc.; Semco Research, Inc.; Seward & Flood Printing Co.; Shamban Co.; Standard Paper Box Corp.; Statham Laboratories; Summers Gyroscope Co.; Swissomatic Products; Tapoo Hawes Originals; Transco Products, Inc.; United Products Manufacturing Co.; United States Plywood Corp.; Universal Tool Co.; Wefco Manufacturing Co.; Weaning Cup Corp.; and Wolfe, Franklin C. Co., Inc.

Santa Monica and southern California are justly proud of the Sheltered Workshop. It has become much more than an adventure in sociology and rehabilitation. It has become a demonstrated and living fact that where there is vision, understanding, and cooperation lives of the physically handicapped can be turned into lives of useful productivity, marked by self respect and ingenuity. Much of the credit for the success of the workshop must go to Mr. J. E. Anthony, the general manager, whose determination, initiative, and faith made a transient dream into a living reality. His dedication has changed the course of lives, previously marked by frustration and desolation. Today, the witnesses to his personal enthusiasm are those whose deft hands spin a portion of the gigantic web of American industry. Joe Anthony combined idealism with practical reality, and out of this cloth was cut the pattern for the Sheltered Workshop. Standing behind Mr. Anthony have been many of the farsighted citizens of the community who have brought to the undertaking technological knowledge, sound business management, and public relations and advertising skills. The Sheltered Workshop represents a classic refutation of human hopelessness, and it constitutes a challenge to all who would achieve an independence of mind and body. It is a program which could and should be expanded throughout the Nation to the end that many hundreds of thousands of handicapped citizens might achieve the measure of economic independence so necessary to the enjoyment of the blessings of citizenship in a free land.

It is a privilege, Mr. Speaker, to be able to pay tribute to the Santa Monica Bay Sheltered Workshop for the great job being done, and to pay a personal word of tribute to the handicapped who constitute the work force. I have visited the workshop, and look forward to doing so again within the very near future. I share the pride of the people I represent in this unique and worthwhile undertaking.

Battleship "Arizona" Memorial

SPEECH
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. UDALL. Mr. Speaker, every morning the American flag is raised over a rusting bit of metal in Pearl Harbor—the only visible remains of the U. S. S. *Arizona*, the famed battleship named for my State, sunk in the surprise attack which plunged our country into World War II.

The story of the Navy's daily tribute to the battleship and its brave crew which

died that day nearly 16 years ago is well known. To the Navy, the *Arizona* remains a commissioned ship of the fleet, with most of its crew—1,102 officers and men—still aboard.

Now the House has acted to authorize construction of a more permanent memorial to honor these men and the others who died in the Pacific war by passage of H. R. 5809, introduced by the Delegate from Hawaii [Mr. BURNS]. I believe he is to be commended for his efforts on this matter, and I was pleased to join him as a cosponsor.

Among the approximately 1,200 who perished aboard the *Arizona* were 7 from my own State. They were George Allan Bertie, Jr., and George Sanford Hollowell, of Phoenix; Louis Edward Cremeens, of Yuma; James William Horrocks, of Nogales; James Joseph Murphy, of Bisbee; Harvey Leroy Skeen, of Miami; and James Randolph Van Horn, of Tucson.

The words of Admiral Radford, spoken when the daily flag-raising ceremony was instituted, apply equally well, I think, to efforts to establish this memorial:

I am sure the *Arizona's* crew will know and appreciate what we are doing. May God make His face shine upon them and grant them peace.

Opening FBI Files

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. KEATING. Mr. Speaker, under leave previously granted, I insert additional editorial comment pointing up the need for legislation to soften the effects of the Jencks decision: –

[From the Philadelphia (Pa.) Evening Bulletin of June 5, 1957]

OPENING FBI FILES

In its defense of individual rights the Supreme Court has denied to the FBI the privilege of keeping secret all its reports from undercover agents. The Court does not compel the Government to open its files to inspection. But when these reports are made the basis of prosecution in court the defendant has a right to have a look at them.

In the case of Jencks, a labor leader was charged with falsely swearing he was not a Communist. He had to take a non-Communist oath under the provisions of the Taft-Hartley law. Two undercover agents of the FBI, Ford and Matusow, gave information that they knew Jencks was a Communist at the time he swore he was not.

The majority of the Supreme Court may have been influenced by the later confession of Matusow that he lied in a number of his undercover reports. At any rate, the Supreme Court decided that the defense had a right to check on the statements made by the agents or with the known facts.

The dissent of Justice Clark and the separate opinions of Justices Burton and Harlan show how difficult it is to draw a line which shall give protection to the defendant and not cripple the Government. The United States must defend itself against a Red conspiracy while preserving the tradition of justice to the individual.

[From the Albuquerque (N. Mex.) Journal of June 7, 1957]

BLOW TO ENFORCEMENT

Law enforcers are gravely concerned over the United States Supreme Court's decision in the Jencks case which under certain circumstances opens FBI files in subversion and other criminal cases.

Congressmen and Government officials see the decision as resulting in a complete breakdown of our entire internal security. Legislation to prevent such FBI disclosures has been introduced.

Narcotics Commissioner Anslinger sadly declares the Supreme Court has struck a fatal body blow against the prosecution of dope peddlers. He said the sensational ruling will automatically dry up 85 percent of his sources in narcotics cases.

It's the tipster who gives the FBI much of its information in criminal and subversive cases. If the names of tipsters are to be made public the source of underground information will evaporate.

One official in the United States Justice Department said the decision would make a complete shambles of law enforcement in America.

If the High Court's ruling is as far reaching as all these officials claim, any remedial legislation should be rushed with all speed.

[From the Atlanta (Ga.) Constitution of June 12, 1957]

COURT RULING SNARLS JUDICIAL PROCEDURE

Refusal by United States district attorney, James Dorsey, of Atlanta, to open his files to defense attorneys in two criminal cases this week brings home the effect of the recent United States Supreme Court ruling that the Federal Government must make such files available to defendants.

In both instances, cases against the defendants had to be dismissed.

Mr. Dorsey's reasons, of course, are understandable. His files on the cases were assembled from confidential sources and to reveal those sources as well as the information to anybody would be a violation of confidences. Making such files available would destroy the investigative machinery of the FBI and the Federal court system.

We cannot pass judgment upon the legal thinking through which the Supreme Court arrived at its decision. But it is quite obvious that its effect will be to snarl the course of justice—unless other measures are taken—for a long time to come.

In his dissenting opinion to the ruling, Justice Clark warned that it opened FBI files "to the criminal and thus afforded him a Roman holiday for rummaging through confidential information as well as vital national secrets. It opens up a veritable Pandora's box of troubles."

FBI Director Hoover consistently has opposed opening his agency's "raw files." He expressed it as follows to a Senate subcommittee in 1950:

"FBI reports set forth all details secured from a witness. If these were disclosed, they could become subject to misrepresentation, they could be quoted out of context, or they could be used to thwart truth, distort half-truths, and misrepresent facts.

"The raw material, the allegations, the details of associations and compilation of information in FBI files must be considered as a whole. They are of value to an investigator in the discharge of his duty.

"These files were never intended to be used in any other manner and the public interest would not be served by the disclosure of their contents."

If the Court ruling stands, it is difficult to see how it will be possible to maintain internal security, combat enemy agents, or control interstate criminals and mobs.

District Attorney Dorsey's action may help precipitate moves to clear up this situation. Otherwise, Federal court procedures are headed for chaos.

[From the New York World-Telegram and Sun of June 15, 1957]

REDS IN THE FILES

Comes now the Communist Party, using the United States Supreme Court's decision in the Jencks case as the basis for a demand that it be permitted to rummage through FBI files.

That is exactly what Associate Justice Tom Clark warned against in his forthright dissent to the Court's majority opinion. He said that, if the ruling stands, Government intelligence agencies might as well close up shop.

The district judge who originally tried the case said the decision is the "greatest comfort to guilty defendants in many a year."

So, we repeat:

The Justice Department should move immediately to find a way out of this dilemma.

Congress should start immediately its own inquiry into the effect of the decision which apparently will force the Government to open up its secret files or drop prosecutions.

Congress—with Justice Department help, we hope—should make a law, and quick, to protect FBI files from the Reds.

[From the New York Herald Tribune of August 12, 1957]

THE MORAL OF THE ABEL CASE

The case of Col. Rudolf Ivanovich Abel points a moral for Congress and the American people.

This may well be one of the most important trials for alleged espionage that has ever come before an American court. Colonel Abel is charged with being a high officer in the Soviet secret police. If the charges are sustained, he would constitute a direct link between the Kremlin and spying within the United States.

But he comes before the bar at a time when the law concerning the relations between the investigative methods and material of the Federal Bureau of Investigation and the presentation of Government cases in which the FBI is in any way involved is in a state of great confusion. The suggestion has even been made that the case might have to be dropped, in preference to the disclosure of the means whereby Colonel Abel was tracked down and such additional information as the court might call upon this FBI to disclose.

Matters may never come to this pass in this particular case. But they have done so in other Government prosecutions. At least six have been abandoned by the Justice Department since the Supreme Court ruling on the Jencks case on June 3; others have been dismissed by the courts because of the Government's reluctance to produce FBI reports and one FBI agent has been fined $1,000 for taking the same attitude.

It is fair to say that no one can predict with any accuracy precisely how a trial judge will interpret the majority opinion in the Jencks case. Some have continued to follow the old practice of studying the files in secret and allowing those distinctly relevant to the defense to be produced in court. Others have taken Justice Brennan's words, in the majority opinion, very literally: "The burden is the Government's, not to be shifted to the trial judge, to decide whether the public prejudice of allowing the crime to go unpunished is greater than that attendant upon the possible disclosure of state secrets and other confidential information in the Government's possession."

A broad interpretation of this phrase could lead, as Justice Clark predicted in his dissent, to "a Roman holiday for rummaging through confidential information as well as vital national secrets."

In matters like the Abel case, concerning top-level espionage, such rummaging could be disastrous.

The Supreme Court states what the law is. Congress writes the law, and can only be overruled when in conflict with the Constitu-

tion. Congress, therefore, has the power and the obligation to clarify the law under which the FBI and the courts operate. Measures to do so have been drawn up and approved by the Judiciary Committees of both House and Senate.

Representative CELLER, Democrat and chairman of the House committee, requested the Rules Committee, nearly a month ago, to bring the bill to the floor. Now, however, with the whole question at crisis point, he has said: "I'm not withdrawing that request, but I'm not pushing it. I think it's well to delay in this matter, let the rust settle on Supreme Court decisions."

Fortunately, a number of his Republican colleagues do not propose to let the settling dust befog the Abel case. They are pressing for urgent action; Representative KEATING, the author of the House bill to allow judges to rule on the admissibility of FBI files, has said: "I can think of no legislation in Congress where the need is more urgent." Minority Leader JOSEPH MARTIN said: "The Democratic leadership determines what legislation we shall consider. They and they only, will be held responsible if this vital legislation is not passed."

[From the New Britain (Conn.) Herald of August 17, 1957]

PROTECTING FBI RECORDS

It is now believed that Congress will adjourn without doing anything about the bill to bar access to FBI private files.—James Marlow, AP's news analyst, voices the thought that the small amount of opposition to the bill will be enough to squelch action in the present session.

This would be a near-tragic thing. It would mean dozens of "live" cases must either be dropped by the Justice Department, or that lawyers for suspect Communists and all others involved in prosecution on the basis of FBI evidence, can pour over the FBI secret files.

The Supreme Court paved the way for this alternative choice through its now famous Jencks case ruling. Since the court ruled that a defendant must, under all circumstances, know the evidence of his accusers, the Government has had to drop at least half a dozen cases, rather than give access to FBI files.

Prosecution of the Russian spy, Col. Rudolf Abel, might hinge on whether Congress takes action on a new bill.

Indeed, the case involving John Franks, former New Britain athlete, could conceivably depend on what Congress does concerning this bill.

As difficult as it will be for Congress, with adjournment in sight, every effort should be made to seal up this immense loophole in our judicial system.

[From the Fall River (Mass.) Herald News of August 17, 1957]

CONGRESS DEMONSTRATES CONFIDENCE IN FBI CHIEF HOOVER

The prestige of J. Edgar Hoover is being demonstrated in dramatic fashion as Congress, on the verge of its rush toward adjournment, pauses to ram through a bill to "protect" files of the Federal Bureau of Investigation from exposure to Communists and other groups.

The already bright prospect for passage of the measure was enhanced considerably by speculation that the Government might prefer to drop its case against Col. Rudolf Ivanovich Abel, alleged Soviet spy, rather than allow the defense to see relevant files. Speedy House passage was expected to follow Senate approval.

The problem of safeguarding FBI files has been aggravated by the Supreme Court seven-to-one decision in the Jencks case. The Court ruled, June 3, that Jencks, a labor union official convicted of falsely signing an affidavit that he was not a member of the Communist Party in 1950, was entitled to an order directing the Government to produce for inspection all reports touching on events and activities to which two paid Government witnesses had testified.

Because of the ruling, the Justice Department has said it has been forced to drop certain cases. In his annual report on July 28, Hoover said: "The very basis of our success is the FBI's assurance to this country's citizens that the information they give will be maintained in the strictest confidence in our files."

An administration bill to safeguard the FBI files was reported unanimously by the Senate Judiciary Committee on July 1. The House Judiciary Committee reported a stronger bill on July 5. The revised measure, as it neared Senate passage, required that disclosure of relevant files be made only "after a witness called by the United States has testified on direct examination."

Minority Leader JOSEPH W. MARTIN, JR., has predicted easy passage of the bill because of "strong bipartisan support of the FBI."

This is good news.

Governor Muñoz-Marín, of Puerto Rico

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. JACKSON. Mr. Speaker, during last week several members of the House took occasion to mention the name of Gov. Muñoz-Marín, of Puerto Rico. In several of the comments it was suggested that Governor Muñoz might be playing fast and loose with Communist agents and revolutionary provocateurs in his official capacity. These comments appear to me to be most unfortunate and not at all in keeping with the actual record of achievement in Puerto Rico which must be credited, in large part, to Governor Muñoz.

Perhaps no Latin leader in the Western Hemisphere has demonstrated a greater understanding of the value of free enterprise and personal initiative than has the Governor of Puerto Rico. In an effort to raise the standard of living of the island's people, he has embarked upon a program marked with vision and determination. Incentives have been offered to investors, taxes have been waived or greatly reduced for foreign capital, and because of these things, new industries and businesses have sought out Puerto Rico as the site for new manufacturing and processing facilities.

Communism wants no part of the American system of free initiative, and no Communist could ever approve what Governor Muñoz is doing. Puerto Rico is literally the "show case for freedom of action" in the Caribbean area, and upon its progress the eyes of all Latin America are centered. What happens in Puerto Rico is not only of importance to its own residents, but to millions of United States citizens here on the mainland. Our own stake in the success of Governor Muñoz' program is no small one. If it succeeds it will demonstrate to reluctant Latin Republics that foreign investment is a good thing for all concerned. If it fails, it will only reinforce the nationalist premises that capital investment is a bad thing—per se.

Governor Muñoz is a political liberal—I am a political conservative. But he and I have a joint stake and a common birthright in human freedom. The gentleman from California is engaged in a day-to-day and face-to-face struggle with the forces of communism as a member of the House Committee on Un-American Activities. The Governor of Puerto Rico is also waging the same fight on a different front, and with different techniques and tactics. His task is not an easy one, and it is made even more complex when charges of a loose nature are made on the floor of the Congress of the United States.

I have met with the Governor of Puerto Rico on many occasions, both at Forteleza and here in the United States. We have discussed programs and projects of mutual interest and concern. In company with the Governor I have visited housing projects, new factories, and have seen him among the people he governs discussing their problems with them in their homes and in their fields. I have disagreed frankly and, on occasion, vehemently, in friendly debate, but I can report that in no instance did I discern in Governor Muñoz any predilection to any form of government save that which encompasses and protects the people he has the honor to govern. To infer that this honorable and able administrator would betray the sacred trust that is his, or knowingly confer with the enemies of the United States, is to level a charge that cannot be borne out on the record.

I have never discussed the political makeup of other Latin Republics with Governor Muñoz, and I have no way of knowing in what quarter lie his sympathies in the present loud controversy over certain governments and personalities in the Western Hemisphere. But I will say that his administration of the high office he holds has been marked by judicial conduct and fair play.

If foreign policy amateurs will permit the conduct of foreign policy to be conducted in what appears to be the best interests of the United States and by men trained to the job we may expect to see continued improvement in political, economic, and social affairs throughout our hemisphere. By the same token, no good service is being rendered by those who sow the seeds of violence, misunderstanding, and bitterness.

Judy Letson of Bessemer, Ala., Named "Miss National Junior Achiever"

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. HUDDLESTON. Mr. Speaker, practicing the motto, Learning by Do-

ing, high-school youngsters today are receiving practical business training through the nationwide junior achievement program. This worthwhile organization has as its objective to engender the characteristic American freedom, incentive and opportunity which private enterprise and private ownership offers.

It is with a great deal of pride and pleasure that I take this occasion to salute the outstanding young lady who has just been chosen Miss National Junior Achiever. She is Miss Judy Letson, a vivacious and energetic young citizen of my district. I am very happy to join with her townspeople in Bessemer and throughout Jefferson County, Ala., in paying tribute to Miss Letson on receiving this national honor.

She was winner of the county contest and in March she was chosen as Miss SOJAC at the southern junior achievers conference in New Orleans, La. Miss Letson is a member of the E-Pip-Su Co., a junior achievement project sponsored by the United States Pipe and Foundry Co. at Bessemer, Ala. Junior achievement work has already paid off for her, as it will some day for all its deserving participants.

Miss Letson has eagerly learned the fundamentals of business although she does not plan to be a businesswoman. She hopes to become an actress and with her brunette beauty she is bound to go far toward achieving her goal Last December she was queen merry Christmas at the annual Bessemer Christmas carnival and she will be head majorette this fall at Bessemer High School, where she is in her senior year. She is the daughter of Dr. and Mrs. J. W. Leston of Bessemer. Her father is superintendent of Bessemer schools. Her parents, I am sure, must be extremely proud of her, as all of us are.

Federal Grants to States

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. MILLER of Nebraska. Mr. Speaker, I wonder how many folks realize that Federal grants to States and Federal-aid payments to individuals total $56,237,000 in Nebraska and more than $5 billion for the Nation as a whole? Those amounts are for the fiscal year 1956.

I want to sound this warning: Federal grants-in-aid may be threatening the strength of the States.

Here is a statement from a prominent educator:

> If present trends in Federal-State relations continue for another quarter century, the States may be left hollow shells, operating primarily as the field districts of Federal departments and dependent upon the Federal Treasury for their support.

Then consider this statement by Senator KNOWLAND, of California:

> I have never seen the Federal Government contribute money without wanting to exercise control.

I wonder if you realize that since 1947 Federal aid to States has reached the amazing total of $35 billion.

Nebraska has received Federal funds in 65 of the 95 programs available to States and Territories. Last year many more new welfare programs were suggested by the President but got nowhere in Congress. They will be suggested again and again. Some of them may be adopted.

I believe it is time that we sat down and took stock. Where are we traveling?

I warn you we are on a course that leads to the main track of socialism and we had better do something about it.

I believe that most of you are acquainted with my philosophy. It is my firm conviction that the Federal Government should not do for the people what the people can do for themselves. I further believe that when there is a worthy and needed cause, that the Federal Government should step in and provide the funds.

In this group I would place irrigation and reclamation districts, power projects, flood control and other worthy units. Private money is usually not available to construct such projects and the Federal Government, in effect, loans the money. The Treasury gets that money back. That is not an expense. It is an investment in America.

Grants-in-aid projects are something else. They are direct grants from the Federal Treasury. They have no relation to reclamation and similar projects which are in an entirely different category.

Now I agree that many of the grants-in-aid programs we have in Nebraska are highly worthy. They are needed. Many of them do untold good and I am not speaking against them. We must keep most of them through either Federal or State funds.

What I am doing is urging you to take another look to see if these programs cannot be done better on the State and local level than on the Federal level.

The cause of my worry is the mounting billions of dollars which the Federal Government collects from the American taxpayer and then doles back to the States and communities in the form of aid. Too many States and too many people are running to the Government for help.

Now let us take a typical year for which I have some figures, July 1, 1953, to June 30, 1954. Federal-tax collections including social security amounted to $411,706,000 in Nebraska. Federal payments back to Nebraska totaled $98,919,000. In other words, for every dollar that came back to Nebraska we paid for with $4.16.

Naturally, most of the tax goes for our defense and other operations of Government but we more than paid the Government for that $56 million we got back in grants.

Some people seem to have the idea that a grant from the Government is free money. My friends, there is no such thing as free money. The Federal Treasury gets its money from you—whether by taxes or borrowing. The taxpayer pays the bill.

It is only commonsense to assume that part of each dollar you send to Washington is lost along the way to, in, and from the Nation's capital. Administration costs money.

Now I pose this question: "Would it not be better to tax our people on the local level and administer our own programs than depend on the Federal Government when we know full well that it is going to cost more money if the money is routed through Washington?"

More taxes? Certainly not. If grants to the States can be reduced the Federal income tax can be reduced. Perhaps a rebate of 10 to 20 percent to the States would serve the purpose.

Now, I am not saying that the States should forthwith refuse Federal grants in aid. I am merely suggesting the time has come to think the matter over at greater length and determine which grants can be assumed by the States and which should remain in the province of the Federal Government.

As the years pass, more and more suggestions for Federal aid will be advanced. In this session we had to take up the issue of Federal aid to education through construction of schools. The bill was barely defeated or we would have been saddled with a new $2 billion idea. I voted against this bill because I do not believe the Federal Government should be building schools. That is in the province of the communities and the States. Schools should be built, maintained, and operated at the local level under State standards.

NEBRASKA GRANTS

Now let us examine some of the grants in aid programs in Nebraska—many of them laudable. Here are a few of them:

Agriculture experiment stations	$405,535
Cooperative agricultural extension	711,389
School lunch program	631,867
Special school milk program	303,088
Federal airport program	129,541
Roads	16,717,110

Then we have numerous other grants to States and communities—hospital construction, public assistance, aid to dependent children, aid to the blind, and many others that bring the total in this bracket to $34,742,311.

Then there are the Federal aid payments to individuals in health, training, awards, benefits to veterans and others for a subtotal of $21,495,580. The grant total, I repeat, is $56,237,891 for Nebraska.

Back in 1920 the annual report of the Secretary of the Treasury carried 13 appropriation accounts from which payments were made for grants to or within States. In 1930 there were 25; in 1940 there were 44; in 1950 there were 36; last year there were 59 with grants in 95 fields, some closely allied, of course.

Through the years these programs have grown. It is a common statement on Capitol Hill that once a program starts, it is very difficult if not impossible to stop.

I hope you will always bear in mind this statement of former Secretary of the Treasury Humphrey: "The people must come to understand that any program, if financed by Washington, can

only be paid for by local tax money going to Washington, where some is used up for Washington overhead expense and what is left goes back to the local community which provided some or all of the money in the first place."

I repeat, there is no such thing as free money.

Now what are the principal dangers of Federal grants?

Let me repeat the words of Senator KNOWLAND, "I have never seen the Federal Government contribute money without wanting to exercise control."

It does tend to centralize control of State and local situations in Washington.

It fosters the growth of larger and larger bureaucracy and its attendant problems of bigness.

It stifles initiative at the State and local level.

Now I am not suggesting any immediate and overall cure. I am suggesting some intense study of the problem. I am suggesting we forgo further new programs until we get the problem settled. I am suggesting that we make a new evaluation.

I am not opposed to our present fine grants-in-aid programs in Nebraska. I am only asking if we are depending too much on the Federal Government, with a resultant expense that is higher in cost than if we did the job ourselves.

The governors' conference, of which Nebraska's Gov. Victor Anderson is a member, has brought up this subject. I trust it will be given diligent attention with a view to greater economy to the State and Nation.

Nebraska was molded by men and women who carved an empire out of the prairies, people of vision who wanted independence. We built a pay-as-you-go philosophy with no bonded indebtedness.

I believe the people of Nebraska today want that same independence, that they do not want to go too far down the path toward socialism.

[From 1956 Report of the Secretary of the Treasury]

PART A—GRANTS TO STATES AND LOCAL UNITS—NEBRASKA

AGRICULTURE DEPARTMENT

1. Agricultural experiment stations, regular grants, $405,535.

2. Cooperative agricultural extension work, regular grants, $711,383.

3. School lunch program, regular grants, $631,867.

4. National forests fund, shared revenues, $11,413.

5. Submarginal land program, payment to counties, shared revenues, $4,482.

6. Cooperative projects in marketing, $5,465.

7. State and private forestry cooperation, etc., $1,304.

8. Commodity Credit Corporation, value of commodities donated, $359,669.

9. Special school milk program, $303,088.

10. Removal of surplus agricultural commodities, value of commodities distributed within States, $570,811.

11. Disaster loans, etc. (payments to assist States in furnishing hay in drought stricken areas), emergency grants, none.

DEPARTMENT OF COMMERCE—CIVIL AERONAUTICS ADMINISTRATION

12. Civil Aeronautics Administration—Federal airport porgram—regular grants, $129,541.

13. Bureau of Public Roads, highway construction—regular grants, $16,717,118.

14. Bureau of Public Roads, highway construction—emergency grants, none.

15. Maritime activities, State marine schools, regular grants, none.

DEPARTMENT OF DEFENSE

16. Army, lease of flood control lands, shared revenue, $35,466.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—OFFICE OF EDUCATION

17. Colleges for agriculture and mechanic arts, regular grants, $83,222.

18. Cooperative vocational education, regular grants, $379,037.

19. School construction and survey, emergency funds, $531,019.

20. Maintenance and operation of schools, emergency grants, $961,527.

PUBLIC HEALTH SERVICE

21. Venereal disease control, regular grants, $5,255.

22. Tuberculosis control, regular grants, $24,589.

23. General health assistance, regular grants, $95,588.

24. General health assistance (poliomyelitis), emergency funds, $26,760.

25. Mental health activities, regular grants, $22,233.

26. Cancer control, regular grants, $16,352.

27. Heart disease control, regular grants, $13,484.

28. Poliomyelitis vaccination program, emergency grants, $111,687.

29. Hospital construction and survey and planning, regular grants, $748,393.

30. Construction of community facilities, emergency grants, none.

SOCIAL SECURITY ADMINISTRATION—GRANTS TO STATES FOR MATERNAL AND CHILD WELFARE SERVICES

31. Maternal and child health services, regular grants, $99,153.

32. Services for crippled children, regular grants, $130,614.

33. Child welfare services, regular grants, $51,200.

GRANTS TO STATES FOR PUBLIC ASSISTANCE

34. Old age assistance, regular grants, $6,813,864.

35. Aid to dependent children, regular grants, $1,980,960.

36. Aid to permanently and totally disabled, regular grants, $297,123.

37. Aid to the blind, $340,318.

38. American Printing House for the Blind, regular grants, $1,494.

39. Office of Vocational Rehabilitation, regular grants, $284,378.

DEPARTMENT OF THE INTERIOR

40. Federal Aid, Wildlife Restoration, Fish and Wildlife Service, regular grants, $194,378.

41. Payments from receipts under Migratory Bird Conservation Act and Alaska game law, shared revenues, $33,308.

42. Payments from receipts under Mineral Leasing Act, shared revenues, $5,025.

43. Payments under certain special funds, shared revenues, $4,120.

DEPARTMENT OF LABOR

44. Unemployment Compensation and Employment Services Administration, regular grants, $1,117,431.

FEDERAL CIVIL DEFENSE ADMINISTRATION

45. Federal contributions, emergency grants, $35,100.

46. Disaster relief, emergency grants, none.

FEDERAL POWER COMMISSION

47. Payments to States under Federal Power Act, shared revenues, none.

HOUSING AND HOME FINANCE AGENCY—OFFICE OF THE ADMINISTRATOR

48. Defense community facilities and services, emergency grants, none.

49. Urban renewal fund, regular grants, none.

50. Urban planning assistance, regular grants, none.

51. Disaster relief, emergency grants, none.

PUBLIC HOUSING ADMINISTRATION

52. Annual contributions, regular grants, $329,006.

VETERANS' ADMINISTRATION

53. State and Territorial homes for disabled soldiers and sailors, regular grants, $77,046.

54. Supervision of on-the-job training, regular grants, $41,505.

55. Total grant payments, part A, $34,742,311.

PART B—FEDERAL AID PAYMENTS TO INDIVIDUALS, ETC., WITHIN THE STATES, OTHER THAN DIRECT GRANTS AND LOANS

DEPARTMENT OF AGRICULTURE

56. Agricultural conservation program, $5,411,517.

57. Administration of Sugar Act program, $1,636,762.

58. Commodity Credit Corporation (value of dealers' certificates issued incident to supplying feed to farmers in drought-stricken areas), emergency, none.

DEPARTMENT OF COMMERCE

59. Bureau of Public Roads, forest highdays, none.

60. State marine schools (subsistence of cadets), none.

DEPARTMENT OF DEFENSE

61. Air Force, National Guard, $639,328.

62. Army, National Guard, $3,208,628.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—NATIONAL INSTITUTES OF HEALTH

Research grants

63. National Arthritis and Metabolic Diseases Institute, none.

64. National Neurological Diseases and Blindness Institute, $36,346.

65. National Cancer Institute, $9,800.

66. National Institute of Dental Research, none.

67. National Institute of Allergy and Infectious Disease, $24,518.

68. National Heart Iistitute, $39,791.

69. National Institute of Mental Health, none.

70. Division of Research grants, $30,568.

Health, Education, and Welfare traineeship awards

71. National Arthritis and Metabolic Diseases Institute, none.

72. National Neurological Diseases and Blindness Institute, none.

73. National Cancer Institute, none.

74. National Heart Institute, none.

75. National Mental Health Institute, $36,800.

Training grants

76. National Arthritis and Metabolic Diseases Institute, none.

77. National Neurological Diseases and Blindness Institute, none.

78. National Cancer Institute, $47,496.

79. National Heart Institute, $50,000.

80. National Mental Health Institute, $66,509.

Field investigations

81. National Cancer Institute, none.

Fellowship awards

82. National Arthritis and Metabolic Diseases Institute, none.

83. National Neurological Diseases and Blindness Institute, none.

84. National Cancer Institute, $7,416.

85. National Dental Institute, $1,728.

86. National Institute of Allergy and Infectious Diseases, none.

87. National Heart Institute, $10,422.

88. National Mental Health Institute, none.

89. Division of Research grants, none.

Office of Vocational Rehabilitation, HEW

90. Training and trusteeships, none.

DEPARTMENT OF LABOR

91. Unemployment compensation for veterans, $533,506.

92. Unemployment compensation for Federal employees, $393,845.

NATIONAL SCIENCE FOUNDATION

93. Research grants awarded, $53,085.

94. Fellowship awards, $24,283.

VETERANS' ADMINISTRATION

95. Automobiles, etc., for disabled veterans, $17,579.

96. Readjustment benefits (Public Law 346, June 22, 1944) and vocational rehabilitation (Public Law 16, March 24, 1943), $9,215,543.

Total payments within States (part B)	$21,495,580
Total grant payments (part A)	34,742,311
Grand total (parts A and B)	56,237,891

The Birmingham News' Ace Political Reporter, Hugh W. Sparrow, Honored for His Meritorious Service to Journalism

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. HUDDLESTON. Mr. Speaker, the newspaper byline of Hugh W. Sparrow has been a familiar one indeed to the readers of the Birmingham (Ala.) News for approximately 35 years. Mr. Sparrow's byline has appeared over some of Alabama's biggest news stories, and he is today regarded as the dean of political reporters in my State.

Last week in Montgomery, where the Alabama Legislature is now in session, Mr. Sparrow was honored at a surprise luncheon. On hand were numerous State legislators, Lt. Gov. Guy Hardwick, Attorney General John Patterson, Alabama Supreme Court Justice J. Ed Livingston, and many fellow newspapermen, including Mr. Charles A. Fell, editor in chief of the Birmingham News.

They all paid tribute to Mr. Sparrow's courageous and honest reporting and to his dedication to the cause of good government. He was presented a scroll and loving cup, and showered with congratulatory messages. It was a fitting tribute to a fearless reporter who has spent the major portion of his life safeguarding the public's interest. As the faithful watchdog of Alabama's governmental system, Mr. Sparrow has earned the respect and confidence of the people as few elected officials ever have.

Under leave heretofore granted, I am pleased to insert the following article on Mr. Sparrow's surprise luncheon as it appeared in the Birmingham News of August 21, 1957:

NEWS' POLITICAL ACE TAKES A BOW—CRUSADING HUGH SPARROW HONORED FOR MERITORIOUS WORK IN JOURNALISM

(By Trudy Cargile)

MONTGOMERY, ALA., August 21.—Tables turned on News Reporter Hugh Sparrow yesterday.

Our ace political writer who has long covered sessions of the legislature was the somewhat surprised recipient of a luncheon in his honor arranged by members of the present legislature and friends he has won through his long years of news coverage.

Some 60 persons, including representatives from every senatorial district in Alabama, several of the State's higher officers, and members of his own profession were on hand to pay tribute to Sparrow for his meritorious service to journalism.

Like every other member of his profession, said R. F. Hudson, Jr., publisher of the Montgomery Advertiser, Sparrow has worked with the knowledge that often even friends must be hurt with the truth in reporting the facts.

Even most of those politicians present, he added, had probably cursed Sparrow's name at times while cursing themselves for becoming the object of unpleasant publicity at his hands.

"But in behalf of all us 'lying newspapers,' we all salute an honest one," he concluded.

More long-stemmed roses of the thornless variety were in store for Sparrow when Senator Albert Boutwell, of Jefferson, drew attention to his work over the years.

It was Sparrow's accurate expose of prison conditions that led to the abolishing of the lash, Boutwell pointed out in mentioning some of the reporters more outstanding achievements in the news profession.

The grandson of a Presbyterian minister, Sparrow was born in Birmingham where his father, John Sparrow, was one of the founders of the Birmingham Ledger and the Sparrow Advertising Agency.

Sparrow joined his father in newspaper work after attending Howard College. He came to the Birmingham News in 1921 and has remained in Birmingham except for a brief interval when he worked in Louisville, Ky.

In Birmingham he worked as rewrite man, on special assignments and as a feature writer and as a reporter on courthouse, Federal court, and police beats.

In 1951, two Alabama newspapers nominated Sparrow for a Pulitzer Award after his exposes of prison conditions in this State. He won the Big Story Award for a television play, based on the murder of Jake Prescott.

Boutwell described Sparrow as a reporter loyal to the paper and the people.

A scroll, presented by Wallace D. Malone, former legislator and chairman of the board of directors of the First National Bank in Dothan, read:

"Mr. Sparrow, the undersigned know that we represent the views of many thousands of people in our State when we commend you as a news reporter, for your integrity, your everlasting perseverance, your objectivity and your outstanding courage in the pursuit of your profession. You have thus been a power for good government in Alabama. We place you in the front rank of newspapermen in our State who have similar characteristics."

The scroll further commended Sparrow for his "clean mind, temperate habits, and high character as a man."

It was signed by those present at the luncheon.

As an added token of appreciation and commendation, Malone presented a loving cup to Sparrow from his friends and admirers.

In addition to the large number of senators and former legislators present were Lt. Gov. Guy Hardwick, Atty. Gen. John Patterson, and Alabama Supreme Court Justice J. Ed. Livingston.

Congratulatory messages in accord with the honor came from W. A. Malone, Athens; Frank P. Samford, Birmingham; Cecil Ward, Scottsboro; Alyce Billings Walker, Birmingham; R. H. Carr, Jasper; John Temple Graves, Birmingham; Hugh Morrow, Birmingham; Circuit Judge Walter B. Jones, Montgomery, and W. Cooper Green, Birmingham.

Destructive Forest Fires

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. METCALF. Mr. Speaker, each year millions of dollars' worth of public property goes up in smoke as forest fires take their toll.

Last year another 6½ million acres of United States woodland were gutted by fire. Assuming the timber on each acre was worth $40, the out-of-pocket loss was some $264 million.

In Alaska, forest fires burn an average of 1 million acres of public domain each year. Here are two clippings from recent issues of an Alaskan newspaper telling of immensely destructive fires:

SMOKE CLOUDS STOP FAIRBANKS FLIGHTS

FAIRBANKS.—Thick clouds of smoke rolled into this central Alaska city by 25-mile-an-hour westerly winds, covered Fairbanks today and yesterday.

The smoke shut down all flights in and out of the city.

There was a ceiling of only 200 feet at the International Airport yesterday and visibility of only one-eighth of a mile at one time.

The Weather Bureau said smoke from the forest fires in the middle Yukon and Kuskokwin areas will continue with no relief until this afternoon.

Unless the wind changes, all flights will be canceled until then.

Juneau was on the fringe of the smoke haze traveling aloft on prevailing northwesterly winds this morning, the local Weather Bureau office reported.

Weather Bureau officials said the smoke haze was clearly visible from the Juneau Airport station in the clear skies of early morning hours. Its density permitted a direct look at the sun.

Airline pilots flying north from Ketchikan this morning reported the smoke haze clearly visible north from Juneau.

The Weather Bureau reports the smoke has traveled as far as Watson Lake, Yukon Territory, on the Alaska Highway route. It extends over the entire eastern half of interior Alaska and down the Alaska Highway. In the interior the smoke extends north to Bettles and Fort Yukon, west to Galena and Aniak and south to Anchorage and follows the coastal range to just north of Juneau.

FIRE NEAR GALENA BURNS OVER 1½ MILLION ACRES

ANCHORAGE.—A 1,600,000-acre fire has been discovered near Galena, Alaska, about 450 miles northwest of Anchorage.

The fire, 85 miles long and about 30 miles wide, was discovered last week when thick smoke shrouding the area had lifted.

The clearing weather also uncovered other fires. Largest of them is a 700,000-acre fire near the mining community of Flat, about 350 miles northwest of Anchorage.

Numerous other large fires in the Territory continue to burn unchecked.

Mr. Speaker, huge as it is, the cash value of the timber burned is only a minor part of the loss to forest fires.

These forests protect our watersheds when a shortage of water already limits the growth and development of many communities. When these forests go, so does the watershed. And a forest fire does incalculable damage to soil, mining, grazing, recreation, fish, and wildlife.

These fires bring forest management to a standstill. Overnight there must be a shift from a long-term plan of harvesting of mature timber to immediate salvage logging. This upsets economic balances all the way from nurseryman to logger to consumer.

Fires are largely responsible for the lack of reproduction on the 73 million acres of United States forest land now poorly stocked. Fires often create conditions which lead to a build-up of insect or disease epidemics. And often, worthless species of trees replace desirable ones following fire.

The senior Senator from Montana [Mr. MURRAY], the junior Senator from Montana [Mr. MANSFIELD], and I have introduced companion bills to expand the Forest Service's research program for prevention and control of these forest fires. We would authorize a comprehensive forest-fire-research program and establish three regional laboratories. Such an investment would result in more effective fire control with material savings in fire-fighting costs.

Firearms Legislation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD a resolution of the Michigan United Conservation Clubs opposing the proposed Internal Revenue Service amendments and revisions to sections 177.50, 177.51, 177.52, 177.54, and 177.55 dealing with firearms.

As proposed, these regulations strike a blow at the constitutional right of law-abiding citizens to use and own firearms as well as at the right of reputable firearm dealers to sell firearms and ammunition to the law-abiding public free from harassment and bureaucratic redtape. The Michigan United Conservation Clubs, along with other sportsmen's organizations, in the resolution asserts its complete and unbending opposition to the proposed regulations.

I hope all Members of the House will make themselves familiar with the danger inherent in these sections and that they will take whatever steps they feel proper to help sportsmen and gun dealers to oppose them.

The resolution follows:

RESOLUTION OF MICHIGAN UNITED CONSERVATION CLUBS

Whereas the Internal Revenue Service proposes amendments and revisions on sections 177.50, identification of firearms; 177.51, firearms records; 177.52, ammunition records; 177.54, over-the-counter sales to individuals; 177.55, authority to examine records, etc.; and

Whereas the Internal Revenue Service will conduct a hearing on these proposals on August 27, 1957, in room 3313, Internal Revenue Building, Washington, D. C., where all who wish may be heard; and

Whereas we maintain that these proposals are contrary to the present reasonable use of firearms and that they are an invasion of our constitutional rights: Be it

Resolved, That the board of directors of Michigan United Conservation Clubs, assembled in regular official meeting on the 10th day of August 1957, representing approximately 60,000 members, and, by past repeated expressions and protest on similar proposed restrictions, do assume to represent the public interest and the thought of the public in Michigan on this subject, we emphatically protest any such amendments and strongly oppose same, and that copies of this action and expression by this board be airmailed to the Director of Alcohol and Tobacco Tax Division, Internal Revenue Service; to our representatives in Washington looking after such—the National Wildlife Federation; to the National Rifle Association; to Michigan Senators; and all Michigan Members of Congress.

Unanimously approved.

HARRY R. GAINES,
Secretary-Manager.

Legislation for Blinded Veterans

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. PATTERSON. Mr. Speaker and other distinguished colleagues, last Thursday I introduced a bill that would provide a Federal grant of $500,000 annually to the Blinded Veterans Association, Inc. This outstanding organization, founded in Avon, Conn., at the end of World War II, has done and is doing a magnificent job of rehabilitating veterans who lost their eyesight while serving our Nation in the Armed Forces during World War II and during the Korean war.

The Blinded Veterans Association encourages and assists blinded veterans in taking special adjustment training at the Veterans' Administration Hospital at Hines, Ill.; it assists blinded veterans in finding employment and accepting vocational training; and encourages them to participate in community activities. These are only several of the important functions of this splendid organization that is helping blinded veterans to become economically self-sufficient and readjusted to our society.

Mr. Speaker, the Blinded Veterans Association has well demonstrated its effectiveness and I am convinced that with additional funds the organization could make even greater achievements in its good crusade to improve conditions for those who gave their eyesight for our Nation.

Therefore, I earnestly solicit the cooperation and wholehearted support of this entire body in passage of the measure that I introduced last Thursday that is designed ultimately to enhance the economic and solicial welfare of those who lost their eyesight while serving in the Armed Forces of this Nation.

The Late Dr. Joseph B. Cavallaro

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. MULTER. Mr. Speaker, New York suffered a great loss on Thursday, August 22, 1957, with the untimely death of one of my most distinguished constituents.

Dr. Joseph B. Cavallaro was a long-time intimate friend of mine.

He typified everything that we mean when we talk of a good American. He was kind, generous, scholarly and intelligent. He was devoutly religious, with the utmost respect for all religion. He was a good lawyer and an excellent public servant. His fine patriotism is best evidenced by the full performance of his civic responsibilities. Every decent and worthwhile community endeavor found him among its sponsors.

The entire Brooklyn congressional delegation joins me in extending to his family our heartfelt sympathy.

The following article, which appeared in the New York Times of August 23, 1957, is an indication of the esteem in which we all held our dear departed friend:

JOSEPH B. CAVALLARO DIES AT 53—LED BOARD OF HIGHER EDUCATION—BROOKLYN LAWYER, PROMINENT CATHOLIC LAYMAN, FAVORED CURB ON RED TEACHERS

Joseph B. Cavallaro, chairman of the board of higher education, died of a cerebral hemorrhage yesterday at Queens General Hospital, Jamaica, after a month's illness. His age was 53. He resided at 2260 Benson Avenue, Brooklyn.

Mr. Cavallaro, a prominent Roman Catholic layman, was active for many years in Democratic Party affairs as well as in civic and charitable works. A practicing lawyer, he was appointed a member of the board of higher education in 1946 by former Mayor William O'Dwyer. In 1955 Mayor Wagner reappointed him for a second 9-year term.

An outspoken advocate of congressional investigations into communism in the schools, Mr. Cavallaro was elected in 1953 to a 1-year term as chairman of the board of higher education. He was reelected in each succeeding year, winning his fifth term last May 20.

The board, which consists of 21 nonsalaried members and 1 ex-officio member (the president of the board of education), is the governing body of the five city-owned colleges.

After his election by his fellow board members to his first term as chairman, Mr. Cavallaro praised the work of congressional committees that were investigating Communist activities and said that he favored strong measures in dealing with Communist teachers. He told an interviewer that he would welcome the assignment of an assistant corporation counsel to help the board investigate communism in the municipal colleges.

ISSUED REPORT ON REDS

Last June 16, Mr. Cavallaro issued a report on the board's 4-year investigation of Communist influence in the city colleges. Among his disclosures were that four faculty members had been discharged after departmental trials, 22 employees had resigned or retired as a result of the inquiry, and 14 others had been dismissed for refusing to answer questions.

Mr. Cavallaro, who in 1949 was appointed by Pope Pius XII as a Knight of the Holy Sepulchre, frequently spoke in favor of religion as part of a well-rounded education. Three years ago he told a Knights of Columbus communion breakfast:

"The American doctrine of the separation of church and state does not mean the separation of state and religion. If we are to plan wisely for the future, we must create in the minds of our youth a better understanding of what religion means and increase their contacts with it. We cannot hope to preserve our democratic tradition without the religious foundation upon which it rests."

Mr. Cavallaro was born in Brooklyn on November 27, 1903. He received a public school education and, after taking a prelaw course at City College, graduated in 1926 from Fordham University's Law School. The next year he received a master of arts degree in law at the Brooklyn Law School of St. Lawrence University In 1951, St. John's University conferred upon him the honorary degree of doctor of laws.

The board chairman was a member of the Brooklyn law firm of Wingate & Cullen, which he joined in 1922 as a law clerk.

At the close of the regular meeting of the board of estimate last night, Mayor Wagner announced that the board would adjourn in memory of Mr. Cavallaro. The mayor praised him and credited him for "our great college system."

The board of education, at its regular meeting in Brooklyn yesterday, observed a minute of silence in Mr. Cavallaro's memory.

On behalf of the board of higher education, Mrs. Ella S. Streator, chairman of its executive board, issued a statement in memory of its chairman. She said:

"It was with great gratification that he saw the opening of the Staten Island Community College in the fall of 1956 and the approval of the Bronx Community College to be opened a year from now. The establishment of the office of chancellor [of the city colleges] was something for which he had worked diligently since becoming chairman. We shall miss him as a friend, as a colleague, and as a devoted public servant."

Other tributes came from Dr. Buell G. Gallagher, president of City College; Dr. Charles H. Tuttle, senior member of the board of higher education in point of service and chairman of the administrative committee for City College, and John Cashmore, borough president of Brooklyn.

ACTIVE IN WORK FOR BLIND

Mr. Cavallaro took a deep interest in helping the sightless. He was a trustee of the industrial home for the blind in Brooklyn, and for 10 years was chairman of the Vincentian service to the blind for the Society of St. Vincent de Paul.

A trustee of the St, Athanasius Roman Catholic Church, the Italian Board of Guardians and the Brooklyn Catholic Charities, Mr. Cavallaro was a member of the New York Brooklyn Bar Associations and the Brooklyn Red Cross and cancer committees. He had served as Brooklyn cochairman of the National Conference of Christians and Jews.

He was a member of the United Regular Democratic Organization, 16th Assembly District, Kings County. In World War II he was appeal agent for local draft board 138.

Surviving are his widow, Mrs. Linda Parmegiani Cavallaro; a daughter, Mrs. Loretta Rusk; 4 sons, Joseph Jr., Richard, John, and Peter; 2 brothers, Anthony and Albert; 3 sisters, Mrs. Maria Cambria, Mrs. Nancy Brandi, and Mrs. Rose Maccario, and a grandson.

The American Bar Association

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article by Attorney Charles S. Rhyne, president of the American Bar Association, entitled "The American Bar Association—Past, Present, and Future," that appeared in the August edition of the Federal Bar News.

The article follows:

THE AMERICAN BAR ASSOCIATION—PAST, PRESENT, AND FUTURE

(By Charles S. Rhyne)

On August 21, 1878, a group of lawyers met in the pleasant resort environment of Saratoga Springs, N. Y., for the purpose of considering the feasibility and expediency of establishing an American Bar Association. The 100 or so persons who met at Saratoga Springs 80 years ago constituted the first annual meeting of an organization which has since become the authentic national voice of the American legal profession through representation in its house of delegates of State, local, and other associations of lawyers, including the Federal Bar Association.

PURPOSES OF FOUNDERS

At its founding the purposes of the American Bar Association were declared in its constitution to be: (1) to advance the science of jurisprudence; (2) to promote the administration of justice; (3) to promote uniformity of State legislation; (4) to uphold the honor of the profession; and (5) to encourage cordial intercourse among the members of the American bar. In 1936 a sixth objective was added: "to correlate the activities of the bar organizations of the respective States on a representative basis in the interest of the legal profession and of the public throughout the United States." The association's constitution has changed in several respects since 1878 in order to accommodate new developments and in order to recognize the growing emphasis upon service to the public. But it is still implicit in the association's organization and activities that it exists to serve the general purposes announced at its founding in 1878.

The directing and supervisory body of the American Bar Association is its house of delegates, founded in 1936. The house of delegates is much more, however, than the legislative and policymaking body of an organization. It is so constituted as to be entitled to speak for the entire legal profession in our country. There are 236 members of the house of delegates, and they come from 17 different classes of membership. The 107 delegates from State and local bar associations constitute by far the largest single unit in the house, larger even than the 58 State delegates, representing each of the 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico. Other delegates represent ABA sections and other organizations of jurists and lawyers with specialized interests. The 236 members of the ABA's house of delegates represents mor than 200,000 American lawyers.

THREE PERIODS IN HISTORY

Historians of the ABA have customarily divided the association's history into three periods, the first of which began at Saratoga Springs in 1878 and ended 25 years later. The second era, from 1902 to 1936 was a period of growth marked by a tremendous increase in membership and activities. The third period began with the revision of the association's constitution and the establishment of the house of delegates in 1936; it was an era of federation and increasing coordination with State and local bar associations, and it produced the operating procedures and policies still in use.

FOURTH PERIOD—ERA OF PUBLIC SERVICE

The ABA is now in the fourth distinct period of its history. This is the era of public service which began in 1951 when the house of delegates adopted six long-range objectives for the legal profession: (1) The preservation of representative government in the United States through a program of public education and understanding of the privileges and responsibilities of American citizenship; (2) the promotion and establishment within the legal profession of organized facilities for the furnishing of legal services to all citizens at a cost within their means; (3) the improvement of the administration of justice through the selection of qualified judges and adherence to effective standards of judicial administration and administrative procedure; (4) the maintenance of high standards of legal education and professional conduct to the end that only those properly qualified so to do shall undertake to perform legal service; (5) the promotion of peace through the development of a system of international law consistent with the rights and liberties of American citizens under the Constitution of the United States; (6) the coordination and correlation of the activities of the entire organized bar of the United States.

The American Bar Association is today better equipped and organized than ever before to take effective action to further its objectives of public service. That gigantic undertaking known as the survey of the legal profession has been completed, and more than 175 separate reports have been issued covering all phases of our profession. The survey tells us what we have done and are doing and provides a basis for future action. A great new American bar center has been opened in Chicago to house a staff which can carry out the tremendous functions of the American Bar Association as now organized for service to the public and to the profession. An American Bar Research Foundation is now located there to do the research work which will give proper background and direction to effective work by the organized bar on its manifold programs. We have the American bar endowment to receive and channel funds for projects appropriate to the organized bar. The ABA's law-student program now includes more than 35,000 students from all parts of the United States. Most significant of all, the ABA now has the greatest membership in its history, 88,000. We hope the day is not far off when all of the 240,000 lawyers in the United States will be members of the ABA. That is our ultimate membership goal. Any lawyer who is a member in good standing of the bar of his State or Territory is eligible for ABA membership. There are no restrictions of race, color, or creed.

The American Bar Association is proud of its past contributions to the profession and to the public at large. It is proud, for example, to have formulated and promulgated the now universally recognized Canons of Legal Ethics, proud to have been the leader in the establishment and maint-

ance of high standards of legal education, roud of its part in the enactment of the ederal Administrative Procedure Act, and roud of the many things it has achieved in operation with other organizations includ- g the Federal Bar Association. But no mplete list of achievements will be at- mpted here; as they are well known to the embers of the Federal Bar Association. he ABA looks forward to even greater op- rtunities for service in the future and rnestly solicits the aid, ideas, cooperation, d membership of every member of the ederal Bar Association.

The American Bar Association has unched a tremendous program aimed at levating the status of the Government law- er. We are fighting for broad improve- ents in the entire legal service of the ederal Government. The organized legal rofession has been slow to recognize its ain duty in this field. But we now have ccepted that duty and intend to meet it by ghting for increased prestige for the Gov- rnment lawyer and for salaries commen- urate with the important duties he per- rms. We are also concerned about the ay discrimination against lawyers in the ilitary service, and we hope to persuade ongress to end it at an early date.

These efforts we are making to enhance he status and increase the pay of the lawyer n Government are not motivated by selfish otives—although such motives are quite gitimate. Our interest is broader, and xtends to the public at large. We believe hat one of the most vital interests of the ublic at large is to have a strong legal rofession in our country. We know that or the legal profession to continue to ful- ll its historic role as the protector of indi- idual rights it must jealously guard its ignity and prestige and—let us not be too odest to state it—be willing to insist that s members be rewarded financially as be- its their profession's important status in ur society. For I do strongly believe that n a strong legal profession lies the liberty f the people of the United States and in he liberty of the people of the United States es the hope of the world. In matters of iberty Government lawyers are on the firing ine more than any other group of our pro- essions. They must have prestige, stand- g, and capacity to do their job. This is he aim of the American Bar Association's rogram.

Statement of Congressman Harlan F. Hagen

EXTENSION OF REMARKS

OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. HAGEN. Mr. Speaker, I submit or consideration of the membership the tatement which I will deliver tomorrow t an Internal Revenue Service hearing evoted to proposed new Service regula- ions dealing with firearms and ammu- ition sales.

The statement follows:

TATEMENT OF CONGRESSMAN HARLAN F. HAGEN CONCERNING PROPOSED REVISION OF INTERNAL REVENUE SERVICE REGULATIONS DEALING WITH INTERSTATE TRAFFIC IN FIREARMS AND AMMUNITION

My name is HARLAN F. HAGEN. I am United tates Congressman from the 14th District f California. I wish to voice objections to ertain sections of the proposed revision of the Federal Firearms Act regulations which are the subject of this hearing.

Specifically, these sections are:

1. Section 177.50, identification of firearms,
2. Section 177.51, firearms records.
3. Section 177.52, ammunition records.
4. Section 177.54, over-the-counter sales to individuals.
5. Section 177.55, authority to examine records.

At the outset, let me say that I do not believe that the Congress intended a law designed to assist police authorities in the general recording of traffic in firearms to be twisted into an instrument to harass legitimate traffic and discourage the private ownership and use of firearms. The philosophy of the police state control evident in these proposed revisions of regulations is nowhere supported in the legislative history of the Federal Firearms Act, or the National Firearms Act; to the contrary, Congress has, through the establishment of the National Board for the Promotion of Rifle Practice, consistently encouraged the private ownership and use of individual firearms and has appropriated millions of dollars toward this end over the last 40 years. I believe that it would be much more in keeping with the overall legislative intent of Congress if regulations were designed to encourage the lawful ownership of firearms rather than to place such extensive control upon their ownership and use as to discourage the average citizen from so doing.

With regard to specific objections to certain sections of the proposals, I wish to comment as follows:

SECTION 177.50, IDENTIFICATION OF FIREARMS

I believe that representatives of the domestic firearms industry and firearms importers have or will testify at this hearing that a large proportion, possibly as high as 30 percent, of firearms presently being manufactured do not carry serial numbers. This condition has existed ever since the manufacture of firearms began centuries ago, and even discounting, for the purpose of this discussion, those weapons which are obsolete or antiques, it is obvious that vast quantities of these firearms are presently in channels of trade or owned by individuals and have no serial numbers and which, if this regulation is adopted, could not be transported in interstate commerce. The intent of the Federal Firearms Act was to attach a penalty to the possession of a firearm from which the original manufacturer's serial number, when such existed, had been removed, altered, or obliterated, obviously for purpose of concealment of unsavory history pertaining to that individual weapon. Congress did not then and does not now intend that every firearm shall be serially numbered regardless of origin or condition.

SECTION 177.51, FIREARMS RECORDS

The proposal that dealers maintain permanent records is completely unrealistic from the standpoint of the taxpayer and the Government. Past regulations have required maintenance of regulations for 6 years, which is more than ample for any reasonable administration of the provisions of the Federal Firearms Act. Maintenance of records in perpetuity would result in enormous expense to serve no practical purpose.

SECTION 177.52, AMMUNITION RECORDS

This section proposes to record the sale of every round of pistol and revolver ammunition sold in the United States and would require evidence of the identity of the person to whom it is sold. The objectives to be aimed for the promulgation of such a regulation leave me completely mystified. Thousands upon thousands of small local hardware and general stores stock and sell such ammunition but only in intrastate trade. They are not subject to the provisions of the Federal Firearms Act and not required to be licensed; in addition, the Federal Government itself sells to members of rifle clubs and to rifle clubs, thousands of rounds of pistol ammunition from Government arsenals on which no record is kept as to the identity of the person finally receiving the ammunition.

SECTION 177.54, OVER-THE-COUNTER SALES TO INDIVIDUALS

This section is obviously designed with the philosophy of the police state in mind. It proposes to register the ownership of firearms, a concept that the Congress refused to incorporate in the National Firearms Act and in the Federal Firearms Act despite the urgings of the then Attorney General. This provision seeks to do by regulation what the Congress has refused to do by legislation.

Two further objections are: (1) That the law and the regulations are silent as to the fate of the millions of firearms presently owned, and (2) that it exceeds the interstate power of Congress because such transactions are wholly local in nature and if subject to regulation are subject to regulation by the State, not by the Federal Congress.

SECTION 177.55, AUTHORITY TO EXAMINE RECORDS

This section provides for the inspection of premises and stock, in addition to inspection of records. There is no objection to inspection of records at any reasonable time but inspection of premises and stock is another matter which should be done only under the authority of a search warrant issued for proper cause. There was and is no history of abuse by dealers or manufacturers which would make necessary such authority.

I hope that at the conclusion of these hearings the Internal Revenue Service will take under advisement the possibility of forming better contacts with the firearms industry and the public so that these pitfalls in proposed regulations may be avoided and the necessity for hearings such as these eliminated.

Speaking for myself, I have received a considerable volume of mail on this subject, and to my knowledge so have many other Members of Congress. I am confident this would have been avoided if those affected had been able to point out on an informal basis the expected difficulties.

There is nothing more provocative of spontaneous public wrath than interference with the constitutional right of our citizens to keep and bear arms. This reservoir of support for protection of a valuable right is not surprising.

An estimated 10 million persons in the United States keep and use firearms for peaceable purposes or for justified self-protection. In my State of California there are over a million hunters and fishermen. Most of them use and own firearms. It is estimated that persons engaged in wholesome target shooting alone spend over $800 million for that purpose.

It should be noted that in the face of this widespread usage of firearms by law-abiding citizens very few injuries are received therefrom. For example, in terms of per capita usage and injury, the automobile is a much more dangerous weapon.

Regulations such as those proposed seek their main justification in the desire to prevent and detect criminal use; however such regulations are quite ineffective for that purpose and have the disadvantage of burdening the rights of legitimate users and have their chief impact against such legitimate users. New York State has a rigorous law which, according to my understanding, bans the use of pistol-type weapons by all citizens. Yet New York has a high crime rate involving such weapons. On the other hand Switzerland requires every able-bodied citizen to own and maintain a firearm. Switzerland stands first among the nations in lack of incidents of crime. There may be other reasons entering into the comparative crime rates of New York State and Switzerland but this comparison certainly demon-

strates that there is no provable connection between the private ownership of firearms and the occurrence of crime.

I would respectfully request that the proposed new regulations be abandoned forthwith.

Minor Public Servants

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial by Dr. Irving J. Sands, chairman of the Medical Society of the County of Kings and Academy of Medicine of Brooklyn. Dr. Sands' article appeared in the August 1957 issue of the Bulletin of the Medical Society, County of Kings:

MINOR PUBLIC SERVANTS

In discussing the position of medicine in England today one receives different comments and views from various people. Even doctors differ as to what actually has taken place in the practice of medicine. One physician said that while personally it was a catastrophe to him, the socialization of medicine in England is likened to the Magna Carta, the greatest thing that has happened to the English people.

On the other hand other doctors have described socialized medicine in most disparaging terms. Doctors may be transferred from one location to another by a bureaucrat attached to a special branch of the government dealing with the practice of medicine. Several doctors have complained that they see from 60 to 70 patients a day and naturally one can hardly expect efficient medical service given to any of these patients. As you walk through the wards and rooms of most hospitals the interns and residents are foreigners rather than native English because the average young Englishman does not wish to practice medicine in England. Many younger doctors openly express a hope to emigrate someday to Canada, Australia, or preferably to the United States, or to any other place where they may practice medicine according to the old principles of free and independent men guided by ethical principles and inspired by their love of fellow beings. Most of the doctors with whom I spoke in England complained that there has been a definite decline in the enthusiasm for the practice of medicine and a diminution in their personal initiative. As one doctor aptly describes his practice of medicine, "Well, I just have a job to do and I do it to the best of my ability." They all agreed that the English medical profession was not prepared for socialized medicine and when the late Mr. Bevan put it over, it was without consultation with the duly-elected representatives of the medical profession. Now doctors are regarded as minor public servants. The type of medicine practiced in England is something which cannot be described in a few words but there is a great difference in the quality of medical practice of today and of 25 years ago.

Of course there are a few doctors in England who are quite enthusiastic about socialized medicine. However, as described by one Englishman, these are the men who could have hardly achieved any success in private practice but now have an assured income, a vacation with pay, and a pension and who never had it so good. Of course there are a few doctors who are impractical idealists and who for some reason or another believe in socialism and socialization.

We who are privileged to practice our profession as free men, unhampered by bureaucratic restrictions, unlimited in our opportunities to advance the frontiers of medicine and to practice scientific and ethical medicine should not ignore history. We should learn and take a lesson from what has happened to our colleagues even in a freedom-loving country as England. We must not take things for granted in that nothing will interfere with our methods of pursuing our professional calling for there are many sinister influences working against the welfare of doctors and against the best medical practices. There are many groups who would socialize our profession and who would be very happy to reduce the position of medical men to minor public servants. There are many who regard medical practice as a mere commodity to be sold for a profit to the lowest bidder. They are not interested in medicine, in doctors, or in sick people. They are only interested in gaining power and votes. They look upon doctors as easy marks who can be forced to accept anything that powerful people may impose upon them. Some of them call the medical profession a trust and in the next breath they laugh at the lack of unity and organization of doctors.

Our strength is in direct proportion to the interest shown by individual members in their local, State, and national medical societies. We are primarily entitled to elect our own leadership by secret ballot. Every man not only has the privilege but an obligation to vote. It is extremely discouraging when a medical society of 3,450 members must hide the fact that only 152 members came out to vote in the last county medical society election. Why such a small number? What keeps so many away from the polls? It would be well if we could get a frank expression from the members regarding this situation and not such comments as "who cares?" There is danger ahead for all of us. Our smug complacency is slowly but surely leading to the strangulation of free medical practice and if this is permitted to continue, we shall soon join our British colleagues in being just minor public servants.

More Taxes for a Free Seaway?

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 15, 1957

Mr. SAYLOR. Mr. Speaker, when Ferdinand de Lesseps undertook to build a canal in Panama, disease among the workers was one of the principal reasons for the project's failure. From this experience, the Commission appointed by the United States to dig a ditch across the isthmus some time later spent the first 3 years in disease control, surveys, and development of construction facilities. The eradication of malaria and yellow fever was a notable achievement, for without it that link between the Atlantic and the Pacific Oceans could not possibly have become a reality so soon.

Like de Lesseps, the supporters of the St. Lawrence seaway were permitted to undertake construction without first resolving the practical problems submerged under reams of theories. There were obvious signs of economic reefs in the St. Lawrence project, yet the myopia which has become so common on Capitol Hill, as well as in the downtown region of Washington, resulted in almost complete disregard of these warnings. More than anything else, however, spending fever was the factor eventually responsible for equipping the St. Lawrence expedition with the necessary funds to set out on its fogbound mission.

When I hear the latest stories of the fiscal difficulties of the St. Lawrence Seaway Development Corporation, I cannot help but think of a little pamphlet that was distributed to Members of Congress shortly before the seaway bill was passed in 1954. In listing reasons why there could be no justification for spending tax money to build the seaway, the pamphlet presented a series of questions and answers, two of which went something like this:

Question: What is the estimated original cost of the seaway?

Answer: One hundred and five million dollars.

Question: How much more would subsequent harbor improvements and channeling cost?

Answer: Hundreds of millions of dollars more of Americans tax money would have to be appropriated in an attempt to justify the initial expenditure.

It was slightly more than 2 years after the $105 million was made available that the misgivings of us who opposed the project began to be echoed by the enthusiasts—except that by this time so much money had already been invested that it appeared safe to begin the cry for additional funds. Now the latest intelligence from the vicinity of the dredging operations is that costs are going to run some 30 percent higher than originally estimated. The seaway people are again looking to Washington for financial assistance.

I have looked into the St. Lawrence file, and I have come up with testimony before the Senate Committee on Foreign Relations by Mr. F. F. Estes, who identified himself as traffic manager of the National Coal Association, when he testified in February 1952. Here is an excerpt from that statement:

There are those who will say, "But this will not cost us anything; it will pay for itself through the collection of tolls." That is a very pretty statement but certainly no one is so naive as to believe it. Government projects just don't turn out that way.

What Mr. Estes said 5 years ago will soon be confirmed if those he was criticizing at the time have anything to say about it now. As explained by the Philadelphia Inquirer editorial of Sunday, August 11, which I wish to insert in the RECORD, there is a move afoot to dispense with tolls althogether and turn over to Uncle Sam all the bills, notes, and expenses that we were told would be liquidated by the Seaway Corp.

The Inquirer points out that Delaware Valley would, under this move, be required to pay taxes for a project to deprive that area of Pennsylvania of trade and business that it should logically have. I remind the Congress that railroads leading from Delaware Valley will also suffer serious business losses if and when the St. Lawrence project is com-

pleted. Another victim of this tax-supported venture will be the coal industry, not only through loss of utility markets that will come with the power generating phases of the St. Lawrence project, but also from an influx of foreign residual oil that tankers will move down the St. Lawrence and into Great Lakes ports.

Mr. Speaker, although I vigorously opposed the St. Lawrence project on the ground that the United States Government could not afford to underwrite it, and for assorted other reasons which seemed to make the proposed seaway impractical, I no longer resisted it once authorization became law.

If there's another world, he lives in bliss;
If there is none, he made the best of this.

Following this suggestion of Robert Burns, I strongly favor making the best of the St. Lawrence facilities when they are completed. Western Pennsylvania should utilize to the fullest whatever advantage the seaway may offer. Railroads will carry vast tonnages of freight to and from the docks along Lake Erie. Meanwhile highways need to be constructed from Erie south into industrial and marketing centers of western Pennsylvania, as well as eastward across the mountains. There will unquestionably be great volumes of new business generated through the opening of the seaway.

Nevertheless, the Government's investment of $105 million in the seaway is not an incontrovertible reason for us to go ahead with the project at any cost. I do not contend that further appropriations would necessarily mean sending good money after bad, but I do believe that Congress is going to have to give a long look at this matter before another dollar is made available. If, as the New Jersey Taxpayers Association and the Philadelphia Inquirer fear, revenue for the seaway is expected to come from Washington instead of from shippers, then we should begin asking questions.

Before investing any more of the taxpayers' hard-earned dollars into this venture, Congress must reappraise the whole project. We need to find out why sponsors said that it could be done with the money appropriated in 1954. Despite our admonition against undertaking a job that seems certain to be more expensive than advertised, supporters of the St. Lawrence insisted that the $105 million which Congress appropriated would be sufficient to launch it onto a self-sustaining and prosperous career. We need to know how those people could be so wrong. If the St. Lawrence Development Corporation is dependent upon this type of advice for its future programing, this information must be available. Congress, by authorizing construction, opened another socialistic business. The architect and builder have already admitted their miscalculations. Now the operator, even before the store is finished, has decided that it can never be a paying proposition. Perhaps a new proprietor would help matters. In any case, the people who are putting up the wherewithal for the building should at least find out how much further into their pockets they will be expected to go in the years ahead.

The Philadelphia Inquirer editorial follows:

MORE TAXES—FOR A FREE SEAWAY?

It looks as if one more chunk out of the wage earner's pay envelope is to be taken—this time to foot the bill for running the St. Lawrence seaway.

The New Jersey Taxpayers Association sounds a strong warning that a movement is underway to shift the cost of building and maintaining the seaway from the shippers who will use it, to the Nation's taxpayers generally.

This issue will come to the fore on September 9, in Washington, when a hearing will be held on fixing seaway tolls. When the seaway was first authorized its backers were eager for a bill which stipulated that tolls should be levied high enough to make the seaway pay for itself. Now they have changed their mind.

As the Inquirer predicted from the start, the cost of building the seaway has turned out to be much higher than originally expected (not including the extra costs of deepening shipping channels in the Great Lakes). Seaway backers now fear that the higher costs will necessitate higher tolls, and that some shippers may balk at paying them.

So, says the Detroit News, "the best case is for toll-free operation." The Cleveland Plain Dealer says "if this means a partial Government subsidy, what of it? There might also be a moratorium on tolls for the first few years." It brushes aside any so-called moral obligation to make the seaway self-liquidating. Dr. N. R. Danellian, president of the Great Lakes-St. Lawrence Association, which promoted the seaway, admits it will not pay for itself, and will have to be operated with a deficit. And Representative JOHN A. BLATNIK, of Minnesota, says he has been against charging tolls from the very beginning.

So it goes. Any promise was good enough to get Uncle Sam so deep in the seaway he couldn't pull out. But now one forecast after another collapses in the face of reality. The original cost was a mythical figure. The original promise that the seaway would pay its way is now just something to be scrapped.

All this is of direct interest to citizens of Delaware Valley, United States of America. For they now stand not only to see their river traffic diverted to a socialistic enterprise, the seaway; they also stand to be taxed to keep that enterprise going.

In other words, it is proposed to tax Delaware Valley for a project which is aimed to take away its trade. That's pretty hard to beat.

How Big Is the Columbia River?

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. ULLMAN. Mr. Speaker, a recent article appearing in the Pacific Northwest Public Power Bulletin gives some indication of why we who represent the Pacific Northwest are enthusiastic over the potentialities for future development of the Columbia River and its tributaries. The author of this excellent article, Mr. Gus Norwood, is one of the foremost authorities on power development in the Nation. He is to be commended, not only for this fine article, but also for the highly important work which he and the organization he serves as executive vice president has carried on for many years.

Mr. Speaker, I recommend this article to my colleague and ask that it be printed in the RECORD:

HOW BIG IS THE COLUMBIA RIVER?

(Summary of talk before engineering and operations section of Northwest Public Power Association, Wenatchee, May 10)

The greatest challenge facing Pacific Northwest engineers is how to make the best and fullest use of our rivers.

The prophets of gloom and doom are saying we are already half done on the Columbia. Others are asking, "With atomic energy just around the corner, couldn't we keep the tributaries of the Columbia River as primitive areas?"

How big is the Columbia? What is the river worth?

My purpose tonight is to suggest that the Columbia River is worth a lot more than we have thus far been led to believe. Possibly not in our lifetime but someday the Columbia may have 50 million kilowatts of installed capacity.

RIVER OF THREE DIMENSIONS

It may be helpful to think of the Columbia River as a cube which is expanding in all three dimensions as we improve our concepts and techniques of river-basin development.

The three dimensions or factors which concern us are firstly, the amount of power, secondly, the value of power, and thirdly, the financial feasibility. As these three dimensions expand, the cube will grow and thereby we and our children will benefit through the best and fullest development of the Columbia River.

FINANCIAL FEASIBILITY

Many a beautifully bound project report for a hydroelectric dam is gathering dust on a bookshelf because it could not meet an unreasonable feasibility test.

One such test which will affect the long-range development of the Columbia is the artificial and unrealistic assumption that the useful service life of a dam is only 50 years. This well-known ground rule has gone unchallenged until recently.

However, when the Army began to review the 308 report last fall there was included a study of a combination hydrothermal system. It was furthermore assumed that the useful service life of steam plants would be 35 years and the life of dams would be 50 years. The Northwest Public Power Association protested and urged 150 years for service life of dams.

The benefit-cost ratio of most dams doubles when 150-year service life is used, and in the case of flood-control projects may even triple. The effect of the longer life assumption will be to bring into the range of feasibility many otherwise marginal projects. Also in determining optimum dam height as at Hungry Horse Dam, the longer service life would permit the greater height or the larger reservoir.

China has a 4,000-year-old dam. Peru has one 2,000 years old. Hydraulics manuals often give 500 years or indefinite life for dams. TVA uses 100 years for depreciation purposes. Bulletin "F" of the Bureau of Internal Revenue permits 150-year service life for dams, waterways, and reservoirs. Recently the Bureau of Reclamation adopted a 150-year depreciation period for Hungry Horse Dam. As our experience with dams grows, undoubtedly the 150-year period will win acceptance.

In studying the question of how big is the Columbia River, we will find that using the 150-year service life greatly expands our range of financial feasibility. This dimension of our cube will double.

THE VALUE OF PEAKING POWER

The cube's second dimension involves the value of the kilowatt-hour. As a rough rule, if dump power is 2 mills per kilowatt-hour, then firm power is worth 4 mills and peaking 8 mills.

The same kilowatt-hour which in a young hydro system sold as dump power, may at a later stage of development, perhaps due to upstream storage, be sold as firm. Then as atomic plants come in to carry the base load, the hydro kilowatt-hour graduates to the status of valuable peaking power.

When TVA steam plants operate at over 98 percent load factor, the hydrosystem serves to carry the peaks. Hoover Dam and many others illustrate how hydro can be used in the Pacific Northwest when atomic plants assume the base load in 20 or 30 years.

As the value of hydro rises due to the assumption of peaking duty, the second dimension of the cube expands and again the cube grows and makes possible a bigger Columbia River power system.

MORE HYDROPOWER

The cube's third dimension involves the amount of power. With the more liberal feasibility test of 150-year service life and with the growing value of power, more and more projects can be built. Upstream storage, pumped storage, overlap, pondage, diversions and more and more peaking generators will operate to squeeze the last kilowatt-hour from the river.

The three factors may now be applied to the available statistics. According to FPC publication P–26 the status of the Columbia River as of January 1, 1953, was as follows:

	Power developed	Undeveloped	Total
Capacity (million kilowatts)	3.95	30.22	34.17
Average annual energy (billion kilowatt-hours)	29.23	139.01	168.24
Energy as average kilowatts (million kilowatts)	3.34	15.88	19.21
Load factor (percent)	84.5	52.2	56.2

The Columbia's average energy capability of 19,210,000 kilowatts might reasonably be rounded off at 20 million kilowatts. With this as a base the installed capacity which would be permissible at various load factors is as follows:

Load factor:	*Installation kilowatts*
100 percent	20,000,000
50 percent	40,000,000
40 percent	50,000,000
35 percent	57,143,000
30 percent	66,666,666
25 percent	80,000,000

General Itschner recently testified that the potential of the Columbia was as follows:

	Average kilowatts	*Peak kilowatts*
Maximum potential	19,000,000	45,000,000
Practical limit	12,500,000	28,000,000

He cited Chief Joseph and The Dalles as dams where future peaking generators would be installed.

He might have mentioned Ice Harbor as a sign toward future thinking on river development. Last year Ice Harbor Dam plans were suddenly changed from four 65,000-kilowatt to six 90,000-kilowatt units. Overnight the installed capacity was doubled from 260,000 to 540,000 kilowatts. Someday the Bonneville Dam may have a second powerhouse. Grand Coulee may have a third or even a fourth powerhouse and might even have a 43-foot extension on the dam to create added storage.

As power needs increase, as our planning technology improves and as we use the Columbia for peaking power on top of an atomic energy base load system, we should find ourselves approaching and possibly exceeding a 50-million-kilowatt generator installation on the Columbia River.

What the Closing of Corona Naval Hospital Means

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. HOSMER. Mr. Speaker, Earl Macki is a retired chief warrant officer in the Navy. His daughter is married to a first-class petty officer. Macki served 30 years to earn his retirement, and during most of it Lydia, his wife, was either at his side, or waiting for his return from sea. She is a "Navy wife" in the truest sense of the phrase. She is typical of the thousands upon thousands of Navy wives whose courage, devotion, and sacrifice help their men defend our country. The Navy wife is as much a factor in the greatness of the Navy as the Navy man himself. Therefore, what she has to say should be as important to the officials charged with ultimate responsibility for the efficiency of the service as words from any other source.

That is why I asked that a recent letter to the editor printed in the Long Beach Independent from Mrs. Macki be reprinted here. Within the vast necessity to manage a great branch of the United States military service, there is little time to savor thoughts such as hers. She would be very unlikely to be called upon to testify before a congressional committee on her subject, nor would she be likely to be able to discuss it in a conference with the Secretary of the Navy or any of his capable assistants. However, they may read of her views here, and they reflect something of great importance to the efficiency of the service.

They deal with the critical naval hospital shortage in the Long Beach-Los Angeles port area, which homeports one-seventh of the United States fleet. Understandable as may be the reasons for the current closing of the Corona Naval Hospital, just as understandable are reasons for plans for a replacement hospital, actually in the port area, and not 40 miles remote from it, as was Corona. I have forwarded to the Navy Department an offer by the city of Long Beach to set aside, reserve, and convey to the Navy, without cost, a suitable site for such a future hospital. I have asked only that the Navy Department confer with city officials and indicate their preference as to sites which are available. It is most sincerely hoped that the Department will make this small move, at no budgetary cost, toward ultimate solution of the problem eloquently set forth by Mrs. Macki, as follows:

WHAT HOSPITAL CLOSING MEANS

EDITOR, INDEPENDENT:

"By closing the Corona Naval Hospital," as stated by Virginia Kelly in the Press-Telegram Sunday July 14, "the Navy expects to save $890,000 gross in the first year, more later."

By not closing the Corona Naval Hospital, the Navy might be expected to save thousands of lives—those of dependents of active military personnel, widows, orphans of military personnel, retired Navy men and their dependents in the Los Angeles-Long Beach area. This facet of the economy drive should bear some thought, it would seem.

All Navy dependents in this area at present are familiar with the crowded conditions in the Navy clinics. They know what can be done and what cannot be done because of the shortage of medical personnel and equipment. The "will to do" is there, all right but without working equipment and trained people to staff the clinics, it is impossible to keep up with the growth of our medical needs in the Navy dependents department. The Navy has outgrown its medical facilities. In most cases, the dependents accept uncomplainingly, the denial of medical privileges that they have been led to believe were theirs, the denial stemming from inadequate Navy medical facilities. In many cases, desperate need of medical care has resulted in severe hardship financially for Navy personnel having to go unprepared into civilian hospitals.

The "bright spot" in the set-up, however, as Virginia Kelly notes in her article of July 14, "is that all active service personnel dependents may seek civilian medical care under the part-payment provisions of the dependents medical care legislation."

Recently, in my daughter's family, there was the necessity to invoke the aid of Medicaire, the dependents' medical-care program. However, that was not done until every other effort to obtain the necessary surgery through a Navy hospital was exhausted. On the salary of a first class petty officer with a family of six to care for, the part-payment provision in itself was almost a preventive factor to filling this urgent need for surgery. The patient was my 7-year-old grandson. Where to get the part-payment money?

It was borrowed finally but when it is repaid, some necessity to the lives of this family will just simply be lost since the funds had to go elsewhere. The fact is that not many of the enlisted personnel have an available $25 on hand after the cost of living in this day and time has been deducted.

The original intention to set up Medicaire in the beginning denoted a great program to provide medical benefits to Navy personnel and it is indicative of the serious effort by the Navy to care for its own. The idea of the Medicare program deserves much commandation and certainly must have been hailed by Navy personnel as going forward in true Navy tradition to try to find the answers to the vital medical problem.

However, as the article in the Press-Telegram concluded, "The issue is: that Long Beach needs a Navy hospital and that the Navy must be made to understand this."

It is time now for all Navy dependents, widows and orphans of Navy personnel, retired personnel and their dependents to express themselves on the critical situation that can develop if the Corona Naval Hospital is shut down. Long Beach does desperately need a naval hospital and until one is built, Corona Naval Hospital should remain open to save lives, not dollars, right now.

Representative CRAIG HOSMER in Washington, D. C., is to be commended for the stand

he is taking for us of the Navy and it is only fair that we support him with letters and information in this emergency, giving him our full backing.

Councilman John Baker, of Long Beach, is another faithful friend of the Navy people and he deserves our sincere support for his efforts in our behalf.

We have a wonderful Nation to live in, our Navy helped make it that way and we honor our Navy and cherish its traditions deep in our hearts. The Navy could never make a greater contribution to its personnel and their families or to southern California than by erecting a fine naval hospital in Long Beach and if by all working together harmoniously, it certainly can be an achievement in dedication to the American way of living.

Mrs. EARL MACKI.

LONG BEACH.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Water Supply Is Common Problem in Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. JOHNSON of Texas. Mr. President, a problem that is common to all Texas is that of adequate development of the State's water resources. This is a fact that has come to be generally recognized, and that recognition has led to a determination to attack the problem on a statewide scale.

As the Beaumont Journal pointed out recently in a thoughtful editorial on the subject:

In a time when States as well as cities compete for new and existing industry, Texas can't afford to lag behind other States.

I ask unanimous consent that the Journal editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Beaumont (Tex.) Journal of July 19, 1957]

WATER SUPPLY IS COMMON PROBLEM IN TEXAS

As a group of Beaumonters reports, on returning from a tour of Texas, Beaumont has many problems in common with other cities throughout the State.

One of these common problems, and by no means the least, is the lack of an adequate supply of water for future growth and development. This is a problem that plagues not only the industrialized urban centers but also the vast rural areas where the production of food, clothing, and fibers contribute so much to the State's economy.

It is this common problem, and a solution for it, Senator LYNDON JOHNSON has in mind when he urges the Federal Government to produce a master plan by next April which will assure Texas all the water it needs. He has asked the heads of the Army Corps of Engineers and the Bureau of Reclamation to order complete integration of a comprehensive water program from Washington to the local water districts in Texas. He wants a plan that will bolster demands for Federal funds to build the projects necessary for impounding the needed supplies of water.

It is assumed, of course, that such a plan would include continued Federal assistance in completing McGee Bend Dam, the multipurpose project already approved by Congress. This dam on the Angelina River will, when completed, serve the water needs of this section of southeast Texas. Additionally, it will spark new industry and increased agricultural production.

While our immediate concern is to secure an abundance of water for this section and thus solve this serious problem, we also share the broader concern of Senator JOHNSON and laud his efforts to obtain adequate supplies for the entire State. If Texas is, as he says, 25 years behind other Western States in dealing effectively with its water problems, then it is time proper steps were taken to correct this condition. In a time when States as well as cities compete for existing and new industry, Texas can't afford to lag behind other States.

Gov. Price Daniel has pledged his best efforts to solve the State's water problems on a State level. It is good that he has the backing of Senator JOHNSON and others in Washington—the fountainhead of so much of the necessary funds for building the projects to impound the water.

An Issue That Must Be Faced

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an editorial entitled "An Issue That Must Be Faced Soon." The editorial was published in the Farmers Union Herald of August 5. It relates to a resolution which it was my privilege, with four of my colleagues, to sponsor, calling for a family-farm food and fiber policy. The resolution is still pending in committee. I hope that before the conclusion of the 85th Congress the Senate will adopt the resolution as a guide for legislative enactments in the economic field.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ISSUE THAT MUST BE FACED SOON

Within the last week there have been reports from Washington that Congress, or the Senate at least, may take a close look at national farm policy before adjourning.

The look may come, it is reported, when a resolution calling for a family-farm food and fiber policy is brought onto the floor of the Senate.

The resolution was offered by Senator HUBERT HUMPHREY and four of his associates last January. It has lain dormant while the prospect of farm legislation has faded away.

The Humphrey resolution would commit the Congress to a national policy which would be the basis for future legislation. If passed, in its present form, it would commit Congress to a family-farm pattern.

The resolution calls for encouragement of an agriculture based on ownership and management of the land by family units and the discouragement of industrial-type farms.

It is significant that, since the introduction of the resolution, two agricultural research professors, reporting for the National Planning Association, have called for a recognition in national policy of "the crucial importance of family farming—in a democratic society."

Marshall Harris, of Iowa State University, and Robert Rohwer, formerly of Oklahoma A. and M., in their report, state that the family farm "represents the most desirable form of organization for American agriculture."

They find that this is true not only in economic performance but also in equality of opportunity and social values.

The outstanding virtues of this class of farms, they point out, are "a secure and stable way of life, strong community institutions, conservation of land, other natural resources, and a strong emphasis on preserving the basic freedoms."

Harris and Rohwer would strengthen the family farm by "raising the productivity of and levels of living of low-income farms, discouraging the trend toward increased large-scale farming and establishing a clearly defined public policy to improve family farming as a way of life."

To accomplish these results they would:

Give preference to family farmers whenever private enterprise uses publicly owned land.

Reduce and eventually eliminate the importation of foreigners who compete with American farm laborers and operators and are paid low wage rates, thus depressing farm wages and prices.

Encourage agricultural workers, particularly migrants, to organize and protect their rights fully.

Withhold publicly sponsored credit from large-scale enterprises, extending tax preference to family-type units and discourage ownership of farm land by nonfarmers.

The Harris-Rohwer report has received endorsement not only by the Farmers Union but also by the Grange and the Farm Bureau. At least representatives of the latter organization have signed the report.

The Humphrey resolution calls for a so-called bill of rights for the family farmer. It calls for:

The right to full equality of economic opportunity.

The right to improved standards of rural living.

The right of reasonable protection against natural hazards.

The right to extend agricultural free enterprise, through cooperative action.

The right to public cooperation and assistance in saving the soil.

The right to preserve the social and human values of family farming.

The right to a democratic voice in his own farm program.

The right to benefits of an expanding world trade.

The right to a long-range program of food storage to encourage abundance.

The right of assurance—that land reclamation development will result in establishment of new family farms—not factories in the field.

If the Humphrey resolution actually gets to the floor of the Senate, as Washington reports seem to indicate it will, the real issue in American agriculture will have to be faced by that august body.

That issue is: What kind of a national agriculture do the American people really want?

The issue must be faced sooner or later. The people living on the land; indeed, the people living in the rural towns and villages and even in our big cities cannot go on for-

ever dependent on an agriculture subject to whims and fancies of both nature and men.

If the American people can agree that the family farm is worth preserving as the basic pattern of our agriculture—then the first step will have been taken toward solving our farm problems.

For Liberty of People To Bear Arms

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. YARBOROUGH. Mr. President, the Alcohol and Tobacco Division of the Internal Revenue Department is holding a hearing today on its proposals for a registration law requiring all manufacturers and dealers in firearms to keep a record of all sales of firearms, and another proposed regulation, proposing to require every person who buys a gun or any ammunition to sign a receipt for it.

Mr. President, I regard this proposed regulation as unnecessary, burdensome, and unduly restrictive of the rights of the American people. I oppose it, and presented a statement at the hearing today in the Department of Commerce Auditorium before the Alcohol and Tobacco Tax Unit of the Bureau of Internal Revenue. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

These proposed regulations would require all dealers to maintain a permanent record of all firearms received and disposed of, and would require every person who buys a gun or a box of shells to sign a receipt therefor. In my opinion these are unnecessarily burdensome restrictions on our people.

The people of Texas generally are accustomed to use firearms. This proposed law would require every farm boy to register his gun and have a receipt for every shell or cartridge bought if he wanted to hunt a buck, turkey, squirrel, dove, quail, or rabbit, or shoot a rattlesnake or wildcat. The rural homeowner would need a Federal receipt to protect his chicken farm from a chicken hawk or from a rabid fox.

Our people are a loyal people. They can be trusted by the Government. Who is afraid of the people? This regulation smacks of a police state. It would be more reasonable to require a permit to go swimming in navigable waters than to require a shotgun and shell permit to hunt rabbits, because the swimming is more dangerous than the hunting.

The oldest shooting club in the United States is at New Braunfels, Texas. The familiarity of our people with firearms has been a strong factor in the ability of our citizen soldiers to prepare speedily for battle in time of war. A nation of outdoorsmen is a healthy, vigorous nation. These restrictive and burdonsome regulations would make it more expensive to keep and use guns and rifles. They would lessen the zeal of our people for outdoor sports in time of peace and effective military service in time of war.

These regulations put bureaucracy in every gun closet in every home in America, and if adopted, would end the ancient concept that "every man's home is his castle," because it would invade the right to defend that home.

I hope that this regulation is defeated. The taxpayers do not need a new burden to hire a new group of agents to keep count of all the shotguns and rifles and shells purchased for every home in America.

Moralizing About Colonialism

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an article which appeared in the Providence Journal of Monday, August 26, entitled "Our Moralizing About Colonialism Should Give Way to Frank Talk."

This article, written by Barry Brown, should be of interest to all who give consideration to international affairs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR MORALIZING ABOUT COLONIALISM SHOULD GIVE WAY TO FRANK TALK

(By Barry Brown)

The so-called colonial problem in American foreign policy is inherently insoluble. We will do well to recognize this fact, and to consider what we can do about it, before the issue arises again in the dramatic form of the Algerian case at the forthcoming session of the United Nations General Assembly.

Notice has already been served that this last and most irreconcilable conflict between France and her north African territories will reappear at the U. N. meeting. "Some think the international organization could modify the Algerian problem," French Foreign Minister Pineau warned the other day. "I must say that, while France is prepared to set forth the problem, it never will accept orders."

WE CAN'T SATISFY ALL

In the debate and the deadlock thus promised, the United States will naturally have to take a stand, and that stand cannot possibly satisfy both the French and the Algerians, or—more importantly—both our principal NATO allies and the vast array of Arab, Asian, African, and Latin American states who identify their interests with the aspirations of all dependent people everywhere. Thus the United States faces anew, in this expanded and intensified form, the same dilemma Cordell Hull described in his Memoirs of the World War II period:

"Our prime difficulty generally with regard to Asiatic colonial possessions, of course, was to induce the colonial powers—principally Britain, France, and the Netherlands—to adopt our ideas with regard to dependent peoples. * * * But we could not press them too far with regard to the Southwest Pacific in view of the fact that we were seeking the closest possible cooperation with them in Europe. We could not alienate them in the Orient and expect to work with them in Europe."

Since the first objective of our foreign policy must always be the security of European or western or Christian civilization, of which the American way of life is a part, we are obviously still "seeking the closest possible cooperation" with the nations of Western Europe. At the same time, "our ideas with regard to dependent peoples" inevitably continue to follow the Wilsonian tradition of national self-determination, largely out of an instinctive attachment to anticolonial movements resulting from our own colonial origins. Meanwhile, both horns of the dilemma have been sharpened, on the one hand by the formalization of our permanent European ties in the NATO alliance, on the other by the development of the U. N. system of "debating diplomacy" and the emergence of a number of new national states on the world scene.

If there is no real way out of this dilemma, perhaps we can ease our position somewhat by a new sort of frankness in explaining it during the debate on Algeria and all the other colonial issues bound to arise at the General Assembly meeting next month.

As to our European commitments, we cannot and need not try to conceal our deep and lasting identifications with like-minded nations of the West. Culturally, historically and psychologically, we are part of Europe. Strategically and politically, the United States has always had a vital interest, historically paralleling that of Great Britain and now coinciding with that of all the other nations of Western Europe, in preventing any European power from gaining hegemony over the continent. The dependent peoples themselves will never permit us to deny our identification with Europe, even if we should be unwise enough to try to escape from reality, no matter how vehemently we may assert our ideological anticolonialism.

RISING EXPECTATIONS

The best we can hope to do, therefore, is to try to convince both the Europeans and the Asians and Africans that our inevitable concern with the interests of our NATO allies does not involve our commitment to shore up their empires indefinitely. It may help us in this explanation to talk about the principle of national self-determination more as a concrete political force than as an abstract moral postulate. For many of our European friends, deeply as they may resent American moralizing about their imperialism, nevertheless recognize realistically that their crumbling empires simply cannot stand against the revolution of rising expectations that is sweeping the areas of the world formerly in a colonial status.

The trouble with treating national self-determination as a universal moral principle is that it has no inherent limits. Pushed to its logical extreme, it becomes a principle of disintegration and disorder and a device for the creation of new empires, rather than a response to the twin aspirations exalted by western liberalism—that of a people to be free of foreign domination, and that of the individual to join the nation of his choice. When we persist in urging our own conception of nationalism as an eternal verity, without regard for political consequences, we disarm ourselves morally and intellectually before our enemies.

INSTRUMENT OF ANARCHY

Hitler used nationalism in just this way, as an instrument of anarchy and oppression, when he first used the Sudeten Germans to destroy Czechoslovakia and then used the German minority in Poland to launch World War II. The Russians are doing the same thing, although the effects of their new imperialism are largely concealed from the champions of anticolonialism by considerations of race and by the curious phenomenon called the salt-water fallacy. There seems to be a feeling among many Asians and Africans that imperialism is not involved in the domination of one white people by another, or when the nation dominated is not separated from the imperial power by an ocean.

These are points we have made and can continue to make in U. N. debates on colonial issues, with Hungary and perhaps soon Syria as exhibits A and B. But beyond this, perhaps we can make clear that our adherence to the Wilsonian doctrine of national self-determination is a matter of political judgment, more than of indiscriminate moralizing. We can emphasize that the principle should be applied to each people demanding national independence on the merits of their specific case, with due regard for questions of timing and orderliness in the process of evolution. Perhaps we can even urge that U. N. members insisting upon immediate independence for peoples who are not really capable of creating a politically and economically viable community should bear some responsibility, financial and otherwise, for the survival of the newborn states.

A POLITICAL FORCE

In short, by understanding nationalism as a political force and national self-determination as a concrete political goal, we can try to persuade the European powers that it is really in their interests to follow a policy of liberation, as the British have done. Similarly, we can try to convince the dependent peoples that it is not necessarily in their interest to make immediate independence an end in itself, at the risk of balkanizing Asia and Africa and leaving them vulnerable to an inevitable new order of empire. In the process, we can say that the differences we are bound to have with both sides on such issues should not outweigh or outlast our common interests.

An effort at frankness on the colonial problem might admittedly make us no more popular with either the Europeans or the Asians and Africans than an attempt at evasion, but it might command more respect. Similarly, there is no assurance that such a shift in the American attitude would contribute much to solution of the concrete and complex problems between France and Algeria. Yet, if we can get away from the idea that national independence is an absolute and self-sufficient moral principle and come to regard it as a political principle that needs to be fitted within a framework of power and interests, we may at least avoid the confusion of seeming to applaud the destruction of western interests in the name of philosophical consistency.

A Psalm for Lawyers

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 27, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a psalm for lawyers, written by Mr. Louis Lande, a prominent and distinguished member of the New York bar. It might also well be applied to legislators, and in the last, busy days of the session it makes good pause for reflective reading. Mr. Lande is a patriarch of the New York bar of which he has been a member for 57 years. He is a member of the class of 1900 of New York University, my own alma mater. Over the years, he has counseled, guided, and inspired many young attorneys.

More recently, Mr. Lande has served as an attorney in the Maritime Administration here in Washington. He will retire at the end of this month after 15 years of distinguished service in the Federal Government.

There being no objection, the psalm was ordered to be printed in the RECORD, as follows:

THE FIFTEENTH PSALM REVISED FOR LAWYERS

(By Louis Lande)

Who shall stand in the high courts of the law?
Who shall receive its highest honors?
He who dealeth righteously and whose aim is justice and mercy.
Who doth not belittle its ministers,
Nor envy his associates.
Who doth not gloat over his victories,
Nor rejoiceth over his adversary's defeat;
And to whom the errant are to be pitied and corrected.
He that worketh for the people's good without profit to himself,
And who honors his brethren for their good works
He shall be worthy to sit in the high places of the law,
And receive the esteem of his fellow men.

Movement by the Young Away From Rural Areas

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 27, 1957

Mr. JOHNSON of Texas. Mr. President, an outstanding weekly newspaper in Texas, the Nocona News, recently took note editorially of the alarming movement away from the rural areas, and expressed concern that a very large percentage of high-school graduates are not interested in farming as an occupation.

The News put its editorial finger squarely on one reason for this by pointing out that these youngsters know the farmer today is not getting his fair share of the consumer dollar.

I ask unanimous consent that this thought-provoking editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHALLENGE TO FARMING AND SMALL TOWNS

Farming and small towns like Nocona stand challenged by a recent survey reported in the current issue of Texas Agricultural Progress. The survey shows that there is a definite apathy among young people to become farmers and as definite a belief that their futures are not in their home towns, however much they would like to remain in those towns.

Out of 234 high-school graduates of this year, the survey shows only 25 said or indicated that they would rather own a farm than hold a job in town. And 15 of those 25 said that they would not want to farm unless they could begin with the right setup. This leaves only 10 out of 234 who are definitely interested in farming. The 15 who would consider farming under the right setup reflect a radical departure from the pioneering spirit of many hundreds of farmers who, with little more than a hand plow, a horse and a cow, started such counties as Montague and thousands of others. Naturally, no one today wants any part of yesterday's farming hardships. On the other hand, unless blessed with riches, no young man can expect to start out with what others have acquired over a period of years.

American economics also stand challenged by the revealing apathy of young people to farm. They know better than any one, except their parents, how hard farmers work against such tremendous odds as wind, hail, droughts, too much rain, frosts and burning sunshine. They know, too, that the farmer is not getting his just share of the consumer dollar. During the latter part of last year, the farmer was getting only 40 cents of this dollar, and this figure fell to 38 cents last February. The farmer is getting only 15 cents of that dollar for his tomatoes, peas and beans. When Mrs. Farmer goes to a store she is required to pay retail prices far from commensurate for products raised on the farm.

Commenting of jobs at home instead of leaving home, most of the students said, in effect: "I'd rather stay here than any place on earth if work were available, but we just don't have it here. My town has everything I like except the opportunity to work." This situation is not new for small towns. Nocona is indeed an exception with three major leather goods factories. Most small towns have only one major industry, if any.

The urge of 20-year-olds to strike out in a big city is as natural as daylight following dark. The day comes, however, when many become disgusted with the coldness and artificiality of the big city, where it takes 2 hours to drive to work and 3 to drive back during the evening rush. They find that their friends back home are their best friends and, unless they become great successes in a financial way, they eventually learn that it would have been better to have stayed at home for $50 a week than to have gone to a big city for $65. The old saying that "It is better to be a big fish in a little pond than a little fish in a big pond" is very applicable.

Their names have never become nationally known, but millions of the best businessmen in America have been and still are small-town merchants and other businessmen. They and our farmers are keeping rural America alive and without rural America there would be no America. The comparative few who come to wield great power in certain industries are not nearly as powerful nor as influential as the combined force of America's farmers and America's smalltown businessmen.

The Gallant 32d Division of the Wisconsin National Guard

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 27, 1957

Mr. WILEY. Mr. President, I have been pleased to note in the press reports of my State that the National Guard hopes to start building additional armories in some 16 Wisconsin cities during the next 2 years.

The announcement of the plan has come from the distinguished adjutant general of my State, Maj. Gen. Ralph J. Olson. The construction will be based upon Federal-State matching of funds with the various cities to provide the land.

Each armory unit will contain facilities needed to train one company or battery of the famed 32d Division of the Wisconsin National Guard. The units will vary, each accommodating between 140 and 170 men.

The announcement of the armory plan came in connection with a conference of the Wisconsin National Guard Association. Maj. Gen. Fritz Breidster, commander of the 32d, told the assembled officers that the division's traditional infantry regiments, artillery battalions, and antiaircraft units are to be transformed in accordance with the new plans for the atomic organization of the division.

Much as Wisconsin will regret seeing many hallowed units of the 32d fade into history, my State is determined that the 32d shall continue to rank with the very best National Guard divisions of the Nation, ready to meet every emergency of the atomic age.

The 32d is part and parcel of the history of my State. It has some 114 units in 78 Wisconsin cities. Its former commander, Maj. Gen. Jim Dan Hill, has been urged by many to be president of the National Guard Association of the United States.

The officers of the Wisconsin National Guard Association, as newly elected, are:

Maj. William P. Robinson, Middleton, Dane County, president.

Lt. Col. Carlisle P. Runge, Madison, vice president.

Lt. Col. Malvin P. Wang, Camp Douglas, treasurer, incumbent.

Lt. Col. Donald G. Raiche, Neenah, secretary.

In order that my colleagues may be familiar with the great record for gallantry of this division since its creation in 1917, I send to the desk the text of a Milwaukee Journal historical writeup describing the Red Arrow Division's achievements in two world wars. I ask unanimous consent that this brief history of a division which saw more action in World War II than any United States division in any war—a division which takes the deepest of pride in its pre-eminence in the National Guard of our country—be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of July 14, 1957]

THE GALLANT 32D DIVISION—TWO BOOKS TELL BATTLES OF FAMOUS WISCONSIN-MICHIGAN COMBAT UNIT DURING WORLD WARS—IN ACTION 15,696 HOURS AGAINST JAPS

(By Christopher Matthew)

Near the village of San Nicolas in central Luzon, Philippine Islands, a barred red arrow in solid concrete rises from the top of a memorial shaft to point against the sky. Officers and men of the 32d Infantry Division erected it there in memory of their gallant comrades who were killed along the Villa Verde Trail in one of the last campaigns of World War II.

As the crow flies, the distance from one end of the trail to the other—from San Nicolas to Santa Fe—is only 15 miles. By twisting, treacherous mountain road it is 50. For the GI's of the Red Arrow Division it was a hell through a maze of booby traps and enemy bunkers manned by kamikazes under the overall command of Tomoyuki Yamashita, ablest of the Japanese generals. It took the 32d 5 months—from January to May 1945—to cover the distance. Two-thirds of its 10,000 men were casualties; 1,000 fell in action.

Having opened the road into the heart of enemy held territory for other units, the battered Red Arrow was given a month's rest, then called back to mop up central Luzon, a task that lasted for several weeks after atomic bombs had knocked out Japan.

FIGHTERS BEST, SAID GENERAL YAMASHITA

Isolated Japanese units in the hills of Luzon hadn't heard that the war was over, and probably wouldn't have believed it if they had. Even General Yamashita had received no official order to surrender. In a polite series of communications he assured American commanders that he was waiting anxiously for instructions. He finally surrendered on September 5 to the unit that he later praised as having the best fighters he had faced in the whole war—none other than the 32d.

Among United States infantry divisions the 32d is in many respects unique. It fought from beginning to end in both World Wars and chalked up a remarkable number of firsts. Two recent volumes recount its exploits. The first, a comprehensive, illustrated history. The 32d Infantry Division, by H. W. Blakesley, is published by the historical commission of Wisconsin; the second, the story of the Buna campaign, Victory in Papua, by Samuel Milner, is published by the office of the Chief of Military History, Department of the Army.

GENERAL PERSHING LAUDED DIVISION

Created in 1917 from National Guard regiments of Wisconsin and Michigan—some of which had histories going back to volunteer militia days—the unit was originally known as the Red Circle Division. In France it picked up the nicknames "Les Terribles" and "The Iron Jaws." Even Gen. John Pershing, who was not given to careless eulogies of his troops, especially if they were National Guard units, later wrote: "Unstinted praise must be given to the 32d."

After the armistice, the Red Circle Division changed its emblem to the red arrow because as their commander, William G. Haan, said: "We pierced every line the Boche put before us."

In 1940 the Red Arrow was among the first of the 18 National Guard units to be ordered into Federal service. It received its training at Camp Livingston, La.

Selected soon after Pearl Harbor for shipment to northern Ireland, the division was moved from Camp Livingston to Fort Devens, Mass. Then a sudden change in plans in the War Department took it to Australia under command of Maj. Gen. Edwin F. Harding. Augmented by 3,000 draftees, it arrived in May 1942, 2 months after Gen. Douglas MacArthur, commander of the newly established southwest Pacific theater, had arrived from the Philippines.

The military problem at the moment was to halt the Japanese thrust across the isthmus of Papua, the long tail of New Guinea, the island that looks like a dinosaur on the map. The Japanese held the northern coast of the island and had sent a detachment across the formidable Owen Stanley Mountains to capture the south. The Australians still held on to Port Moresby on the southern coast.

General MacArthur planned a counterattack, picking the infantry forces of the Australian 7th and the American 32d for the operation. The initial plan was to send our division north across the mountains. One battalion actually made the grueling march. After 42 days of climbing, scrambling, clawing, and suffering from fever and dysentery, they emerged like ghostly shadows. The rest of the troops were flown north to points near Jap held Buna.

The top brass was so sure that Buna could be taken easily that it detached one whole regiment from General Harding's command and added it to the Australians, who were to attack from the west, while our forces attacked from the east. The pincers movement began about the middle of November, 1942.

Almost at once hard luck dogged the project. Some 6,000 Japanese were still strongly entrenched at Buna. Nipponese planes sank 7 out of 8 small transports containing food, medicines, ammunitions, and men. Seasonal rains came early and turned this godforsaken place on the inhospitable northern coast of New Guinea into the ultimate nightmare country. Companies came down with dengue fever and malaria. At one time, over half the men were running temperatures.

"TAKE BUNA OR DIE"

The air forces tried to fly in or drop in supplies, but much of this precious freight was irrevocably lost, smashing to bits on striking the ground or else falling not on designated targets but deep in the jungle or on inaccessible mountain slopes. Flyers trying to strafe Japanese positions often hit our own. General Harding sent desperate calls for the return of his regiment, for supplies and ammunition. The MacArthur answer from Moresby was to take Buna or die.

After 2 weeks of fighting, the sick, hungry, weary troops had made no advance. They were, as E. J. Kahn, Jr., one of the draftees assigned to the outfit, writes, "treading water—in some cases, literally, where they were trying to advance through neck deep swamps." There were countless acts of heroism but also failures among leaders and men.

A remark by the Australian commander in chief that the men of the 32d were inferior fighters reached MacArthur at Port Moresby and sent him into a towering rage. Summoning Gen. Robert L. Eichelberger from Australia, he told him to "relieve Harding and his subordinate commanders or I will relieve them myself, and you, too." Eichelberger did remove Harding—many still think precipitously—on the ground that he had not been sufficiently stern in weeding out subordinates. Eichelberger had better luck than Harding in wangling tanks, artillery, and the extra regiment from various headquarters above him. Even so, it took him 4 weeks to capture Buna.

THOUSANDS WERE AWARDED DECORATIONS

His appraisal of the Red Arrow men at the end of the campaign differed markedly from what he thought of them when he first assumed command. He later wrote:

"The 32d which 'failed' at Buna was the same 32d that won the city. Any historian will be hard put to discover in this war a division which earned, and deserved, so many citations and decorations for individual bravery."

Two Wisconsin soldiers—1st Sgt. Elmer J. Burr, Menasha, and Sgt. Kenneth E. Gruennert, Jefferson—won the Medal of Honor, posthumously. Nine more men won this highest of honors in the next 2 years, all but 2 posthumously. Some 3,000 others were awarded other decorations, not counting 11,500 Purple Hearts.

During the next 2 years the Red Arrow was chosen to spearhead five other operations on the road back—Saidor, Aitape, Morotai, Leyte, and Luzon. In all, it saw 15,696 hours of action, more than any United States division in any war.

After a brief period with the army of occupation, it was inactivated in February 1946 in Japan. Within 10 months, on November 8, 1946, it was reorganized as a National Guard unit. The Red Arrow was again an active division.

Revere (Mass.) Journal a Popular Weekly

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. LANE. Mr. Speaker, the Revere Journal has served the people of Revere, Mass., for 76 years. Its future is assured.

This is all the more remarkable because we associate weekly newspapers with rural areas. The Revere Journal, however, is the newspaper for the city of Revere which is part of the metropolitan area of greater Boston.

The Journal may not be big, but its neighborly coverage of the news has won a personal following whose loyalty and confidence is reflected in the opening lines of a conversation you frequently hear in Revere that begins this way: "The Journal says."

Many honors have come to this hardy little newspaper through the years. The latest is the news that, of the 550 weekly newspapers published in the United States, the Revere Journal ranks among the top 100, in terms of circulation.

Eight thousand four hundred regular subscribers depend upon the Journal to know what's going on.

Under unanimous consent to extend my remarks, I ask the CONGRESSIONAL RECORD to recognize the standing of this fine weekly by printing the attached article from the August 22 issue of the Revere Journal:

WIDELY READ NEWSPAPER—JOURNAL AMONG TOP 100 WEEKLIES IN UNITED STATES ON CIRCULATION LIST

The Revere Journal has been listed among the 100 top circulation weekly newspapers published in cities and towns of under 50,000 population in the 1957 Directory of Weekly Newspaper Representatives, Inc., according to the American Press, a magazine published about hometown newspapers.

The magazine's analysis shows that there are a total of 550 weekly, semiweekly and triweekly newspapers with a circulation of 5,000 or more throughout the United States listed in the directory.

The magazine listed the Revere Journal in 94th place in the top 100 newspapers, stating that the Journal has a net paid circulation of 8,300 copies weekly.

According to the listing, the Journal was only 95 copies away from the 90th position on the list, with the four papers listed in between having a circulation from 8,300, the Revere Journal's figure, and 8,395 listed for the Blue Island, Ill., Sun Standard, which holds the 90th place.

The figures listed in the directory were based on paid circulation figures for 1956. Edward A. Waldman, circulation manager of the Revere Journal, said that the figures listed for the Journal are accurate but during the months in 1957, the newspaper's circulation has increased to an average of 8,400. He said that the new figures will be reflected in the 1958 directory.

The American Press, in its analysis, stated that of the 550 newspapers listed in the directory, 376 are published in communities of under 50,000 population and that 174 are published in larger cities.

In the 100 top circulation weeklies, only one Massachusetts newspaper besides the Revere Journal is listed. It is the Arlington News with a circulation of 8,650.

Not Guilty

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. DORN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star dated Monday, August 26, 1957:

NOT GUILTY

Harry Truman, in our opinion, has done as much as any man, and a great deal more than most, to prod America into assuming its responsibilities as the leader of the free world. The move to support Greece and Turkey, the Marshall plan, the decision to fight in Korea, the creation of NATO—all of these called for courage and leadership, and they are enduring marks to the credit of the former President.

It is the more disappointing, therefore, to find Mr. Truman now joining in the chorus of those who would indict the people for failures which really were the fault, not of the people, but of their political leaders.

Writing in Sunday's Star, Mr. Truman, referring to the Korean war, said this: "In unison with the United Nations we acted—and we acted swiftly, and at that we were almost too late. Our people, eager to return to the ways of peace, and wanting quick demobilization, had brought about a sharp reduction of our military strength."

To this charge the people may well plead not guilty. For while it is true that there was strong popular demand to bring the boys home when World War II ended in 1945, this is not the reason why we were so weak, so dangerously unprepared to fight even a "police action," in 1950. For this, the primary responsibility rests on Mr. Truman and his Secretary of Defense, Louis Johnson.

In 1949, just before the Korean war broke, it was Mr. Truman, not the people, who was insisting that a defense budget of $13 billion was all our economy could stand. When Congress appropriated some $615 million in excess of the budget request for the Air Force that year it was Mr. Truman, not the people, who ordered the money impounded and decreed that it must not be spent. When the Joint Chiefs of Staff, in 1948, urged an expanded military program which called for some $9 billion in additional money, it was Mr. Truman, not the people, who vetoed the proposal. And when Defense Secretary Johnson was assuring anyone who would listen that his economies were cutting out the fat, but not the muscle, from the Military Establishment, how were the people to know that he was a sadly mistaken man?

Mr. Truman's remarks in the main were aimed at the situation which prevails today. He said he hoped that "all of us" have learned from our Korean experience, that this (1957) is no time "to fool" with our defense requirements, and that we should not let ourselves become "economy mad" with respect to national defense.

As far as the people are concerned, however, 1957 is like 1949. They do not know now, as they did not know then, whether the cutbacks in defense spending are wise or unwise. They cannot possibly know. They have to assume in 1957, as they assumed in 1949, that their political leaders have made their calculations carefully and correctly, and that they know what they are doing. If it turns out otherwise, if today's economies lead to another Korea, we trust that the reaction of those who are really responsible will not be to blame the people.

Squadron's Wings Folded

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. BARTLETT. Mr. Speaker, the 74th Air Rescue Squadron in Alaska is being deactivated after a long period of service in the highest tradition of the Air Force. It would be impossible in many pages of the CONGRESSIONAL RECORD to detail the rescues which have been accomplished by the officers and men of that squadron. In wilderness areas, and oftentimes under the most severe climatic conditions, those of the 74th Air Rescue Squadron have risked their lives to save others.

An evaluation of the Air Rescue Squadron has been made in a letter written to me by Mr. John Vincent, of Orlando, Fla. Mr. Vincent has had personal knowledge of the quality and caliber of the work of the officers and men of this detachment. I take great pleasure presenting here a letter written to me about this by Mr. Vincent including an editorial from the Fairbanks, Alaska, News-Miner:

I am taking the liberty to send you, quoted en toto, an editorial from the Fairbanks News-Miner of July 11, 1957. It was sent to me by an expert on Arctic lore, Mr. E. W. "Scotty" Heter, with whom I did some survival work in the Territory during the winter of 1956.

The quotation follows:

"This week we saw a good, though by no means an unusual, example of the work which has been performed in this part of the world ably by the 74th Air Rescue Squadron.

"This unit, which is based at Ladd Air Force Base, has picked up countless military and civilian fliers and passengers out of the wilderness and brought them safely home.

"If our experience in the air age has taught us anything, it is the old chestnut that what goes up must come down. When an aircraft comes down in the wilds of interior Alaska, the occupants are lost indeed without a ready group like the 74th, which is ever on the alert.

"Under the conditions which prevailed when an Air Force F-89 jet plane became unmanageable in the air on Tuesday, no search for rescue would have been possible by other means than helicopter. Overcast made planes useless. The downed men might have spent many days in the wilderness had it not been for the tireless helicopters of the 74th.

"Had it been a pair of civilians instead of 2 airmen who were down, the 74th Air Rescue Squadron would have responded just as promptly. This has been demonstrated often in the past.

"These words of appreciation are written in the light of an announcement from the Alaskan Command that the 74th Air Rescue Squadron is being deactivated in the fall. We do not know the military or other considerations which led to that announced decision. But we would certainly urge that they be reviewed.

"We really don't know what we'd do here in interior Alaska without the 74th's efficient 'copters."

Few people outside the Territory can realize the vital role played by the men of the ARS and the high regard in which they are held by Alaskans. Few can know the tremendous communal effort that goes into saving the life of a lost hunter, an overdue

bush pilot, an injured Eskimo, unless they've actually seen it firsthand. It is difficult for outsiders to believe that men will leave their jobs and the comfort of their homes to go out and search for a stranger in distress. In the vastness of the Territory and, especially, under the terrible rigors of the Arctic winters, it is a fact that these selfless, cooperative efforts would often fail were it not for the expert guidance of the Air Force's professional rescue men in the squadron at Fairbanks and the other one down at Anchorage. I would suggest that nowhere in the world would the loss of an air rescue squadron be of such vital importance to American citizens.

Insurance Protection of American Families, Businesses, and Institutions

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, may I call to the attention of the House an event of truly historic significance which will take place in our sister Commonwealth of Kentucky on Wednesday, September 4, 1957.

It was in the thriving frontier town of Lexington, Ky., in the year 1807, that the American Agency System of bringing insurance protection to America's families, businesses, and institutions was begun. This great system was born when Thomas Wallace, a prominent merchant of Lexington, was appointed an agent of Insurance Company of North America, of Philadelphia, Pa.

Thus, a free people, with initiative and enterprise, created a system of providing for their own security through independent local businessmen. The merit of the plan was such that it spread throughout America, enabling the Nation to grow and prosper.

The Commonwealth of Kentucky and Insurance Company of North America share many historical links. Kentucky became a Commonwealth in the year 1792, the same year in which the Insurance Company of North America was founded. The company was organized in Philadelphia in Independence Hall in the very same room in which the Declaration of Independence was signed just 16 years before.

Mr. John A. Diemand, the president of this 165-year-old insurance organization, which is well and favorably known throughout the world, will participate with leaders in Kentucky life in suitably marking the occasion. I append herewith the remarks of Mr. Diemand, in commemorating an event of great interest to the insurance world and to all who benefit from the strength and stability of our great American insurance companies.

REMARKS BY JOHN A. DIEMAND, LEXINGTON, KY., SEPTEMBER 4, 1957

In celebrating the sesquicentennial of the American agency system of insurance selling, we focus our thoughts on the vital core of one of the Nation's most important businesses.

Twelve years ago, the Highest Court in the land had this to say: "The modern insurance business holds a commanding position in the trade and commerce of our Nation. * * * Perhaps no modern enterprise directly affects so many in all walks of life. Insurance touches the home, the family, and the occupation of almost every person in the United States." Today, after the great new growth stimulated by liberalized multiple-line legislation and an expanding economy, these same things can be said with even greater emphasis.

To achieve such preeminence has been an extraordinary feat. It has been possible only through the remarkable efforts of unusual people in a unique system. We do well to consider and honor that system, and those who have made it succeed.

In its origin, the American agency system was devised by the early fire companies as a means of keeping pace with the westward march of empire, while retaining the heart of their affairs in the cities of their origin. If this could be done, a twofold gain would result: their financial strength would rise through an inflow of new premiums, and their vulnerability to catastrophe would be lessened by a greater spread of risk.

This was straight and sound thinking, but there were those who had their doubts. Some shortsighted cynics asked, "Can we trust agents in far places, not to sell us out to policyholders?" Those who answered "Yes" prevailed, and the American agency system was born.

As we now see, seldom has greater good faith produced better works. On the other hand, of the companies who did not adopt the system, few survive today. They paid the price of extinction when conflagrations struck the cities where they kept their liabilities concentrated in risks they could watch.

The simple fact is that the founders of the American agency system understood the true essence of insurance. Those who rejected the system did not.

The solid core and sound foundation of all insurance is utmost good faith among the parties. This is not a pious motto but a hard business fact. If a man buys a car, he drives it around the block first, but he cannot test his fire policy with a trial blaze in his home. If he buys a suit, he may try it on first, but both an insurance policyholder and his insurance company hope he will never have occasion to try out the effectiveness of his policy.

The proper role of the insurance agent is entirely in keeping with this philosophy. His work is in the nature of a public trust. His is the delicate task of dividing fairly his loyalty between the companies which appoint him and the customers whom he counsels. To him, as both original underwriter and salesman these companies entrust their fortunes and good name. To him the public entrust their needs for insurance protection. The agent's power of economic good and evil is great in both directions.

To discharge well this twofold trust requires a high degree of wisdom and skill. Above all it requires steadfast integrity. Of all of these traits the American agency system has had and shown an abundance.

It is for this that we honor the system, and those who have made it great. To make our celebration more than a passing gesture, let us pledge performance in keeping up their proven practices. In this performance, let us continue the utmost good faith which they have shown.

Let us take these principles as our guide:

1. The public's interest is our first concern.

2. The security and well-being of the insurance industry will be in direct proportion to the efficiency of its service to the insuring public, and the best guaranty of a brilliant future will be secured by providing the best possible coverages on the simplest possible forms and at the fairest possible rates.

3. To these ends there must be laws and practices encouraging initiative in the public interest.

Let us insist on action in accordance with these principles, and let us guarantee it with the full power of the American agency system.

Coal and the Future

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JENNINGS. Mr. Speaker, a special Coal Research Subcommittee of the House Committee on Interior and Insular Affairs has concluded a 15-month study of the problems facing the Nation's coal industry. This subcommittee was established in the 84th Congress and has now made a preliminary announcement of its findings and recommendations. I understand the complete report will be available in the near future.

Virginia is one of the Nation's coal-producing States; 1956 production amounted to 26,004,732 tons, the major portion of it coming from counties in the Ninth Congressional District. We are, therefore, very interested in the subcommittee's investigation and recommendations.

I would like to commend the subcommittee members for their diligence in conducting a thorough study of the coal industry and its place in the Nation's econoy. Our colleague, Congressman ED EDMONDSON, has been an interested and able chairman of the subcommittee.

When the complete report is published, I intend to consider its recommendations and, after discussing the report with coal industry leaders, introduce legislation to carry out these recommendations. I hope that sympathetic consideration will be given this legislation by the Congress next session.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Bristol Herald-Courier of August 25, 1957, entitled "Coal and the Future." This editorial pertains to the subcommittee's activity and forthcoming legislation.

COAL AND THE FUTURE

Few pieces of legislation have ever held a more specific significance for southwest Virginia than one which probably will be introduced in Congress next week.

This measure, the fruit of a 15-month study by a special subcommittee, calls for the establishment of a new Government commission to coordinate research into new ways of using coal.

Perhaps more important, the subcommittee recommends that the Commission be provided with a $2 million appropriation—a sum which it can use to conduct research of its own or to provide aid to private research agencies.

Coal, of course, is more than holding its own as a fuel. After the "recession" of just

a few years ago, it stands today as a stronger-than-ever facet of our national economy.

But the uses to which coal can be put are virtually limitless. Many of those uses already have been uncovered; research will broaden the field as it removes the cloak which thus far has shrouded the great potential of this fossil fuel.

Congress probably will not act on the subcommittee's recommendation during this present session. But we have every reason to assume that some action will be forthcoming in 1958.

Those of us who live in the mountain empire are trusting that Congress will approach the matter in positive fashion, creating the commission and providing the necessary appropriation.

We know the results of the recommended research will further strengthen the position of coal in the nuclear era and that this, in turn, will enhance the economy of the Nation as we move through the second half of the 20th century.

Coal has had a great past; it has an even greater future.

Only shortsightedness can prevent the fulfillment of that future.

Safety in the Air

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger of August 22, 1957:

SAFETY IN THE AIR

The survival rate in major air disasters continues to be shockingly low. In a recent tragedy in Canada, a Maritime Central Airways plane crashed with 79 persons aboard and there were no survivors. The airliner was one transporting veterans and their families from England to Scotland and had crossed the Atlantic Ocean safely, only to meet its fate in the form of a local thunderstorm.

While the passenger fatality rate, per mile flown, has been declining in recent years the number of persons killed in crashes and the fact that so many crashes result in death to all occupants of huge airliners is becoming a major Government concern.

Modern airliners do not carry parachutes for occupants and most of them do not seat their passengers backward, which gives them the greatest possible chance of survival in a crash. Moreover, it seems certain that some aircraft are operated under highly questionable weather conditions, in both this and other countries, and that no adequate safeguards are available to passengers in this regard.

As airline traffic increases and the number of passenger airliners in the skies multiplies enormously in the next few years, the situation will become more acute. It seems that the problem would be an appropriate one for a special Presidential commission to tackle, in the hope of finding some way to prevent fire, which so often overtakes passenger aircraft when they crash, and to prevent commercial air travel in questionable weather, or with questionable facilities.

When new and larger airliners go into operation next year, carrying greater numbers of passengers, it seems it will only be a question of time before two of these giants collide and burn. Such an air crash would mean death for several hundred people. A special study or investigative group may be able to make some progress in avoiding such a grim eventuality.

This Administration Likes Labor Votes but Not Labor—United States Army Officials Charged With Antilabor Activities in New Jersey by Amalgamated Clothing Workers, AFL-CIO

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, Charles Kovacs, president of the Central Jersey Industrial Union Council, CIO, and Thomas J. Dunn, president of the Central Labor Union, AFL, accused Michael A. Zielinski Co., of Brunswick Avenue, Trenton, N. J., of strikebreaking, unfair labor practices, and failure to recognize a union.

Since March 23, 1957, the employees of Michael A. Zielinski, the majority of them members of the Amalgamated Clothing Workers of America AFL–CIO have been on strike, which was called when the company arbitrarily fired Mrs. Connie Marino, the union shop chairlady and nine other workers. Since that date the company has not bargained in good faith even though many meetings were held. They would not recognize the union and refused many offers of mediation, including the office of mayor.

The National Labor Relations Board has received from the union unfair labor charges saying the company is guilty of unfair labor practices, is interfering with the rights of workers to join a union of its own choosing. Rather than negotiate a collective bargaining agreement with the union, the company, in cooperation with the Southern Athletic Co., of Knoxville, Tenn., subcontracted their work, throwing approximately 100 workers out of jobs. This arrogant position of the company indicates their utter disregard for their employees.

The union officials further charged that the United States military procurement officials were pursuing a strikebreaking policy in assisting in this subcontract.

Leonard Amato and Joseph Aletti, local international representatives of the Amalgamated Clothing Workers of America, AFL–CIO, said, "Our union will not give up this fight. We intend to continue this strike. We have 1,500 union members in the Trenton area, who have enjoyed many years of labor peace with management, and the position of Michael A. Zielinski Co., owned by local citizens, in relations to their employees is a community disgrace."

I include here a day letter issued by the Amalgamated Clothing Workers, AFL–CIO, under date of August 21, 1957, and the text of a letter sent to Maj. Gen. Webster Anderson, executive director of the Military Clothing and Textile Supply Agency, Philadelphia Quartermaster Depot, by Jacob S. Potofsky, general president of the Amalgamated Clothing Workers.

The letters follow:

AMALGAMATED CLOTHING WORKERS OF AMERICA, AFL–CIO,
Asbury Park, N. J., August 21.

United States military procurement officials were charged today by the Amalgamated Clothing Workers of America, AFL–CIO, with pursuing a strikebreaking policy in making awards for clothing the Armed Forces.

At a meeting here of the Amalgamated General Executive Board at the Berkeley-Carteret Hotel, Jacob S. Potofsky, union president, made public the union's latest protest against actions of the Philadelphia Quartermaster Depot in favoring firms guilty of violating the Federal labor laws and other delinquencies.

In a blistering communication to Maj. Gen. Webster Anderson at the Philadelphia depot, Mr. Potofsky charged that the Army, in effect, is destroying the jobs of 100 workers employed by the Michael A. Zielinski Co., of Trenton, N. J., by permitting the firm, on strike for more than 4 months, to use the facilities of the Southern Athletic Co., of Knoxville, Tenn., a repeated law violator itself.

Only last week the Southern Athletic Co. was cited by the House Government Operations Committee with repeated delinquencies in performing Government contracts. A few months earlier, Robert Tripp Ross resigned as Assistant Secretary of Defense following charges of conflict of interest, his wife and brother-in-law heading the Wynn Enterprises, with which Southern Athletic is affiliated.

The committee found that the military procurement agencies had loaded down firms with new contracts despite repeated delinquencies. Since Ross' resignation the Wynn Enterprises have obtained $2 million worth of Air Force contracts.

In his protest to General Anderson, Mr. Potofsky pointed out that the Zielinski firm, after it had obtained a contract for $522,600 from military procurement officials to produce 134,000 pairs of men's cotton trousers, discharged 10 workers for seeking union representation, a right guaranteed them under the National Labor Relations Act.

The union, Mr. Potofsky said, advised the Army authorities of the firm's violation of workers' rights, and of the subsequent strike. The military procurement officials, nevertheless, Mr. Potofsky charged, permitted the Zielinski firm to shift its production to the Southern Athletic facilities at Knoxville.

The House Government Operations Committee charged only last week that as many as five Wynn enterprises entered bids on a single procurement, offering different unit prices for the same items; that awards were made to more than one Wynn company at different prices for the same items; that a low-bidding Wynn company had lost to a higher-bidding Wynn company for the same items; that awards of contracts were made to Wynn companies that had no manufacturing facilities; that Wynn companies were loaded down with new contracts although they had defaulted on deliveries of materials under previous orders.

"The picture which emerges is a shocking one," Mr. Potofsky wrote to General Anderson. "The Military Clothing and Textile Supply Agency had known all along there is a labor dispute at Michael A. Zielinski Co. It had been informed that Zielinski's workers were engaged in a lawful strike to secure

the right to join and be represented by a union of their own choosing.

"By approving a substitute place of performance for a recalcitrant employer in a labor dispute, the agency has taken sides in the dispute, lining up with the employer against his workers. In plain terms, the Military Supply Agency has embarked on a policy tantamount to strikebreaking.

"There seems to be some deep-seated determination to reward law violators and strikebreakers. Otherwise how explain such indefensible and outrageous conduct as promoting a partnership between an employer determined to deprive his workers of the right to organize, and another employer who has become notorious for his contempt for the law.

"The problem is not one of narrow and technical legalisms. Strikebreaking by a Government agency is destructive of free collective bargaining and a threat to basic rights long guaranteed to every American worker. It is repugnant to public policy and contrary to the fundamental principles of our free society.

"On behalf of the Amalgamated Clothing Workers of America, I strongly urge the Military Clothing and Textile Supply Agency to cease its strikebreaking activity by withdrawing the use of a substitute place of performance by Michael A. Zielinski Co."

AMALGAMATED CLOTHING WORKERS OF AMERICA, AFL–CIO,
August 19, 1957.

Maj. Gen. WEBSTER ANDERSON,
Executive Director, Military Clothing and Textile Supply Agency, Philadelphia Quartermaster Depot, United States Quartermaster Depot, United States Army, Philadelphia, Pa.

DEAR GENERAL ANDERSON: Since writing to you last Friday to accept your invitation to luncheon, I have learned that the Military Clothing and Textile Supply Agency has undertaken to interfere with the efforts of the Amalgamated Clothing Workers of America to bargain collectively on behalf of the employees of Michael A. Zielinski Company of Trenton, N. J. The facts are as follows:

(1) While this firm was working on a contract, under invitation QM36–030–57 NEG–23, for 134,000 pairs of men's cotton trousers in the value of $552,600, Mr. Zielinski discharged some 10 workers for exercising the rights guaranteed them under the National Labor Relations Act. As a result, Mr. Zielinski's workers have been on strike for over 4 months.

(2) During this period, the Amalgamated Clothing Workers, representing a majority of Mr. Zielinski's workers, has met with him on numerous occasions in an effort to negotiate both the reinstatement of the discharged workers and the terms and conditions of a collective bargaining agreement. When Mr. Zielinski refused to reinstate these employees and to bargain in good faith, the Amalgamated Clothing Workers filed unfair labor practice charges against the company with the National Labor Relations Board.

(3) In mid-July, Mr. Zielinski informed us that there would be no use meeting inasmuch as his contract had been canceled. At a meeting in Philadelphia with representatives of the Military Supply Agency, our representatives were informed that termination for cause was in fact being contemplated, but such termination would not take place if agreement could be reached shortly. As a result, representatives of the Amalgamated Clothing Workers redoubled their efforts to obtain a fair settlement.

(4) Thereafter, our attorney kept your legal counsel informed of developments, including Zielinski's sudden reluctance to meet with the union. In a conversation with our attorney on July 24, Mr. Zielinski explained that he wanted to postpone meeting with us because "something else was cooking with the contracting officer." That same day our attorney reported this conversation with Mr. Zielinski to your legal counsel and was informed that a letter of termination had been prepared which would go out on Friday, July 26, if we did not report to him that a meeting had been arranged.

(5) On July 26 our attorney reported to your legal counsel that a meeting could not be arranged, and was told that the letter of termination was being held pending receipt of a proposal from Zielinski. Thereafter our attorney made repeated efforts to obtain further reports on developments and was told by your legal counsel that no decision had yet been made.

(6) On August 13 a letter dated August 9, 1957, was received by our attorney signed by a Capt. James M. Murphy, Successor Contracting Officer, stating the following:

"Please be advised that this matter has been disposed of by the Government's approving the use of a substitute place of performance by Michael A. Zielinski Co."

(7) Our attorney was subsequently informed by your legal counsel that the substitute place of performance was the plant of the Southern Athletic Co., in Knoxville, Tenn.

The picture which emerges from the foregoing is a shocking one. The Military Clothing and Textile Supply Agency has known all along that there is a labor dispute at Michael A. Zielinski Co. It was informed that Zielinski's workers were engaged in a lawful strike to secure the right to join and be represented by a union of their own choosing. By approving a substitute place of performance for a recalcitrant employer in a labor dispute, the Agency has taken sides in the dispute, lining up with employer against his workers. In plain terms, the Military Supply Agency has embarked on a policy tantamount to strikebreaking. It is in effect destroying the jobs of close to 100 workers in Trenton, N. J., while it once again rewards Southern Athletic Co., the persistent violator of the law which has just been cited by a congressional committee for its record of delinquencies in the performance of Government contracts. There seems to be some deep-seated determination to reward law violators and strikebreakers. Otherwise how explain such indefensible and outrageous conduct as promoting a partnership between an employer determined to deprive his workers of the right to organize, and another employer who has become notorious for his contempt for the law.

The problem is not one of narrow and technical legalisms. Strikebreaking by a Government agency is destructive of free collective bargaining and a threat to basic rights long guaranteed to every American worker. It is repugnant to public policy and contrary to the fundamental principles of our free society.

On behalf of the Amalgamated Clothing Workers of America, I strongly urge the Military Clothing and Textile Supply Agency to cease its strikebreaking activity by withdrawing the use of a substitute place of performance by Michael A. Zielinski Co.

Sincerely yours,

JACOB S. POTOFSKY,
General President.

Viva and Ole—Capehart's a Real Hero in Paraguay

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. ADAIR. Mr. Speaker, a Hoosier Senator is contributing in very large measure to the effort to build international understanding and good will. This is particularly true with respect to our Latin American neighbors. Recently, Senator CAPEHART visited Paraguay, and the following article from the Indianapolis Times, which I insert with unanimous consent, illustrates the esteem in which he is held among our neighbors to the south:

VIVA AND OLE—CAPEHART'S A REAL HERO IN PARAGUAY

(By Edward Tomlinson)

ASUNCIÓN, PARAGUAY, August 20.—A Hoosier lawmaker landed here Sunday afternoon and took over the capital of Paraguay for 24 hours. Republican Senator HOMER E. CAPEHART, of Indiana, was invited to this South American Republic to receive its highest honors.

In 34 years of experience as a reporter of events in this part of the world, I have seldom seen a Yankee official receive such a spontaneous and wholehearted welcome in any of the countries south of the border.

The government of President Alfredo Stroessner, the Paraguayan Congress and the municipal authorities of Asuncion vied with one another to pay him homage. The Foreign Minister, Dr. Sapena Pastor, conferred upon him the little South American nation's highest decoration, the Grand Order of Merit.

Congress met in extraordinary session and made him an honorary member. The city dedicated and named a boulevard the Avenida HOMER E. CAPEHART.

From the moment the special plane, which brought the Senator and his party from Buenos Aires, landed at the brandnew airport, built with a loan from the Export-Import Bank, he was treated as a national hero.

Practically every daylight hour during his stay he either listened to or replied to speeches of welcome and praise. A regiment of the army with two bands was lined up at the airport. Cabinet officials, members of Congress, generals, and leading citizens formed a welcoming committee.

The party was whisked directly to the Presidential palace for the decoration ceremony. Later at a state dinner, attended by the government and diplomatic corps, hospitality and enthusiasm burst all bounds.

Native musicians and composers performed the colorful music of the country. Officials and their wives joined in the lively Paraguayan folk dances. Eventually, when the orchestra struck up Banks of the Wabash, the Senator rose and sang it lustily, and the assemblage leaped to its feet, applauding wildly and shouting, "Viva CAPEE-HART, Viva CAPEE-HART."

At 7:30 a. m. Monday a detachment and band from the navy lined up in front of the National Pantheon or Hall of the Heroes where Paraguay's honored dead are buried. The Senator and his son, Thomas C. Cape-

hart, who is traveling with him, placed a huge wreath in front of the chapel altar. At 8 o'clock, President Stroessner received the party at Government House and then personally drove the Senator to the ceremony dedicating the avenida.

Following the speeches, the entire party visited the Colegio Internacional, a coeducational high school, conducted under auspices of the Disciples of Christ, or the Christian Church, headquarters of which is in Indianapolis.

This is the school to which practically all the leading families and officials of the country send their children. Several of the cabinet ministers, alumni of the institution, proudly went along to assure the Hoosier that his fellow citizens were contributing to the educational and cultural advancement as well as the economic development of their country.

In fact, the Senator was invited to Paraguay in order that the heads of the government and the people could express their personal appreciation to him and to the United States for the assistance and aid the little republic has received from us.

In 1954, Senator CAPEHART had visited South America as head of a congressional committee to study various projects being financed by the Export-Import Bank and other Government agencies. He found that a Paraguayan request for a loan to construct the first water-supply system in Asuncion had been turned down by the World Bank. The Senator urged the United States Export-Import Bank to take a look into the possibilities of assisting the little country on this and several other much-needed public works.

The government and the people were so grateful that today the name CAPEHART is almost as well known throughout Paraguay as it is in Indiana.

Speakers made it plain that Paraguay does not want gifts, but legitimate assistance in the form of loans and credits to be paid back with interest. They also wanted the Senator to assure the American people that Paraguay is on the side of the United States in the fight against communism.

Congressman John Fogarty Wages the Good Fight

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. ASPINALL. Mr. Speaker, just this morning while reading through the most recent issue of the American Federalist, the official magazine of the AFL–CIO, I came across a most interesting, instructive, and commendatory article about our colleague, the gentleman from Rhode Island's Second Congressional District, JOHN E. FOGARTY. Congressman FOGARTY is one of the most highly respected and truly effective Members of this body. Most of us take personal delight following his lead in one of the most difficult tasks performed by any Member of Congress. It is pleasing to note that others also have a high regard for his services and are desirous of letting him know of their kindly feelings as he effectively discharges his responsibilities to his constituents at home and his follow citizens throughout the Nation. I include this article in today's RECORD:

CONGRESSMAN JOHN FOGARTY WAGES THE GOOD FIGHT

(By Fred Ross)

People are fond of JOHN E. FOGARTY, Congressman from Rhode Island. People like him—and he likes people.

The lawmaker is a fine-looking man of 44 who comes from Harmony, a little town near Providence. He seems to know almost everybody in the entire State. He is warmly greeted wherever he goes.

One of Congressman FOGARTY's old friends told this reporter:

"JOHN hasn't changed a bit. His friends counted on him when he was a boy in school. They still depend on him. And he never fails them."

Congressman FOGARTY's record in Washington shows his regard for people and his sympathetic understanding of their needs. He wants to help people—and he has proceeded on the theory that he can help them most effectively by fighting for the right kind of legislation.

A Member of the House of Representatives since 1941, Mr. FOGARTY takes his job very seriously. More than a decade ago—during the 79th Congress—he was named to the Appropriations Subcommittee handling labor, education, health, and welfare matters. He is now the chairman of this important subcommittee.

Congressman FOGARTY has made himself an expert on the Department of Labor and the Department of Health, Education, and Welfare. These are the departments which are the concern of his subcommittee.

His expert knowledge of the operations of both of these departments has been demonstrated on many occasions—but never more impressively than in the current session of Congress. Congressman FOGARTY was magnificently effective in blocking the efforts of certain lawmakers determined to use the meat ax on the appropriations for the two departments.

During the debate one Congressman saw fit to make a slighting reference to Mr. FOGARTY as a former bricklayer.

For a decade prior to his first election to the House, JOHN FOGARTY was a bricklayer. He is very proud of that fact. He is proud that he was president of local 1 in Providence for 4 years. And it is with profound pride that he still carries his union card.

Congressman FOGARTY, a Democrat, heard the remark which was intended to be disparaging. Unruffled, and with simple dignity, he replied that he was very proud of having been a workingman.

It was Republican Congressman CHARLES WOLVERTON from New Jersey who took the floor to back Mr. FOGARTY and demolish the slighting remark.

"The gentleman from Rhode Island, as chairman of his great committee," said Mr. WOLVERTON, "has presented a clear and lucid picture of the health needs of the Nation, what has been accomplished and what is planned for the future."

And Congressman WOLVERTON concluded his tribute by saying:

"Let's get more bricklayers in the House."

Primarily through the efforts of Congressman FOGARTY, the National Institutes of Health at Bethesda, Md.—part of the United States Public Health Service—have grown into a large research organization. The Institutes conduct programs which will lead, it is hoped, to the ultimate conquest of cancer, heart disease, mental illness, and other ailments.

When JOHN FOGARTY first became a member of the Appropriations Subcommittee in 1946, the total National Institutes of Health appropriation was just $3,500,000. To Congressman FOGARTY goes the credit of obtaining passage of an appropriation bill for NIH of $22 million for fiscal 1958.

In recognition of his outstanding leadership in the health field, President Eisenhower named him several months ago as a congressional adviser to the United States delegation at the 10th World Health Assembly in Geneva, Switzerland.

JOHN FOGARTY's efforts have not been confined to the health and labor fields. Just recently he testified against a natural gas bill that would be detrimental to the consumers.

"I have been unable to learn," he said, "of a single natural gas producer who has suffered from appropriate regulation which the Federal Power Commission is authorized to administer under the present provisions of the Natural Gas Act.

"Raising costs of natural gas would take additional tolls from the consuming public and add them to the rich profits already enjoyed by an industry which we favor with special tax treatment designed to offset the special risks which are inherent in their operations."

The Congressman also took the floor of the House recently to fight for Federal flood insurance.

"As things stand today," he said, "your constituents and mine cannot buy flood insurance. Private companies won't sell them any, and until we get the Government program going they cannot buy Federal flood insurance."

Congressman FOGARTY's fight for adequate appropriations for vital activities of the Federal Government has earned him the praise of the labor movement.

"You have brought great credit not only to yourself but to Congress and the labor movement of which you are a proud member," AFL–CIO President George Meany wrote the Rhode Islander last spring.

"I predict that for many years people will be quoting your clear answer to Congressman EMMET F. BYRNE, Republican, of Illinois, when he tried to slight you by referring to your former occupation. Your proud statement in defense of anyone who earns his bread by the sweat of his brow will stand as an eloquent tribute to you.

"We are all aware of the tremendous odds against which you were working. The failure of any of the Republican leaders to come to the defense of the administration's own budget made your task almost impossible. Yet you managed to prevent some of the worst slashes.

"It is another indication of the advantages of the democratic system that when you forced your colleagues to stand up and be counted, they reversed themselves and voted with you to prevent some of the cuts.

"On behalf of the 15 million members of the AFL–CIO—the bricklayers and the barbers and the butchers and all the others—I extend to you fraternal greetings and appreciation."

Another leader of labor who wrote to Congressman FOGARTY was International President Harry C. Bates of the bricklayers. In his letter to the fighting Rhode Island legislator, Mr. Bates said:

"I have had occasion to read excerpts from the House RECORD of April 2, 1957, in which Congressman BYRNE of Illinois remarked on your station in life as a bricklayer and your intelligent reply to his remarks. I feel confident that the distinguished Members of the House of Representatives were not at all impressed with the remarks uttered by Congressman BYRNE.

"JOHN, I have often told you of my feelings for you, and I should like to take this occasion to again express them for the record. For my colleagues on the executive board of this international union, for myself, and for the thousands of our members in America, I want to make known to you

our sincere and heartfelt appreciation for the credit you have brought to yourself and our organization, both in your capacity as a bricklayer and a distinguished Member of Congress.

"The record you have compiled during your many years as a Congressman is one that has endeared you to the hearts of the workers of this country. Your sound judgment in carrying on the fight to retain certain funds for the proper functioning of several departments has likewise won for you the admiration and the undying gratitude of untold numbers of people in all walks of life."

Mr. FOGARTY's voting record shows that he has earned these words of praise. He has consistently voted to protect and advance the well-being of the Nation's plain people. He was one of those who voted to uphold President Truman's veto of the Taft-Hartley Act in 1947.

He was among those on the right side in the successful effort to recommit the Wood bill, which would have worsened the Taft-Hartley Act.

In 1952 he voted to ask President Truman to refuse to use a Taft-Hartley injunction against the striking steelworkers.

The bricklayer from Rhode Island has always given his support to the postal workers in their efforts to obtain wage increases.

He cast his vote against the amendment removing 1 million people, previously covered by the Fair Labor Standards Act, from minimum wage coverage.

And he continues to fight the good fight for the labor movement. In the rarified atmosphere of Washington, he has remained a good trade unionist. He has not forgotten that he is a dues-paying member of the bricklayers, as was his late father, and as is his older brother, William.

The Providence bricklayers fondly remember him as a fine union member and leader. Only 23 when first elected president of his local, he was the youngest man ever to have held the post.

Henry Dodd, business agent of the local, told why he was chosen for 4 successive years to lead the organized bricklayers.

Mr. Dodd said that the members recognized him as a good, smart, live young fellow. He added that he was a good speaker, a good mechanic, and a good leader. The business agent also remembered that John Fogarty was always trying to get jobs for the older members, and he succeeded in many cases.

Although the Congressman from Rhode Island maintains that his years in the local presidency were uneventful, Mr. Dodd takes a different view. John Fogarty carried the ball for the bricklayers in negotiations with the employers. He was an effective negotiator, winning substantial pay increases for his members.

The future lawmaker was only 17 when he started his apprenticeship as a bricklayer. While following his trade, he also attended Providence College. In 1946 that institution awarded him a honorary doctor of political science degree.

Congressman FOGARTY is worried about the pockets of unemployment and distress which exist in New England and other parts of the Nation. In his own State of Rhode Island, thousands are jobless because of the closing of textile mills and a depressed condition in the jewelry industry.

Recently the State Department of Employment Security estimated that 31,200 were unemployed in a work force of 360,000, or 8.8 percent.

JOHN FOGARTY's grasp of the problems of people and his desire to help them have led him to initiate a two-pronged attack on unemployment problems.

He has introduced a bill to create a Federal agency to assist areas having chronic unemployment problems. It is a companion bill to one sponsored by Senator PAUL H. DOUGLAS, of Illinois.

Virtually identical bills were aired for months at Capitol Hill and field hearings last year. At the same time the Senate passed the Douglas bill by a healthy margin, but the House, eager to adjourn for the summer, failed to act.

JOHN FOGARTY is not waiting for Congress to act, although he hopes to see the needed legislation enacted. He is using the facilities at hand in an effort to put more people to work in Rhode Island.

As a result of his planning, representatives of several Federal agencies met recently at Woonsocket with civic, labor, and business leaders and State government representatives.

JOHN FOGARTY's abiding love for humanity was shown in a speech at a recent New York luncheon.

He told of the great progress made through medical research in eliminating human ailments in the past 10 years. He told of drugs that have been developed to curb tuberculosis, blindness in prematurely born babies, heart disease, mental illness, polio and other maladies.

"I am greatly encouraged by these milestones in medical progress," said Mr. FOGARTY. "But the most impressive and, to me, the most important accomplishment of the past 10 years is that during that period, as a result of these medical discoveries, 5 years of life have been added to the span of every man, woman and child in America. "That, to me, is the most vivid and graphic way we can sum up the progress we have made in the decade. A child born today can expect to live 5 years longer than a child born 10 years ago.

"This medical miracle has more meaning to me than the invention of the telephone or the radio or the automobile or the airplane. For while each of these inventions was historic and had far-reaching effects on our way of living, they touched only the periphery of our lives, while here is something that affects directly and clearly the most fundamental and precious possession we have—life itself."

The lawmaker from Rhode Island maintains his deep devotion for organized labor and its principles. He has no use for free riders who are perfectly willing to accept the better wages and better working conditions which are won by trade unions but who refuse to join up. When he was a working bricklayer, he regarded free riding as unfair. And he still feels that way.

He believes firmly that it is sensible and proper for governmental employees to belong to unions. A few days ago, at a meeting in Washington marking the 25th anniversary of two lodges of the American Federation of Government Employees, he remarked:

"The only way you get a raise is to have an organization speak for you. In Government service, the same as anywhere else, you need organization."

The Congressman said that Federal employees who belong to unions should take pride in their membership, just as he is proud of belonging to the bricklayers. Like other toilers, Government workers can gain increased security as well as higher pay through organization, he declared.

Mrs. Fogarty, a former school teacher, was Miss Louise Rohland, of Rehoboth, Mass. The Fogartys have a 10-year-old daughter, Mary.

Congressman FOGARTY has been doing a splendid job for the welfare of the American people for a number of years. It is gratifying that such an outstanding legislator comes from the ranks of our own labor movement.

Address of Hon. Melvin Price, Democrat, of Illinois, Member of the Joint Committee on Atomic Energy and the House Committee on Armed Services, at the Jefferson-Jackson Day Banquet Held by the Scioto County, Ohio, Democratic Central-Executive Committee in Portsmouth, Ohio, May 25, 1957

EXTENSION OF REMARKS

OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. POLK. Mr. Speaker, some time back, Hon. MELVIN PRICE delivered a very thought provoking and constructive address at the Jefferson-Jackson Day banquet in Portsmouth, Ohio. His statements and observations are of such importance that I want the Members of the House of Representatives to have the opportunity of reading his message on this occasion.

The address follows:

Mr. Chairman, ladies and gentlemen of the Democratic Party, it seems to me a good thing for us to be celebrating the Jefferson-Jackson era together. I think the party of Jefferson and Jackson, the party of Franklin D. Roosevelt and Harry S. Truman, has a very good chance to win the Congress again next year and to regain the White House in 1960.

We must not minimize the difficulties of the 3½ years ahead. As good Americans we must recognize that we live in a world of danger, that Soviet aggression is a factor we cannot ignore, that we must pay the price of security and freedom.

It is still fair to point out that it is we Democrats who have forced the Eisenhower administration to recognize the facts of modern life and to spend the necessary money to be sure that we have enough muscle in our Armed Forces to defend our way of life.

Some remarkable things have happened to the Eisenhower "Great Crusade" in the six months since the President was re-elected on promises and pledges which most of his own party did not believe in.

We have had the spectacle of a $72 billion budget which the President's own Secretary of the Treasury violently attacked.

We have had the spectacle of the President saying that the budget could not possibly be cut as much as $2 billion—and the President himself then sending a letter to Speaker SAM RAYBURN saying that he had discovered, after all, that budget reductions of $1.8 billion were tolerable.

The Republicans' one authentic so-called egghead, Mr. Arthur Larson, has a habit of calling us Democrats a "divided" party.

What in the world does he think of his own Republican Party?

Larson's personally proposed budget for the United States Information Agency was slashed sharply because he couldn't find any words, despite his brains, to defend it properly. He got precious little support from his own Republicans.

The senior Senator of the Republicans, Senator BRIDGES of New Hampshire, wants Eisenhower's budget cut by $5 billion.

The GOP official floor leader, Senator KNOWLAND of California, is withdrawing from Congress at the conclusion of his present term because apparently he can't endure Mr. Eisenhower's "modern Republicanism."

It is commonly believed that Senator KNOWLAND, for whose personal integrity every Member of Congress has respect, intends to run next year for the governorship of California. He wants to re-establish a base, apparently, from which to challenge Eisenhower's "modern Republicanism."

Our Republican friends are split so sharply, so fundamentally, that not more than a third or a fourth of the Republican Members of Congress can be counted as Eisenhower people.

We Democrats have our differences. These differences are sometimes earnest and are warmly argued.

But the differences haven't kept us from mapping out and enacting all the legislative and social progress in our democracy for the past quarter of a century.

Let's ignore for a moment the historic contributions of the early New Deal, the depression era, when the country was paralyzed by the excesses and abuses of Wall Street control and the refusal of Herbert Hoover to use Federal power to meet the needs of the people.

Let's talk about recent history.

The first Republican Congress in 18 years—the 80th Congress—passed the Taft-Hartley Act and a few other laws intended to repeal or modify the New Deal.

The country got tired of that very quickly and elected the Democratic 81st Congress that raised the minimum wage from 40 cents to 75 cents an hour—and did something to help the farmers, too.

We got another Republican Congress in 1952—the 83d Congress—and a tax bill was adopted that gave most of the tax relief to corporations and large personal taxpayers.

There wasn't any social reform, though. There was no school-aid bill, no social security change of major importance that plowed new ground.

Under the leadership of Eisenhower—the Eisenhower who called himself, at that moment, a dynamic conservative or a moderate progressive or a middle-of-the-roader—we got, instead, the Dixon-Yates scheme to torpedo the Tennessee Valley Authority and inject politics in the Atomic Energy Commission.

We got farmers sold down the river. We got drought districts denied Federal assistance except in belated and stingy amounts. We got the late Martin P. Durkin resigning, angrily, from the President's Cabinet because he thought he had been sold down the river on Taft-Hartley law changes.

The proposed Hells Canyon high dam on the Snake River in the northwest was sold down the river by Sherman Adams in the White House—and Democrats have been winning congressional and local elections in the northwest ever since.

The country got tired of the Republicans again.

It takes the country only about 2 years to get tired of Republican control of Congress, no matter how befuddled the voters may be by the legend and fame of a general.

In 1954 the people elected a Democratic Congress again—and once again we got progress.

The Democratic Congress checked the plans of Agriculture Secretary Ezra Taft Benson to push farm price supports lower and lower.

The Democratic Congress pushed through a minimum wage bill of $1 an hour—although Eisenhower's Secretary of Labor, Mr. Mitchell, pretended that anything more than 90 cents might prove terribly inflationary and harmful to the economy.

It was not until this year—a full 18 months after we Democrats insisted on $1 an hour—that Secretary Mitchell acknowledged that $1, instead of 90 cents, had not produced unemployment and business bankruptcies and all the other horrid things he worried about in 1955.

The Democratic Congress elected in 1954 pushed through basic Social Security Act changes granting benefits to women workers and widows at age 62 instead of age 65.

It pushed through disability benefits at age 50, giving a disabled worker the right to start collecting insurance for himself and his family at that age instead of forcing the family on charity by a rigid rule that nothing could ever be paid before age 65.

President Eisenhower, the self-proclaimed "modern Republican," wasn't in favor of these changes in 1955 and 1956. He signed the Democratic bills because he didn't dare veto them.

And finally last year, when he was running for reelection, he decided to join us—since he couldn't lick us.

He became "modern." His Republican party was perfectly willing to pretend to be modern in order to capitalize again upon the personal popularity of its general.

But his Republican Party didn't really mean it. Once the President was reelected, and all the coattail riders were taken care of, the Republicans began to do what came naturally.

Senator BRIDGES spoke with contempt of "modern Republicanism." Senator KNOWLAND, Mr. Eisenhower's Senate leader, came out against the school-aid bill. JOE MARTIN, the voice of the Republicans in the House, became absolutely certain that Eisenhower's budget could be cut—and cut sharply.

I say to you solemnly, the President today does not lead his own party.

The President cannot count on his own party for support of the programs he says are significant and even vital.

Do you know why the school-aid bill failed last year? It is because about 75 Republicans first voted to load down the bill with amendments, and then voted against it.

Do you know why a civil-rights bill failed last year? It is because the Republicans in the House delayed the bill until the last week of the session, when there wasn't time for the Senate to act.

Do you know why civil-rights legislation has been delayed this year? It is because Republicans in key committees of the House and Senate refused to attend sessions and vote to expedite a civil-rights bill.

If all the Republicans on the House Rules Committee and Senate Judiciary Committee claiming to favor civil-rights laws actually attended and voted that way, the fight would already be over.

The only rollcall votes in the House of Representatives on appropriation bills this year came on the bill to finance the Department of Labor and the Department of Health, Education, and Welfare. Let us see what the record shows.

The bill was handled on the floor by Representative JOHN FOGARTY, of Rhode Island, a Democrat. FOGARTY'S subcommittee had made some careful reductions in the money the two departments asked, but it cut carefully rather than with a meat ax. This didn't satisfy Eisenhower's Republicans.

An amendment was filed to slash an additional $204,000 from the Labor Departments' Office of Solicitor. This is an important job, because the Solicitor makes the investigations necessary for minimum-wage decisions on Government contracts under the Walsh-Healey and Davis-Bacon laws. To protect workers from chiseling contractors on Government work, the Solicitor must have enough money to do his job.

The Secretary of Labor, James P. Mitchell, is a Republican—but Republicans in the House voted 153 to 42 to cut down his Solicitor's operations. Democrats voted 129 to 88 against the reduction.

Another Republican amendment proposed a slash of $136,000 from the Labor Department bureau protecting the reemployment rights of veterans. Republicans in the House voted 107 to 88 in favor of the slash. Democrats voted 118 to 30 against it.

An amendment was filed to cut $346,000 from funds for the Bureau of Labor Statistics. This Bureau gathers and publishes statistics of employment, labor disputes, and the cost of living. Its Consumer Price Index is of vital importance because the wages of millions of workers are tied to the index and go up or down as it rises or falls.

Secretary Mitchell, a Republican, begged Congress not to impose the cut, but Republicans in the House voted 134 to 62 in favor of the reduction, while Democrats voted 139 to 83 against it.

All of us in Congress are mindful of the need for economy and careful spending. But when it is a matter of a few hundreds of thousands of dollars for the Department of Labor—the smallest department of Government—it is not true economy to knock out vital functions.

The President can get Democrats to understand this. He can't get his nonmodern Republicans to understand it.

The manner in which the Republicans have dealt with the public power issue is a failure of President Eisenhower personally.

He plays golf with so many private-utility executives that he believes they are telling him the solemn truth when all they are feeding him is private-utility propaganda.

So he calls the Tennessee Valley Authority "creepng socialism" and he sells out the proposed big Federal dam in Hells Canyon. He refuses to support the Gore-Holifield bill to let the Government itself build atomic reactors for industrial electricity—although he is perfectly willing to sign bills giving the private-utility industry subsidies for building reactors based on the people's investment of billions in atomic energy.

He was stopped cold in the Dixon-Yates raid on the TVA, and I predict he will eventually be stopped cold in the raid of a private utility on the Hells Canyon site.

I am even hopeful that if we can get a few more Democrats in Congress next session—or maybe this session—we can at last pass the Gore-Holifield bill for Government-built reactors and begin the process of bringing the blessings of peacetime uses of atomic energy to all our people.

It is a terribly dangerous thing for this country to sit idle, siphoning money to private industry in the atomic field, while both Great Britain and the Soviet Union surpass us in the development of industrial reactors. Yet, I tell you this is exactly what is happening—and that this kind of program is the only Eisenhower type of program that his own Republicans will support.

Take a look at the Eisenhower record on Federal aid to the schools. He was totally against it in 1953 and 1954. In 1955 he grudgingly came up with a proposal for $225 million in Federal funds spread across 3 years. Finally—last year—he proposed $1.225 billion in 5 years. And when his own Republicans killed that program, he blamed the Democrats.

I suggest to you, in all seriousness, that in 20 years of frustrated defeat in the New Deal-Fair Deal era the so-called modern Republican Party became incapable of governing our country.

It became so accustomed to blind opposition that it cannot recover the habit of affirmation, of constructive action.

I do not question the integrity or patriotism of our opposition—as the questioned and slurred ours. There is a genuine possibility, however, that the Republican Party has been made obsolete by history.

Republicans came reluctantly to the acceptance of the necessity of internationalism, the necessity of acting as if we know we

live in a world of peril, and that we need allies.

They came reluctantly or never at all to acceptance of the social responsibilities of government. What have they contributed, really, in what is now nearly 25 long years? Nothing in the domestic field except a grudging concession that they will tolerate what they are compelled to tolerate.

They twice elect a President, with a shining name, and the bloom is scarcely off his second election before they hasten to repudiate him.

The President himself belatedly acknowledges that the Democrats were right all along—on the budget, on foreign policy, on domestic policy—and his horrified Republicans in Congress refuse to make the compromises necessary to survival.

There is no head, no tail, no backbone in the executive leadership of this administration—and the members of the general's own party in Congress are striving with each other for ways to denounce him.

Mr. Eisenhower's press secretary, James C. Hagerty, has been suggesting that lots of other Presidents took more time away from the job than Ike himself.

I may suggest, in turn, that when Roosevelt and Truman were in the White House, nobody ever doubted who was the country's Chief Executive, in or out of Washington.

The history of the past quarter century proves that with a bold and brave President in the White House, a Democratic President who understands and accepts his job, the country can make progress.

It can make progress providing the people give that President enough Democratic Members of the House and Senate to overbalance the inevitable individual defections on some issues.

It isn't enough to give the President a Democratic margin of maybe 20 in the House and of only 2 in the Senate.

Give us 20 more Democrats in the House and half a dozen more Democrats in the Senate—and the country can look forward again to progress that will keep us up with history.

We'll be able to pass the good programs that Eisenhower requests in his last 2 years and to force through some other good programs that he doesn't request.

This is the task of our party in the year and a half leading to the November 1958 congressional elections. Let's elect some more Democrats—and then in 1960 we will elect a Democratic President to lead the country.

It May Be Worth It

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. ASPINALL. Mr. Speaker, there has been a great deal said pro and con about the visit of certain American youth to Moscow and Communist China. One of the most succinct, constructive, and understanding editorials of this situation that have come to my attention appeared in the Daily Sentinel, of Grand Junction, Colo., under date of August 23, 1957. With the feeling that the editorial would be of value to all of my colleagues I am pleased to insert it following these brief remarks:

IT MAY BE WORTH IT

Without condoning the students' defiance of the State Department rulings when they went into Red China we cannot agree with Secretary Dulles that they are tools in the hands of the Communists. Their appearances in Moscow, where some of them defied Soviet rules and many took the opportunity to defend the United States before Soviet students, belies their being tools—they sound like individualists.

Undoubtedly there were some Communist sympathizers in the group, but the chance to visit Moscow at the cost of $2 a day was attractive to any youngster with curiosity or spirit who could go to Russia and see for himself, and, perhaps, spread some American doctrine while he was at it.

Those may have been among the reasons for going to Red China. Certainly the State Department's blind policy of curtaining off the land where one-third of the world's population lives has not done much to enlighten us on actual conditions there. It is definitely a strong weapon for Communist propagandists.

If it is possible for American college students to be seduced from democracy to communism in a brief sightseeing tour through China then they were not very well grounded in democracy in the first place. If they, like their president, find it hard to defend democracy, then perhaps they are not the best sort of ambassadors to send to a communistic country. If they are curious and outspoken they will find contrasts which will disillusion them and make statements which may disillusion some Communists.

They were wrong, of course, in disobeying their Government, but that doesn't mean that the Government was right. We find a parallel here between their disobedience and that of the soldier who refused the "white sidewall" haircut. He was wrong in disobeying orders, but the ensuing row uncovered a lot of idiocy in Army rulings and cleaned up some conditions which needed cleaning up. If the students manage to find out something about Red China and to spread a little American doctrine (their clothing, their freedom to travel alone, will do that); if they also focus attention on the idiotic ruling which denies any American right to travel in China and thereby gives the communistic propagandists a real weapon, then the punishment they suffer on return may be worth it. We don't look for any of them to defect and remain in China nor for many of them to come home preaching the advantages of communistic government. They may do so, but they sound too much like individualists to us.

Why Repeal the Income Tax?

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. BURDICK. Mr. Speaker, I have here an article issued by the Organization To Repeal Federal Income Taxes, Inc., which I wish to commend to the attention of my colleagues:

If our personal freedom and national liberty are to be maintained then action must be taken to repeal the one law that nullifies the Bill of Rights—the 16th amendment. This amendment authorizes the Federal Government to assess any degree of taxation upon us that it may desire. By this seizure of our wealth we become pawns of the Government and a subject, rather than a citizen. The 16th amendment states: "The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration."

Why has the United States a national debt of about $275 billion? The answer to this is that without the 16th amendment this would have been impossible, for the Government would have to live within its means as it did for 124 years during which time we were the richest nation in the world and the only free people in the world. Today we are the poorest nation in the world and we have lost our freedom for we are no longer entitled to the fruits of our labors.

The Federal income tax is an immoral law breeding dishonesty in government and in the citizen. It is contradictory to the bill of rights and nullifies the 4th, 5th, and 10th amendments. The Federal income tax is a confiscatory law and each year is progressively seizes more of your property and earnings.

Repeal means that every payday you will take home all the tax money that is now withheld from your wages;

Repeal means that, in fact, your immediate earning power will be increased by the amount that is now withheld from your wages;

Repeal means that your future earning power will not be limited by the fear of higher brackets and higher deductions that are, in direct effect, taxes placed upon you to curb your initiative and your desire for self-advancement;

Repeal means that your employer will be enabled to establish a broadened program for systematic reinvestment of earned income back into his business to guarantee progressive expansion and proper maintenance of the machinery and equipment upon which your job and your future economic welfare depend;

Repeal means the end of excessive Federal taxation; which means the killing of inflation without undermining government, education, or industry;

Repeal means more efficient government by competent government employees at higher take-home pay at less cost to the taxpayer;

Repeal means returning the duty of self-government to the States.

Repeal means restoring individual dignity and personal liberty to every American citizen.

The American citizen has been deprived of his rights of freedom guaranteed by article IV of the Bill of Rights:

He is no longer secure in his person, his home, in his papers and effects against the unreasonable searches and seizures of the Collector of Internal Revenue and his agents; he is required by the enforcement laws of the 16th amendment to keep records of his personal and business financial transactions upon which he may be prosecuted and imprisoned.

The American citizen has been deprived of his rights of freedom guaranteed by article V of the Bill of Rights.

He is held to answer for his every financial transactions; regardless of the amount, source, purpose or legality of such transactions; he is subject not only to double jeopardy arising from his year-to-year reports on his financial transactions, but he is also forced to testify against himself, his wife and his family in his written and sworn reports of income to the Bureau of Internal Revenue.

He is deprived of utilizing his free choice of individual initiative in working for the betterment of himself and for the general welfare of the Union.

The free and equal rights of American citizens have been abridged; classes of American citizens, graded by income level, have been established and each class is taxed, not according to the individual citizen's equal obligation to Government but according to the citizen's individual initiative and

individual productive ability. The progressive system of graduated income taxes against earned income penalizes the ambitions, the initiative, and the personal advancement of each citizen.

Annual taxes are withheld from individual citizen's wages from payday to payday without consent or individual authorization; other citizens are forced, against their free will, to make detailed reports, inform upon and collect income taxes from their employees under criminal codes that allow neither compensation nor reimbursement for costs of collection, keeping the records and transferral of moneys collected. Nor is the employer-collector allowed a legal margin between honest error or business failure and criminal intent.

The American citizen has been deprived of his rights of freedom guaranteed by article VI of the Bill of Rights:

Upon suspicion only, the Collector of Internal Revenue or his agents may file liens for seizure of the citizen's bank accounts, his papers and his property; such liens are published in the public press without the citizen's prior knowledge or defense; the citizen is subjected to unjust and extralegal hearings in kangaroo courts presided over by deputies of the Collector of Internal Revenue and forced to furnish evidence against himself that can be used in his prosecution in open court.

The American citizen has been deprived of his rights of freedom guaranteed by article VII of the Bill of Rights:

In all matters of time of payment, amount of payment, and method of payment, the citizen is subjected to the flexible rulings of the Collector of Internal Revenue; as is assessed unjust and unreasonable fines in the guise of interest and penalty, and he is still held under the threat of criminal prosecution. The rules of common law have been superseded by the codes of the 16th amendment.

The American citizen has been deprived of his rights of freedom guaranteed by article VIII of the Bill of Rights:

Excessive fines have been imposed; cruel and unusual punishment has been inflicted upon citizens who have been convicted of lateness in making income-tax payments; inability to make income-tax payments and failure, for any reason, of fulfilling orders of courts in making income-tax payments.

Did you know that your income-tax dollars helped finance such projects as highways for Communist Yugoslavia, homes for Turkish miners, a model city for Communist-sympathizer Nehru, of India, and allowed Great Britain to reduce its personal income tax?

This unconstitutional use of your tax dollars is called foreign aid. For such purposes the United States Government in 1954 spent $4.5 billion; for tax-supported, Government-operated businesses, the expenditure in 1954 was $28 billion; a total illegal and unconstitutional spending of our hard-earned tax dollars of $32.5 billion. At the same time the Government collected in personal income taxes from individual wage earners an amount of $33 billion.

Therefore, if we cut out aid to Communist-Socialist countries, whose aim is to destroy America, and if we get Government out of private enterprise there would be no need for personal income tax.

The fact remains we progressed to a great, prosperous nation before 1913 when the 16th amendment was enacted. That was 124 years and the bite was small. It is constantly greater.

The 18th amendment was repealed because it infringed the rights of just some of the people; this 16th amendment must be repealed, as it infringes the rights of all the people.

Happy Is Our Home

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. ROGERS of Texas. Mr. Speaker, I am in receipt of a most interesting and informative brochure from the board of economic development in Happy, Tex. It is, I believe, notable that this thriving and industrious community in the great Panhandle of Texas is exercising vision and foresightedness in projecting the many attributes of their most attractive city. The title of the brochure is "Happy Is Our Home," and from my knowledge of the populace of this community, I consider it most apropos. Under unanimous consent, I insert herein a few of the many pertinent and enlightening facts from this publication:

HAPPY IS OUR HOME

Our history: Even before the white man came to this area, it was known as Happy Hunting Ground by the Indians who roamed the plains. Later, during the cattle drives, cowboys named it Happy Draw because it was a source of grass and water for their stock. As the town was located on this draw, the original settlers chose this name for their new home. Settlement began in the 1880's and Happy was incorporated in 1925.

Location: Happy is ideally located for those who appreciate the freedom and elbow room of a small town and still can be only minutes away from the larger shopping centers. State and Federal highways radiate in 3 directions, 2 of them being 4-lane expressways. Happy is situated in the heart of the Panhandle-Plains area of Texas, an area comparatively young in history, rich in resources and unlimited room for growth and progress.

Business opportunities: Happy, besides being in every way a fine town in which to live and raise a family, is also an excellent place to bring up a business. Here are some of the opportunities Happy offers to business and industry: a stable farm income from well irrigated land. Happy has an ample underground water supply for domestic and industrial users. Excellent transportation and freight service. Happy is connected north and south by U. S. Highway 87, a four-lane expressway giving easy access to Amarillo north and Lubbock south. East and west Texas Highway 1087. The Santa Fe railroad connects Happy with all the United States for dependable passenger and freight service. Happy is also serviced by bus and truck lines with overnight service to Fort Worth and Dallas, and connections with all regional cities. Happy is serviced by the Southwestern Public Service Co., Pioneer Natural Gas Co., and the General Telephone Co. Happy offers plenty of space for industrial and housing development, having no State income tax or sales tax and low property taxes. City taxes are only $1.40 per $100 on 33⅓ percent valuation and school taxes $1.50 per $100 on 37½ percent valuation.

Our climate: 3,660 feet above sea level, with humidity averaging approximately 58 percent and prevailing southwesterly breezes make for ideal living conditons. The nights are always cool and the days never oppressively hot or humid. Rare is the day when the sun doesn't shine. Average temperature is 56.6, with an average minimum of 43 and a maximum of 71. The average annual rainfall is 21.12 inches.

"Happy is our home" is more than just a catch phrase. It has real meaning to hundreds of citizens who prefer to live and work in this community—a community that has never been beset by the perils of boom or bust, but over the years has enjoyed a steady, wholesome growth based principally on agricultural economy.

In the heart of the last great business frontier, the great Southwest, Happy, Tex., is ideally located for both business and personal development. We believe you will profit by investing your efforts and resources in the fresh, opportunity-laden atmosphere of Happy, Tex. We urge you to investigate the opportunities available and you will join us in saying "Happy is our home."

Misunderstood America

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. ADAIR. Mr. Speaker, under unanimous consent, I include an editorial from the Kendallville News-Sun entitled "Misunderstood America." It gives us much reason for reflection upon our relations with other nations of the world and points out our obligations in that respect.

The editorial follows:

MISUNDERSTOOD AMERICA

It is not a new story that America is misunderstood and disliked in some parts of the globe. But it is always somewhat disheartening to learn what limits these attitudes go in certain countries.

Recently the National Broadcasting Co. presented a filmed television program called "As Others See Us," drawing on interviews with ordinary citizens in many lands around the world.

Opinions about America, often strikingly negative, ranged all over the lot. Most astonishing were those in India.

Though India is notorious for hostile attitudes toward America, few can fail to be shocked at the extremes of views revealed.

According to NBC Reporter Joe Michaels many Indians are firmly convinced that the widespread outbreaks of so-called Asiatic influenza are the result of American H-bomb experiments.

Such a distortion obviously is the work of the Communist propagandists in Asia. To us it is utterly fantastic. But we cannot laugh off the fact that many people accept the story as true.

Naturally such belief reflects ignorance—both of the scientific aspects of the H-bomb experiments and of American attitudes. But, unhappily, it also shows a far too great readiness on the part of the Indians to believe the worst of the United States.

We can never be complacent about such disfavor. It is well for us to be constantly reexamining not only our policies but our official and general behavior toward the countries we deal with.

But in India's case there is reason to believe that the official attitudes outspokenly expressed by Prime Minister Nehru, Krishna Menon, and other leaders have tended to foster intense dislikes of us rather than to encourage real understanding of this country.

For all its shortcomings, America is not the evil place many Indians make it out to

be. On the contrary, it is still the world's greatest citadel of freedom, with vast material and spiritual accomplishment to show the world as the fruits of that liberty.

It is not only our job but the task of responsible Indian leaders as well to see that the citizens of that populous country gain a true portrait of the nation which more than any other, demonstrates the promise and the fulfillment of freedom.

Federal Grants-in-Aid to South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. BERRY. Mr. Speaker, I have just received some illuminating facts with regard to Federal grant-in-aid programs in South Dakota. These figures illustrate what is happening in these grant-in-aid programs when a small State like South Dakota receives $36,408,176 in so-called grants from the Federal Treasury.

This grant-in-aid program is one of the most alarming growths of Federal bureaucracy. The movement has grown from $1½ billion in 1947 to an estimated $5 billion in fiscal 1958. We need only to examine how bureaus grow through such grants to see that there will be no stopping of this trend of Washington-controlled government if many of the programs are not handed to the States.

At the governors' conference in Williamsburg, Va., the latter part of June, President Eisenhower told the Governors of the States that the trend toward centralized Government is not only continuing but accelerating. He said:

> If States' failure to meet pressing public need has created the opportunity, developed the excuse, and fed the temptation for the National Government to poach on the State preserves, year by year responding to transient popular demands, the Congress has increased Federal functions.

President Eisenhower suggested at that meeting the creation of a Federal-State task force which would develop adjustments in our tax structure to the end that the States would keep a greater share of tax revenue. It would determine what functions now being performed by the Federal Government can be taken over by the States, and it would establish responsibility for problems which might arise in the future.

I want to say at this point, Mr. Speaker, that I wholeheartedly endorse the suggestion of the President. I think the time has come when we must take a sharp look at this whole grant-in-aid problem.

The last session of Congress added 13 new grant-in-aid programs to the statute books. Several more have been added this session. I would emphasize that most of these funds finance good programs, but the question is not one of merit but what is the most effective means of carrying out needed programs under our constitutional form of government.

It is not the spending which should worry us so much as the effect of this spending, for as the Federal Government takes over these functions which rightly belong to the States, cities, and counties, control moves away from the people into the hands of bureaucrats in Washington who are actually responsible to no one. This is the thing which should give us great concern because it robs us of the concept of government upon which this Nation was founded.

It is, Mr. Speaker, for that reason that I wish to insert in the RECORD at this point a list of 61 of the 95 programs available to the States and Territories of which South Dakota received payments last year.

The list is as follows:

Direct Federal grants-in-aid to South Dakota, fiscal year 1956

Agricultural experimental stations	$316,699
Cooperative agricultural extension work	515,756
School-lunch program	375,049
National forests fund	78,778
Submarginal land program	33,091
Cooperative projects—marketing	15,263
State and private forestry cooperation	33,094
Commodity Credit Corporation	439,708
Special school milk program	209,192
Removal of surplus agricultural commodities	695,739
Civil Aeronautics Administration—Federal airport program	41,388
Bureau of Public Roads—highway construction	8,566,426
Army—lease of flood-control lands	36,279
Agricultural, mechanical college grants	76,511
Cooperative vocational education	253,114
School construction and survey, emergency	587,185
Maintenance, operation of schools, emergency	828,144
Venereal-disease control	−1,200
Tuberculosis control	14,750
General health assistance	63,759
Polio emergency grants	15,000
Mental health activities	19,419
Cancer control	14,830
Heart disease control	13,399
Polio vaccine program	206,769
Hospital construction, survey, planning	177,945
Maternal and child health services	86,095
Crippled children services	106,326
Child welfare services	70,587
Old-age assistance	3,823,562
Aid to dependent children	1,882,459
Aid to permanently, totally disabled	309,757
Aid to the blind	76,939
Printing for the blind	1,369
Vocational rehabilitation	146,318
Wildlife restoration	401,836
Migratory bird conservation	1,953
Mineral leasing payments	96,929
Special funds payments (Interior)	8,800
Unemployment compensation, employment service	573,810
Civil defense—emergency grants	23,672
Homes for disabled soldiers, sailors	78,632
VA on-the-job training, supervision	40,918
Total grant payments (43 programs) direct	21,358,449

Federal-aid payments other than direct grants and loans, fiscal 1956

Agricultural conservation program	$4,732,035
Agricultural conservation program	147,214
Public roads, forest highways	223,921
National Guard, Air Force	1,402,762
National Guard, Army	2,669,468
National Arthritis and Metabolic Diseases Institute, research	25,415
National Cancer Institute, research	4,850
National Institute Allergy, Infectious Diseases, research	13,922
National Institute of Mental Health, research	10,587
Division Research Grants	4,570
National Cancer Institute, training	5,000
National Cancer Institute, fellowships	2,592
Unemployment compensation, veterans	507,145
Unemployment compensation, Federal employees	92,575
National Science Foundation, research	19,134
National Science Foundation, fellowships	6,180
Automobiles for disabled veterans	14,400
VA readjustment benefits and vocational rehabilitation	5,167,948
Total payments (18 programs)	15,049,727
Total grants-in-aid to South Dakota (61 programs)	36,408,176

Commencement Address Delivered by Representative Albert Thomas, of Texas, at Stephen F. Austin State College, Nacogdoches, Tex., August 22, 1957

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. THORNBERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a commencement address made by my colleague, ALBERT THOMAS, to the graduates of the Stephen F. Austin State College, Nacogdoches, Tex., August 22, 1957:

THE IMPORTANCE OF ESTABLISHING OPEN LINES OF COMMUNICATION BETWEEN SOCIETY AND SCIENCE

Many of you have been the captured audiences of commencement speakers on other occasions, and some of you are now seated here for your first college commencement address. I sympathize with your entrapped dilemma because I have been caught in it myself. I recall some few years ago when I attended my own commencement exercises, the distinguished speaker's subject was Einstein's Theory of Relativity. He labored for some 30 to 40 minutes making one of the most scholarly speeches I have ever heard. But, when he finished, I had a small idea that he didn't know too much about his subject and, as far as I was concerned, I knew noth-

ing about the subject before or after the speech.

Let me exhort you, as you move away from this happy and tranquil campus into a comparatively unhappy world of tranquilizers, to do all you can to improve the channels of communication between society and science.

I respectfully suggest that one of the big reasons why you have progressed thus far in acquiring knowledge is because it was conveyed to you simply, imaginatively, and clearly, and you did some digging, too. Lest you too quickly judge that observation a platitude, I cordially invite you to spend a few hours with me in my office in Washington trying to dig out the meaning of letters, official documents, and statements, from and by responsible officers of Government, and some from my good voters. Nor can I escape from my own charge—maybe you would appreciate more clarity now.

Understanding precedes learning. If we don't understand what is written or said, we don't begin to learn, do we? For example, here in Stephen F. Austin earlier this summer was concluded a 6 weeks' institute in the natural sciences for secondary-school teachers designed to help increase the numbers of scientists through improved science teaching. The significant phrase there is "through improved science teaching." Science teachers today face tremendous tasks in keeping up with the furious pace set by advances in science. In order to help them understand these new advances in science, including nuclear physics, the National Science Foundation undertook a small program 4 years ago to enable high-school teachers, without cost to them, to return to college during the summer and study under scientists trained in the subject matter. The American Association for the Advancement of Science called it "one of the most significant developments in teacher education in the past 20 years."

I know something about the program because, as an independent agency of the United States Government, the National Science Foundation appears before the Appropriations Subcommittee, which I am privileged to head, to defend its budget proposals. I considered it to be one of the finest programs developed by the Foundation because it reaches the heart of the problem—the motivation of young men and women toward careers in science. From an early beginning of two summer institutes in 1953, the project has grown until during this summer there were 96 institutes supported by the Foundation in all parts of the Nation. Naturally, I was delighted that the Stephen F. Austin State College, whose genial, able, and distinguished president, Dr. Paul Boynton, is my friend, was chosen one of the institutions qualified to help carry forward this important job. Your record is excellent.

The job is indeed important. Our principal competitor for the minds and hearts of men is the Soviet Union. Since World War II, the Soviets have so far progressed in training scientists and engineers that one of our foremost physicists has stated that he believes the United States has already been surpassed in the race for numbers of graduates in the sciences and that it is now too late for us to catch up in the near future.

My doubt arises when I consider kinds of graduates. We cherish the freedom we enjoy to pursue careers of our own choosing.

No such freedom exists in Russia where careers are selected for Soviet youth by the State. We may have been surpassed in quantity during the last 5-year period, but I seriously question whether we have been outrun in quality, or total numbers. I recognize that this may be myopic rationalization, but so long as we are able to convey facts clearly to our young people about the danger of Russia outstripping us in scientific manpower, I am confident your students will, in adequate numbers, choose careers which will sustain our economy and our defense. Having chosen careers by their own designation, our youth will be more productive than youth coerced into directed careers.

The problem may be resolved by keeping open our lines of communication. Let us underscore to our youth the opportunities presented to them by our sturdy economy. Let us not build our Nation on fear. Dr. James R. Killian, Jr., president of the Massachusetts Institute of Technology, expressed the point of view I wish to emphasize. Dr. Killian said, and I quote:

"The last thing we should do is to engage in an academic numbers race with the Russians. We need, instead, to concentrate on those qualitative aims which will keep our science and engineering always ahead. * * * This policy and objective, if followed, will require us to set quality and creativeness at the highest achievable level."

How does one go about setting quality and creativeness at the highest achievable level? Certainly not through coercion. It seems to me, achievement of quality and creativeness is attained through the inspiration which arises from the kind of rapport which exists between the good teacher and his student. Teacher-student harmony is keyed to clear communication which supports understanding which, in turn, fans the flame of inspiration. In this connection, I am convinced, we who have chosen careers in the social sciences—as lawyer, writers, teachers, artists, have much to give to our fellow men who have chosen careers in the natural sciences—engineers, mathematicians, physicists, chemists, others.

The scientist and engineer are frequently not good communicators. Would you agree, then, that we, who are supposed to be good communicators, ought to help them? If science is, as I believe it is, no less a part of our culture than law, literature, and art, each of us is mutually obligated to understand the other. For example, would it not be possible for you, as teachers of English, history, or geography to develop course content, which pointed up the significance of scientific advances as you prepare your curricula? Similarly, is it not possible for the mathematics teacher to underscore the importance of his subject matter as a factor in music—yes, even in history? I think there is vast room for a constructive interchanges of knowledges here, and I am persuaded that such interchange is quite necessary in order for society to catch up with science.

I am not quite sure that I have said that just right. Who's catching up with whom? Should society catch up with science, or science with society? In a large sense, both concepts are wrong. Science and society are not mutually exclusive—science is as much a part of society as literature. Science itself is much concerned with this problem. The American Association for the Advancement of Science last winter stated that "in marked contrast to other associations, scientific societies seldom consider the social and economic position of their group." In all fairness, I think the Triple-A S could as well have stated that "in marked contrast with older civilizations, United States society has not seriously enough considered the place of science and teachers within itself or within its economy."

To train more teachers and scientists we must first elevate the teacher to that high position of leadership and prominence in the community that he or she so richly deserves. And we must pay them in accordance with that high position. One good way to expedite the training of teachers and scientists is to put a premium pay on both professions. Premium pay is long overdue and will be helpful.

I have worked very closely over the past years with several scientific organizations of the United States Government in handling their finances. In doing so, I have come to know many men of science. These men do not wear long white coats, nor do they have long beards or long hair. They are long on brains, however, but as they themselves point out, they are short on the know-how of public affairs. Their business is too important, however, for you or me to be indifferent about their status in our society. Society and science have a long road to travel before they meet in complete understanding, and I'm reasonably sure that science has already traveled more than half the distance to set up the meeting. Society must be willing now to travel the rest of the way.

Most of you, I believe, are, or soon will be, teachers. Whether you teach the sciences or the arts, there is not a more worthwhile, more rewarding job in the world. To an extent possibly greater than any other group, you can do more to help young people understand the importance of the role of science in our society. In the final analysis, you teachers must do it. We in Washington can help by directing the resources of Government into constructive uses, but we have no business whatsoever in directing you or your schools.

The world in which you are to venture is as new and strange to my generation as to yours. Perhaps you are better equipped to meet it than we older ones. My generation has been forced to change as the times in which we lived, changed. Your education has been tailored to meet the new conditions. In spite of that apparent advantage, which you may have, your generation faces a terrible dilemma. It is how can you exist with an incompatible system of government such as Russia and her satellites have, without succumbing to it or becoming engaged in an all-out war, from which there could easily be no survival. The answer is to stay ahead of Russia in the arts and sciences. In my judgment, Russia today is behind us in total numbers and quality of engineers, teachers, and scientists. But if she continues to produce in numbers for the next 10 years what she is doing today; and we do not step up our production, then Russia will be ahead of us. The day she outstrips us in number and quality of professions is the day we become a second-rate power to Russia.

Let me leave this last thought with you. It is your duty, as college graduates, to see to it that Russia never surpasses this country in the annual training of engineers, teachers, and scientists. As you pass through these portals of learning, see to it that others take your place.

I wish Godspeed to each of you as you leave this friendly, pine-scented campus and move into a troubled world which, in my judgment, will be less troubled if you do what you can to keep open channels of communication between society and science.

Wabash Valley Development

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. MACK of Illinois. Mr. Speaker, the Wabash River Basin, lying in Illinois and Indiana, has a great future, as is evidenced by the formation of the Wabash Valley Association. This nonprofit organization, formed to promote the prosperity, welfare, and development of the Wabash River area, came into existence August 12 at Mount Car-

mel, Ill., where more than a dozen mayors of cities and representatives of chambers of commerce and civic organizations from three dozen cities in Illinois and Indiana voted unanimously to form this association.

Mr. Speaker, I am including an excellent article on this subject which was published in the Robinson Daily News, which sets forth in detail the background and objectives of this association, and I predict that it will do useful work for the benefit not only of the Wabash Valley but for the country as a whole.

The article follows:

[From the Robinson (Ill.) Daily News of August 13, 1957]

FORM WABASH VALLEY ASSOCIATION TO SEEK IMPROVEMENT OF RIVER, PROMOTE PROSPERITY OF REGION—UNIVERSITIES OF ILLINOIS, INDIANA, AND PURDUE PREDICT BRIGHT FUTURE WITH OPENING OF ST. LAWRENCE WATERWAY

Three great State universities are now at work jointly on surveys aimed at improving the Wabash River Basin in Illinois and Indiana.

Control of the floods which now devastate thousands of acres of fertile farmland, canalization of the river to permit navigation and industrial development and improvement of recreational facilities are among the possibilities.

The Wabash Valley Association, a nonprofit corporation to support this work, and to promote the prosperity, welfare, and development of the Wabash River area, was voted into existence Monday night in a meeting at Mount Carmel.

More than a dozen mayors of cities and representatives of chambers of commerce and civic organizations from three dozen cities in Illinois and Indiana attended the meeting and voted unanimously for formation of the permanent organization.

The recently organized Crawford County Chamber of Commerce, which in its first meeting endorsed the Wabash River project, and the chambers of Robinson, Palestine, and Hutsonville, were among those having representatives at the meeting.

Prof. Joseph A. Russell, head of the department of geography at the University of Illinois, headed a panel of university experts who reported on a joint arrangement between the University of Illinois, Indiana University, and Purdue University to conduct the surveys and make recommendations for development on the basis of their findings.

Professor Russell told his large audience that the Wabash River Valley lies in an American heartland area destined to have enormous development in industry, agriculture, and population in the next few years.

"You are living in an area unique in the world, and in my study of geography I know of none other which has such a good combination of needed water supplies, farmland, climate, natural resources, transportation, and recreational possibilities to support large population in plenty," he said.

"You are in an area destined for development, whether you like it or not, and many parts of this area will gain great new prosperity which will be sparked by the opening of the St. Lawrence Waterway, now only 2 years distant," he said.

"This area development cannot be prevented, but it can be directed.

"First step is to find out what you have and what problems confront you.

"You know that there are large natural resources in the area and our preliminary surveys from material which the three cooperating universities now have will make it apparent how large they are, and where they are, and how present transportation facilities and shipping rates affect industry.

"You know that the Wabash and its tributaries are destroying thousands of acres of crops in the periodic floods of the region.

"You need to be able to show that control of those floods will mean enough additional national prosperity to justify the measures necessary for their control.

"For instance, a study by Purdue University a short time ago showed that the roads of Indiana alone suffered $4-million damage from every flood, not even considering farm losses.

"You need a survey of present industry and possible future industrial development to see if canalization of the river is justified economically, as many believe.

"Your proposed organization of the Wabash River Association is needed to back this work, get the people of every community in the area informed, and to go on to obtain action," Professor Russell concluded.

Prof. Louis Wetmore, head of the bureau of community planning at the University of Indiana, and Prof. Philip Lewis, who is a native of Lawrenceville, and two research assistants, William Lamont and Armin Ludwig, completed the interim report for the three universities, showing numerous charts and slides on the Wabash Valley resources and physical appearance.

The Wabash River development project is considered so important to the welfare of Illinois that the University of Illinois has appropriated $8,000 to help with its portion of the work.

Only local contributions to the survey to date have been contributions of a total of $500 in equal shares from the cities of Mount Carmel, Lawrenceville, Vincennes, and Terre Haute.

The Wabash River Association will have as members all interested individuals and organizations in the area. Individual memberships will cost $10 a year; organization membership, $50 a year.

It will be governed by a board of directors to be chosen in equal numbers from Illinois and Indiana.

President was the man who called the meeting, J. Roy Dee, mayor of Mount Carmel, who started work on the Wabash River project about 3 years ago and has been responsible for getting the universities interested and the work underway.

He introduced many of the mayors and other representatives of communities and organizations present and predicted that the association, with joint Illinois and Indiana membership and the technical assistance of the three universities, could do much for the future of the Wabash Valley.

Mayor Dee, who has not only been the originator and mainspring of the present effort to get general cooperation on Wabash River problems, but who has done much of the early financing at his own expense, said that he hoped that there would soon be a county organization in every Illinois and Indiana community in the Wabash Valley to back the movement and to make Washington aware of the importance of the river.

Both the Illinois and Indiana Legislatures have passed resolutions asking the attention of Congress in their last sessions. Several State senators and representatives were present at the meeting to show their interest, including State Representative Ray Koehler, of Grayville, who introduced the measure supporting the work in the Illinois Legislature, and State Senators Paul Broyles, of Mount Vernon, and Hershel Green, of West York.

Guy McGaughey, Jr., Mount Carmel and Lawrenceville attorney, reported on a planning committee meeting in Terre Haute, which offered a set of bylaws to govern the association, founded on the highly successful Mississippi Valley Association.

Kent Lewis, representing the Crawford County Chamber of Commerce, by appointment of Otto Poehler, president of that organization, moved the adoption of the bylaws and the formation of the permanent organization, saying that since the Crawford County Chamber of Commerce had already endorsed the project he felt confident that the people of this area would approve.

Among other Crawford County people attending the meeting were representatives of the Chamber of Commerce of Palestine, Jim Goodwine and Earl Allen; Chamber of Commerce of Hutsonville, Ped Huffman, Art Warnke, and John Kelly; Robinson Chamber of Commerce, Perry Graves, Jr., and Game Warden Glen Tilton, and factory inspector George Brubaker, of Robinson.

There is a possibility of a meeting of representatives of various organizations of 3 or 4 surrounding counties being held in Robinson in the near future to hear reports from the universities and plan organization of local committees.

Cocktails Aloft Senseless

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the Evening Tribune, Lawrence, Mass., on August 23, 1957:

COCKTAILS ALOFT SENSELESS

The Air Line Pilots Association notified Congress this week that at least 23 airliners have been seriously endangered by inebriated passengers in the past 2 years. The charge was emphasized in a report filed with the Senate Transportation Subcommittee considering legislation to halt the serving or consuming of liquor on commercial flights.

We agree with the association that it should not be necessary to wait until an intoxicated passenger causes a fatal accident before stringent action is taken.

Two years ago Wednesday, Congressman THOMAS J. LANE warned that unless the airlines cooperated by discontinuing this practice, or the Civil Aeronautics Board took action, he would introduce a bill making it a Federal offense to serve alcohol in the air. That warning has been disregarded, he told the committee last week.

The evidence presented in support of such a move is glaring. Four instances of drunken passengers forcing their way into the cockpit. Eight cases of inebriates creating such disturbances aboard that flight crew members had to leave their cockpit duties to subdue them. Three instances of unscheduled emergency landings to remove intoxicated passengers whose behavior was threatening a plane's safety. Three cases of intoxicated passengers damaging windows, doors, or pressurization devices in flight. Five instances of drunken passengers creating fire hazards in flight.

And how about this one? The report mentioned three instances where intoxicated passengers were carrying guns. One of them pointed a gun at a stewardess when he asked her for coffee.

Commercial plane passengers have every right to expect every conceivable medium of safety. Inebriates certainly do not come under this heading. The owners and operators of these lines have to take every precaution to see that their equipment and personnel are constantly in top order.

An unruly inebriate jeopardizing the safety of dozens of other human beings a couple of miles above good old terra firma can be as dangerous as a fox in a hencoop.

A flight crew with an assignment to carry out. A passenger list of individuals with a smooth trip and happy landing attitude. An inebriate starts to get boisterous. What an appalling situation!

Ex-Prisoners of War Oppose Return of Enemy Assets

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. MACK of Illinois. Mr. Speaker, my Subcommittee on Commerce and Finance recently scheduled hearings on the administration of the alien property bill and related bills.

Although we were not able to continue our hearings due to the lack of cooperation on the part of the administration, we have received many comments from organizations and individuals throughout the country. Therefore, Mr. Speaker, under leave to extend my remarks, I wish to include a letter I received from the American Ex-Prisoners of War, Inc.—the legislative officer of such—and copies of resolutions which were passed at their 10th annual convention.

The letter and resolutions follow:

AMERICAN EX-PRISONERS OF WAR, INC.,
Tuscaloosa, Ala., August 12, 1957.

Hon. PETER F. MACK, Jr.,
House Office Building, Congress of the United States, Washington, D. C.

DEAR SIR: Enclosed you will find copies of 2 resolutions unanimously passed at the 10th Annual Convention of American Ex-Prisoners of War.

Our organization is gravely concerned about the possible return of enemy assets to their former owners. It is the considered opinion of our organization that these funds should be utilized for medical research for the proper diagnosis and treatment of the various prisoner-of-war diseases.

We hope that your committee will give these measures just and sincere consideration, and refuse the return of enemy assets.

Thanking you for your consideration of this matter, I am,

Sincerely yours,
JAMES S. BROWNING,
Legislative Officer,
American Ex-Prisoners of War.

RESOLUTION PASSED UNANIMOUSLY AT THE 10TH NATIONAL CONVENTION OF AMERICAN EX-PRISONERS OF WAR, BIRMINGHAM, ALA., JUNE 5, 1957

Whereas the War Claims Act of 1948, as amended, states that no property or interest therein of Germany, Japan, or any national of either such country vested in or transferred to any officer or agency of the Government at any time after December 17, 1941, pursuant to the provisions of this act, shall be returned to the former owners thereof or their successors in interest, and the United States shall not pay compensation for any such property or interest therein. The net proceeds remaining upon completion of administration, liquidation, and disposition pursuant to the provisions of this act of any such property or interest therein shall be covered into the Treasury at the earliest practicable date; and

Whereas it is estimated that there is over $600 million in the war claims fund under the custody of the Office of Alien Property, Department of Justice; and

Whereas the War Claims Act of 1948, as amended, was specifically set up to provide benefits for injury, disability, death, or enemy detention of American prisoners of war: Be it, therefore,

Resolved, That the National Organization of American Ex-Prisoners of War go on record at their 10th annual convention as favoring that these funds be utilized to establish a research program to make a complete medical study of the effects of malnutrition and other hardships on the mortality and morbidity of former United States prisoners of war and civilian internees pursuant to the provisions of Public Law 744 of the 83d Congress that authorize such a study.

RESOLUTION PASSED UNANIMOUSLY AT THE 10TH ANNUAL CONVENTION OF AMERICAN EX-PRISONERS OF WAR, BIRMINGHAM, ALA., JUNE 1957

Whereas section 39, added to the Trading With the Enemy Act by section 12 of the War Claims Act, provides, in substance, that no property or interest therein of Germany, Japan, or any national of either such country vested in or transferred to the United States pursuant to the Trading With the Enemy Act shall be returned to former owners or their successors in interest, but that the net proceeds remaining upon the completion of administration, liquidation, and disposition shall be covered into the Treasury of the United States; and

Whereas the War Claims Act specifically provides that these funds be used to provide benefits for injury, disability, death, or enemy detention of American prisoners of war; and

Whereas the proposed legislation, S. 600, in the current session of Congress, would, if passed, return these frozen enemy assets to their former owners: Be it, therefore,

Resolved, That the National Organization of American Ex-Prisoners of War at their 10th annual convention go on record as being completely opposed to the passage of S. 600, or any other legislation that would return frozen enemy assets to their former owners.

Labor and the Supreme Court

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very enlightening article by J. Albert Woll, AFL–CIO general counsel, which appeared in the September 1957 issue of the AFL–CIO American Federationist.

The article follows:

LABOR AND THE SUPREME COURT
(By J. Albert Woll)

In a year in which the United States Supreme Court devoted an unusually large portion of its time to deciding labor cases, perhaps the most interesting, significant, and somewhat contradictory development is that the role of the States in the labor-relations field has been both enlarged and at the same time diminished.

State power has been enhanced by the Court's holding that the Constitution does not prevent a State from enjoining peaceful organizational picketing that violates a State law against coercing an employer to interfere with his employees' right to join or to refuse to join a union.

State power has been lessened by the Court's ruling that the refusal of the National Labor Relations Board to act in matters within its jurisdiction does not give the State courts or agencies authority to intrude.

In Teamster, Local 695 versus Vogt, the exercise of State power, outside the area of interstate activity embraced by the Taft-Hartley Act, was sustained and enlarged by the ruling that a State may lawfully enjoin picketing where the picketing is for a purpose declared unlawful by the State.

The case arose in Wisconsin and involved the picketing of a small gravel pit by a teamster local. The picketing occurred after the union unsuccessfully had tried to induce the employees to join its ranks.

The Wisconsin Supreme Court found that the picketing violated the State's Employment Peace Act because the purpose of the picketing was to coerce the employer to interfere with his employees in their right to join or refuse to join the union, a purpose declared unlawful by that act. In affirming the injunction granted against the picketing, the court held that there is a broad field in which a State, in enforcing some public policy, expressed by its legislature or its courts, may constitutionally enjoin peaceful picketing directed at preventing fulfillment of that policy.

While the supreme court was careful to note in its decision that it continues to adhere to the view expressed in earlier decisions that a blanket ban on picketing would be unconstitutional, it seems almost impossible to ascertain the area in which this view would be applicable or the State actions regarding picketing which would be proscribed.

As the dissenting opinion of Justice Douglas, in which Chief Justice Warren and Justice Black joined, pointed out, the Supreme Court in 1940, in *Thornhill* v. *Alabama*, set aside a State ban on picketing because "the dissemination of information concerning the facts of a labor dispute must be regarded as within that area of free discussion that is guaranteed by the Constitution."

Retreat from this broad protective principle began, according to the dissenters, in *Teamsters Union* v. *Hanke*, when four member of the Supreme Court "announced that all picketing could be prohibited if a State court decided that that picketing violated the State's public policy."

And the retreat became a rout in *Plumbers Union* v. *Graham*, in which it was decided that it was only the purpose which was relevant, a decision under which, in the dissenters' view, "the State court's characterization of the picketers' purpose had been made well nigh conclusive."

"Today the Court signs the formal surrender," Justice Douglas said. Under the Vogt decision, in his opinion, "State courts and State legislatures are free to decide whether to permit or suppress any particular picket line for any reason other than a blanket policy against all picketing."

Fortunately, the Vogt decision is inapplicable to a situation in which activities affecting interstate commerce are involved, for within the ambit of peaceful picketing affecting interstate commerce, the Garner case, decided by the Supreme Court in December of 1953, effectively forbids State action.

Generally speaking, the States may not intrude in this area except where the picketing involves violence or breach of the public peace or other types of coercive conduct

coming within the exceptions to the Garner holding.

State power in this area remains as the exception to the preemption doctrine. Under this doctrine, in the words of the Supreme Court in the Garner case, "controlling and therefore superseding Federal power cannot be curtailed by the State even though the ground of intervention be different from that on which Federal supremacy has been exercised."

Apparently, the Supreme Court is not going to permit expansion of this exception to include the banning of concerted activity which may offend some public policy of a State.

The Court's refusal to expand the exception is evident from its decisions in *Pocatello Building Trades Council* v. *Elle* and *Retail Clerks Local 560* v. *Newberry*, in which cases the court relied upon its earlier decision in *Weber* v. *Anheuser-Busch*. In the Weber case it had been held that concerted activity either protected by section 7 or prohibited by section 8 of Taft-Hartley could not be regulated by a State under its own restraint of trade laws. In short, the State was precluded by Federal law from acting.

In the Pocatello case, the Building Trades Council had been enjoined from carrying on concerted activity under the Idaho Secondary Boycott Act. Reversing the Supreme Court of Idaho, the United States Supreme Court relied upon the principle announced in the Garner and Weber cases that the area which has been committed to the National Labor Relations Board under the Taft-Hartley Act cannot be infringed upon by the States under obscure State laws which announce a public policy of the state.

And under the same theory the High Court in the Newberry case, informed the Idaho Supreme Court that it erred in upholding an injunction against stranger recognition picketing of an employer involved in interstate business.

The decision of the Supreme Court in the Vogt case upholding the injunction against organizational picketing and its rulings in the Pocatello and Newberry cases upsetting similar injunctions underscore the importance of the Court's earlier decision in 1953 in the Garner case and its related holdings this past session on Federal preemption in the labor-relations field.

One would have thought that as a result of the Garner and Weber decisions the number of injunctions issued by State courts against union activity, falling within the framework of the Taft-Hartley Act, would have materially lessened. This hardly appears to have been the case, in view of the fact that the Court found it necessary to render no less than seven decisions reaffirming or strengthening the principle enunciated in Garner and Weber.

Many State court injunctions have reflected a grab for power on the part of the States because of the existence of a so-called no-man's land between the authority of the National Labor Relations Board, as it exists under the Taft-Hartley Act, and the authority of the Board as it is exercised under the Board's policy of declining to assert its full statutory authority.

Although the Supreme Court in its Garner and Weber decisions has held that, where conduct falls within exclusive Federal jurisdiction, a State cannot intrude, the failure of the Labor Board to assert its full jurisdiction encouraged some States to enter the no-man's land to fill the breach, on the theory that parties to the dispute should have a court or agency available to decide the issues involved.

The Supreme Court struck down this misconceived notion of State authority in its decision in the related cases of *Guss* v. *Utah Board, Meat Cutters* v. *Fairlawn Meats, Inc.*, and *Building Trades Council* v. *Garmon*. In these cases the States of Utah, Ohio, and California entered the no-man's land and adjudicated labor disputes either after the National Labor Relations Board had declined to act under its jurisdictional policy or after a State determination that the dispute did not affect interstate commerce.

By their actions the States directly posed this question for the Supreme Court to decide: Did Congress, by vesting jurisdiction over labor disputes affecting interstate commerce in the National Labor Relations Board, completely remove State power to treat with such disputes even in those situations where the Board has declined or would decline to exercise jurisdiction but has not ceded jurisdiction to the State pursuant to section 10 (a) of the Taft-Hartley Act?

Section 10 (a) empowers the Board to cede jurisdiction to a State agency where the State's labor law and the interpretation given to it are not inconsistent with the Taft-Hartley Act.

The Supreme Court held that a State may act in a labor dispute within the statutory jurisdiction of the National Labor Relations Board only where the Board has ceded jurisdiction under section 10 (a). The Court was fully aware that its decision confirmed the existence of a no-man's land in which neither a State has the authority to act nor the Federal Government the inclination to regulate. But, according to the Court, this was a situation which Congress could change by legislation or the Labor Board could remedy by reasserting its jurisdiction and by ceding jurisdiction under section 10 (a) wherever possible.

This decision, together with the Court's earlier decisions in the Garner and Weber cases, should limit to a great degree State intrusion in labor disputes which affect interstate commerce. In assessing the impact of this limitation on State power, however, it should be remembered that there are some areas in which State intervention is permitted, as, for example, the prevention of violent conduct or mass picketing.

While the cases just discussed relating to State power are believed to be of special interest and significance, a number of other recent decisions important to labor merit attention.

In the companion cases of *General Electric Co.* v. *United Electrical Workers, Goodall-Sanford* v. *Textile Workers*, and *Textile Workers* v. *Lincoln Mills of Alabama*, it was held that section 301 of the Taft-Hartley Act empowers Federal courts to compel specific performance of arbitration clauses contained in collective bargaining agreements and furnishes a body of substantive law for the courts to apply in such cases.

Section 301 provides, in part, that suits for violation of contracts between an employer and a labor organization representing employees in an industry affecting commerce may be brought in Federal district courts without respect to the amount involved or without regard to the citizenship of the parties.

The majority of the Supreme Court reasoned that the agreement to arbitrate grievance disputes is the quid pro quo for an agreement not to strike and that, viewed in this light, section 301 does more than confer jurisdiction in the Federal district courts over unions. Rather, it "expresses a Federal policy that Federal courts should enforce these agreements on behalf of or against labor organizations and that industrial peace can be best obtained only in that way."

A number of other difficult and perplexing questions concerning the application and interpretation of the Taft-Hartley Act were also presented to the highest tribunal.

Can the National Labor Relations Board deprive a union of its rights under the act when it finds that a non-Communist affidavit filed by an officer is false? The Court answered this question in the negative in *Leedom* v. *International Union of Mine, Mill and Smelter Workers* and in *Amalgamated Meat Cutters* v. *National Labor Relations Board*, stating that the proper action is to pursue, in a criminal proceeding for perjury, the individual who made the false statement.

In *National Labor Relations Board* v. *Truck Drivers Local 449*, the Court was asked to review the question of whether nonstruck members of a multiemployer bargaining association committed an unfair labor practice when, at contract time, they temporarily locked out their employees as a defense against a strike against one of the employers in the association.

The National Labor Relations Board had held that it was not an unfair practice by the employers. The Second Circuit Court of Appeals disagreed with the Board, holding that it was. The Supreme Court agreed with the Board.

The High Court's theory in deciding this case was that Congress in Taft-Hartley had sanctioned multi-employer bargaining as well as protecting the rights of employees to strike in support of their demands; that the strike in this case against only one of the employers threatened disintegration of the multi-employer bargaining arrangement and this justified the employer's temporary lockout as a defense to the union's purported divide and conquer stratagem.

The Supreme Court made it clear, however, that its holding provided no sanction for lockouts generally, and the Court specifically stated that its holding was limited to the particular circumstances of the case before it. It carefully pointed out that it was not concerned with cases in which lockouts were utilized to frustrate organization, to destroy or subvert bargaining representation or to avoid the duty to bargain.

During its last term the court was also requested to determine whether a union could lawfully strike in support of contract-reopening demands after expiration of the 60-day cooling off period but before terminal date of the contract. The answer was found in a practical interpretation of section 8 (d) of the Taft-Hartley Act based upon an analysis of the legislative history of that section. (Section 8 (d) provides that a contract continues in full force and effect, without resort to strike or lockout, for a period of 60 days after notice is given or until the expiration of the contract, whichever occurs later.)

In National Labor Relations Board versus Lion Oil Co., the court held that the term "expiration date," embodied in section 8 (d), "has a twofold meaning; it connotes not only the terminal date of a bargaining contract but also an agreed date in the course of its existence when the parties can effect changes in its provisions."

Fortunately, this line of reasoning differed from that of the court of appeals, which had upheld the employer's contentions that the strike had ocurred at a time when it was not lawful, and therefore the strikers had lost their status as employes under the act.

Of real significance to labor is the court's decision in the case of the Office Employees versus National Labor Relations Board, in which the court was asked to settle the status of a union as an employer.

Unfair labor charges had been filed by the Office Employees Union against an Oregon component of the Teamsters Union. The Board dismissed the action on the ground that the Oregon Teamsters fell within the jurisdictional yardstick applied to other types of nonprofit organizations and therefore the Board refused to assert jurisdiction.

By this action, the Supreme Court held, the Board had "engrafted a blanket exemption upon the act for all labor unions as employers," beyond the intent of Congress, and

the Board had thus acted arbitrarily and beyond its power.

During its past term the Supreme Court was presented the opportunity to rule on the constitutionality of the Taft-Hartley amendment to the Corrupt Practices Act which forbids labor organizations to make contributions or expenditures in connection with elections to Federal office. This opportunity, however, was postponed despite the objections of three Justices who, through Justice Douglas, lambasted the Corrupt Practices Act ban as "a broadside assault on the freedom of political expression guaranteed by the first amendment."

Confining itself strictly to the allegations of an indictment involved in the case of *United States* v. *UAW*, which had been dismissed in the Federal district court as not charging a violation of the Corrupt Practices Act, the Supreme Court upheld the indictment, concluding that it was a violation of the Corrupt Practices Act for a labor organization to use its general funds to finance television broadcasts supporting candidates for Congress, as charged in the indictment.

This decision means that the case is now to be tried in the Federal district court and, if a conviction results, the Supreme Court at some future date again will be called upon to decide the grave constitutional questions it has so far sidestepped.

During the Court term just ended, the Supreme Court had a heavier labor caseload than in any past term since the enactment of the Taft-Hartley Act. Of the more than 100 cases presented to the Court for review, involving issues of importance and significance to labor, the Court decided 21 cases in which written opinions were filed and 10 cases in which they were not.

Such sumptuous legal fare, of course, requires a period of digestion before the full import and implications of these decisions can be completely appreciated. The cases briefly discussed in this article indicate the vast scope of the Court's work on labor matters this past term and the highlights as they appear to me on initial reflection.

While digestion may be more important than ingestion in terms of the long-range significance of these decisions, they are guideposts in the never-ending process of judicial interpretation which shed some light on the road labor is now traveling.

New Federal Prison Is Urgently Needed To Keep Overcrowding of Dangerous Criminals From Reaching the Explosive Stage

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. MACK of Illinois. Mr. Speaker, Congress has seen fit to refuse an appropriation this year for construction of a new maximum-security prison in the Midwest. It was another victim of the economy ax. This institution is urgently needed by the Federal Bureau of Prisons to keep overcrowding of the most dangerous criminals from reaching the explosive stage. I am confident, therefore, that Congress soon will provide money for its construction, perhaps in the next session.

With this in mind, I would like to acquaint the House with a strange paradox that has come to my attention in connection with an area that has been proposed as a site for the new prison. The businessmen of Taylorville, in the 21st Congressional District of Illinois, have taken an option on a tract of land which they have offered to donate free to the Government as a site for the prison. Taylorville is the seat of Christian County.

The paradox to which I referred is that Christian County is Illinois' leading coal-producing county but at the same time is an area of considerable unemployment, largely as a result of mine shutdowns.

The first three paragraphs of this news story in the Illinois State Journal of Saturday, June 15, tell the story:

Christian County remained far out in front during May as the top coal-producing county, according to a report yesterday by Ben H. Schull, State directors of mines and minerals.

Christian's 2 mines, with 1,269 workers, produced 589,886 tons.

In second place was Williamson County where 25 mines and 15,575 miners turned out 460,212 tons.

So in this age of rapidly increasing mechanization we have a case where 29 percent more coal is produced by one-twelfth as many miners.

What has this situation done to the economy of Christian County?

A survey, made at my request, showed that of a total Christian County labor force of 13,600, 6 percent were unemployed in April 1957. During that month, too, Christian County led the State in coal production.

With this number of unemployed, Christian County would be eligible for Federal classification as an area of substantial labor surplus if it were not for one purely arbitrary factor. In order to be considered for such a classification an area must have a total labor force of at least 15,000. Christian County's labor force is 13,600, according to the April survey made by the Illinois Division of Placement and Unemployment Compensation in pursuance to a request made by me through the Bureau of Employment Security of the United States Department of Labor.

The proportion of unemployed in Christian County would be much higher than 6 percent if it were not for the fact that hundreds of men thrown out of work by coal mine shutdowns have found employment at industrial plants in Springfield and Decatur.

These jobs have two serious disadvantages. First, Taylorville is 29 miles from Decatur and 27 miles from Springfield. Commuting to these cities imposes a personal hardship and an additional expense on the Christian County worker. Second, skilled coal miners who have taken anything they could get to do at the Springfield and Decatur plants are the first to be laid off in slack production seasons because they lack seniority.

Mr. Speaker, the United States is said to be enjoying a period of unparalelled prosperity. Yet 6 percent of the workers of Christian County, Ill., are without jobs and many others are forced to commute long distances to earn an income. The coal industry is booming, but many miners are without jobs in the largest coal-producing county of Illinois. This is the paradox that I want to bring to the attention of the House.

Remember, Mr. President?

EXTENSION OF REMARKS
OF
HON. ALTON LENNON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. LENNON. Mr. Speaker, I would like to insert in the RECORD a timely and challenging editorial by Mr. L. C. Gifford, of the Hickory Daily Record of August 24, 1957. The leading women's organizations of our country are actively promoting support for House Joint Resolution 127, proposing a constitutional amendment to guarantee equality of rights to women and now pending in the Committee on the Judiciary. Mr. Gifford forcefully reminds us of campaign promises on the subject and the lack of action thereafter to insure equal rights for women.

The editorial follows:

[From the Hickory (N. C.) Daily Record of August 24, 1957]

REMEMBER, MR. PRESIDENT?

During these days when the subject of civil rights is so much on everybody's tongue and in everybody's mind, the Record is moved to repeat the question which Mrs. May Craig, of the Portland (Maine) Press-Herald, and usually of the TV panel, Meet the Press, posed for President Eisenhower at a recent news conference. Mrs. Craig's question was:

"Sir, you have been, and others have been, very active in trying to wipe out discriminations which are based on race, creed, religion, and color. Why have you not been as active in trying to wipe out discrimination based on sex; namely, the equal-rights amendment?"

The Press at this point indicated "laughter." However, we are not inclined to laugh, either at the question or at the President's reply, which was:

"Well, it's hard for a mere man to believe that woman doesn't have equal rights. [More laughter.] But, actually, this is the first time that this has come to my specific attention now since, oh, I think a year or so. And really, I just can't answer your question this morning.

"I do know that in certain States there are, and probably in all, that there are some things where women do not yet have what they believe to be at least their full rights and I am in favor of it. I just probably haven't been active enough in doing something about it."

Mrs. CRAIG. "Will you?"

The PRESIDENT. "I will take a look at it." [More laughter.]

There are millions of women who see nothing funny about either the question or the answer—they are in dead earnest in their efforts to achieve equality of rights under law. These women are the women who voted for Mr. Eisehower—the women who, according to the election analysts, placed him in the White House. They are friends and members of the General Federation of Women's Clubs, the National Woman's Party, women of other organizations, and women of no organization who have struggled under inequitable conditions and practices in competition with men. These women know the President is not as uninformed on the subject of the equal rights amendment as his

reply to Mrs. Craig would indicate. He must be somewhat acquainted with the platform adopted by his party at the San Francisco Convention in August, 1956, which reads in part as follows:

"We recommend to the Congress the submission of a constitutional amendment providing equal rights for men and women.

"The Eisenhower administration will continue to fight for dynamic and progressive programs which, among other things, will through assistance to the States, employees and employers:

"Assure equal pay for equal work regardless of sex;

"Continue to fight for the elimination of discrimination in employment because of race, creed, color, national origin, ancestry or sex."

The President remembered his party's platform on October 25, 1956, in a major campaign speech at Madison Square Garden, when he said:

"We seek—first—the assuring or justice and dignity in our society.

"How do we propose to seek it?

"We shall seek, as we promised in our platform, to assure women everywhere in our land equality of rights.

"My friends, all this is the work that all of us—you, your Congress, and your President—must and shall advance in the next 4 years."

Also, the President's memory was still functioning on January 16, 1957. In his message to Congress on that date, speaking of his legislative program, he asserted:

"The platforms of both major parties have advocated an amendment to the Constitution to insure equal rights for women. I believe that the Congress should make certain that women are not denied equal rights with men."

The months have rolled by and again it is August. There is no convention scheduled and Mr. Eisenhower has forgotten his party's platform of yesteryear—forgotten his high purpose to assure justice and dignity to the women of the Nation. He only vaguely recalls having heard something on the subject a year or so ago. But the women who work in the Federal civil service under discriminatory regulations and the women who cannot work at all on account of the discrimination placed upon them through the omission of sex from the contract clause governing the spending of about $40 billion, as reported by the President's Committee on Government Contracts, remember. And the women who crossed party lines to vote for Mr. Eisenhower at the last election on account of his bright promises, also remember.

Sir, will you remember again when we march to the polls in 1958 and in 1960? Or will you take a look at it now, Mr. President?

The Network Censors and NAACP Have Many More Songs To Mangle

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. DORN of South Carolina. Mr. Speaker, I commend the attention of the House this splendid editorial appearing in the August 7 edition of the Anderson, (S. C.) Independent. This editorial ably takes to task the major networks for their shocking and unwarranted censorship of the songs of that great American, Stephen C. Foster.

The Network Censors and NAACP Have Many More Songs To Mangle

The Nation's three big radio and TV networks continue to make their own new rules concerning what people shall hear and see.

In the process they are rewriting American folk songs and American history and are, in the view of Representative BRYAN DORN, among others, giving us a dose of Hitler-Stalin totalitarian censorship in this respect.

It has been decreed by the network moguls that the word "darkies" shall not be used in renditions of Suwanee River and My Old Kentucky Home.

Since this action was taken on behalf of the NAACP, it follows that other racial groups, professional organizations, regional committees, and all the many assorted pressure groups should get into the act.

Why stop with changing the wording and meaning of two songs? Why not apply the same measure to any number of other favorite American songs?

Examples of defeatist, subversive, and discriminatory songs could be found almost without number.

EXAMPLE NO. 1

"Daisy, Daisy,
Give me your answer, do!
I'm half crazy,
All for the love of you!
It won't be a stylish marriage,
I can't afford a carriage,
But you'll look sweet
On the seat
Of a bicycle built for two!"

"I can't afford a carriage," says he. The Association of Automobile Finance Companies should raise violent objections. Anybody who can sign his name these days can get under the wheel of an eight-cylinder carriage. And what about that "bicycle built for two"? What are they trying to do, wreck the bicycle market? Whassa matter with bicycles built for one?

EXAMPLE NO. 2

"'Leven cent cotton, forty cent meat,[1]
How in the world can a poor man eat?[2]
Mule's in the barn, the crop's laid by.[3]
The cup's plumb empty and the cow's gone dry,
Well water's low, nearly out of sight,
Can't take a bath on a Saturday night.
No use talkin', any man's beat,
With 'leven cent cotton and forty cent meat."

[1] An economic fallacy. Cotton is 32 cents and meat is $1.50.

[2] A subversive dig at the Republican administration. Should be held in contempt of Ezra Benson.

[3] Mules yet. Obviously discrimination against the tractor manufacturers.

EXAMPLE NO. 3

"I hate to see de ev'nin' sun go down,
Hate to see de ev'nin' sun go down.[1]
Cause my bady, he done lef' dis town."

[1] The National Association of Electric Light Companies must raise objection. The word "hate" must be changed to "love" so next line may read, "Cause 'lectricity done light my town."

EXAMPLE NO. 4

From the Bonnie Blue Flag:

"As long as the old Union was faithful to her trust,
Like friends and like brothers, kind were we and just;
But now when northern treachery attempts our rights to mar,
We hoist the Bonnie Blue Flag, that bears a single star."

Comment of Network Vice President E. Z. Trailingwire: "Definitely communistic. Lips that voice such treachery shall move before no mike of mine."

EXAMPLE NO. 5

"There's a church in the valley by the wildwood,
No lovelier place in the dale;
No spot is so dear to my childhood
As the little brown church in the vale."

Obviously the word "brown" must be offensive to the NAACP. Must be changed to "green," since nobody this side of Venus has green skin.

EXAMPLE NO. 6

From The Old Oaken Bucket:

"The old oaken bucket, the iron-bound bucket,
The moss-covered bucket that hung in the well."

"Moss-covered bucket" must go. Here we are spending billions of dollars overseas trying to teach Hottentots to boil the typhoid out of water and to clean their toenails—and some subversive comes up with this! If sung, must be referred to as "antiseptic bucket."

EXAMPLE NO. 7

"They say we are aged and gray, Maggie,
As spray by the white breakers flung;
But to me you're fair as you were, Maggie,
When you and I were young."

It's evident the guy can't see, and this is a reflection on the United States Association of Spectacle and Eyeglass Vendors.

Another part of this song says:

"Let us sing of the days that are gone, Maggie,
When you and I were young."

But definitely this must be changed to conform with today's conditions or else there'll be a kick from the social security people. Substitute word "here" for "gone," and words "senior citizen" for "young." It doesn't rhyme? Neither does modern verse.

EXAMPLE NO. 8

From Little Brown Jug:

"My wife and I lived all alone,
In a little log hut we called our own;[1]
She loved gin and I loved rum,[2]
I tell you we had lots of fun.
Ha! Ha! Ha! You and me,
Little brown jug don't I love thee!"[3]

[1] Log huts are for Rooshian passants. Make ours big FHA house and put emphasis, with sarcasm, on "called."

[2] The whisky people don't like—and neither do the temperance folks. Change to "She loved cola and I loved water."

[3] That word "brown" has got to go.

EXAMPLE NO. 9

"Oh, dem golden slippers! Oh, dem golden slippers!
Golden slippers, I'm gwine ter wear, because dey look so neat."

Comment of Verbose J. Trindux, network vice president in charge of song washing: "The Amalgamated Union of Leather Shoemakers objects. Golden shoes, indeed. Who's got the key to Fort Knox? Besides, why the Brooklyn dialect? Trynna ruin our rating in Flatbush?"

EXAMPLE NO. 10

"Darling, I am growing old;
Silver threads among the gold
Shine upon my brow today;
Life is fading fast away."

Nix. Offensive to a whole boodle of sponsors, including Pep-Perso-Forty Co., Old Rejuvenator, Inc.; National Society of Gonad Gland Physicians, etc. Also a direct slam at the Fountain of Youth, inviting protests from Floridians already sore over not being able to hear word "darkies" in Suwanee River.

EXAMPLE NO. 11

"Yankee Doodle, keep it up,
Yankee Doodle dandy,
Mind the music and the step,
And with the girls be handy."[1]

[1] With the what be what? The vereo idea.

And, in conclusion, that part of the national anthem referring to the "rocket's red glare" obviously is something slipped in by the Commies. Change to "clean," like in clean H-bomb.

The Spending Trend in Federal Government Must Be Controlled and Tax Relief Accomplished on a Fair Basis

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, I have introduced H. R. 9415, a bill to amend the Internal Revenue Code of 1954 so as to provide for scheduled personal and corporate income tax reductions and for other purposes. After long consideration of various tax-relief proposals, I have come to the conclusion that H. R. 6452, a bill introduced by Mr. SADLAK of Connecticut, comes closest to a fair and equitable method of providing realistic and greatly needed tax relief, with particular reference to those persons on whom the tax impact has fallen with exceptional heaviness.

Since the House Ways and Means Committee has provided for hearings during the first week in January on certain tax revision proposals, I am requesting that my bill be heard at the time of the SADLAK proposal. It is my hope that those who are interested in bringing about some relief from the hardships of Federal taxation will support these proposals and that the Ways and Means Committee will include these provisions in an overall tax relief bill next year. Of course, to have tax relief we have got to balance the budget and reduce Federal expenditures. A substantial start has been made in this regard, but much more will have to be done in the second session of the 85th Congress, if we are to have a fair tax relief bill.

The time has come to enact a realistic program of forward scheduling of tax reductions for all income taxpayers, individual and corporate. I am convinced that achievement of a moderate schedule of income tax rates is necessary to the continued vitality and growth of our Nation's economy, and to the maximum advances in the standard of living of all our citizens.

Accordingly, Mr. Speaker, I direct the attention of my colleagues to the bill I have introduced today, H. R. 9415, which schedules annual reductions of individual income-tax rates in each bracket, and of the corporate income tax over a period of 5 years, beginning January 1, 1958. These reductions can be granted to our citizens out of the increased revenues resulting from normal economic growth without increasing any other taxes. However, this can only be done if Government spending is brought under control. I believe that my bill would serve to restrain ever-increasing Government spending so that Americans can look forward to regularly scheduled tax reductions. H. R. 9415 further provides adequate safeguards, in the form of postponement procedures, to assure that none of the scheduled tax reductions will result in a return to deficit financing. In fact, if the economy continues to grow over the period when the reductions are scheduled as it has in recent years, there should also be sufficient growth in total revenue to provide for regular retirement of a portion of the national debt.

The legislation provides for coordinated reductions in all the progressive rates of individual tax, with the first bracket rate being reduced from 20 to 15 percent. The top rates of tax would be brought down to 42 percent, the individual tax from its present top of 91 percent, and the corporate tax from its present top of 52 percent. Specific examples of individual tax rate reductions, over the 5 years, follow: $4,000–$6,000 bracket, from 26 to 17 percent; $8,000–$10,000 bracket, from 34 to 19 percent; $12,000–$14,000 bracket, from 43 to 21 percent; $16,000–$18,000 bracket, from 50 to 23 percent; and $20,000–$22,000 bracket, from 56 to 25 percent. Appendix A shows the new individual rates for each year as proposed under my bill. Appendix B provides a means by which individual taxpayers can compute their tax liability at the end of the rate reduction period, as compared to their current tax liability. Appendix C illustrates for corporate taxpayers how the present normal tax would be reduced from 30 percent to 22 percent, and the surtax from 22 to 20 percent.

This legislation is primarily designed to moderate the tax impact on individuals and on small and growing business, and to elimite the tax barrier to starting new businesses. The problem is entirely a matter of rates. Both as regards unincorporated businesses, which approximate 84 percent of the over 4 million business units in the country and the owners of incorporated small business, the major tax impediment is the system of steeply graduated rates of individual tax—the rates which begin with 22 percent on taxable income between $2,000 and $4,000, increase rapidly to a rate of 50 percent on taxable income between $16,000 and $18,000 and go on up to a top rate of 91 percent. The incorporated firms have the additional problem of the corporate tax, especially the combined top rate of 52 percent which applies to income over $25,000. None of the special devices previously suggested for aiding small business effectively deal with the real source of the problem. Any and all of them would set up new inequities and discriminations within the tax laws. Many of them would add greatly to the complexity of the laws. By contrast, a moderate scale of individual and corporate rates would solve the problem with fairness and equity for all. Especially, the 1 percentage-point difference between each rate bracket from 15 percent at the bottom to 34 percent at the $80,000–$90,000 bracket, and 2 percentage points thereafter would insure a minimum tax impediment to the beginning of small business and growth of all business.

Estimated individual tax savings under my bill, based on 1956 income levels, would be $10.6 billion, as shown in Appendix D. Nearly 60 percent of the total savings would fall in the taxable income brackets up to $6,000. 79 percent of the savings would come in the taxable brackets up through $16,000 to $18,000, where the 50-percent rate applies. Only 6.3 percent of the savings would accrue to the brackets above $50,000. Thus, the benefits of this legislation are heavily centered in the first bracket and the lower progressive brackets of the individual income tax.

The relatively small savings total in the brackets above $50,000 makes clear that revenue considerations are no barrier to the scheduled reductions in the higher rates. I have proceeded on the dual premise that, first, under a reformed rate structure there is no reason why an unincorporated business or other individual taxpayer should pay a higher top rate of tax than a corporate taxpayer and, second, the lower the top rate of individual tax the greater will be the protection for all middle bracket taxpayers. Proof of the latter point is found in other proposals for reducing the progressive rates which always link higher rates at the top with higher rates in the middle brackets. I cannot too strongly stress the point that concern for small-business and other middle-bracket taxpayers cannot be fully translated into a reasonable rate structure without a consistent contraction of the rates all up and down the line.

As to corporations, it is estimated that the total corporate-tax savings, based on 1956 income levels, would be about $4.2 billion.

Assuming continuance of prosperity and economic growth, it is reasonable to expect that the scheduled reductions would be fully realized without net revenue loss to the Federal Government, probably with some net gain. For example, under existing tax rates, budget revenues of the Federal Government have grown from $59.4 billion in fiscal year 1955 to an estimated $70.6 billion in fiscal year 1957, or a net gain of more than $11 billion. Some of this gain reflects the impact of inflation on revenues, but the major part of it has resulted from economic growth itself.

Based on 1956 income levels, it would take annual revenue growth of only about $3 billion a year to accomplish the scheduled rate reductions without net revenue loss to the Treasury. If the economy grows in step with the recent historic average, the revenue growth should average up to $4 billion a year without inflation. Moreover, less than one-half of the annual revenue effect of the individual tax cuts and none of the revenue effect of the corporate tax cut would be reflected in fiscal year 1958.

Mr. Speaker, my decision to introduce this bill at this time comes from study of two conflicting trends. On the one hand, there are strong pressures within and without the Government for spending the revenue increase resulting from economic growth instead of applying it to tax reduction. On the other hand, there is among our citizens and businesses a dangerous and growing dissatisfaction with the income tax rate structure as it now stands, most evident as regards the tax impact on new and small business, self-employed professional people, and the whole range of middle income families.

COUNTERING THE SPENDING TREND

By the nature of basic policy legislation, and of spending authorizations, commitments for Federal spending on many programs extend a number of years ahead. Thus, the introduction of new spending programs, and the enactment of new spending authorizations for old programs, have the effect of usurping tax reduction opportunities which otherwise would occur out of revenue growth over a period of years.

The primary purpose of forward scheduling of income-tax reduction is to set up competition for tax reduction in a potential amount which has significance for all income-tax payers, as against using revenue growth to expand old and undertake new Government spending programs.

Existing procedures result in a one-sided budget operation. Each year, there is thorough inquiry into Government expenditures, first by the Budget Bureau, then by the House Appropriations Committee, and finally by the Senate Appropriations Committee. There has been no such annual inquiry as regard the tax or revenue side of the budget.

In fact, there has been no general inquiry specifically directed to the excessiveness of income-tax rates by either the Ways and Means Committee or the Senate Finance Committee, since 1948, 9 years ago. Because of circumstances, beyond their control, these tax-writing committees have not been able to provide a continuing forum in which taxpayers, individually or through their representatives and voluntary organizations, could reflect their views or choices as to the advantages to be derived from a moderate and reasonable scale of rates, as compared to increased Federal spending on any and all programs.

Mr. Speaker, as a member of the Committee on Ways and Means I find this situation increasingly uncomfortable. During periods of war and readjustment, it was understandable that the committee should be looked upon essentially as the initiating body for tax collection. However, in my view it is now time for the committee to become the motivating force for tax saving.

Accordingly, the effect of my bill is to call upon the Ways and Means Committee to adopt a related role in budget making, that of a jealous guardian of taxpayer rights and interests. It is my conviction that this role can be best performed by the forward scheduling of tax reductions. Only in this way can there be equal competition as against the forward commitments for Federal spending.

Should essential needs arise for programs of increased spending, then tax reduction over 5 years of the amount scheduled could result in a return to deficit financing, except for the effective safeguards in the legislation.

POSTPONEMENT PROCEDURES

These legislative safeguards are in the form of postponement procedures whereby the scheduled rate reductions could be spread out to a maximum of 9 years without change in the basic law. The legislation places the initiative for postponement in the hands of the President, but a balance has been struck in the burden and exercise of postponement authority for final decision as between the Congress and the executive branch.

While the postponement procedures may be applied separately as between corporate and individual reductions every postponement of an individual tax rate cut must be accompanied by a postponement of a corporate tax cut. The only limitation on this "linkage" is where the result would be to postpone a corporation reduction for more than 1 year.

The bill further provides that each scheduled reduction in either the individual or corporate tax may be postponed for only 1 year with the schedule of subsequent reductions also being moved ahead 1 year. Thus, it is possible to phase these reductions over a maximum period of 9 years without new enabling legislation, should budget conditions require full resort to the postponement procedures.

Specifically, the President is empowered to make, by November 15, a postponement from January 1 to July 1 of an individual tax cut which, if permitted to go into effect as scheduled, would cause an imbalance in the Federal budget for the current fiscal year. This postponement would be accomplished by a postponement of the scheduled corporate tax cut from January 1 to July 1. However, if the President has not, by November 15, postponed a corporate tax cut because he did not postpone a cut in the individual tax, he would be empowered to review the scheduled corporate tax cut in relation to the prospective budget situation for the following fiscal year. If such review indicates that the scheduled reduction would cause an unbalanced budget in such following fiscal year, then he would postpone the scheduled corporate reduction from January 1 to July 1.

The legislation also provides that the President would in his annual budget message recommend to the Congress whether any postponed rate reduction should become effective on July 1, or whether such reduction should be further postponed to January 1 next. This procedure is designed to provide the Ways and Means Committee, the Senate Finance Committee, and the Congress as a whole, the opportunity to review the revenue needs in light of the budget situation, whenever the President recommends postponement of a scheduled January 1 reduction.

Acting on the basis of such review, the Congress may, by means of a joint resolution which has become law before May 15, make finally effective, as of July 1, any scheduled reduction in individual and corporate tax cuts which had by Presidential action first been postponed from January 1 to July 1, or further postpone such cuts until January 1. This action may include a further postponement of a corporate tax cut to January 1, while making an individual tax cut finally effective as of July 1. In the event the Congress has not so acted under these alternatives then the President may again act. By May 15 he may further postpone a corporate reduction or corporate and individual reductions until January 1, but this authority is limited to previously deferred reductions and may be invoked only if the July 1 scheduled cuts would cause budget imbalance in the coming fiscal year.

In the event of postponement until January 1, either by joint resolution or in its absence by action of the President, the schedule of subsequent reductions is moved ahead 1 year, but with the limitation that each reduction may be put off only 1 year by use of the postponement procedures. This means that the first scheduled reductions could not be put off more than 1 year and that subsequent reductions must come within 2 years of each other.

The Presidential postponement authority may be questioned as a delegation of the tax-levying responsibility to the executive branch of the Government. Such, however, would not be the result, as the President would have no authority to increase taxes, or to change any scheduled reduction after the effective dates set forth.

In fact, the present procedure—or lack of it—actually makes available to the executive branch increased taxation—the revenue growth—without having to recommend increased levies. Under the procedures in my bill, in the event of a postponement of a scheduled tax cut, the Executive would only be reimposing for a 6-month period that which, in the absence of the legislation, would exist for an indefinite period. Thereafter, the Congress would have adequate opportunity to decide whether the reduction should be postponed a further 6 months. If the Congress did not act, the presumption would be that it intended at that time to let the President make the next decision, based on the statutory factors.

THE CASE FOR INCOME-TAX RATE REFORM

The growing dissatisfaction with the income-tax rate structure goes much deeper than normal taxpayer irritation with a heavy tax load. It reflects a growing recognition that there is something fundamentally wrong with a tax structure which penalizes hard work, risk-taking, and achievement.

The basic source of the complaint is the steeply graduated rates, which start after only $2,000 of taxable income, reach 30 percent at the $6,000 to $8,000 bracket, 50 percent at the $16,000 to $18,000 bracket, and go on up to a top rate of 91 percent.

Mr. Speaker, I would like to emphasize to my colleagues in the House that the

present rates increase with particular severity over the range of income received by such important elements of our society as small-business men, professional people, and farmers, salesmen, technicians, supervisors, and skilled craftsmen. If such individuals by their own enterprise and hard work advance their income, they find that the Government lets them keep only a rapidly declining proportion of it.

There can be no doubt that both the present high combined corporate-tax rate and the steeply progressive individual rates are serving to prevent an adequate flow of investment funds, and especially venture capital, into new and expanding business. In fact, it may be stated flatly that this Nation has a severe shortage of new capital, and especially venture capital, because the tax laws are designed to produce such a shortage. The extremely severe rates in the middle and higher income brackets are an especially limiting factor on the accumulation of new capital for investment in new and growing enterprises.

When this situation is considered in relation to the needs of a rapidly growing population, and millions of new workers coming into the labor force, it becomes clear that the time has come to bring an orderly plant for reducing the rates which discourage individual effort, prohibit adequate savings, and threaten the industrial vitality and supremacy of our Nation. Even under a fair and moderate rate structure, our economy may be hard pressed to generate all the savings needed to meet all opportunities to advance production and living standards without inflation.

To narrow the range of rate graduation, it is necessary that relatively more relief, percentagewise, be given to the graduated part of the rates than to the basic rate. The rates above the basic rate of 20 percent are the graduated part. These range from 2 percent in the $2,000 to $4,000 taxable income bracket, to 71 percent at the top, all on top of the basic rate of 20 percent. Note, however, this graduated part is of least importance from a revenue-producing standpoint. The graduated part of the rate structure actually provides only about 17 percent of the revenue derived from the individual tax, or about $5.5 billion out of about $33 billion. The remainder, or 83 percent, comes from the basic rate of 20 percent paid on all taxable income. Thus, the higher percentage reductions in the rate ranges above 20 percent will have considerably less revenue effect than the smaller percentage reduction applying to the first bracket rate.

My bill provides a focal point for the expression of taxpayer interest in using revenue growth to reduce excessive income tax rates instead of to support increased Government spending. I feel certain that many taxpayers, both individually and through various groups to which they belong, will express their views on this legislation to their representatives in Government. I will urge the Ways and Means Committee to schedule hearings at the earliest possible moment. It is my hope that this legislation will be enacted well before the end of the current session of the Congress.

As a final point, I urge taxpayers to relate the advantages to themselves and to their businesses of achieving the moderate scale of tax rates at the end of 5 years, as set out in appendixes B and C, as against postponing or perhaps even foregoing ultimate achievement of such rates to accommodate higher Federal spending on any and all programs. We cannot have both the tax reductions and the spending. It is up to the taxpayers to make a choice and, Mr. Speaker, I believe that as elected Representatives of the people we already know with certainty what that choice will be—tax reduction.

APPENDIX A

Individual tax rates

Taxable income bracket [1]	Present rates	Jan. 1, 1958	Jan. 1, 1959	Jan. 1, 1960	Jan. 1, 1961	Jan. 1, 1962	Taxable income bracket [1]	Present rates	Jan. 1, 1958	Jan. 1, 1959	Jan. 1, 1960	Jan. 1, 1961	Jan. 1, 1962

APPENDIX B

Tax computation tables, individuals

If the taxable income [1] is—	The tax	
	Is: Present law	Will be: Year 1962
Not over $2,000	20 percent of the taxable income	15 percent of the taxable income.
Over $2,000 but not over $4,000	$400, plus 22 percent of excess over $2,000	$300, plus 16 percent of excess over $2,000.
Over $4,000 but not over $6,000	$840, plus 26 percent of excess over $4,000	$620, plus 17 percent of excess over $4,000.
Over $6,000 but not over $8,000	$1,360, plus 30 percent of excess over $6,000	$960, plus 18 percent of excess over $6,000.
Over $8,000 but not over $10,000	$1,960, plus 34 percent of excess over $8,000	$1,320, plus 19 percent of excess over $8,000.
Over $10,000 but not over $12,000	$2,640, plus 38 percent of excess over $10,000	$1,700, plus 20 percent of excess over $10,000.
Over $12,000 but not over $14,000	$3,400, plus 43 percent of excess over $12,000	$2,100, plus 21 percent of excess over $12,000.
Over $14,000 but not over $16,000	$4,260, plus 47 percent of excess over $14,000	$2,520, plus 22 percent of excess over $14,000.
Over $16,000 but not over $18,000	$5,200, plus 50 percent of excess over $16,000	$2,960, plus 23 percent of excess over $16,000.
Over $18,000 but not over $20,000	$6,200, plus 53 percent of excess over $18,000	$3,420, plus 24 percent of excess over $18,000.
Over $20,000 but not over $22,000	$7,260, plus 56 percent of excess over $20,000	$3,900, plus 25 percent of excess over $20,000.
Over $22,000 but not over $26,000	$8,380, plus 59 percent of excess over $22,000	$4,400, plus 26 percent of excess over $22,000.
Over $26,000 but not over $32,000	$10,740, plus 62 percent of excess over $26,000	$5,440, plus 27 percent of excess over $26,000.
Over $32,000 but not over $38,000	$14,460, plus 65 percent of excess over $32,000	$7,060, plus 28 percent of excess over $32,000.
Over $38,000 but not over $44,000	$18,360, plus 69 percent of excess over $38,000	$8,740, plus 29 percent of excess over $38,000.
Over $44,000 but not over $50,000	$22,500, plus 72 percent of excess over $44,000	$10,480, plus 30 percent of excess over $44,000.
Over $50,000 but not over $60,000	$26,820, plus 75 percent of excess over $50,000	$12,280, plus 31 percent of excess over $50,000.
Over $60,000 but not over $70,000	$34,320, plus 78 percent of excess over $60,000	$15,380, plus 32 percent of excess over $60,000.
Over $70,000 but not over $80,000	$42,120, plus 81 percent of excess over $70,000	$18,580, plus 33 percent of excess over $70,000.
Over $80,000 but not over $90,000	$50,220, plus 84 percent of excess over $80,000	$21,880, plus 34 percent of excess over $80,000.
Over $90,000 but not over $100,000	$58,620, plus 87 percent of excess over $90,000	$25,280, plus 36 percent of excess over $90,000.
Over $100,000 but not over $150,000	$67,320, plus 89 percent of excess over $100,000	$28,880, plus 38 percent of excess over $100,000.
Over $150,000 but not over $220,000	$111,820, plus 90 percent of excess over $150,000	$47,880, plus 40 percent of excess over $150,000.
Over $200,000	$156,820, plus 91 percent of excess over $200,000	$67,880, plus 42 percent of excess over $200,000.

[1] After deductions and exemptions.

APPENDIX C

Corporate tax rates

	Present	Jan. 1, 1958	Jan. 1, 1959	Jan. 1, 1960	Jan. 1, 1961	Jan. 1, 1962

The Proposed Federal Firearms Regulations

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the American Rifleman of August 1957. It appears that those who oppose possession of firearms by lawful and law-abiding American citizens are about to strike another blow against the hunters, gun collectors, trap shooters, skeet shooters, farmers, and gun owners of this country.

As usual they are doing it under guise of regulations issued by the Alcohol and Tobacco Tax Division of the Internal Revenue Service.

It seems that as often as this question has been presented to Congress it has been resoundingly defeated on the floor of the House and the Senate, but the Alcohol and Tobacco Tax Division keeps on presenting regulations of this kind, apparently in the expectation that the citizens of this country will lay down supinely or will sleep on their rights. Proposed regulations 177.50, 177.51, 177.52, 177.54, and 177.55 supposedly issued under the authority conferred on that branch of the Government by the National Firearms Act and Federal Firearms Act go far beyond the power granted to that Agency. I hope that the Alcohol and Tobacco Tax Division of the Internal Revenue Service will realize the main purpose of these regulations and will withdraw them gracefully.

This is a question which affects every hunter, fisherman, sportsman, target shooter, collector of firearms or citizen who merely desires to possess a firearm to protect his own home.

The article follows:

[From the American Rifleman of August 1957]

THE PROPOSED FEDERAL FIREARMS REGULATIONS—IMPORTANT HEARING SCHEDULED FOR AUGUST 27

The Internal Revenue Service of the Department of the Treasury has formally announced that a public hearing will be held on August 27, 1957, at 10 a. m., in room 3313, Internal Revenue Building, Washington, D. C. At that time and place all interested parties will be afforded opportunity to be heard, in person or by an authorized representative, with reference to a proposal to amend and reissue regulations relating to interstate traffic in firearms and ammunition. Written data, views, or arguments relevant to the proposed regulations may be submitted in duplicate for incorporation in the record of hearing (1) by mailing the same to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington 25, D. C., provided that they are received prior to the termination of the hearing, or (2) by presenting the same at the said hearing. Material relating to each section of the proposed regulations must be submitted separately and must bear the number of the section to which it relates.

Those sections of the proposed regulations to which the National Rifle Association has already filed formal protest and to which the NRA will object at the public hearing, were discussed in detail in the article beginning on page 22 of the July American Rifleman. (If you do not have this article, a reprint is available without charge on request.) In order that you may have the section number, there is reproduced below the exact language of the five sections of the proposed regulations that appear to be principally objectionable.

"SEC. 177.50 Identification of firearms: Each licensed manufacturer and importer of a firearm shall identify it by stamping (impressing), or otherwise conspicuously placing or causing to be stamped (impressed) or placed thereon, in a manner not susceptible of being readily obliterated or altered, the name and location of the manufacturer or importer, and the serial number, caliber, and model of the firearm. However, where imported firearms are identified by the foreign manufacturer in a manner prescribed in the foregoing sentence, additional stamping will not be required if the information prescribed by this section appears. None of such information may be omitted except with the approval of the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington 25, D. C.

"SEC. 177.51 Firearms records: Each licensed manufacturer or dealer shall maintain complete and adequate records reflecting the receipt (whether by manufacture, importation, acquisition from other licensees, or otherwise), and the disposition, at wholesale or retail, of all firearms (including firearms in an unassembled condition, but not including miscellaneous parts thereof) physically or constructively received or disposed of in the course of his business. Entries in such records shall be posted at the time of each transaction, or in each instance not later than the close of business on the day next succeeding the day on which the transaction occurs. The records prescribed by this section shall be in permanent form, separate and distinct from records pertaining to other merchandise handled by the licensee, and shall be retained permanently on the business premises until discontinuance of business by the licensee. Where the business is discontinued and succeeded by a new licensee, the records will appropriately reflect such facts and will be delivered to the successor. Where discontinuance of the business is absolute, the records will appropriately reflect that fact and will be delivered to the Director for permanent retention. The records shall show and include:

"(a) A full and adequate description of each firearm, including (1) the manufacturer thereof; (2) the manufacturer's serial number stamped thereon; (3) the caliber or gage of the firearm; (4) the model and type of firearms; and

"(b) The name and address of each person from whom each firearm (if not the manufacturer's own product) was received together with the date of acquisition; and

"(c) The disposition made of each firearm including the name and address of the person to whom sold and the date of disposition."

The prescribed format for the firearms record is as follows:

A B C FIREARMS COMPANY, 123 FOURTH STREET, BALTIMORE, MD.

Manufacturer of Firearms—Federal Firearms Act License No. 52-1

Description of firearm					Receipt		Disposition	
Manufacturer	Serial No.	Caliber or gauge	Model	Type	Date	From whom (name and address or FFA license No.)	Date	To whom (name and address or FFA license No.)

Prescribed format for firearms record

"SEC. 177.52. Ammunition records. Each manufacturer and dealer shall maintain, on the licensed premises, complete and adequate records reflecting the production or receipt and the disposition at wholesale or retail of all pistol or revolver ammunition. The ammunition shall be described as to manufacturer, type, caliber and quantity, and the identity of the persons from whom received and to whom sold must be shown.

"SEC. 177.54 Over the counter sales to individuals: Where disposition of firearms or ammunition is made by over-the-counter sale or distribution to individuals, the persons to whom the firearms or ammunition are sold, distributed, or delivered will be required to acknowledge receipt thereof in their own handwriting in the record prescribed by this subpart.

"SEC. 177.55. Authority to examine records, etc. Any internal revenue officer designated by the Director shall have authority to examine the books, papers, and records kept by a licensee pursuant to the regulations in this part, and to examine his premises and stock, during regular business hours in the daytime. When such premises are open at night, such authorized officers may enter them while so open, in the performance of such authorized official duties."

Many NRA members and others, including Members of Congress, have already protested these proposed revisions in the administrative regulations for the enforcement of the Federal Firearms Act. It is the volume of protests already received that has been responsible for the establishment of this public hearing. Efforts must be redoubled to make absolutely certain that the interests and wishes of the law-abiding, gun-owning citizens of the United States are made known to the Internal Revenue Service.

Do these things: (1) If you can possibly do so, plan to attend the public hearing in Washington, D. C., on August 27 (Tuesday) in person. You will not be required to make a speech, but it is essential that the greatest possible showing of opposition be made.

(2) If you cannot attend the hearing, read carefully the article dealing with the proposed regulations in the July American Rifleman; submit a written statement even though you may have already done so. Submit your statement in duplicate for incorporation in the record of hearing and do not be dissuaded by the redtape imposed by Federal regulations. Note that material relating to each section must be submitted separately and must bear the number of the section to which it relates. Mail your statement so that it will be received by August 27, 1957.

(3) Wherever possible submit written statements in the name of rifle clubs, state associations, fish and game clubs, veterans', fraternal, and patriotic organizations, etc.

(4) Urge your United States Congressman or Senator to support you in your position relative to these proposed Federal regulations.

Whether by design or not, the public hearing on August 27 will in all probability come after the United States Congress has adjourned. Few, if any, Congressmen or Senators will be in Washington and able to attend the hearing in person. However, they can file written statements and such statements will be most effective.

This is a vital question to every individual who believes in the right of American citizens to possess personal firearms for lawful purposes, free from arbitrary and unnecessary governmental control. The issue here is of far greater importance than the merit or lack of merit of any of the proposed regulations. The issue is whether under the guise of executive department regulation our rights in the private ownership of firearms can be strangled little by little without legislative action of any kind. Do not leave this for someone else to do. This is your battle.

The Middle East Crisis

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. MURRAY. Mr. President, notwithstanding the promulgation of the Eisenhower doctrine, the Middle East remains the center of much unrest which again could bring the world to the brink of war. The United States has tried very hard to convince the leaders in the Arab countries that playing the Soviet game will turn out to the detriment of their peoples and create the danger of Communist dictatorships in their countries.

The more the United States tried to appease some of these Arab leaders, the more they turned against us and the Western World. Poisonous propaganda, emanating from Syria and the Egyptian Government-controlled radio in Cairo, against Christianity and the Western World, continues unabated.

Many of the Arab leaders in these countries, who were pro-Nazi and against the West during the last war, refuse to see where the real interests of their peoples lie and continue to show their basic hatred toward the West, inciting their peoples while forgetting that they may reach a point of no return where they could no longer control the passions and the hatred they instill into their peoples.

As an example of this mentality, let me quote what the editor of the leading Syrian daily newspaper Al Manar wrote a few months ago:

One should not forget that, in contrast to Europe, Hitler occupied an honored place in the Arab world. His name awakened in Arab hearts feelings of love and enthusiasm. * * *

The Arab world should be congratulated in producing in its midst this Hitler who has shaken the world from end to end. * * *

English and French journalists are mistaken if they think that by calling Nasser Hitler they are hurting us. On the contrary, his name makes us proud. Long live Hitler, the Nazi who struck at the heart of our enemies. Long live the Hitler of the Arab world who has opened the gates to victory and eternity for his people.

The magazine Prevent World War III, published by the Society for the Prevention of World War III, Inc., a nonprofit educational organization, 515 Madison Avenue, New York, has just published an interesting article on this subject, entitled "Will the U. N. Solve This Problem?"

Mr. Preisdent, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL THE U. N. SOLVE THIS PROBLEM?

The situation in the Middle East continues to be fraught with grave dangers to world peace. Unless positive and effective action is taken to thwart those forces which wilfully keep tensions alive and to solve the burning issues in that area, mankind may be faced with the awful specter of world war III.

In the society's statement "The U. N. and the Middle East Crisis" (November 1956) the observation was made that "for years it has been politically expedient for statesmen to pretend there was peace in this vital area." The U. N. itself became the main vehicle through which the real situation was concealed. Consequently, the U. N. Charter, as it applied to the Middle East, was a virtual dead letter.

When Britain, France and Israel embarked on military operations against Egypt, the U. N. was quick to condemn them. In retrospect, it is now clear that whatever one may have thought about their motives, they focussed world attention on a festering sore which had been eating away at the prestige and usefulness of the United Nations.

For the first time since the State of Israel was born, fundamental elements making for conflict in the Middle East, are spotlighted. The "pure and simple aggression" which originally described the military action, has lost much of its weight as the history of Nasser's endless provocations and lawless deeds were catalogued before the bar of world public opinion. Viewed in this light, the conflict with Egypt can now be traced directly to the insatiable ambitions of the Cairo "strong man."

It was mainly through the deceit of the dictator and his agents that the legitimate aspirations of the Arab peoples were turned into an irrational force of hate and enmity. The ceaseless harrassing of Israel marked by cold-blooded physical violence and economic attrition was the microcosm of the larger conflict between Nasser and the West. If Israel could be forced to bend the knee, the whole Middle East would fall into Nasser's lap, leading to economic strangulation of our most reliable allies in Western Europe. This was Nasser's calculation. If it had been realized, United States security would have been placed in the greatest jeopardy since Hitler's planned invasion of the British Isles.

Nasser, of course, did not possess the wherewithal to challenge the West without concrete help from outside sources. Though a self-proclaimed anti-Communist, the mutual advantages gained by Hitler and Stalin in their 1939 pact, could hardly be ignored by Nasser and his top German advisers. Thus, the "mariage de convenance" between Nasser and Khrushchev was a logical and essential ingredient in the successful development of his plans.

All of the hidden ramifications of Nasser's conspiracy were disclosed by the short-lived military campaign. They constituted nothing less than a major threat to world peace and security. Yet, the initial reaction of United States policymakers toward the conflict was essentially the continuation of the old line. This position proved to be decisive during the deliberations of the United Nations in November 1956. As in the past, the U. N. devoted its efforts to the surface manifestations while glossing over the basic issues which had turned the Middle East into a caldron of strife and unrest. However, the force of events and the growing awareness of millions throughout the world who may have been blinded by Nasser's cunning propaganda, began to make their impression. Today, our policymakers are beginning to "understand" that the real issues in the Middle East crisis can no longer be swept under the rug.

What are some of the major problems which block progress toward peace in the Middle East?

Nasser's policy of belligerency toward Israel: The denial of Israel's sovereign rights through unlawful economic blockade and acts of physical terror and attack run counter to the U. N. Charter and violate resolutions adopted by the Security Council. In terms of its own security, the West can no longer sit by and accept as a matter of course Nasser's defiance on this question. In this connection, a hopeful sign is the President's view that "free and innocent passage" in the Gulf of Aqaba is in accord-

ance with international law. As a logical sequence to the President's position, support of all nations' rights of passage through the Suez Canal, including Israel, must be unequivocal.

The problem of the Arab refugees: For a number of years Arab propaganda has endeavored to discredit Israel as responsible for the miserable conditions of hundreds of thousands of refugees. Yet, it is a matter of historical record that the Israeli Government has time and again offered to work out an equitable agreement with the Arab states so as to alleviate the hardships of these unfortunate people. It is also a matter of record that the Arab leadership, egged on particularly by Nasser, has rejected such overtures for negotiations. The reason is not hard to find. The Arab leadership looks upon these refugees as pawns whose plight is to be exploited for ulterior motives.

The refugee problem would have never developed in its present sharp form, had not the Arab leaders made war on Israel in the first place, and having done so, induced the Arabs living in Israeli territory to leave. That the Arabs continue to stall on the question of providing a just solution is indicated by reports of U. N. officials.

Fortunately, public opinion is getting to know these facts and this is reflected in new efforts by the United Nations as well as by our own representatives at the U. N. to solve this problem in a concrete and just manner for all concerned.

The continuation of hate-inciting propaganda: In the No. 49 issue (Winter-Spring 1957) of Prevent World War III the society noted that Arab propaganda against the West and Israel was a fundamental impediment to the establishment of normal conditions in the Middle East. "Those leaders who purvey poisonous propaganda help to create a climate of blind hatred which may prove to be uncontrollable among peoples who are kept ignorant as to the real state of affairs. As a result, a change from a policy of hostility to one of peace and mutual accommodation becomes virtually impossible, even when the long-term interests of the country concerned require it. When a people are infected by artificially whipped-up hatred, those who are responsible for this state of mind become prisoners of it. They are no longer able to act in a statesmanlike manner, which is imperative if the country's welfare is to be safeguarded."

In this connection, it is interesting to note that anti-American propaganda emanating from Egypt predates the decision of our Government to withhold financial support for the Aswan Dam project. Many people have been under the impression that the Nasser regime began to talk tough after that episode. The facts show that this is not the case. For example, the Cairo radio (October 11, 1955) denounced the mutual security program as a weapon by which the United States hoped to penetrate the Middle East. On October 14, 1955, the Cairo radio proclaimed: "Justice and logic require that we now defend Russia and attack America, which has shown falsehood, deceit, and ill will."

The outpourings of poisonous propaganda against the United States, the West, and Israel continue unabated, particularly from Egypt and Syria. We cite below a sampling of this propaganda which dominates the newspapers and airways of these countries:

"It is being said that we peoples of the colonies should support Christianity and fight for the democracy of the western states, threatened with being uprooted. 'Are not these things the cause of the oppression and servility afflicting us?'

"But which states are detonating atomic and hydrogen bombs? The Christian western states, which are appealing to us to help them preserve their civilization. Whose civilization is responsible for discrimination among people because of color? The civilization of the western states, 'These western states whose Christian religion eulogizes fraternal love and equality of human beings, are foremost in destroying the lives of their fellow men in Japan, Kenya, Algeria, Port Said, Malaya, South Africa, and elsewhere. The same states were responsible for the Jews seizing the property and homeland of the people of Palestine.'" (Cairo radio, June 9, 1957.)

"'The former Jordanian Government which was toppled by the American imperialist with the help of the palace and its plotting group was loyal to these agreements.'

"The imperialists and their foster child Israel received these agreements calling for cooperation with hatred and anger. They continued working with their agents in Jordan, as they still work with their agents in Syria, until they were successful in temporarily altering the situation in Jordan. They destroyed the agreements of honor and glory, violated the principles of Arab policy, maltreated the people, and filled the prisons with thousands of detainees including officers, soldiers, and citizens." (Syrian newspaper An-Nasir quoted by the Cairo radio, June 14, 1957.)

"Only a few million dollars have thrown a national government in Jordan out of office. Only a few million emboldened the Lebanese Premier and Foreign Minister. A few millions convinced Nuri as-Said to relinquish power after he had spread terrorism in every inch of Iraq to prepare the way for his masters for a new alliance.

"But do these leaders, these governments, and their supporters at least know what they are worth in the eyes of America? Did they ever consider how much Israel is receiving compared with what they take themselves, and what Israel is paying? They content themselves with the crumbs while Israel is receiving billions. They sacrifice their interests and the future of their countries. They sacrifice even their very existence and expose themselves to the wrath of their peoples, while Israel pays nothing unless realization of its aims happens to result in a disadvantage to it." (Egyptian newspaper Ash-Shab, June 17, 1957.)

The warlike character of this propaganda is obvious. "It goes beyond the normal practices of exhortation to patriotism as it whips the mind of the people into a state of blind hatred" (the U. N. and the Middle East Crisis). It creates a war psychosis.

Peace in the Middle East cannot be built in the path of this hurricane of hate. Therefore, it should be a cardinal task of western statesmanship to work for the curbing of this propaganda.

Though the Middle East situation is in a state of flux at the present time, there are signs that Nasser's game is beginning to lose its effectiveness. Even those Arab States which have provided an important base for Nasser's operations, are shying away from his domineering and grasping tactics. It is certain that Nasser will try by all means to prevent the disintegration of his Pan-Arabic scheme and, therefore, one must anticipate that he will resort to desperate measures. The appearance of contingents of the Russian Navy in Middle Eastern waters and the delivery of Russian submarines to Cairo must be viewed in this light. New provocations against the State of Israel which has tirelessly sought a peaceful settlement, may be employed by Nasser so as to bolster his prestige.

Whatever Nasser's plans, however, they will fail if the United States acts with determination. In concert with our western allies, our Government should insist that the United Nations grapples once and for all with the fundamental issues involved in the crisis.

The society is under no illusions with regard to the complexity and difficulties attending the situation in the Middle East. Yet, we are confident that the United Nations with the active support of the United States and all freedom-loving countries can achieve positive results. In this connection we advocate the adoption of a program resting on the following principles:

1. Unity of action in the Middle East with France and England;

2. Protection of the sovereignty of all Middle Eastern States, as envisioned by the Eisenhower Doctrine.

3. A fundamental Israel-Arab settlement of outstanding differences through peaceful negotiations;

4. Insistence that all hate-inciting propaganda in the Middle East against the West cease and that Arab leaders publicly recognize the rights of the Israeli people to live a normal economic life with all of her neighbors;

5. A U. N. program to help the distressed Arab refugees and to contribute to the development of the resources of all the Middle Eastern countries.

If the actions of the United States are based on these principles of justice, we shall have safeguarded our own interests while at the same time, given new faith and confidence in the United Nations as man's best hope for world peace.

Korea's Distinguished Ambassador to the United States Tells Europe What the Free World Must Do To Be Saved

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address given by Dr. You Chan Yang, Ambassador of the Republic of Korea to the United States, before the Royal Institute of International Affairs at Chatham House, London, England, on June 13, 1957. Dr. Yang has recently returned from a tour through Europe to express Korean appreciation to those countries which sent troops to Korea to help repel the Communist aggression 7 years ago. In the process, Dr. Yang has given eloquent and persuasive witness to the soundness of American policies of steadfast resistance to any further expansion of Communist power, prestige, or influence in Asia—whether by force or by the seductive coexistence trick. The address follows:

CAN WORLD FREEDOM AND STABILITY BE RESTORED?

Mr. Chairman, ladies and gentlemen, honored guests, I consider it a distinct privilege to be asked to speak before the Royal Institute of International Affairs. It is an honor to my country, the Republic of Korea, and to me, its representative, to have this rare opportunity to meet with this distinguished group.

The very name of your organization implies that you are interested in the affairs of the entire world, the problems and aims of the countries therein, and their relationships in the family of nations.

Therefore, with this in mind, I wish to state that I come before you as a true friend, and I know that you will wish me to speak frankly and sincerely, because, otherwise, there would be no point in talking at all.

First, I wish to tell you that I have come to England at the request of my President, Dr. Syngman Rhee, to express the heartfelt gratitude of the Republic of Korea for the assistance rendered by the Government of England when we were invaded by cruel Communist hordes, during the darkest period of our history. We shall never forget that you sent forth your sons to battle against the enemy. You can be justly proud of them for they fought bravely beside ours, and particularly distinguished themselves on Hill 355. We Koreans will always remember that you recognized our desperate circumstances, and you came halfway around the world to come to our aid. May I take this opportunity to pay a tribute to those of you whose sons still lie in Korea, on foreign soil, because they paid the supreme sacrifice so that my people might remain free.

We are living today at a time when science has made such rapid progress that no longer can any nation isolate itself from the rest of the world. The speed of present-day communications and transportation makes everyone next-door neighbors. Therefore, what affects one nation, has a direct influence on all the others. This is an irrefutable fact. As a result, the destinies of all countries are affected by the fate of even just one of their neighbors.

If all countries are at peace, have a healthy respect for each other's rights, and enjoy a cultural and economic interchange, you have a happy world community. On the other hand, if, in some corner of the world, just one member decides to annex his neighbor and make him subject to his will, no other country is safe from the same fate so long as the aggressor is allowed to continue his evil way unhindered. If so, international relationships become strained, tension mounts, economies of nations waver, and cultural development flags.

My friends, such is the case today. There is an evil element now rampant in our midst that is destroying the peace of the world and undermining the relationships of the friendly nations. That element—the most insidious force which besets our present civilization—is communism.

Let us look at the facts. We presently have a Communist country which has overrun its neighbors, oppressed the people, and is constantly curling its greedy tentacles around new territory. Unhindered, communism has been allowed to trample under several peoples. Do you think for one moment that you are safe from the same plight? We have sat idly by, and watched country after country being swallowed up by a voracious monster.

When we, in the Republic of Korea, were invaded—an invasion that was Communist-inspired, Communist-equipped, and Communist-directed—we fought back with every fiber of our being. Unarmed, we were overwhelmed by superior forces which possessed the latest armaments, and had it not been for your help and that of other member states of the United Nations, the Republic of Korea would not exist today. As it is, only half of my country is free. At great cost the Communist invasion was beaten back. We suffered 2 million casualties and the virtual destruction of our resources. However, during the past several years, with generous aid from our friends and sacrificial efforts by our own people, the damage has been largely reconstructed. Gradually our long-range stability is being insured.

What Korea means for Europe is that a nation very much like your own has been implanted as an unshakable bulwark to stem the communization of the entire vast area of the Far East—which includes more than half of the population and territory of the entire world. We stand there surrounded by enemies, like an embattled fortress on a dangerous frontier. With your help we shall continue to stand—and thereby hold in check the Communist program of world domination.

Naturally, the Communists have beset us not only with arms but also with their twin weapon of propaganda. They have done their best to undermine global confidence in our leadership and in our democratic program. Their psychological warfare against us has followed two major lines: (1) that our government is not really democratic; and (2) that our approach to international problems is warlike, and, therefore, disruptive of world peace. In answer to those two challenges, I have come to bring you some sober and solid facts.

The establishment of genuine democracy in Korea has not been easy. It has been tremendously difficult, because of internal conditions and external pressures. I shall indicate briefly both the nature of the problems and the ways in which we have solved them.

Internally, Korea was left in a tragic condition by 35 years of Japanese exploitat'on and by the subsequent artificial division of our nation. When Japan was driven out in 1945, 80 percent of our people were illiterate. Our entire economy was wrecked, for it had been skillfully and purposely subordinated to the will of Japan. Our people were without experience in management—political or industrial—for the Japanese had held us in complete subjection. Under the Japanese, our land tenure system had become one of centralized landlordism. When we assumed our own government in southern Korea, our factory and agricultural productiveness was far insufficient for our needs. And our problem was compounded by the sad mistake of the 38th parallel division—which separated our agricultural south and the industrial, mineral and coal-rich, and hydroelectric resources of the north.

We did, however, have great resources. Chief among them was the fierce national patriotism and high abilities of our own people. Secondly, we were generously befriended by the United States and other western nations, which granted us financial, economic, and technical aid. Without those two resources, we could not have survived. But in addition to them we had yet another which was 'ndispensably essential—a great and inspired leadership, provided by one of the most remarkable men of the 20th century, our president, Dr. Syngman Rhee.

Now, let us see in quick review what has been accomplished.

One of our first achievements as a government was the enactment of a program of land reform, which turned over to tenant farmers all the farmlands in southern Korea—with the exception of some 10 percent owned by religious organizations and missionary groups.

Secondly, we started the enormous job of creating a literate, educated nation. We had to build schools, train teachers, and both write and publish textbooks. But today, despite the obstacles, we have achieved what I think is a near miracle. At the present time, more than 91 percent of all children aged 6 to 11 are in school. We have some 50 collegiate grade institutions with an enrollment of over 80,000 students. Illiteracy has been reduced to less than 10 percent of the total population. And thousands of our students are now engaged in advanced study abroad.

Politically, we have extended the free ballot to all over 21, women as well as men. Our 4 national and many local elections have resulted in balloting by an average of 85 percent of all who are eligible. Our political freedom is attested to by the considerable political controversy in our 90 newspapers. Gradually our politics have evolved a stable party system, consisting of two major parties, the Democratic and the Liberal parties. Quite dramatically our political freedom was emphasized in the elections of 1956, when Dr. Syngman Rhee was reelected President, together with a vice president from the opposition party. Our legislative assembly has always demonstrated considerable independence from the executive branch. Like all democracies, we sometimes complain about the lack of calm and unity in our domestic concerns. But we value freedom sufficiently to pay this price.

It was for freedom that 8 million of my countrymen have fled from the north to the Republic of Korea. They are still coming, and, although our housing problem is extremely acute, they are taken in and sheltered.

It was for freedom that the Hungarians revolted, as they did recently in a desperate attempt to break the bonds of unendurable oppression. It was, in brief, man's perpetual struggle against despotism. They preferred to die rather than live in subservient obedience to an inhuman master. From our own personal experience with Communist tyranny, we could sympathize with the Hungarians, for we knew only too well how they felt. That is why we were one of the first countries to send relief goods to them in their struggle for liberty.

Likewise, the Poles have made attempts to liberate themselves from an intolerable situation. Recently in Chungking, Red China, there was a tremendous labor uprising against the Communist regime. There is great unrest and turbulence due to lack of food, ill treatment, and loss of freedom. I am sure the people of East Germany, of Vietnam and of others are not satisfied with the division of their countries.

Did you know that in the north of my country, the Communists this very moment are amassing incredible amounts of war material and storing it underground? At the end of the Armistice which was signed in Korea on July 27, 1953 the Communists did not have one single plane. Today they have 770 planes, of which 518 are jet fighters and 99 are jet bombers. There were no airstrips. Now they have 40. Communist armed forces personnel in North Korea has increased 62 percent; their naval strength by over 300 percent. You cannot tell me that all that building—which, by the way, is in flagrant violation of the Armistice agreement, to which they affixed their signature—you cannot tell me that this buildup is for commercial purposes. I tell you they mean war. On the other hand, we and the United Nations Command have scrupulously abided by the conditions of the truce.

The Communists are very clever. They foment crises in one part of the world so that their vast military preparations to attack in another part will not be noticeable. While your attention is focused on the Middle East, they are getting ready to pounce on us in Asia. Lenin long ago made the statement that the "road to Paris lay through Peiping." He further said that they would then take Europe after Asia fell; then after Europe the United States would drop into their laps like a ripe plum.

If the Republic of Korea falls, Japan is untenable. If the Communist gang gets control of all the vast teeming millions of manpower in Asia, no combination of military might on the face of the earth could withstand such a tide. Need I point out to you that, after us, you would be next, and if we fall, there is no hope for you.

Now in view of the foregoing relative to Communist activities, a decision has been made to relax trade restrictions with Red China, North Korea, and other Communist puppet regimes—in other words, there will be negotiations with a foe whose hands are still

red with the blood of your countrymen whom they have so cruelly butchered.

Let me give you my reasons why I am dismayed at this policy, and why I think it will be unsuccessful:

1. Soviet Russia has been supplying the finished product to Red China such as military and technical equipment as well as consumer goods. This has been a drain on the resources of Russia. By a relaxation of trade restrictions, thereby building up Red China's industrial potential Russia will no longer have this responsibility and can concentrate on her own needs and will sell her products to other markets.

2. Some people think that by trading with Red China they are going to wean her away from Russia and Russian influence, thus weakening Russia's position, but to our way of thinking, instead of weakening communist power you are going to increase it by building up another communist satellite. A Communist—whether Chinese, Russian, English, or Korean—is one and the same thing. The Communists stick together, right or wrong, and form a solid bloc of resistance which has been definitely proved in international gatherings where the free world has varied opinions, but the Communists have only one.

3. With the responsibility of China off her back, Russia will be able to supply at a profit armaments to other countries very anxious to get hold of them and this would be detrimental to the entire world.

4. Also, with the industrialization of China and with the millions of Chinese slave laborers she can produce tremendous amounts of consumer goods which will be dumped on the markets of the world at fantastically cheap prices, and destroy free enterprise in the free world. In this way, you will be ultimately ruining your own business, for you cannot compete with them as they have 600 million Chinese to draw from for slave labor.

5. From a moral and humane standpoint, are you willing to let it be said your brave British boys died in vain in Korea—those who died for the cause of liberty, freedom, and justice?

6. How can there by a healthy business relationship with a State that has been branded as an aggresor by that august body for international peace, the United Nations, especially an aggressor that defies United Nations disapproval and remains in my country, occupying it illegally?

Further, it is my understanding that Malaya will be given its independence in August of this year; also, I hear that Singapore may become independent a little later. In this connection, it is hoped that, if these areas are to become independent, they will not fall under the influence of Communist China and become Chinese citizens instead of Malayan citizens. They should remain within the Commonwealth so that more millions will not be subjected to the Communist Chinese yoke. Great Britain is to be commended for relinquishing those areas as colonies, and giving them their independence, but at the same time it would be tragic if the tremendous manpower and wealth of raw material they possess should be made available to Red China.

The Communists have proved time after time that neither their spoken word nor their written word can be trusted. They would be as perfidious in trade negotiations as they are in international relationships. By trading with Red China, North Korea, and other Communist bloc countries they will now have access to vital commodities that will eventually be used against the free world.

Therefore, we are very much worried about the present conference on disarmament which is being held here in London. We would be the first country to welcome disarmament, if we could rely on the Communists to do likewise; judging from past experience we definitely know that they will not abide by any agreement they sign. It will only tie the hands of the countries of the free world behind their backs while the Communists will become a superior power and enslave us all.

That, my dear friends, is the way we look at it. We foresee only heartbreak, disillusionment and disaster.

Now, you probably want to ask me what suggestions I have as to the road we should take. I firmly believe that our only salvation—yours and ours—lies in international cooperation of the free world through cultural and economic exchanges. By a continued, all-out embargo, we could bring any country to its knees economically in a short time, but weakly the free world gives in to pressures brought about by some of their unpatriotic businessmen who are after only money. And so it goes on and on until a country allows itself to be badgered into a policy of which it really at heart does not approve.

Other nations of the free world may not trade so extensively with England as heretofore in certain commodities now that they know there is the possibility that they may be used to manufacture goods whose ultimate destination is Red China. Those persons who hope to benefit by a relaxation of the trade embargo for the sake of a few extra pounds will find themselves with many less pounds in the long run. They also will see themselves in the unenviable position of being the perpetrators of a grievous crime: the possible destruction of the free world.

We do not believe the Communists are going to become reasonable and decent in their international behavior simply of their own free will. We do believe that pressure will have to be brought against them—far more so than has yet been done. For that reason, we continue to oppose the admission of Red China to the United Nations—at least until it clears itself of aggression by voluntarily withdrawing from North Korea. We believe an even more stringent economic blockade against the Communist countries might produce results. And we think the United Nations must be converted into an effective agency for enforcing justice in international affairs. This need is evidenced not only in Korea but also in other areas much closer to your own immediate concerns.

What does the future hold for Korea and for the world? I wish I knew. Of one thing, however, I am certain: our problems are not going to disappear simply because we find them disagreeable. In all history, freedom and democracy have been won by peoples who believed in them so deeply that they would die rather than surrender those rights. When we confront an ambitious totalitarian aggressor, we cannot merely wish him into agreeable behavior. We cannot assuage his imperialism by pretending it does not exist—which I fear is the method of those nations that describe themselves as "neutralist." We cannot achieve the millenium of perfect peace simply by crying out that this is what we desire.

Europe, like Asia, has a long history of dealing with military adventurers. You learned at Munich that compromise, concession, and retreat are not effective means of dealing with them. I believe the history of the past 12 or 15 years shows that this is not the way to deal with the aggression of the Communists.

What, then, do we need? It seems to me that our primary needs are for firmness and unity. We, who are still free, must stick together at all costs—and we must stand firmly for justice in international affairs, even when it hurts. We dare not afford the luxury of a foreign policy which refuses to take risks—for retreat in the face of threats is the certain pathway to inevitable defeat.

I hope you will forgive me for being blunt today, but I cannot urge too strongly that we take bold measures with the problems we face. We must fiercely resolve to remain steadfast even when buffeted by the protests of the weak who live only for the moment and take no thought of the future.

As the representative of the Republic of Korea, I come to you from a people of courage and of firm conviction that democracy and freedom are essential. I come to you to hold out a hand of fellowship between the democracy of the East and that of the West. So long as that tie remains strong, we cannot be defeated. Eventually, our faith will prevail, and freedom and stability will be restored to the world. That is our aim, and I am confident it is also yours.

Postal Rate Debate Goes to Foundations of the Republic

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pageland Journal of August 22, 1957:

POSTAL RATE DEBATE GOES TO FOUNDATIONS OF THE REPUBLIC

A significant public debate is being held in Congress on the subject of mail rates and the budget of the Post Office Department. At issue are increases in mail rates, and whether the raises should be placed on first-class mail, letters, and other sealed material, or second-class mail, which includes publications with editorial or news content such as newspapers and magazines, and third-class mail, which is unsealed, bulk mail, often not addressed to individuals, but to boxholders and generally is advertising in one form or another.

According to records, kept and made public by the Post Office Department, first-class mail just about pays its own way. Second-class mail, devised as a means of subsidizing the spread of public information in the infancy of the Nation and maintained as a device to spur greater interest in public matters, among other things, costs the Department a great deal more to handle than its revenue amounts to. Such huge publications as Life magazine, a large, heavy book mailed weekly as preferential second-class matter to millions of readers at a cost annually of millions of dollars, and the small weekly newspaper, which involves a total mailing cost of $100 more or less a year, are lumped in the same class. Third-class mail, which receives least attention and is subject to numerous cost-cutting rules while in the mails, is an overall loss class, the records indicate, but the difference is not significant. It boils down, then, to second-class mail. Should the subsidy be continued at the expense of other users of postal service, or should it be placed on a break-even or profitable basis?

It was brought out in debate recently that Life and National Geographic, two mass circulated magazines, got more than $60 million in 1955 in services in excess of what they paid for. This sounds absurd. Non-readers, in effect, help to pay for a reader's magazine. These large, money-making publishing companies are fully capable of paying the costs of distribution of their product, and therefore why shouldn't they.

They are in the same class with the publi-
ations at the other end of the line, the low-
rculation nondaily papers (most daily cir-
lation is by direct delivery rather than
rough the mails), some of them noncom-
ercial such as religious and educational pa-
rs. Take as an example a weekly with a
rculation of 5,000, which is large as week-
es go. A paper of this size might make a
rofit of $5,000 a year. If the publication
ere mailed at say first class rates, mailing
st would be $150 a week or $7,500 a year.
second-class rates, costs would be nearer
50 a year. The paper would lose money
d could not be published. Literally hun-
eds of community publications fall into
is category.

Of course, there could be compromises be-
ween the present low second-class mailing
tes and the first-class rates cited, but the
nswer seems to be elsewhere, for a business
at operates on so small a margin cannot
and many cost increases, even light ones,
d continue to operate. Perhaps the solu-
on lies in application of the old tax rule
hich says something like tax those who
ve, for the benefit of those who have not.
he mass circulation magazines could afford
carry a fairer share of the Post Office De-
rtment's expenses, because profitwise, cir-
lationwise, and in other respects they are
a different category than the small news-
per. If the lawmakers would consider
reating a new class of mail, or of dividing
he present second-class category into groups
sed on distance, weight, and dollar volume,
d especially on preferential treatment,
hich gives the high-powered magazines
hat amounts to first-class service at sec-
nd-class rates, the load could be better car-
ed by the publication industry as a whole
ith a lessening of the Government's losses.

Underlying the whole debate, however, is
more basic problem into which it is im-
ossible to go in space available. The Post
ffice Department was designed originally as
Government service department, not as a
ommercial enterprise. No one expects the
epartment of Agriculture to show a profit
n an experiment station, for instance. A
ederal judge is not required to collect more
nes than his salary and court expenses
mount to. The Congress should make up
s mind whether it wants to continue the
ostal service as a service, or whether it
ants to make money out of it. Once that
atter is clearly determined, the problem is
ell along toward solution.

Nasser's Expendables

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. MURRAY. Mr. President, events
n the Middle East again have taken an
nfavorable turn. The switch to the
eft in Syria, where known pro-Com-
unists have seized control of the army,
s one more example of how subversion
hich thrives upon hatred can take hold
f a government, to the detriment of the
eople.

It is obvious that Egypt's Nasser, close
lly of Syria, has been behind this sub-
ersion, just as he was helping the pro-
oviet government in Jordan a few
onths ago, before it was ousted by the
ing of Jordan.

Nasser's dream to become the undis-
uted ruler of an all-Arab empire, stretching from the Atlantic Ocean toward Pakistan in central Asia, can only come nearer to realization if he first succeeds in putting his own henchmen into power in those various Arab countries.

In this connection, I have read a very interesting exposé entitled "Nasser's Expendables." This article appeared in issue No. 50 of Prevent World War III, the magazine published by the Society for the Prevention of World War III, Inc., a nonprofit educational organization, 515 Madison Avenue, New York.

Mr. President, I am advised by the Public Printer that this article is estimated to make 2¾ pages of the CONGRESSIONAL RECORD at a cost of $211.75. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NASSER'S EXPENDABLES

It seems that modern dictatorships, by their very nature, thrive at the expense of their strongest supporters. Both Hitler and Stalin turned their friends and allies—domestic and foreign—into obedient satellites. When this was achieved, they liquidated the leaders who had helped them, and replaced them with their own henchmen. Those who remember the prewar Hitler and Stalin period, will also recall how these dictators cooperated with the various kings of the Balkan countries only to undermine their positions and oust them at the opportune moment.

THE EXPENDABLES

Egypt's strong man, Gamal Abdul Nasser, is filled with the same gratitude toward the Arab Kings. They are pawns—his expendables. Yet, Nasser would have never reached the position he now enjoys without the concrete help and financial support of the Arab Kings.

If the Kings ignored the fate which befell a number of European rulers, one would expect them to sit up and take notice when one of their own, former King Farouk, was sacked by the Egyptian dictator. However, this did not happen. Instead, they heaped praise on the bright young man. There appeared to be no doubt in their minds that Nasser's sole ambition was to revive the ancient glories of Islam. After all, it was he who outlined the grand design which made such a marked impression on the Kings.

"When I consider the 80 million Muslims in Indonesia, and the 50 million in China, and the millions in Malaya, Siam, and Burma, and the nearly 100 million in Pakistan, and the more than 100 million in the Middle East, and the 50 million in the Soviet Union, together with the other millions in far-flung parts of the world—when I consider these hundreds of millions united by a single creed, I emerge with a sense of the tremendous possibilities which we might realize through the cooperation of all these Muslims, a cooperation going not beyond the bounds of their natural loyalty to their own countries, but nonetheless enabling them and their brothers in faith to wield power wisely and without limits." (Egypt's Liberation by Premier Gamal Abdul Nasser, Public Affairs Press, Washington, D. C., p. 113.)

Whatever aspirations the Arab kings may have had with regard to this project, it goes without saying that Nasser had no intentions of taking a back seat. Possessed with the Fuehrer complex, he wrote: "And now I go back to that wandering mission in search of a hero to play it. Here is the role. Here are the lines, and here is the stage. We alone, by virtue of our place, can perform the role" (ibid., p. 114). In Nasser's self-appointed role supporting actors are superfluous. This holds especially true for the kings who are logically regarded by Nasser as a barrier to his insatiable ambitions.

Discussing one of the chief elements which allegedly prevented the Arabs from destroying Israel in 1947–48, Nasser writes, "* * * then, each in its own internal affairs encountered the same factors, the same ruling forces that had brought about their defeat, and forced them to bow their heads in humiliation and shame" (p. 95).

Therefore, it is clear beyond the shadow of a doubt, that the Arab kings are regarded by Nasser as an intolerable stumbling block. It is they who must submit completely to his will. But submission is only a temporary respite. They will live on his sufferance until the day that he prepares his assassins for the coup de grace.

Former French Premier Mollet referred to Nasser's book as the new Mein Kampf wherein an oriental Hitler lays bare his boldest dreams. The French statesman was not playing on words. Nasser's book shows all the earmarks of German geopolitical theory and even terminology. Nasser writes about the allegedly outdated concept of political boundaries and national states (p. 84) and stresses the need for living space (p. 85). In developing his thesis he delineates the three "circles": Arab, Islamic, and African. Nasser tells us that they are tangent to each other through the center which is Egypt. To hold the three circles firmly and to wield them as a gigantic geopolitical unit which can, if it wills, strangulate the world, is Egypt's holy mission since no one else is qualified to play it (p. 88).

KING HUSSEIN VERSUS NASSER

The crisis that shook Jordan in the spring of this year has its roots in Nasser's dreams. Like Hitler, the Egyptian dictator operates according to plan. When Hitler marched into the Rhineland, some people thought that this was merely the act of a German patriot asserting the God-given rights of his people. If those trusting souls had seriously studied Mein Kampf they would have recognized that Hitler's move was but a preparatory step toward wider pickings.

Nasser's seizure of Suez was also praised by many people as the expression of a legitimate national aspiration. A careful examination of Nasser's writings shows that the grab was not the work of an Egyptian patriot but the initial thrust of a man who desires nothing less than to be the lord and master of the whole Islamic world and its resources. It was a move to prepare the groundwork for the Jordan "Anschluss" with Syria and Egypt—the nucleus for the Arab "circle."

That Nasser and his strategists were working day and night toward this goal was hardly a secret. Yet, the king of Jordan, entranced by the thought of becoming a "big" king, seemed oblivious to the facts of life.

Nasser had carefully prepared the attack. The governmental apparatus in Jordan was honeycombed with his agents and stooges. However, it seems that the rather crude methods of Nasser began to tell on the king. Toward the beginning of the crisis Hussein found his tongue. He warned his then Prime Minister Suleiman Nabulsi that the Communist danger had grown. There were individuals, he declared, "who feign loyalty to Arab nationalism, indulge in hullabaloo, prevarication, falsehood, and heroics, thereby seeking to conceal their evil designs against Arab nationalism and the fact that they cooperate with our enemies in misleading the masses and exploiting the people."

Nabulsi contemptuously ignored Hussein for he knew that the king had become more and more isolated since the British had been ousted in March 1956. At that time Hussein was hailed as a great patriot. Actually, the riots and demonstrations resulting in the

removal of the British General Glubb as the Chief of the Arab Legion, had been engineered by Egyptian agents together with an assortment of pro-Communists and Nasserites who had infiltrated Jordan's Government. Hussein's difficulties were compounded by the fact that by losing the British subsidy of 30 million pounds annually, he had placed himself at the mercy of Nasser who had solemnly pledged that Egypt, Syria, and Saudi Arabia would make up a great part of the deficit.

While the noose around Hussein's neck was drawn more tightly, Prime Minister Nabulsi, an ardent devotee to the Nasser cause, was already speaking of the end of Jordan. On one occasion he proclaimed flatly, "Jordan's destiny is to disappear." Another time he said, "Jordan cannot live alone. Our intentions were from the beginning to work for Arab unity. The first step is a sort of federation and the first phase of federation is to have it between Syria and Jordan * * *. Practical negotiations are now making progress * * *. There is no longer any doubt that federation is coming."

Nabulsi's words were translated into the demonstrations and riots in April which threatened to overthrow King Hussein. The London Economist (April 27, 1957) reported how the rioters carried the flags of Jordan, Syria, and Egypt. Nasser's picture was most prominent. The main slogan of the mobs was, "Federal Union With Syria and Egypt!" It was these initial demonstrations which broke Nasser's spell over Hussein. By the end of April the King, with great courage smashed the conspiracy and the Nasserites fled or were imprisoned.

PROVOCATION THROUGH PROPAGANDA

At the beginning of the crisis Nasser was confident of success. Although he regarded Hussein as "an emotional irresponsible playboy" (New York Times, April 28, 1957), he was sure that his loyal followers in Jordan would keep the King in line. Egyptian propaganda reflected the carefulness with which Nasser played his cards during those dramatic days. On April 18, 1957, the Cairo radio reported a commentary from the Syrian newspaper Barada: "The battle is now tense in Jordan between the forces of imperialism and reaction and the forces of patriotism, and the Jordanian people who are renowned for their gallantry and strength in defense." The radio also referred to another Syrian newspaper, An-Nasr which said that Hussein should seek the advice of his Arab "friends," that is King Saud and Presidents Al-Quwwatli (Syria) and Nasser. The paper declared that they were the true "trustees" of Jordan and that they were dedicated to helping Hussein achieve complete freedom. "We do not believe that King Hussein's opinion is different from that of the three leaders or that his means are different from ours."

Nasser's propagandists were trying to give Hussein the benefit of the doubt. With a condescending air they portrayed him as the innocent victim of an "alien imperialistic conspiracy." The Cairo radio (April 22, 1957) pretended to weep over Hussein's plight and charged that the ousting of Nabulsi and a couple of pro-Nasser generals was really the work of the "imperialists." Yet, even in this broadcast there was already a faint hint that perhaps Hussein himself was no longer willing to toe the mark: "Is it possible by these torturous means, devoid of honor, sincerity, straightforwardness, and respect for the will of the people, to succeed or divert a people from their aims and objectives?" Hussein's name was not mentioned but this ominous warning was made: "Those who planned the plot, who participated in it, and those who supported it, will relent sooner than they imagine * * *."

Thus, Nasser's propagandists shifted to a bolder line as it became apparent that Hussein was getting out of hand. On April 23, the Egyptian radio denounced what it called the conspiracy against Jordan. It named the heroes of Jordan's independence; i. e., Generals Nuwwar, Huyari, and former Prime Minister Nabulsi. Since it was the King who had eliminated this trio from positions of power, the Egyptian propaganda guns were inevitably shifting their sights on the King himself. This was the meaning of the Egyptian radio broadcast on the following day which termed the strife in Jordan "the struggle of Arabdom." The broadcaster affirmed that the Arab nation was in the midst of the battle in Jordan and that Jordan will triumph in the same way the Arab nation has triumphed.

As the plot against Hussein unfolded with all its ramifications, the King finally took to the radio on April 25, 1957. Though he castigated Israel, he also leveled a sharp attack against his Egyptian friends: "I had to believe that the slightest duties of cordiality and gratitude would have required our brethren in Egypt to cease at least inciting the people through the press and radio by attacking my person—I who had sworn my blood for the sake of dear Egypt at the time of its catastrophe—and to cease fabricating statements and falsifying utterances in an attempt to plot out the conspiracy against the throne—the plot which is being investigated by a reliable group headed by a higher ministerial committee, the plot which is confirmed and upheld by the fleeing of certain conspiring officers for fear of being uncovered.

"I was patient for a long time regarding the mistakes of these Egyptian tongues and pens which attacked and defamed us, which attempted to incite certain of our people against us, and destroy the true situation in our country, and which released lies, rumors, and propaganda. We were patient and will remain patient, suppressing rage and forgiving (them?) in fulfillment of our promise to Egypt and in maintaining our solidarity, fraternity, Arabdom, and unity. We had hoped that this misleading propaganda would not flare up, spread, and become brutal in a way which has become difficult for our Arab dignity and prestige, and our national heritage to tolerate injustice and wrong."

On April 27, the Egyptian radio toned down—apparently stung by Hussein's accusations. Once again Cairo pretended to shed tears about the dangers to Jordan's independence and security. "O Arabs," an Egyptian radio commentator declared. "Who is Jordan? Jordan is your country and mine. Jordan is our country, my brother. Jordan is the country of all the Arabs. The independence of Jordan is my independence and yours, my brother. The independence of Jordan is our independence; it is the independence of all Arabs. The security of Jordan is your security and mine, my brother. The security of Jordan is the security of all the Arabs."

The new approach emphasized that Egypt had not been interfering in Jordan but was only naturally solicitous for her welfare. "We of the voice of the Arabs," the Cairo radio said, "have no right to speak in the name of Jordan. Jordan has its own nationalism."

In this connection it will be recalled that on April 18, the Egyptian radio had named Nasser as one of the trustees of Jordan's fate, but Hussein's surprising show of defiance obliged the Egyptian propagandists to disclaim any thought of intervention. However, the change was of short duration for on May 4, the Cairo radio once again began to employ threats and innuendoes: "Those who concocted the Jordanian plot did not take into consideration the fact that the day will come when the plotters will be disgraced, when everything will be exposed before the eyes of world public opinion, and when the mask will be taken off the faces of those who plotted and committed crime without heeding the lessons of history. Truth can never be suppressed, and crime will never pay." The following day (May 5, 1957), the Cairo radio sought to discredit Hussein's policies: "The Jordanian budget which the present Government will submit cannot be described as a budget of an Arab State proceeding in the caravan of liberation. It is a novel budget, the main item of which is American aid given to this Arab country as a reward for those who hatched the imperialist plot and for the bold measures they took against the free and struggling people."

On May 8, it became clear even to Egyptians that the King was winning out. The Cairo radio was incensed and railed against the imperialists and their stooges. As if it were warning Hussein directly, the radio quoted Nasser: "We shall antagonize those who antagonize us and we shall be peaceful to those who are peaceful to us."

The Egyptian Home Service, broadcasting on May 10, deplored that Jordan "by virtue of the plots of imperialism and its lackeys has been transformed into a state about which the imperialists deem it their right to speak with malice * * *." It charged that Jordan's status had changed "after it permitted the supporters of reaction and imperialism to raise their hands and stand in the way of the people's will." The broadcast concluded with the warning that the people would yet emerge victorious for the sake of the whole liberated Arab world.

EXPOSING NASSER

However, by this time the Jordanian propaganda machine had largely outgrown its fears and inhibitions and struck back. It noted that at one time the Egyptians would praise Arab leaders when they did the bidding of Cairo and would denounce them when they strayed from Nasser's camp. The broadcast referred to the stand taken by the Egyptian press on the crisis in Jordan. It charged that the Egyptian papers relied on information of traitors to Jordan and accused Egypt of having lied about the true conditions obtaining in the capital of Jordan. The broadcast noted that when General Hyari first accepted the post chief of staff under Hussein, the Egyptian press smeared him as an "imperialist stooge." On the other hand, when he fled to Damascus the same paper praised him.

The Jordanian radio commentator, understating the case, noted that this kind of propaganda based on false reports and provocation, "harms relations between Egypt and the other Arab States." In conclusion the commentator said: "We request that the Egyptian Government and the Ministry of Guidance in Egypt reimpose supervision on the Egyptian press and the Voice of the Arabs broadcast so as to avoid in the future any misunderstanding between sister Egypt and any other Arab State." As was to be expected Cairo, by this time, arrogantly ignored Jordan's rather mild protest of interference.

This forced Hussein's hand and on May 11 the Jordanian newspaper Al-Urban broke wide open the conspiracy hatched by Nasser and his cohorts. It was a plot, the newspaper declared, which not only involved the overthrow of King Hussein but also the thrones of the Kingdoms of Saudi Arabia, Iraq, and Libya. The newspaper named names of key Egyptian agents and also revealed the identity of certain representatives from the various Soviet embassies in the Middle East. The people of Jordan were told the pertinent facts concerning the nefarious role of Egyptian representatives in Jordan. King Hussein was their target and one of the leading organizers of the plot against the King was the Egyptian Military Attaché Fuad Hilal. Together with the Egyptian consul general in Jerusalem he was expelled from Jordan. The expulsion deepened the rift between Jordan and Egypt and showed that

e King had become disenchanted with sser's pan-Arabic schemes.

In recounting the zigs and zags of the gyptian propaganda line during the crisis e thing becomes clear, that is, Nasser ove with all his might to control the nts in that country so that his dream absorbing Jordan would be fully realized. was a cat and mouse game—first pretend- to be concerned about Hussein's diffi- ties—pretending that Egypt had no de- to interfere but on the contrary wished ssein well. When Hussein sought to clean the nest of Nasserites the Cairo radio gan to squeal like a stuck pig, yet even en direct attacks against the King were lded. However, the logic of events in rdan could no longer contain the feeling outrage which grew in the breasts of sser and his coconspirators. They threat- ed Hussein and even now seek in every ssible way to turn his people against him. The Jordan story has had a profound ef- t on recent developments in the Middle st. Like a flash of lightning it cleared the heavy atmosphere of confusion and sion made impenetrable by the cunning opaganda and bold activities of Nasser and s henchmen.

KING SAUD AGAINST NASSER

The crisis in Jordan would have never ched such grave dimensions, had it not en for the fact that Nasser not only re- ved help from the minions of Moscow but o from King Saud of Saudi Arabia. Saud, , had sat at the feet of the bright young n from Cairo. Nasser fascinated him and doubtedly the King dreamed about the day en the whole Moslem world would lay strate before his throne. It was there- e relatively easy for King Saud to pro- e millions of dollars for the terrorists d propagandists who flooded the Arab rld under the direction of Nasser and his i advisers. It was Saud's money received m the royalties paid by American oil com- nies, that subsidized the activities of Nas- 's men in Jordan.

Events in Jordan shocked King Saud and e confidence which he reposed in Nasser gan to wane. Indeed, it has been reported at after Nasser blocked the Suez Canal ereby cutting off much of Saudi Arabia's revenues, the King began to wonder ere Nasser's program would lead to. King ud received his answer in relative short der. According to reliable reports, the ng discovered that the Egyptian military aché in his capital had organized and anced a terrorist band whose ultimate get was the King himself. Saud's secu- y police arrested the plotters who were med with guns, grenades, and explosives. e men admitted planning the King's as- ination and implicated Col. Ali Kha- aba, Egypt's military attaché. According Time magazine (May 13, 1957), the King s outraged and expelled a number of yptians and ex-Palestinians. "He then cked Hussein to the limit."

Nasser was dumbstruck. The idea that might lose Saud's subsidies made him perate. According to Joseph Alsop (New rk Herald Tribune, May 6, 1957), top Nas- representatives sought out King Saud in very shadow of the sacred Kaaba in cca. One Egyptian member of the delega- n swore that Nasser was innocent as a wborn babe. Nasser did not deny that plot existed but disavowed personal re- nsibility. By this time even Saud seems have reached the point of understanding at he might suffer the fate of other lead- s, including King Michael of Rumania d Jan Mazaryk of Czechoslovakia. Re- rts in the press now tell us that Saud has finite second thoughts with respect to sser's dream world. Saud who financed sser in Jordan hoping that he would be hly rewarded for the money; Saud who had helped Nasser in spreading terror throughout the Middle East; Saud who paid for the riots against the King of Iraq, was sobering up at last.

NASSER REACHES FOR IRAQ

The Government of Jordan had accused Nasser of fomenting rebellion against other thrones in the Middle East. These facts have been published in the West last year. The noted British correspondent Sefton Delmer reported to the London Daily Express (January 23, 1956) that the King of Iraq had proceeded to purge his army, having learned that Nasser had infiltrated "the officer corps with the aim of overthrowing Iraq's anti-Soviet Premier Nuri, forcing the abdication of the King and establishing the same kind of military dictatorship in Iraq as in Egypt."

As in Jordan and Saudi Arabia the Egyptians worked through their military attaché, Col. Mahmoud Gamel Al Hinawi, Cairo's military attaché at Baghdad, was responsible for the operation. Only the quick and resolute action of the Iraqui Government uncovered the plot which resulted in the arrest of Colonel Hinawi's number one agent, the German-trained Egyptian Commando Officer Capt. Mohamed Ali Issa. Commenting on the plot, Delmer wrote: "Yes, it is a strange world when ultrarich princes of Saudi Arabia distribute dollars they have received from American oil companies to Communist agents in order that the Communists may spread chaos and anarchy in the neighbor country."

UNDERMINING LIBYA

The King of Libya has also found his friend Nasser a bit difficult. Nasser's agents are omnipresent in Libya—as they are in other countries of that area. The London Economist (April 13, 1957) noted that many of the townspeople in Libya and especially the youth "feel the attraction of the Pan-Arab ideas and methods of which Colonel Nasser has made himself the exponent."

Nasser, of course, has fully exploited these pan-Arab sentiments and his agents have distributed tons of propaganda material throughout the country. The propaganda has been markedly effective to the extent that "humble Cyrenaican parents can be seen urging their children to lisp the name of Gamal Abdul Nasser as they gaze at portraits of the Egyptian leader in the windows." Nevertheless, King Idris has also become uneasy. The Egyptian military attaché in that country, Ishmail Sadek, organized a so-called "Front for the Struggle of the Libyan People." Ignoring the fact that he was but a guest of Libya, he publicly accused the Government of King Idris of being "the servant of imperialism." He backed up his charge by smuggling in at least 28 cases of automatic arms which were hidden in the Egyptian Embassy for future distribution at the appropriate time. The activities of Sadek impelled King Idris to take a stand. The government sent him out of the country along with a number of teachers supplied by the Egyptian Government to instruct young Libyans.

NASSER IS "PRO-NASSER"

Perhaps some people who like to indulge in historical analogies might want to depict Nasser as Egypt's Thomas Jefferson resolutely opposed to monarchy. However, such comparisons are preposterous and misleading. It is a known fact, for example, that Moscow, too, has disposed of kings but who would want to compare Stalin with Thomas Jefferson? Prorepublicanism has no part in Nasser's philosophy. The Lebanese Government which is a genuine republic, can testify to that. The Egyptian dictator, under the guise of fighting imperialism, has been busily at work trying to undermine Lebanon and its republican institutions.

The Lebanese Government has already exposed this conspiracy hatched by the Egyptian Ambassador Abdel Hamid Ghalib. The Ambassador has had large funds at his disposal to interfere in the political life of Lebanon. Joseph Alsop, reporting in the New York Herald Tribune (May 20 and May 22, 1957), states that the Egyptian Embassy in Beirut is the chief political headquarters for the pro-Egyptian forces. These elements have tried to create turmoil and civil war during the recent elections, but the Lebanese leaders who apparently have been wise to Nasser's designs for a much longer time than the Arab kings, have successfully smashed the plot.

THE EDUCATION ANGLE

Nasser's drive to subvert the regimes of the Arab kings not only involves terror, assassination, and civil war, it also includes a carefully laid out program to win over Arab youth. The London Economist (April 27, 1957) devoted an informative article on this subject under the title "Egypt's Empire Builders." Realizing the growing urge on the part of the Arab youth to gain literacy and taking advantage of the fact that in most Arab countries there are few native-born teachers who are equipped to meet the educational needs of the people, Nasser has developed a corps of teachers throughout the Arab world. While the standard and quality of Egyptian pedagogy may be inferior to that of Western standards, it is still high by the standards of the Middle East. "In each oil-bearing country, therefore, the protagonist of a greater Arab nation under Egyptian management has an instrument ready to hand—the schoolmaster for the new school, not to mention the inspector for the schools systems as a whole." Even in the tiny sheikdom of Kuwait the number of Egyptian teachers is more than double that of native teachers.

While not all of the Egyptian teachers in the various Arab countries are pro-Nasser, the London Economist notes that everywhere they are interspersed "with members of Egypt's cultural mission—men and women glib with patter from Cairo's Ministry of National Guidance and capable ('like the one rotten mano in a basket,' as an Iraqui put it) of injecting into a whole school the tincture of disloyalty to the local ruler or government." From time to time some of these teachers are dismissed for becoming too enthusiastic over Nasser and for paying little heed to their duties as teachers. As noted in the case of Libya, a number of the 600 Egyptian teachers in that country were deported. The same holds true for Iraq where groups of teachers have been dismissed although there are still about 500 of of them in the country.

The Economist observes that even when the more ardent Nasserites among the teachers are removed, there are still jobs in other Middle East countries. A point that at once strikes anyone who scrutinizes the efficient work they are doing, is their proprietary behavior. "We are doing this and that. We intend to run a university here." Who is we? Egypt's greater Arab nation, not the Kuwaitis. Wherever they go, these Egyptian teachers who are subsidized by Cairo, faithfully spread the gospel preached by the bright young man. Hitler saw the value of this kind of operation and suceeded in establishing powerful fifth columns in many countries abroad as an adjunct to his military plans.

The amazing influence that Nasser's teachers exert throughout the Arabic world, prompts the Economist to ask the "$64,000 question"; "How far is a ruler such as King Saud, or the sheik of Kuwait, aware of the anomaly whereby he is paying Egyptians to teach the next generation of his subjects that thrones and hereditary rule are out of date, that the western race that has created the wealth that produces superb classrooms and self-wiping blackboards, is fit only to

be booed, and that a role of importance for the Arabs hangs on creating a greater Arab nation run in subservience to Cairo?" To what extent the question can be answered, only the future will tell. If the rate of present developments continues, the kings may have to give their answer sooner than they expect.

"TO THE BITTER END"

Nasser's role in Jordan has helped to dispel many illusions. The kings are no longer as comfortable as they were when Nasser first came to them. His initial failure in Jordan was in no small part due to the support that Hussein received from the Kings of Saudi Arabia and Iraq. This cold fact must have made a profound impression on the Egyptian dictator and may induce him to take more drastic measures.

Will the Kings be prepared for the coming counter attack? Nasser's next move may be camouflaged by the smokescreen of a new drive on Israel. The "bright young man" has been adept in employing the bogey of Israel as a means of whipping recalcitrants back in line. Will the Kings dare to penetrate the anti-Israel fog which has already led them to the brink of self-destruction?

There is no doubt that the struggle betwen Nasser and the Arab Kings will continue to the bitter end. Nasser will never give up his dream to rule the Arab world and only the Kings stand in his way. If the Egyptian dictator is to succeed, he must eliminate them.

Civil Rights

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. O'HARA of Illinois. Mr. Speaker, months ago in my report to my constituents in the Second District of Illinois I said:

"The civil-rights bill will reach the floor of the House within the next fortnight, and I believe is certain to pass without crippling amendments. Contrary to the fears of some I look for the bill to clear the hurdles in the Senate without filibuster."

That was at a time when the defeatist attitude was pretty general and a filibuster regarded as inevitable. I am glad that I did not mislead my constituents in my prediction by accepting this attitude. Yesterday is not today, and always we go forward, too slowly perhaps, but always forward.

The so-called compromise bill leaves very much to be desired. It is a frail little craft, with seams in the hull that leak, to attempt to navigate the sea of prejudice and discrimination in the search for the promise land of an America of real equality in the exercise of the rights dear to all men.

But, Mr. Speaker, it will make the voyage in safety and its landing will be on the shores of that America of real equality for all men and women. But ours is the continuing, tireless, unrelenting job of standing by as the sailors, to mend the seams in the hull with strengthening amendments beginning as soon as we convene for the second session. To that, Mr. Speaker, we are dedicated. And now that the start has been made, feeble though it may be, we shall push the harder for the prompt enactment of civil-rights legislation with teeth protecting all the people of the United States in the exercise of their rights as Americans to live in the society of their fellow Americans on a plane of equality and without discrimination of any nature based on the circumstances of race, religion or station.

We have come a long way. We still have far to go. But always we go forward, and just ahead is waiting us the sunshine of brotherhood, if our faith and our courage remain strong.

The Immigration Problem

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the Jewish Times, of Massachusetts, and an editorial from the Pilot, the archdiocesan paper of Boston, regarding Senate bill 2792, the immigration bill.

In addition, I ask that there be printed in the Appendix an explanation of Senate bill 2792.

There being no objection, the editorials and the explanation were ordered to be printed in the RECORD, as follows:

[From the Jewish Times]

NEW IMMIGRATION BILL

Some cracks of light were cast on the shadows of our immigration policy last night with the favorable action by the Senate on Massachusetts Senator JOHN F. KENNEDY'S immigration bill. This bill, which is said also to have the support of Chairman FRANCIS E. WALTER, of the House Immigration Subcommittee, would aid in the reunion of families, lift mortgages on quotas, and grant authority to admit orphans adopted by United States citizens.

Most important, the Senate finally has acted on that portion of the Kennedy bill which proposed the admission of Egyptian Jews and other beleaguered refugees through utilization of 14,000 of the unused visas provided under the Watkins Refugee Relief Act of 1953. Certainly the Egyptian Jewish refugees were as much victims of totalitarianism as those from Hungary and deserve such favorable treatment.

The piecemeal action contained in this legislative measure again highlights the crying need for a complete overhaul of our immigration system, which this newspaper has so continuously and consistently urged. Aside from the aspects of fair administrative procedure in the immigration mechanism, the vile national origins quota, the dynamic growth of this Nation's population, and the disappearance of physical frontiers calls for new attention to the philosophy governing immigration policy. Bills such as the one under discussion deserve passage because they correct bad situations, but their very minimum nature whets the appetite for some overall action in the field of immigration.

[From the Pilot, Boston, Mass.]

S. 2792

This week, at long last, an immigration bill was allowed to pass in the Senate, and it will now go to the House for further action. Senator KENNEDY, through very unpromising days, continued to press for some effective legislation and although this new bill (S. 2792) is not all that he wanted, it is probably the very best that could be had at the present. The reallocation of basic quotas had to be abandoned, and the regularization of parolees was also dropped from the legislation. This last item remains a blot on our generous gesture toward the fighting Hungarians last year and and should be attended to without delay.

We must, however, in these matters count our blessings, and in this case blessings won by diligence and insistence on the part of the junior Senator. Between the civil-rights fracas and the foreign-aid confusion it seemed for a while that there would be no immigration bill at all this session. The Senator's bill, among other provisions, will permit entrance of from sixty to seventy thousand people on "the family reunion" basis, by which near relatives are given preference through the allocation of special quotas in their regard. At the same time, every heart will warm to the provision which will allow an unlimited number of children under 14 to come to America if adopted by United States citizens. Besides this, the unused quotas from the Refugee Relief Act, which may run as high as 18,000 (though estimates vary), will be redistributed. These three items alone should encourage those who have labored so hard to bring charity and justice into our present legislation.

The struggle is far from over yet, all the same. It is just possible that some elements unfriendly to the philosophy of charity represented in this bill will aim at giving it trouble in the House. There are many champions in that body who can rise to its defense and we feel certain that the representatives from this area, now, as in the past, will be heard. The bill should be passed, and we are confident that it will be acted upon favorably at once.

ANALYSIS OF KENNEDY IMMIGRATION BILL, S. 2792

Section 1: Under existing law some children are unable to accompany their parents because it is not clear that the term "stepchild" includes illegitimate children. The section clarifies existing law.

Section 2: Amplifies the definition of "child" as contained in the basic statute so as to include illegitimate children and children adopted while under the age of 14.

Section 3: Makes clear that spouses and children of aliens admitted to the United States under the skilled workmen provisions of the law shall be entitled to first preference, thereby allowing families to be reunited.

Section 4: Allows an unlimited number of orphans adopted by United States citizens to enter the United States during next 2 years. It is estimated that approximately 5,000 orphans will be ready to come to the United States within the 2-year period.

Section 5: Vests the Attorney General with discretionary authority to admit the spouse, child or parent of a citizen or an alien already in the United States, notwithstanding the fact that the relative may have committed some offense which is a bar to entry into the United States.

Section 6: This section would permit the Attorney General to authorize a visa for, and to admit to the United States, under such controls as he deemed necessary, the spouses, parents, and children of United States citizens or of lawfully resident aliens, notwithstanding the fact that such relative

s afflicted with tuberculosis. This is another measure primarily designed to alleviate hardship and to prevent the unnecessary separation of families.

Section 7: Forgives certain aliens misrepresentations which they made in connection with their applications for immigration. Most of these persons made these misrepresentations in order to avoid forcible repatriation by the Communists to countries behind the iron curtain.

Section 8: This section would grant discretionary authority to the Secretary of State and the Attorney General to waive the requirement of fingerprinting on a reciprocal basis, for aliens coming to the United States on a temporary basis.

Section 9: This section grants the Attorney General discretionary authority to adjust the status of certain skilled specialists who are in the United States temporarily but whose services have been deemed to be urgently needed in the United States. Spouses and children of those aliens would also be granted nonquota immigrant status. This section applies only to foreign skilled specialists who are in the United States on July 1, 1957.

Section 10: This section cancels the mortgages imposed on the quotas of certain countries pursuant to the Displaced Persons Act and other legislation. It is estimated that the lifting of these mortgages will result in approximately 8,000 quota numbers being made available each year, particularly in countries such as Latvia, Lithuania, Estonia, and others whose quotas were heavily mortgaged.

Section 11: Section 323 of the Immigration and Nationality Act, relating to the naturalization of children adopted by citizens of the United States would be amended by this section so as to authorize the naturalization of children adopted by United States citizens in those cases in which the parent is stationed abroad in the Armed Forces or in the employment of the United States Government, or of an American firm or international organization when it is intended that the child reside abroad with the parent until the parent's employment is terminated.

Section 12: This section would permit persons who are in the first, second, or third preference categories and who have made application to the Attorney General before July 1, 1957, to enter the United States immediately. This section would permit the reunion of members of families who have been separated by the workings of the Refugee Relief Act and other laws and would permit the admission of about 33,000 aliens including 20,000 Italians and 3,500 Greeks.

Section 13: This section would permit a limited number of Government officials and their immediate families who have come to the United States in a diplomatic status to have their immigration status adjusted at the discretion of the Attorney General when such an adjustment is in the best interest of the United States. This provision is designed to enable diplomatic and other officials of Communist governments who have defected to remain in the United States as permanent residents.

Section 14: A technical provision making certain definitions contained in the Immigration Act applicable to the Kennedy bill, S. 2792.

Section 15: Provides that approximately 18,000 nonquota visas which were authorized under the Refugee Relief Act of 1953 but which remained unused when that act expired in December of 1956 would be available to bona fide refugee-escapees who have fled because of persecution on account of race, religion, or political opinion. These nonquota visas would be available for refugees throughout the world, including refugees from Egypt and north Africa, those located in Spain, the NATO countries, Austria, and the Far East. Under this provision Egyptian refugees from Egypt and Hungarian refugees who are in Western Europe could enter the United States.

Section 16: Provides that a short period of overseas residence by a child admitted for permanent residence shall not constitute a break in United States residence for purposes of naturalization.

Statement of Congressman Cecil R. King in Opposition to Certain Proposed Revisions of Internal Revenue Service Regulations Relating to Interstate Traffic in Firearms and Ammunition

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. KING. Mr. Speaker, today a public hearing is being held by the Director of the Alcohol and Tobacco Tax Division of the Internal Revenue Service in Washington, D. C., on the proposal to amend and reissue regulations relating to interstate traffic in firearms and ammunition.

A number of the proposed regulations have been considered by the Congress and intentionally excluded from the Federal Firearms Act. Should any such regulations be deemed worthy of consideration, they should be properly presented to the Congress for possible inclusion in legislation, rather than being promulgated as administrative regulations of doubtful validity.

Mr. Speaker, I wish to submit my views in opposition to these proposed revisions:

The Federal Register for May 3, 1957, and for July 10, 1957, published notice of proposed revisions in the Internal Revenue Service Regulations pertaining to the enforcement of the Federal Firearms Act. In neither publication did there appear any general statement of the basis and purpose for the new regulations being proposed as is provided for in the Administrative Procedure Act, title 5, United States Code, section 1003 (b). In the absence of such statement of basis and purpose, certain of the new proposals would appear to be unnecessary, unduly restrictive and improper. Sections 177.50, 177.51, 177.52, 177.54, and 177.55 have received widespread public opposition. In view of this opposition, I believe that the Internal Revenue Service should carefully review its position. My own views on the sections in question are as follows:

I. IDENTIFICATION OF FIREARMS SECTION 177.50

Each manufacturer and importer of a firearm shall identify it by stamping (impressing), or otherwise conspicuously placing or causing to be stamped (impressed) or placed thereon, in a manner not susceptible of being readily obliterated or altered, the name and location of the manufacturer or importer, and the serial number, caliber, and model of the firearm. However, where imported firearms are identified by the foreign manufacturer in a manner prescribed in the foregoing sentence, additional stamping will not be required if the information prescribed by this section appears. None of such information may be omitted except with the approval of the director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington 25, D. C.

From the time of the enactment of the Federal Firearms Act to the present, it has not been the practice of manufacturers to impress serial numbers of every firearm manufactured. In fact, a majority of all firearms are and have been manufactured without serial numbers and without some or all of the information called for by this section. The law provides that it shall be unlawful to transport or receive in interstate or foreign commerce a firearm from which the manufacturer's serial number has been removed, obliterated, or altered, and the possession of any such firearm shall be presumptive evidence that such firearm was transported or received in interstate commerce in violation of the law. Thus, it was clearly the intent of Congress that a penalty should attach to the possession of a firearm from which the manufacturer's serial number had been removed, obliterated, or altered. Congress did not attach this penalty to the possession of a firearm which had been manufactured without a serial number nor did Congress require, in the law, that serial numbers be impressed on all firearms manufactured. The failure of Congress to include such a requirement in the Federal Firearms Act, especially in view of the prevailing business practice, seems conclusive that Congress did not intend to require every firearm to have a serial number or to carry the additional information which would be required by section 177.50 of the proposed regulations.

In my opinion, the provisions of the statute are plain and unambiguous and the Internal Revenue Service does not have the authority to extend or to amend the provisions of the statute by regulation.

In *Koshland* v. *Helvering* (298 U. S. 441, 80 L. Ed. 1268), the Supreme Court discussed an administrator's power to issue regulations in the following language:

> Where the act uses ambiguous terms, or is of doubtful construction, a clarifying regulation or one indicating the method of its application to specific cases not not only is permissible but is to be given great weight by the courts. And the same principle governs where the statute merely expresses a general rule and invests the Secretary of the Treasury with authority to promulgate regulations appropriate to its enforcement. But where, as in this case, the provisions of the act are unambiguous, and its directions specific, there is no power to amend it by regulations.

The Federal Firearms Act is plain and unambiguous; it needs no clarification in this respect. The proposed regulation actually extends the coverage of the act and is therefore not a proper regulation.

II. FIREARMS RECORDS (SEC. 177.51)

This proposed section contains three objectionable requirements which will be discussed separately. It provides:

Each licensed manufacturer or dealer shall maintain complete and adequate records re-

flecting the receipt (whether by manufacture, importation, acquisition from other licensees, or otherwise), and the disposition, at wholesale or retail, of all firearms (including firearms in an unassembled condition, but not including miscellaneous parts thereof) physically or constructively received or disposed of in the course of his business. Entries in such records shall be posted at the time of each transaction, or in each instance not later than the close of business on the day next succeeding the day on which the transaction occurs. The records prescribed by this subpart shall be in permanent form, separate and distinct from records pertaining to other merchandise handled by the licensee, and shall be retained permanently on the business premises until discontinuance of business by the licensee.

The Federal Firearms Act provides:

Licensed dealers shall maintain such permanent records of importation, shipment, and other disposal of firearms and ammunition as the Secretary of the Treasury shall prescribe.

The term "permanent records" as used in the act, was obviously used to mean records in permanent form as contrasted with temporary records such as sales slips. The language "permanent records" cannot logically be construed to mean permanent records permanently retained as this section of the proposed regulations would require. That this was clearly the intent of Congress in the matter is borne out by past administrative regulations which have required the retention of dealers' records in permanent form for at least 6 years. There can be no question that dealers' records should be retained so long as they may be needed and useful in carrying out the provisions of the act. However, the statute of limitations applicable to offenses defined in the Federal Firearms Act is 5 years. It is difficult to see how the dealers' records would be of value in carrying out the provisions of the Federal Firearms Act after the 5-year statute of limitations. This proposed regulation would make each dealer and each manufacturer a permanent public archives. Such a requirement is unrealistic and unreasonable.

Equally objectionable is the provision in section 177.51—and this applies equally to section 177.52—that manufacturers are required to keep and retain such records. The statute requires only dealers to maintain records and the application of the statute to dealers was obviously deliberate. In the bill, S. 3, 74th Congress, which was amended and became the Federal Firearms Act, the following language was contained in section 3 (d):

Licensed "manufacturers" and dealers shall maintain such permanent records of "manufacture," importation, shipment, and other disposal of firearms and ammunition as the Secretary of Commerce shall prescribe.

The quoted language was omitted in the bill as enacted. Thus Congress did not intend to require manufacturers to maintain records and the proposed regulation, being contrary to the will of Congress, should not be adopted.

Also objectionable under section 177.51 is the requirement that records of receipt of firearms and ammunition be maintained. The statute requires the keeping of records of "importation, shipment, and other disposal of firearms and ammunition." Regulations necessary to carry out this provision would be proper. Section 177.51, however, goes beyond this and requires the maintenance of records not required by Congress. Clearly, neither production nor receipt are included in the statute, the language of which is plain and unambiguous.

III. AMMUNITION RECORDS (SEC. 177.52)

Section 177.52 provides:

Each manufacturer and dealer shall maintain, on the licensed premises, complete and adequate records reflecting the production or receipt and the disposition at wholesale or retail of all pistol or revolver ammunition. The ammunition shall be described as to manufacturer, type, caliber, and quantity and the identity of the persons from whom received and to whom sold must be shown.

Objections to the inclusion of "manufacturer" in the above regulation and objections to the application of the regulation to the "production or receipt" of pistol or revolver ammunition have been covered under section 177.51 and are equally applicable to section 177.52. It is my opinion that this proposed regulation will place an intolerable burden on manufacturers and dealers. That such records will be required to be kept forever compounds its unreasonableness. An infinitesimal fraction of all pistol and revolver ammunition produced and sold is used illegally. The doubtful value of the regulation is far exceeded by the tremendous burden which would be imposed upon thousands of honorable and legitimate businessmen throughout the Nation. As an indication of the doubtful value of this regulation, I would point out the fact that it is commonly accepted business practice for small-arms ammunition to be handled by thousands upon thousands of very small local hardware and general dry-goods merchandisers. Many of these neither ship nor receive firearms or ammunition in interstate commerce but deal entirely with jobbers within their own State. It is conservatively estimated that as many as 50,000 such small rural dealers may not be licensed under the Federal Firearms Act and would not be subject to its controls.

IV. OVER-THE-COUNTER SALES TO INDIVIDUALS (SECTION 177.54)

Section 177.54 provides:

Where disposition of firearms or ammunition is made by over-the-counter sale or distribution to individuals, the persons to whom the firearms or ammunition are sold, distributed or delivered will be required to acknowledge receipt thereof in their own handwriting in the record prescribed by this subpart.

This provision runs counter to the purpose of the act as reflected in its legislative history. Stripped of its veil, it is nothing more nor less than a requirement of registration of persons who purchase firearms or ammunition. Congress refused to incorporate such a provision in the National Firearms Act and in the Federal Firearms Act. During the hearings on S. 3, April 16, 1935, the then Assistant Attorney General Keenan wanted a more drastic bill in which such a provision as this would be a feature. Congress did not include such a provision and the hearings make it clear that had such a feature been included the bill would not have passed. The Commissioner will clearly have exceeded his authority if he adopts this proposed regulation in light of the congressional history of this act.

A further objection is the fact that the proposed regulation transcends the act and the power of Congress in that interstate transportation has ended when the original package containing the firearm or ammunition has been opened to make a sale to a consumer. Thus, when an individual makes a purchase in a local sporting goods store the entire transaction, including the seller's and purchaser's activities, is wholly local in nature and not subject to the commerce power of Congress.

Numerous court decisions differentiating between interstate and intrastate commerce make it clear that the proposed regulation is an attempt to control a sphere of local activity which is immune from Federal control. If the Federal Firearms Act is and can be extended into this field it should be done by Congress and not by an administrative ruling by the Commissioner of Internal Revenue.

V. AUTHORITY TO EXAMINE RECORDS (SEC. 177.55)

Section 177.55 provides:

Any internal revenue officer designated by the Director shall have authority to examine the books, papers and records kept by a licensee pursuant to the regulations in this part, and to examine his premises and stock, during regular business hours in the daytime. When such premises are open at night, such authorized officers may enter them while so open in the performance of such authorized official duties.

There is no objection to the portion of this section which provides for the inspection of records kept pursuant to the act. However, that portion of the section which authorizes internal revenue agents to inspect premises and stock without a search warrant is illegal and unreasonable.

To enforce a statute which requires the maintenance of records of importation, shipment, and disposal of firearms, it would seem reasonable to provide by regulation for the inspection of such records. Only by extending the statute to require records of manufacture, production, and receipt could there be any purpose or any need for free inspection of a businessman's premises and stock. The history of the enforcement of this act indicates no necessity for such a regulation. Congress was not trying to correct abuses by dealers and/or manufacturers. Congress was interested solely in the criminal element in our society. The provisions of section 177.55, if adopted, will depart from the congressional purpose in this regard and will subject legitimate businessmen to searches without a warrant. If such is to be the law the responsibility of skirting the fourth amendment should lie with Congress and not with the Commissioner of Internal Revenue.

Facts on the Republican Post Office Record

EXTENSION OF REMARKS
OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. CEDERBERG. Mr. Speaker, my distinguished colleague, the gentleman from Oklahoma [Mr. EDMONDSON], placed in the RECORD August 1, 1957, what he chose to call the Post Office Record Republicans will not be reporting.

In reviewing what he portrays to be the Republican record on postal affairs I find the presentation of these six items, which the gentleman from Oklahoma facetiously calls accomplishments, are riddled with misinformation.

Personally I would have no hesitancy in presenting the facts on these items to the people of my district. I believe the people are entitled to facts and not distortions.

I am happy to present the facts with respect to the operation of the postal service under the Republican administration and to answer item by item the presentation that was made in the RECORD.

Item 1:

Unmentioned accomplishment No. 1 is the fact that Mr. Summerfield not only failed to live within his legal budget, but made unnecessary terminations of mail service to the people in order to blackjack additional funds out of the Appropriations Committee. Never before have we had the spectacle of rural mail carriers reporting in for work and being ordered to sit around the post office and not do their job—and no amount of bright new paint will gloss over the fact that this administration is the first in history to stop delivering the mail to the people in any kind of emergency.

EFFICIENT OPERATION SAVES TAXPAYERS MONEY

Answer: The Postmaster General has never failed to live within his legal budget. During the first 3 years of the present administration the Department returned the following sums to the Treasury:

	Million
Fiscal year 1953	$83.6
Fiscal year 1954	108.7
Fiscal year 1955	43.0

In fiscal 1956, because of the unprecedented growth in residential areas it was necessary for the Department to obtain a supplemental appropriation to provide additional city delivery service not anticipated in the original budget. This supplemental appropriation was obtained toward the close of the year and after the appropriation for the next year—1957—had been passed. It was thus apparent at the start of the 1957 fiscal year that additional funds would be required for that year for the same reason.

The Department endeavored to obtain a supplemental appropriation in July 1956 by an amendment to a supplemental appropriation bill at that time before the Senate Appropriations Committee. The Department was advised that it should defer its request until the next session of Congress, which it did.

In January 1957 the House Appropriations Committee was advised that the Department would require additional funds for 1957. By then it was apparent that a supplemental appropriation would be needed, not only because of the growth in the city delivery service but also because of a general increase in the volume of mail and increase in cost due to recently enacted salary legislation. Request for such funds was formally transmitted to the Congress in March 1957.

Since by the start of the fourth apportionment period, April 6, 1957, Congress had not passed the supplemental appropriation requested, it was necessary for the Department to curtail postal services to a limited extent to avoid violation of the antideficiency statute. These services were immediately restored when sufficient funds to complete the year were obtained.

One of the curtailments that would have the least adverse effect on the public was the elimination of Saturday delivery of mail and the closing of post offices on Saturday. In the rural areas this saved the travel expense of the rural carriers but effected no saving of their salary because they were paid on a 6-day-week basis. In order to make the maximum use of their time on that Saturday, they were required to report to their local post office where they worked sorting mail and performing other duties to the extent possible.

It was with the greatest reluctance that the Department made these temporary curtailments of service but it had no other alternative under the law.

Item 2:

Republican accomplishment No. 2 is the fact they have shut down many post offices in smaller communities across the country, thereby depriving residents of these small towns of many postal services.

BETTER SERVICE AT A SAVING

Answer: Post offices have been discontinued where as good or better service can be provided by rural carrier, star route carrier, city delivery service, rural station, contract station or classified station and at the same time result in a material savings for the taxpayer.

When many of these offices were established they were the only means of delivery of mail to patrons. With better roads and the establishment of rural delivery most of those patrons chose to have mail delivered by rural carrier, who also collects mail, sells stamps and money orders. The function of such offices as a means of service to patrons thereby diminished. When railroads were supplanted by star route as a means of supply, such offices also lost their function as a source of distribution of mail to other offices.

In other areas larger cities have expanded and extended city delivery service contiguous to the area served by these small post offices. Such small offices themselves did not meet the requirement for city delivery service and the only means of according city delivery service to these patrons is through consolidation of the post offices.

Item 3:

They have recommended the termination of the postal savings system which has been of great service to millions of Americans, which would compel those citizens to place their savings in private banks, or in a sock at home where no bank is available.

IN LINE WITH HOOVER COMMISSION RECOMMENDATION

Answer: The Comptroller General of the United States, in his reports to the Congress on the audits of the Postal Savings System since 1951, has consistently recommended that the Congress should give consideration to the question of whether, under present conditions, there is need for the Postal Savings System, stating that by and large the main purpose and justification of the system are no longer applicable. In May 1955 the Commission on Organization of the Executive Branch of the Government, the Hoover Commission, in its report to Congress on business enterprises in Government, recommended that after some reasonable period no further postal savings deposits be received and that depositors be given an opportunity, during a period not to exceed 5 years, to place their savings in United States savings bonds or other amply secured, guaranteed bank, and savings and loan deposits.

The original purpose of the Postal Savings Act of 1910 was to provide depositors a place for depositing savings at interest with the security of the Government for repayment thereof. Its main purpose has been superseded by the availability of United States savings bonds and the ample security of guaranteed bank and savings and loan deposits up to $10,000. It is evident that the public is finding adequate security for its savings in other than postal savings. This conclusion is based on the fact that the amount on deposit in the Postal Savings System has dropped from $3.4 billion in 1947 to $1.5 billion in 1957, and continues to decline.

It is believed that the discontinuance of the Postal Savings System will not work a hardship on those who now have deposits, or discourage thrift, because 98 percent of the deposits are made at first- and second-class post offices where banks or savings institutions are located or are readily available by mail. For outlying communities, banking facilities are usually available at the point where the other business of the community is transacted.

Item 4:

They have forced the removal or resignation of thousands of postmasters whose only sin was being appointed by a Democratic administration.

FRAUDULENT PRACTICES BRING FIRINGS, NATURALLY

Answer: Actually, only 824 postmasters have been removed during the period January 20, 1953, to July 31, 1957. Of these, 441 were removed for embezzlement and fraudulent practices, 241 for inefficiency and generally unsatisfactory operations, 80 for failure to perform appropriate duties or devote the required amount of time to duty, and 52 for unbecoming conduct. Removals are effected only after formal charges are preferred in accordance with civil-service rules and all removal actions are subject

to review by the Civil Service Commission.

Item 5:

They have used up millions of buckets of red, white, and blue paint in a costly redecoration program which is strangely inconsistent with their repeated talk about economy.

WHY DO DEMOCRATS OPPOSE THIS SAFETY MOVE?

Answer: The so-called "red, white, and blue" paint program involving mail boxes and trucks was undertaken by the Department after a most careful study of all pertinent factors.

In regard to motor vehicles we faced at the outset the fact that the fleet was badly in need of a planned rehabilitation and maintenance program. The olive green color of vehicles presented a drab, unattractive appearance. Truck waxing had been ordered stopped in the fall of 1952. There was no planned truck repainting program. Equipment was deteriorating rapidly. The accident record of the truck fleet was deplorable. In the latter part of 1953 we began studies to determine the answers to these problems.

Our first problem was to reconsider the color of paint to be used in a formalized repainting program. Safety considerations and comfort of employees dictated that the top and upper part of the vehicle be of a light color. It was proved that white cabs and bodies substantially reduced interior heat in hot weather and tests showed that such cabs were 8 to 11 degrees cooler in hot weather than drab colors. Safety considerations suggested a high visibility material and the familiar red reflecting sensitized tape now in wide use by owners of motor vehicles was selected because of its greatly improved nighttime visibility. A dark blue for the lower portion of the vehicle seemed a logical final step, just as the older vehicles were all in three colors of green and cream, with black on fenders.

Application of the new color scheme was inaugurated at the beginning of 1955 only as repainting of an individual vehicle is required. This program will cover a period of several years before completion, at a cost that compares favorably with the old cost.

Results achieved from the vehicle paint program may be summarized as follows:

(a) Shop time required for a complete vehicle turn-around for repainting has been appreciably reduced.

(b) We have a vehicle which affords our employees greater comfort. Cabs are cooler in hot weather. Employee morale and pride in the equipment has improved.

(c) We have a color scheme and quality of enamel which stands up longer, maintains its luster, and does not show road dust so readily.

(d) We have changed from a camouflage color to a high visibility color scheme more easily seen both day and night. This has been a major factor in our accident prevention program. The accident rate—day and night—of the white, red, and blue vehicle is substantially lower than the rate of vehicles painted olive drab. As a matter of fact, it is one-third of previous accident rates.

In regard to the mail-box program the Department for years has received complaints from the public about the street corner collection boxes. People have confused them with relay or storage boxes used exclusively by postal employees and some have actually put their letters in city trash boxes where shape and color were similar to the collection boxes located on street corners. Others complained that the mailboxes could not be found. All of these complaints stemmed from the camouflage color of the old boxes. For repainting as needed, we required a color that was (a) easily identifiable, different from any other public receptacles; (b) representative of the United States mail and the national services of the Department; (c) consistent and compatible with other postal markings; (d) of lowest possible original cost; and (e) low in maintenance cost.

The present colors were selected and became standard in August 1955, matching the truck fleet. The lack of cost figures in former years precludes a comparison but we have made every effort to keep cost to the minimum required for proper maintenance.

The new box colors show public acceptance as it is now easier to find and identify the mailboxes. The new attractive easy-to-find color scheme has received widespread commendation from postal patrons.

Item 6:

They have talked and boasted for 3 years about their great new lease-purchase program to build new post offices, and wound up after 3 full years with a start on one small post office under this program.

LEASE-PURCHASE PROGRAM FILLS BUILDING NEED

Answer: The lease-purchase program originated with the Congress and not the Post Office Department. Lease-purchase legislation was originally passed by the 82d Congress only to be vetoed by the President.

Lease-purchase was not intended to be a substitute for a public works building program nor a huge construction project. It is designed as a highly selective technique to use moneys which would have to be spent for rent anyway, as purchase moneys over the period of the lease.

The building construction needs of the Department are being satisfactorily and economically met under a commercial leasing program. Since January 1953 over 1,700 newly constructed buildings have been acquired under such leasing agreements. Leasing with various terms of occupancy provides the needed flexibility for the Department to meet the problems of urban growth and population shifts.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an article by Elmer T. Peterson in the Daily Oklahoman of May 15, 1957:

FEDERAL AID TO EDUCATION

Ladies and gentlemen, hold onto your hats. You ain't seen nothin' yet. • • • The NEA has vociferously declared that Federal aid for public schools will not mean Federal control.

• • • • •

Theodore Brameld, professor of educational philosophy at New York University, has just published a book called "Toward a Reconstructed Philosophy of Education," and his views will probably startle you.

There is not room in this column to print quotations in volume, so page numbers will be given, to make sure that no reckless accusations appear herein.

Federal Education Authority, analogous to TVA but on a larger scale (p. 300). This would be supported by Federal taxation, "supplemented by local resources." It would offer free universal education. It would "gear curriculums, teaching, guidance, and administration to the purposes of the economy of abundance, political order, scientific society, and esthetic patterns." It would "bring newspapers, radio chains, and other instruments of public enlightenment into direct cooperation with education and under similar controls."

International authority (IEA) for education, financial aid (furnished of course, mainly by the United States as under UNESCO) "to schools of all countries" (p. 303).

Religion to be considered a part of education, and therefore under the same authority (p. 307).

• • • • •

Brameld says the United States should spend (p. 295) at least 35 billion dollars on education, nationally and internationally, during the next quarter-century • • •. "Moreover, not less than half of this should come from the Federal Treasury."

• • • • •

On pages 321–322 Brameld clearly advocates permitting the employment of teachers who teach communism, on the theory that communism is only one more political theory. That contention, of course, is a familiar one on the Communist front.

• • • • •

Brameld, author of the book in question, is a member of NEA. Whether his views are specifically endorsed by the most influential leaders of NEA is not the point. The real point is that they have not repudiated them or the ones quoted last year. The general public is entitled to know just how they stand.

Stalemate in the Disarmament Conference

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 27, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent column by Mr. Walter Lippmann. This article poses with exceptional clarity the changes which are taking place in the world situation and which demand our close attention. As a Nation we have been so absorbed in the overriding challenge of the Soviet Union that we have neglected many of the new forces in world power and have been slow to de-

tect many points of erosion in western strength.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of August 17, 1957]

THE STALEMATE

(By Walter Lippmann)

There is increasing evidence, it seems to me, that the stalemate in the cold war has become so deep that neither side has much hope or much fear that it will soon be broken. The ritual of proposals, offers, demands, and declarations goes on. But there is little pretense that they are serious in the sense that they are steps in a genuine negotiation. What we are now saying to the Russians and what they are now saying to us about Germany, China, the Middle East, and disarmament is said without any expectation that it may lead to an agreement.

We are talking to the West Germans and the Russians are talking to the East Germans. Each of us is laying down terms which presuppose that the other side has made an unconditional surrender. On disarmament we would like the Russians to give up their great advantage—their capacity to conceal their intentions and to spring a surprise. The Russians would like us to give up our great advantage, which is that we have bases within striking distance of the heart of the Soviet Union.

These are some of the marks of the stalemate. For the time being, the balance of power is such that there is no prospect of a general war, and there is no compulsion to settle the issues. The real concern of both coalitions—of the NATO powers and of the Warsaw powers—is inside their own spheres of interest and influence. Khrushchev is making a determined effort to hold the satellite empire in line. We are greatly concerned at the turmoil and the hostility in the Arab lands on our side of the Iron Curtain.

Since change is in the nature of things, we know that this stalemate will not persist forever. The overriding question is how the stalemate may come to an end.

There are two main possibilities. One is by what is known as a technological breakthrough which would give one side or the other undoubted military superiority. The other is by that erosion and dissolution of alliances and allegiances which is going on within the two coalitions. There is erosion in Eastern Europe, which is obviously a great worry to the Kremlin. There is erosion in French North Africa, in the British Middle East, and in the American sphere of interest from Formosa and Okinawa to Japan.

On the whole, the probabilities seem to be that if the stalemate dissolves, it will be because of the great political changes that are taking place within the two coalitions. It is not, of course, for a layman to say that there will not be a decisive technological break-through that will radically alter the military balance of power. But a layman can say that foreign policy cannot be founded on the possibility that something, which is not happening, could conceivably happen someday nevertheless.

Moreover, the new invention would have to be a very big one—say, some easily produced device, unknown and unavailable to the other side, which would be an almost perfect defense against bombers and missiles. For the stalemate will almost certainly not be broken as long as both sides have the power to inflict terrible and crippling blows on each other.

The history of invention shows, it seems to me, that where there is such an intense competition as between the Soviet Union and ourselves, where the best brains from all over the world are mobilized on the problem, where such great resources are available, the chances are very small that there will be a new invention which, if it is decisive, is also unique.

It is more probable, then, that when the stalemate dissolves it will be because of political developments in Germany, in Eastern Europe, in North Africa and the Middle East, in China and in Japan. The one thing that can be said of all these problem areas, or these unsettled lands, is that the influence of the great powers is declining.

It has been declining ever since the Second World War. The Soviet sphere of influence is big. But it is not so big as it threatened to be a few years ago—as witness the resistance of Eastern Europe and the approach of China to a position of equality. Our own sphere of influence is also big. But the days are past when it could be supposed in Washington that there should be no neutrals, that every nation not under direct Communist domination was in duty bound to sign up with us.

As power declines, the problems of diplomacy become more difficult, requiring more knowledge, more insight, more sympathy, and more delicacy. That is one reason why it is worse today than it used to be to send out to the embassies the well meaning but the ignorant.

Michigan Publisher Shows How Federal Aid Hurts More Than It Helps

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. CEDERBERG. Mr. Speaker, some of our most sound philosophy has come from the editorial pages of our Nation's smalltown newspapers. These men are out at the grassroots away from pressures and away from the rush and the din. They can sit down and quietly meditate on the problems of the day and they usually come up with some very sound observations.

Such an instance has just come to my attention in a weekly newspaper in my congressional district. An editorial in the August 14 edition of the Arenac County Independent, published at Standish, Mich., pretty well points up the case against Federal aid. Editor Perlberg shows the inequities that existed in connection with a project involving a number of Michigan communities. When sprawling Federal bureaucracy attempts to run local affairs and dole out a handful of funds here, two handfuls there and a bagful somewhere else someone is bound to get hurt. And it is the taxpayer in every instance, who gets hurt, because it costs more to run affairs from Washington than it does at the local level.

The editorial follows:

FEDERAL AID HURTS MORE THAN IT HELPS

Standish people can see the inequities of Federal aid projects as easily as anyone we can imagine.

A story in The Independent this week shows how Standish lost around $1,000 a day for 45 days in the spring of 1956 by starting the new sewage disposal plant too early.

Federal aid came into the picture on July 1, 1956. Standish finally awarded an often delayed contract about May 15. Had the city waited another 45 days around $45,000 could have been obtained in much-needed assistance.

The bill was passed long after July 1 but the Government picked that date on which assistance would be given. Some were lucky. Some weren't. But everyone pays toward the few who got assistance.

A report last week showed how ridiculous these aid programs are. Lapeer is chuckling this week over an $80,000 grant in Federal aid toward a new plant and interceptor sewer system. Lapeer has waited a little longer to let a contract, so became eligible.

But the Lapeer plant costs only about $100 per census person to build because the city is larger than Standish and has a bigger tax base per census person.

Standish is paying around $200 per census person for its plant but can get no Federal aid.

Imlay City, a small community near Lapeer, will apparently get nothing simply because some bureucrat decided they weren't entitled to it. Even people in Lapeer think the setup is crazy but aren't about to turn down $80,000. They'll be gyped out of a similar grant some other time through equally ridiculous aid programs.

The complaint is not that Standish or Pinconning, West Branch or East Tawas didn't get the money. The point is that Federal aid is never fair. Those who do their best on their own get left out. Those who hold off or are forced into situations later on, get handouts.

Standish and the other communities who started before July 1, 1956, will be able to build and finance their own plants. So would Lapeer and all the others coming along later if the Federal Government had stayed out of the picture.

School building is the same. The continued hope for Federal handouts is keeping many communities who could well afford it wait awhile in hopes of some free money. If Federal aid was cast aside on local projects once and for all we'd no doubt see the classroom shortage dwindle sharply in a year or two.

Standish people have a good picture of what can happen. We hope they, and others in the area, remember this instance the next time they start encouraging a Congressman to go along with some new scheme for Federal aid on local projects.

Statement of Principles of Americans for Democratic Action

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 27, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Statement of Principles of Americans for Democratic Action, adopted at ADA's 10th annual convention in Washington, D. C., in March 1957. At the first ADA convention a statement of principles was adopted and it served the organization for a decade. In adopting the statement of principles at the 1957 convention, the organization set forth goals to which liberal Americans aspire.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF PRINCIPLES

Americans for Democratic Action is an organization of liberals, banded together to work for freedom, justice, and peace.

Liberalism, as we see it, is a demanding faith. It rests neither on a set of dogmas nor on a blueprint, but is rather a spirit which each generation of liberals must learn to apply to the needs of its own time. The spirit itself is unchanging—a deep belief in the dignity of man and an awareness of human frailty, a faith in human reason and in the power of free inquiry, a high sense of individual responsibility for oneself and one's neighbor, a conviction that the best society enables the greatest number of its members freely to develop their potentialities.

The goals of liberalism are affirmative. In our Nation, we seek the fulfillment of the free individual in a just and responsible society. Abroad, we look toward a world where all people may share the freedom, abundance, and opportunity which lie within the reach of mankind—a world marked by cooperation, by mutual respect, and by peace.

The greatest threat to the spirit of liberalism in our time has been totalitarianism—the arbitrary use of political power which annuls the individual in the interests of a police state. Communism is presently the most dangerous form of totalitarianism, all the more so because it masks its purposes under slogans and programs which deceive millions desperately seeking improvement and change. ADA rejects totalitarianism in any form, whether Communist or fascist. Friends and apologists of totalitarianism have no place in our organization.

Within a free society, we affirm the values we share in common with conservatives—in particular, the belief in constitutional processes and in the rule of law. We welcome continued debate with conservatives as exemplifying the process by which a responsible democracy achieves social change. But we reject conservatism in the field of policy, particularly where, in the interests of preserving the status quo, it prevents responsible social action. We equally reject complacency, whether in the form of self-righteous conservatism or of doctrinaire liberalism. In particular, we assert that our Nation and the world cannot achieve the goals for which all mankind cries out without thought, planning, and decisions. And we believe that only liberalism has the energy and the will to provide the leadership our times require.

INTERNATIONAL AFFAIRS

Our goal in foreign policy should be to seek world peace by relating the tremendous power of this nation responsibly to the preservation and enlargement of the liberties of the peoples of the world.

World peace requires active sympathy and support for democratic forces everywhere and an implacable resistance to totalitarianism in all its forms.

World peace requires, no less, a sober readiness to negotiate differences with those who oppose us, where negotiation does not jeopardize basic principles. General war has become an intolerable option in the nuclear age. The obligation rests all the more on the United States to offer concrete and realistic proposals which will unite the free peoples, help those not free to gain their freedom, and lay the foundation for lasting peace.

Support of the principles of the United Nations Charter should be the cornerstone of our foreign policy. But that support does not in itself constitute a foreign policy. We must make full use of the U. N. to weld, as rapidly as possible, a community of effort for collective actions broad enough to encompass the ideals and hopes, and allay the fears, of the free peoples.

Aggression, tyranny, misery, and racial discrimination anywhere are enemies of peace everywhere; and it must be our steady purpose to work with other peoples in their effort to enlarge opportunity and achieve justice. The need for such action is greatest of all in those parts of the world now awakening from centuries of oppression and squalor, and seeking to make up for lost time in raising their social and economic standards and attaining national independence.

We cannot long survive as an island of plenty in an increasingly turbulent sea of misery. We want to play our full part in a sustained and substantial cooperative effort to raise living standards in the underdeveloped nations of the world, and thereby reduce the ominous gap between the living standards there and in the United States. We favor more thoroughgoing cooperation to expand international trade, to banish the specter of depression, and to prevent the menace of inflation.

As a nation, and through the U. N., we must help prepare a thoroughgoing step-by-step system of disarmament, both in conventional and in nucelar weapons, coupled with provisions for inspection and safeguards against evasion. Until such a system has been accepted, our responsibility to freemen everywhere requires that we maintain a defense force sufficient to deter aggression, whether limited or global. The weakening of our defenses or the abandonment of our willingness to fight for our principles would constitute a betrayal of freedom in a world where tyranny still threatens war.

History has thrust world responsibility on our country. We must respond to this challenge with the imagination required by a changing world. We must understand that, in the end, we are dealing with people—with their diverse characters, their individual aspirations and their legitimate hopes. To touch their minds and hearts, we must recognize that moral and social policies and attitudes are as essential as military strength.

Because foreign policy in reality is the face a nation wears to the world, we emphasize above all that we can work fruitfully with the people of the world only as we remain faithful, at home as well as abroad, to our own highest ideals of freedom, of equal opportunity and of social justice.

DOMESTIC AFFAIRS

The national program of ADA is directed toward a society in which each individual enjoys the highest degree of liberty, opportunity, and security compatible with the liberty, opportunty, and security of his fellows.

By liberty we mean the full assurance and exercise of those traditional rights that are embodied in our Constitution: equality before the law, and freedom to speak, write, worship, vote, and assemble in accordance with the individual conscience and without regard to race, creed, color, national origin, or economic status. These are rights which never go for long without challenge and which are not preserved without tireless and constant rededication.

Believing that any denial of equal rights is indefensible, we support legislation and administrative action on all levels of Government to make secure the life, person, and property of every individual against violence and intimidation; and to eliminate segregation and other forms of discrimination in employment, housing, education, transportation, suffrage, and all other aspects of public and community life. We favor a more liberal and more generous immigration policy, which treats equally people of all nationalities. We oppose the usurpation by congressional committees or executive agencies of the judicial function at the expense of individual rights and liberties. The power of investigation must not be abused in the name of security.

By opportunity we mean the right of all Americans to participate and share equitably in the benefits of an expanding economy in a free society. This imposes on the Government the obligation to manage its taxing and spending and its control over money and credit in such ways as to maintain vigorous and steady economic growth and maximum employment.

Government has the further obligation to foster a fair and just economy, by apportioning taxes according to ability to pay, using its powers to correct inequities; to help farmers and farm laborers to obtain an adequate income; to assure workers the right to organize democratically and bargain collectively; to provide competitive business a fair opportunity for growth and profit, free from monopolistic barriers and constraints; and to regulate those large-scale industries which are natural monopolies.

To make opportunity real for all Americans, our society must assure to every child a good education and a chance to grow up in health and decency.

Wise and provident use of the resources of our lands and waters, for the benefit of all the people, is the responsibility of the people acting through their governments. The great investments in atomic energy and the great possibilities for its constructive uses belong to all the people, and public control is necessary to insure that it is developed for their benefit. The miraculous and far-reaching advances in all fields of science must be put to the service of all the people—in production, in medicine, in education, in communication.

By security we mean the social and economic guaranties to assure at least a minimum American standard of living for all members of our population, especially the most defenseless—the children, the aging, the sick, the indigent. To this end, we favor the steady improvement of our systems of social insurance and other social and economic measures looking toward the elimination of poverty. Where local and private initiative and resources are not sufficient, the national government must initiate programs, including Federal contributions where necessary, for education, health, and housing, to which the people of the world's richest Nation are entitled. The decay and disorganization of American cities calls for action at all levels of government to restore the creative values of urban living.

ADA is a political organization dedicated to the furtherance of these basic principles. Although it is neither a political party nor a part of a political party, it endorses and works actively for candidates for public office. Its organizational purpose is to stimulate thought and action in the service of the American liberal tradition.

We place our faith in the wisdom and courage of a free people.

Postal Rate Increase

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 27, 1957

Mr. COTTON. Mr. President, Mr. George Brady, managing editor of the Boston Record American, made a statement before the Senate Committee on Post Office and Civil Service on the subject of postal rates. The statement represents the viewpont of a publisher of

a large metropolitan daily newspaper, and merits the consideration of the Senate. Therefore, I ask unanimous consent to have his statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is George Brady. I am assistant to the general manager of the Hearst newspapers. I am appearing on behalf of Mr. H. G. Kern, general manager of the Hearst newspapers. Mr. Kern regrets his inability to be present but our newspapers in Boston and Detroit are shut down by strikes and he is devoting all his time to efforts to resume publication. This statement was prepared by Mr. Kern and I am authorized by him to appear for him here today, and to speak for all of the Hearst papers. These papers are: The Albany Times-Union, the Baltimore News-Post and Sunday American, the Boston Record-American and Sunday Advertiser, the Detroit Times, the Los Angeles Examiner, the Los Angeles Herald-Express, the Milwaukee Sentinel, the New York Journal-American, the New York Mirror, the Pittsburgh Sun-Telegraph, the San Antonio Light, the San Francisco Call-Bulletin, the San Francisco Examiner, and the Seattle Post-Intelligencer.

First, we should like to thank you for the opportunity to be heard on the vital matter of postal rates. We realize that this subcommittee has undertaken a very big job, and that through no fault of yours the job had to be begun very late in the congressional session. The House of Representatives took 7½ months on this question. Now, in a couple of weeks, you are asked to expedite this bill through to passage. Furthermore, the bill before you is by no means the same bill which was introduced early this year. The current bill is far more drastic than the original version. Adoption by the House of the Rhodes amendment relating to publications has greatly complicated the problem you face. There were no hearings on the Rhodes amendment in the House and, in fact, it was adopted on the House floor under circumstances which prevented full debate.

There are not very many advocates of this legislation. Some of them take the extreme position that there is something sinister about those of us who oppose this legislation and insist on our right to come here and tell you so. This is a bill which would force a lot of people to pay a lot more money for a service they obtain from the Government. For more than three-quarters of a century, this service has been provided at low cost as a matter of Government policy. Now it is proposed that this policy be reversed—and, gentlemen, this bill would reverse the historic policy, for this is not just another rate-increase bill. We of the Hearst newspapers have always believed in the right of petition. Coming to our duly elected representatives and stating our views seems to us to be the American way. We are glad that your committee agrees with us and is giving those of us who are affected an opportunity to tell you our story.

Reports to the effect that most newspapers support this legislation have been spread far and wide. It is partly to refute this misunderstanding that the Hearst newspapers feel it important for them to be represented here today. It has been claimed that not many newspapers are against this bill, and yet the fact is that every national, regional, and State newspaper association is opposed to this bill. Many of them have been, or will be, or at least want to be, represented at these hearings. Others would have been had it not been for the problems of time and distance.

Hearst newspapers pay over $400,000 a year in second-class postage. Of course, some papers use the mails for delivery purposes far more than others. One Hearst paper, the Milwaukee Sentinel, has about 10 percent of its circulation in the mail. On the other hand, some of our evening papers have only a fraction of 1 percent of their circulation by mail. In the Hearst group, there are 7 morning papers, 8 evening papers, and 12 Sunday papers. Mail rates are primarily the concern of morning papers. This is true for two reasons. One is that early editions of morning papers are published the night before date of issue, thus making possible delivery by mail on the date of issue. The other is that train schedules, and mail delivery schedules, normally make it impossible for even the first edition of an evening paper to be delivered to a mail subscriber on the date of issue. If you will remember that second-class rates are primarily a morning newspaper problem, you will be able to understand why some afternoon papers are indifferent on the rate question.

The dwindling number of daily newspapers is a source of concern to the Congress as well as to those of us in the publishing industry. I am sure you can all recall several instances of old and respected journals which disappeared for economic reasons. Generally speaking, newspaper publishing is not a very prosperous trade under today's conditions. An effort to persuade you to the contrary was made before this subcommittee by the Deputy Postmaster General in his testimony on August 16. He said that "Newspapers have experienced unprecedented levels of business." He also said that newspaper advertising revenues increased more than 6 percent in 1956 over the previous year and that trade press reports predict another record-breaking year in 1957.

Unfortunately, the Deputy Postmaster General spoke of advertising revenue, not profits. I regret to say that Hearst Consolidated Publications, which include all but 5 of the Hearst newspapers, not only has not increased its profits but has suffered a considerable loss in the first 6 months of 1957. You may be sure the current strikes will not improve the picture when figures for the complete year are available. Here are the figures: In the first 6 months of 1957, Hearst Consolidated Publications had a net income of $714,400, a decrease from $1,072,800 profit of the first 6 months of the previous year. Comparing net income with total sales volume, the percentage retained was about seven-tenths of 1 percent. Does this look like the record-breaking year of which Mr. Stans spoke?

Incidentally, none of our papers enjoys a local monopoly, for we have competition in all of the 11 cities in which we operate. Indeed, in 5 of these cities Hearst papers supply all the competition there is. The Post Office has a monopoly; we have none.

The Hearst newspapers willingly concede that none of our papers would be forced out of business by a postal rate increase. We could be hurt, and hurt badly, but not destroyed. The reason is we simply would not pay excessively high rates. Unlike many groups of mail users, there are alternatives to mail delivery for newspapers. We might drop mail subscriptions entirely, we might use truck and carrier delivery to an even greater degree than at present, or we might discover some new means of distribution. It would be a disservice to the rural population if we were forced to stop supplying newspapers to farm people, but excessive mail rates and lack of suitable alternatives might force us to take that step.

Because the Post Office revenue estimates assume there will be no decline in mail volume at steeply increased rates, you should be interested in second-class mail expenditures by our papers before and after the last rate increase. You will recall that second-class rates were raised 10 percent per year in 1952, 1953, and 1954. So-mail rates charged our papers were 30 percent higher in 1955 than in 1951. But Hearst papers paid the Post Office only 11 percent more in second-class postage in 1955 than in 1951. Six of our 15 papers actually paid less in 1955 than in 1951, despite the higher rate. Why was this true? We reduced the number of mail copies because we found cheaper and better methods outside the mails. In other words, the last 30 percent hike was more than the traffic would bear, as far as we were concerned. You may be sure the 60 percent increase in second-class rates provided by the bill before you would have an even greater effect in driving our papers from the mails, which would not help the financial position of the Post Office.

You may ask why we are here if the Hearst newspapers will abandon the mails where possible as an alternative to paying higher second-class rates. The answer is that even though a newspaper's mail circulation be small, it is important for several reasons. One is that we think our papers perform a valuable service and we want as many people as possible to avail themselves of that service. Another is that certain people within the circulation area of most newspapers cannot be reached at low cost in any other way. Newspapers must also consider that today's farm may be tomorrow's suburb. Rural subscribers may soon become suburban readers, and important to our advertisers. Then there are the members of the Armed Forces, and the boys and girls away from home at college. We think it is part of our job to enable them to keep up with what is going on back home, and at low cost.

The position of the Hearst newpapers is that this is a bad bill and it should be defeated, not compromised. If there were more time, there are a number of constructive things this subcommittee might do, especially in drafting a sensible declaration of congressional policy which would set forth the ground rules under which postal rates would be set. The Senate Post Office Committee made a good start in that direction when an advisory council issued what is commonly known as the Carlson report, and a second advisory group added further guidance with its report this year. Unfortunately, the effort in this direction contained in title II of the bill before you is a hodgepodge which will do more harm than good. There are some fine passages in title II but as a whole it falls far short of what is needed. Among other things, it would give statutory endorsement to the cost-ascertainment system, which is the real root of all the dissension over postal rate policy. The Hearst newspapers do not quarrel with the mathematics of cost ascertainment, but we do object to the misuse made by Post Office Department officials of figures obtained from cost ascertainment. It is cost ascertainment which leads to the smear charges that the press is subsidized by over $250 million a year, although it is now revealed that the post office has another bookkeeping system which shows only about a $100 million loss on second class. We submit that the public interest would best be served if the Congress ordered the post office to revise the cost-ascertainment system so it can never be misused again. Of course, the post office will never willingly discard cost ascertainment. It would do so only when forced to by Congress. Why? Because the post office can jack up fourth-class rates every year or so, by simply petitioning the Post Office Department and showing through cost ascertainment that this class is not paying its way as required by a law.

The Hearst newspapers would like to see an end to the almost annual fights over mail rates, but see no prospect of that as long as the management of the post office takes the position it is running a business and not a service worth what it costs. It seems that repeated failure to gain congressional approval of rate-jacking efforts is the only hope for a different brand of thinking by postal officials

who are so business minded that the notion that the postal system is a service to the public, which ought to be supported by general revenues, is abhorrent to them. This bill would revolutionize postal policy and turn a service worth its cost into an alleged business, required by law to pay its way.

We are confident that you members of this fine subcommittee will see the injustices and inequities in this bill and accordingly reject it.

His Wishes in Reverse

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JENSEN. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and to include a letter as follows:

ONAWA, IOWA, *August 8, 1957.*

Representative JENSEN.

DEAR SIR: Psychiatrists tell us it's healthy to "blow off" steam. My health is fine, but I want to keep it that way—so will you pardon a little "blow" from me now. I have always appreciated your efforts for good and wise government—so I thought I'd write you, Senator HICKENLOOPER, and Senator MARTIN duplicate letters. I'm 60 years old and Plato says that is the age when one should be interested in Government and do something about it. So here's my contribution.

If I were a dyed-in-the-Red pro-Soviet Communist I'd work hard at the following program:

1. Encourage the United States to use up all its national resources—coal, oil, minerals, soil fertility, wood, and so forth—by expanding production, even if the consumers couldn't begin to need or use up the finished products.

2. Encourage management to expand plants so they are all forced into competitive high production. As a result their salesmen are run ragged selling anybody the latest models of anything on nothing but credit.

3. Through union demands, force management to pay legally guaranteed high wages and benefits with no regard to the need or profit of the product, even if these demands bankrupt the company or force it to move outside the United States where labor demands are less mandatory.

4. Create an era of freedom for everyone, freedom for youth to be educated, lunched, recreated, and entertained at public expense with no aid expected from youth in return; freedom for work-age men to be supported by unemployment insurance; freedom to vote heavy expenditures even by nontaxpayers; freedom for all over 62 to be supported even though they've never done a productive act—financially productive, not biologically.

5. Stimulate all freedom-loving citizens to feel expansive about their superiority, encourage them to want to share this wealth, by granting huge sume of money to Saudi Arabia headed by the wealthiest man in the world; to India, who helps pay a spiritual leader his weight in gold to operate racing stables in Europe; loans to England, whose aristocracy bets on the horses run by these stables; loans to France, who supports a foreign legion; then grants to correct the wretchedness colonialism causes; draining away capital until our currency is below the value of Canada's.

6. Before a voting taxpayer wakes up to the fact he's lost his freedom of choice, his time for reflection and enjoyment of nature—some men by draft, which frequently disillusions them coldly and permanently at a most idealistic age—then by deductions of pay which withholds their financial security until they're too old to care; before the taxpayer can guarantee a safe law-abiding neighborhood to raise a family, a mentally stimulating school to educate his young, calm and peaceful pleasure for the family to contemplate God in all His goodness. I would eliminate all immigration bars and open all the gates of this "created-by-law, propped-up-by-debt garden of Eden" to all the ne'er-do-wells of the world, who just by being human feel they must be entitled to these hard-fought-for and hard-earned freedoms. The legal guarantees of these freedoms frequently exempt the receiver from any financial responsibility which pays for them. I would force the taxpayer into all the missionary work I could—whether he could afford it or not. I'd keep him blind to the fact that when freedom hands out hard cash the cheerful giver is popular, but can be scorned when his supply of gifts runs out.

7. When the United States taxpayer began to believe that fighting the inevitable was useless, that the ne'er-do-wells seemed to be enjoying all the good things of life, I'd congratulate the Soviet dictatorship on winning the cold war.

Sincerely for good government,
FRANCES GINGLES.

ONAWA, IOWA.

Real Reasons Behind the Recent Kremlin Purges

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following penetrating analysis and evaluation of the recent Kremlin purges. The author, Mr. U. N. Rudin, is president of International Research on Communist Techniques, Inc., an organization of Russian patriots who endlessly fight the evil that has enslaved their motherland. For years they have proved uncannily correct in their diagnosis and evaluations of Communist manueverings, in a publication called "Behind the Communist Line—B. C. I."

Unfortunately, most western statesmen and writers have ignored the advice of these real experts, and instead have naively assumed that Communists in any situation act as normal partiots would—namely, in terms of national interests. Mr. Rudin preaches incessantly the simple basic fact that Communists are not and cannot have interests as patriotic Russians or Chinese or Frenchmen or Americans. They are and, until they renounce communism, must be international conspirators, rejecting utterly the normal and predictable behavior of national patriots. The analysis follows:

WHAT ARE THE REAL REASONS AND CONSEQUNCES OF THE SPLIT IN THE KREMLIN?

(By V. N. Rudin)

All signposts have pointed toward the current climatic and fatal split in the headquarters of the world Communist conspiracy. But in our high-speed civilization such signposts are too frequently unheeded, and news of the recent purge of Communist Party leaders exploded on July 4, with a shock to many international observers, who are still chewing on the bone of speculation. Factual reports and analyses of surface effects in the Communist Party have been adequately presented in the press of the free world, so there is no need to review these here.

However, behind the Khrushchev victory in purging such prominent figures as Molotov, Malenkov, Kaganovich, and less irrevocably Shepilov, lie basic reasons. This event holds enormous consequences for the future of the Communist Party of the Soviet Union (CPSU), the Soviet system, and the entire Communist world.

NATURE OF THE COMMUNIST REGIME MADE THIS SPLIT INEVITABLE

A split within the top leadership of the Communist Party of the Soviet Union, which is desperately holding onto its world Communist Party leadership, was an inevitable result of the status of the Communist regime at the death of Stalin. It was a headless pyramid. The structure of the regime was designed for a dictator—but there was no single successor to Stalin. Without this head, the pyramidal Soviet system has proceeded logically and inevitably toward disintegration. (Behind the Communist line special report, September 1955 et seq.)

The struggle among the collective leaders, or among groups within the Presidium, began immediately after Stalin's death. The liquidation of Beria on July 10, 1953, the forced abdication of Malenkov on February 8, 1955, the fall of Molotov which began in October 1955 and was followed by his resignation on June 2, 1956—all were mere stepping stones leading toward the spectacular climax of July 1957. The internal struggle during the 20th Communist Party Congress (behind the Communist line, February to April 1956), which did not become apparent to the West until much later, actually began the alinement of forces that have recently come into open conflict.

BASIC DIFFERENCES IN TACTICS AND THEORY MORE SIGNIFICANT THAN PERSONAL POWER

The fight among Soviet leaders and factions cannot be evaluated on a basis similar to that among conflicting groups in a normal democratic state, nor even among Latin American power groups. Although it is a struggle for power, the personal aspect is the least significant.

It must be realized that all factions of the Soviet leadership are aware of the present vulnerability of the Soviet system itself—and of the fact that their own survival depends upon survival of the system. Therefore the primary concern of all the "collective leaders" since the death of Stalin has been to save the Communist system—and thus themselves. Their prime motivation is the fear of internal revolution. The East German Revolt of June 1953 and the first open revolts in the Soviet concentration camps in June-Oct. 1953 sounded an alarm that has been dinning the ears of top Soviet leaders ever since.

The basic cause of conflict in the Kremlin, therefore, is the difference of opinion among the various factions as to the tactics necessary to save the Communist system.

Out of the many accusations heaped on the Molotov faction, we can crystallize the following as the essence of the current situation:

"They (the Molotov group) set themselves the goal of returning the party to the false methods of leadership which were condemned by the 20th Communist Party Congress."

In these few words the Central Committee confirmed the acceptance of the tactics advocated by the Kruschev faction. In brief, these are:

The Communist regime of the U. S. S. R. can no longer govern the people according to the so-called Stalinist methods (actually the methods of the Communist system itself), because this would lead to imminent or immediate revolution. Therefore, there must be a change in tactics, allowing for some concessions to the demands of the people.

This more flexible policy, proposed by one Stalinist faction headed by Kruschev at the 20th Communist Party Congress, was opposed by another Stalinist faction headed by Molotov.

By a similar process of logic, motivated by the same desire to save the system and the same sincere devotion to the goal of international communism, the Molotov faction believed that any relaxation of iron-grip tactics would bring about the same internal revolutionary upheaval. This conviction was strengthened by subsequent events in Poland and Hungary, which Molotov considered a direct result of Khrushchev's policy of relaxation and denunciation of Stalin. The Molotov group therefore urged a retraction of the small liberties that the regime was forced grudgingly to give the people after the 20th Communist Party Congress. This has proved impossible, especially among the Soviet intelligentsia.

It is not my place to discuss which tactics, from the standpoint of Communist tyrants, are preferable. Neither policy can halt the historically and politically inevitable and imminent defeat of the Communist regime by the enslaved peoples.

In the meantime, the tyrants argue. The second cause of the Kremlin conflict arises from the Marxist-Communist principle that expedient tactics must be supported by a theoretical ideological background.

The lineup of forces in this phase of the struggle was defined by the end of February 1957. On February 27, Mao Tse-tung delivered the key speech at the Chinese Communist Party Congress, delineating the ideological theory which gave de facto support to Khrushchev's tactics. At variance with basic Marxist theory, Mao stated that there can be and are contradictions between the governing Communist elite and the non-Communist masses. He confirmed Khrushchev's premise that the Communist Party must satisfy demands of the people, or else the differences between the party and the people will intensify toward the final point of open popular revolt against the regime—citing the Hungarian revolution as an example. Mao also supported Khrushchev's line of "many roads toward socialism" by stating that the "road to socialism" (i. e., communism) must take into account national characteristics.

The close resemblance in content and terminology of Mao's speech to Khrushchev's utterances of the preceding year point up the obvious coordination between the two, which was no doubt established at the time of Khrushchev's and Bulganin's trip to Red China in 1955. Mao was the first to send a congratulatory telegram to the Communist Party of the Soviet Union Central Committee on its July victory over the Molotov group.

It is significant that Mao's speech was not published in Pravda until June 19, when Khrushchev's support was sufficiently strong to meet openly the challenge of the Molotov faction.

This challenge, indicative of a strengthening of forces, appeared in February almost simultaneously with the delivery of Mao's speech in Red China. Issue No. 3, 1957, of the influential party magazine, Kommunist, carried an unsigned editorial, which ably defended the classical Marxist-Communist theory of a centralized and uniform Communist empire. The anonymous author was Shepilov.

GROWTH OF INTERPARTY FACTIONS AND DILUTION OF CENTRAL POWER

The alinement of Khrushchev's bright young man, Shepilov, with the Molotov faction has caused much speculation. I believe that the explanation lies in a genuine change of conviction on Shepilov's part in regard to policy.

Appointed by Khrushchev to replace Molotov as Foreign Minister after the latter's forced resignation, Shepilov fell heir to a Ministry of Foreign Affairs that had been ably built up by Molotov during the past 20 years. He was surrounded by a staff of experts who had been selected and trained by Molotov to implement his policies. Molotov's own "iron logic," plus the daily influence of his unpurged staff, in my opinion, finally convinced Shepilov that Molotov's policies offered the best chance for survival of the Communist system.

Kaganovich, long considered the power behind the throne, in the Communist hierarchy, became a powerful ally of Molotov also on the basis of conviction.

The struggle for personal power, which holds third place as a cause of the Kremlin split, influenced Malenkov to aline himself with Molotov and Kaganovich against Khrushchev and Bulganin, in an ill-fated effort to recuperate his position. He is now being shipped out by the same route as Trotsky.

The personal power motive also temporarily alined the third major faction, Mikoyan and Suslov, on the side of Khrushchev and Bulganin—but this is by no means a permanent alliance. Just after the purge announcement, Mikoyan was conspicuously absent from several important functions. Recently he has been conspicuously present—an indication of the mounting pressure of the Mikoyan faction on Khrushchev, which first became evident during the 20th Communist Party Congress (Behind the Communist Line, March and April 1956).

A special role is being played by Marshal Zhukov. Being a good Communist but not an experienced "aparatchik" (apparatus man), and remembering very well his own earlier purge by so-called Stalinist methods, Zhukov has behaved as a regular party member of the Central Committee, staying with the new tactics of Khrushchev. Rewarded by becoming the first military man to be elevated to membership in the Presidium, Zhukov might be said to have been motivated by desire for personal power.

The Presidium, however, has emerged from the current conflict with less power than before. Being too weak to win within this top closed circle, Khruschev had no alternative but to break the established rules of Communist dictatorship by transferring the power of the highest policy decision into the hands of the Central Committee. It was not Communist Party Secretary Nikita Khruschev and Premier Nikolai Bulganin, nor the top men of the Communist Party and Soviet Government in the Presidium, but the 318 members and alternates of the Central Committee of the Communist Party of the Soviet Union who conducted the official purge.

It will now be extremely difficult—and I believe impossible—to retract this controlling power from the Central Committee and return it to the Presidium.

This means that Khruschev and his faction, although they are now in the saddle, have a much weaker grip on their own party than before the recent split. Indicative of the new trend is the fact that Khruschev's speeches in Prague, printed in the Western press, were censored by someone before publication in the Soviet press—in all probability by the Secretariat of the Central Committee.

Although the entire membership of the Central Committee will work together to retain the Central Committee's new power, different groups within this large body will also seek to strengthen themselves. Characteristics of these various factions are already noticeable, and will be discussed in a later report.

As each faction tends to enlarge its circle of support, the central power becomes diluted. This has already happened in the Presidium, which was the only governing body after the death of Stalin. At that time the Presidium consisted of 10 regular members and 4 alternates, a total of 14. After the 20th Communist Party Congress, it was enlarged to 11 regular members and 7 alternates, or a total of 18. Since the recent purge, the Presidium has been increased to 15 regular members and 9 alternates, for a total of 24, and has actually relinquished its controlling power to the Central Committee composed of 318 members and alternates.

The result of this process can only be the continued dilution of power and inevitable disintegration within the Communist Party of the Soviet Union itself. In an effort to stabilize itself, the Communist Party and the Soviet Government (which are one and the same), will be forced to make more and more concessions to the demands of the peoples of Russia. A major concession was announced the next day after the purge—to abolish as of January 1, 1958 the compulsory delivery to the state of assigned quotas of farm, dairy and meat products from the peasants' own small "backyard" plots of land. The fight for these individual plots has been a bitter one between the farmers and the regime, and this concession marks a significant victory for the peasants.

The present Communist rulers of Russia are in the position of being "damned if they do and damned if they don't." With their power and control continually weakening, they must compromise with the people in an attempt to avert revolution—and yet the very concessions that they make produce new and greater demands on the part of the people, and hasten the disintegration of the Communist system.

EFFECTS OF THE KREMLIN SPLIT

With a few notable exceptions, immediate reaction in the free world fell for the Soviet propaganda line—that the victory of Khrushchev means victory of the anti-Stalin faction, and that this should at once bring about a relaxation of tensions on the international scene.

Disillusionment has come with (we hope) convincing swiftness.

For example, on July 5, Mr. Erich Ollenhauer, leader of the German Socialist Party (SPD), told the Socialist Congress in Vienna triumphantly that now Khrushchev would probably agree to free elections and the unification of Germany. But Mr. Krushchev quickly destroyed this rosy dream in a speech in Prague, by stating that no change in the matter of German unification could be expected.

The subsequent statement of the Soviet Government, via Premier Bulganin's letter to British Prime Minister Macmillan, blasted the hopes of those coexistencers who naively look for a speedy agreement with the U. S. S. R. on disarmament.

Other hopes are being raised in regard to Marshal Zhukov. To oversimplify the prevalent analysis, Zhukov is presented as having the entire Soviet Army behind him as a full supporting cast for playing the possible role of a Bonaparte.

In my opinion, these hopes are, at least for the present, premature.

True enough that Zhukov is the first military man to sit on the Presidium. But it must be remembered that in climbing higher

on the party ladder, Zhukov (or anyone else) is coming more and more into the grip of Communist control. It is also true that Marshal Zhukov's name still rates high within the army as a hero of World War II. But Zhukov himself has clearly declared his alliance with the Communist Party. This will by no means increase his popularity with the Russian people, nor among the armed forces which are, after all, composed of the people.

The regime's fear of the growing power of the people is evidenced by the immediate launching of a widespread and intensive campaign to "sell" the new scapegoats to the people. Organized by the central committee through Communist Party members in factories, universities, collective farms, etc., this campaign heaps the blame for all the evils of the Communist system onto the so-called antiparty group.

But already having failed to digest such fat scapegoats as Stalin and Beria, the people can scarcely be expected to swallow the second echelon of Molotov, Kaganovich, Malenkov, and Shepilov. Quite logically and naturally, they look upon the current Communist bosses as the third echelon of the same brand of tyrants.

A good example of the popular attitude is the question put by a kolkhoz farmer to the Communist chairman at a recent rally: "If what you say is true, why were not such people thrown out long ago?"

The official discrediting of the top exponents of the Communist system has, of course, officially discredited the system itself. The people can now openly denounce the fallen tyrants while mentally denouncing those who uneasily hold the reins of a disintegrating empire.

Conditions in Poland

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Poland as a Magnet," published in the Washington Post on August 26, which suggests that a reappraisal of our policies toward Poland is necessary.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLAND AS A MAGNET

Senator KENNEDY has helped to illuminate a gap in foreign policy in an important new speech on American relations with Poland. Critics may be tempted to view this additional expression, following his controversial speech on Algeria, as evidence of Mr. KENNEDY's aspirations to higher office. The fact remains that it takes courage for a politician to talk constructively of practical means to strengthen the independence of Communist states emerging from Soviet domination.

Basically Mr. KENNEDY believes that the American loan to Poland was too little and too late, in terms both of Poland's real economic needs and of the lofty American promises of American help to satellites that manage to obtain more freedom. He has introduced legislation to broaden the Battle, Surplus Disposal and Mutual Security Acts so as to permit a needed flexibility in dealing with intermediate status governments struggling to maintain national sovereignty.

Beyond this he proposes more people-to-people contacts, including the furnishing of books; expansion of trade, including permission for Polish ships to dock at United States ports and possible sponsorship of a housing project in Warsaw; technical assistance; and relief to Polish repatriates from Russia. He recognizes the importance of Poland's position in a German settlement, and he adds the useful suggestion made earlier by others that a permanent United Nations Peace Observation Commission be created to fly immediately to any country such as Hungary menaced by foreign intervention. He might well have asked further that the Polish Government, for its part, end its recalcitrance over the arrangements for private American aid.

Despite its inadequacies, the loan agreement with Poland was a major triumph by Deputy Under Secretary of State Dillon in view of all the technical difficulties. Mr. KENNEDY is unfair to the administration on the matter of fundamental understanding, though he is justified in criticizing the phoniness of the old liberation appeal. Likewise, although he shows awareness of the risks in Poland, he may overestimate the ability of the Gomulka government to continue on the tightrope in view of the contradictions that have arisen in a free Communist state.

Nevertheless, the enlightened attitude Mr. KENNEDY takes on American policy toward changing satellites—a problem which the country may face again elsewhere—is one that commends itself to his colleagues and to the administration. Certainly he is right in directing thinking to the "shades of gray between * * * [the] blacks and whites"—to the "nations such as Poland that may not yet be * * * in a position to be truly friendly, but which are at least beginning to move out from Soviet domination and control."

Proposed Federal Firearms Regulations

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD an editorial appearing in the July 1957 issue of the American Rifleman, entitled "The Proposed Federal Firearms Regulations."

These regulations as proposed appeared in the Federal Register on May 3, 1957. I refer specifically to the proposed regulations 177.50, 177.51, 177.52, 177.54, and 177.55. These regulations are merely a thinly disguised attempt to deprive American citizens of their right to own and possess firearms, and the right of law-abiding dealers and manufacturers to sell lawful firearms and ammunitions for possession by citizens as guaranteed by the Constitution of the United States. These proposed regulations are vicious and go far beyond the intent of the original law.

The person who proposed them and those who are pushing them are open to the most serious criticism, and their maladministration of the Federal Firearms Act and the National Firearms Act should certainly be looked into by the appropriate committee of this Congress.

I hope every Member of this Congress will read the article and will do what he can to help strike down these vicious regulations.

The editorial follows:

VITAL READING FOR EVERY GUN OWNER—THE PROPOSED FEDERAL FIREARMS REGULATIONS

The Federal Register of May 3, 1957 (vol. 22, No. 86), published a proposed set of Treasury regulations which materially and vitally amend the Federal Firearms Act—all done by administrative action in a Washington Government bureau. No notice of the proposed regulations had been received by NRA until, as is required by law, the proposals were published in the Federal Register.

It is the practice at NRA headquarters for the legislative service to review the Federal Register. The issue for May 3, 1957, reached us on May 10. The revisions proposed in the regulations had been carefully studied by May 12, and on May 15 an NRA Legislative Bulletin went to all firearms manufacturers and to leading firearms dealers. At the request of the Olin Mathieson Chemical Corp. (Winchester-Western) 37,000 copies of the NRA Legislative Bulletin were prepared at their expense and mailed by them with a covering letter to their largest dealer list. The Remington Arms Co. responded with a prompt newsletter of their own as did several other manufacturers and important firearms dealer groups. The NRA immediately prepared a news release which went to 1,000 leading daily newspapers and received wide press coverage.

By May 15, the June issue of the American Rifleman was already in type. However, it was possible to alter page 27 (What the Lawmakers Are Doing), and include a box announcing the principal proposed changes in the regulations.

THE LAWS BEING CHANGED

To fully appreciate the import of the proposed changes in the regulations it is necessary to have in mind the basic provisions of the Federal Firearms Act, which was enacted by the 75th Congress in 1938 to control interstate and foreign commerce in all firearms and in pistol and revolver ammunition. Much confusion exists in the minds of some shooters between the provisions of the Federal Firearms Act of 1938 and the National Firearms Act of 1934. The National Firearms Act is unrelated and is, in fact, a taxing act aimed at controlling weapons such as machineguns, sawed-off shotguns, and others of similar nature. The Federal Firearms Act was enacted under the authority of the Federal Government to control interstate commerce. It applies to all firearms of every type whatsoever (including rifles and shotguns) and to pistol or revolver ammunition. The act does not cover .22 caliber rimfire ammunition, shotgun shells, or ammunition suitable for use only in rifles.

The basic provisions of the Federal Firearms Act are these:

1. A person or firm engaged in the manufacture or importation of firearms or ammunition for purposes of sale is required to be licensed by the Treasury Department.

2. A person engaged in the business of selling firearms or ammunition or components thereof, or a person engaged in the business of repairing firearms, is required to be similarly licensed.

3. It is unlawful to ship or otherwise transport in interstate or foreign commerce any firearm or ammunition to any person known to be under indictment or to have been convicted of a crime of violence or to be a fugitive from justice.

4. It is unlawful to ship or otherwise transport in interstate or foreign commerce any stolen firearm or ammunition.

5. It is unlawful to ship or otherwise transport, or knowingly receive in interstate

or foreign commerce, any firearm from which the manufacturer's serial number has been removed, obliterated, or altered.

6. It is unlawful for any licensed manufacturer or licensed dealer to ship or otherwise transport any firearm in interstate or foreign commerce to a person in any State the laws of which require that a license be obtained for the purchase of such firearm, unless such license is exhibited to such manufacturer or dealer by the prospective purchaser.

7. Licensed dealers must maintain such permanent records of importation, shipment, and other disposal of firearms and ammunition as the Secretary of the Treasury shall prescribe.

8. The Secretary of the Treasury may prescribe such rules and regulations as he deems necessary to carry out the provisions of the law.

ENFORCEMENT OF THE ACT

When the Federal Firearms Act was first considered by Congress it was intended that the law be enforced by the Department of Commerce since the law derived its authority from the power of the Federal Congress to legislate with respect to interstate commerce. However, at the time of the enactment of the Federal Firearms Act, the National Firearms Act had been in effect for several years. Its enforcement had been left under the Treasury Department and, since the Treasury Department had a law-enforcement branch, it was decided that they should also enforce the Federal Firearms Act. Both the Federal Firearms Act and the National Firearms Act are enforced by the Alcohol and Tobacco Tax Division, Internal Revenue Service, Treasury Department. The writing of rules and regulations under the Federal Firearms Act has been delegated to the Commissioner of Internal Revenue subject to review by the Secretary of the Treasury.

It is fully established that Federal agencies have the authority, where so prescribed, to issue rules and regulations which are reasonable and necessary for the enforcement of Federal laws with which they are charged. However, in addition to being reasonable and necessary, such regulations must lie within the framework of the law. The great danger inherent in this rule-making power is the tendency for Federal bureaus, in establishing rules and regulations, to go beyond the language and the intent of the law. In such a case they actually usurp the legislative function of Congress and very effectively rewrite the law without in any way considering the Congress or the people whom the Congress represent.

CHANGES GO BEYOND INTENT OF LAW

In the case of the present proposed revision of the Internal Revenue Service regulations under the Federal Firearms Act, it is the belief of the National Rifle Association that some of the proposals are both unreasonable and unnecessary on their own merit. Far more important is the certainty that some of the proposals, regardless of their merit, are not supported by either the language or the intent of the Federal Firearms Act and are, therefore, not within the rule-making authority of the Internal Revenue Service. No greater danger could exist, so far as the gun-owning sportsmen of America are concerned, than the danger inherent in the unrestrained power of a Government bureau which can, without respect to the will of the people, write regulations which have all the force and effect of Federal law.

Many provisions of the proposed regulations reflect this paralyzing tendency of administrative regulation to grow ever more restrictive.

The principal proposals which the National Rifle Association has vigorously protested are these:

1. The proposal that each manufacturer or importer of a firearm shall identify it by stamping, in a manner not readily obliterated or altered, the name and location of the manufacturer or importer and the serial number, caliber, and model of the firearm.

At the time of the enactment of the Federal Firearms Act, and at all times since, there have been many sporting-type firearms, shotguns, rifles, and particularly less expensive .22 caliber rifles, which it has not been the custom of the manufacturers to provide with serial numbers. Well over 1 million rifles and shotguns of all types were manufactured in the United States in 1954. According to the best available estimate, approximately one-half of all shotguns and two-thirds of all rifles currently manufactured in the United States are manufactured and sold without serial numbers. Since this has always been true, it would appear that Congress would have provided in the law that all rifles and shotguns be marked by the manufacturer with a serial number, with the name and location of the manufacturer or importer, and with the caliber and model of the firearm, if such was indeed the intent of Congress. Manufacturers of firearms will be put to a very considerable additional expense to comply with the proposed regulations. Should this regulation be put into effect, a question will immediately arise as to the status of the thousands of rifles and shotguns now in dealers' stocks and in private hands which either do not carry a serial number of which do not carry some or all of the information required by the proposed regulation. In addition to added costs to manufacturers, which must inevitably be passed on to the ultimate consumer, a great hardship will be imposed on importers, particularly importers of obsolete weapons, should this proposed regulation be applied to them. Obviously, the stamping or otherwise impressing of a number or a mark of any kind upon an obsolete weapon materially reduces its market value and its value as a collector's item.

2. The proposal that dealers' records of importation, shipment, and disposal of firearms must be retained permanently on the premises until discontinuance of business by the licensee.

While it is true that the Federal Firearms Act requires dealers to maintain permanent records of importation, shipment, and other disposal of firearms and ammunition, the language "permanent records" does not necessarily imply that such records must be retained in absolute perpetuity. For many years the regulations have required that records be retained by licensed dealers for a period of 6 years. The proposed revision to require the retention of records permanently on the premises would seem to impose an unnecessary and unduly severe hardship on licensed dealers by creating a record-storage problem of some magnitude. The very concept of dealers' records kept in perpetuity seems unreasonable on its face, since it is apparent that such dealers' records must lose all value to anyone once they have attained some reasonable age.

3. The proposal that manufacturers and dealers maintain records reflecting the production or receipt and the disposition at wholesale or retail of all pistol and revolver ammunition; such ammunition to be described as to manufacturer, type caliber, quantity, and the identity of the person from whom received and to whom sold.

This appears to be a completely useless requirement and an intolerable burden upon manufacturers and upon retail dealers in pistol ammunition. Well over 35 million rounds of center-fire pistol and revolved ammunition are purchased and used in the United States for lawful training and recreational purposes each year. By comparison, the number of rounds of center-fire pistol ammunition employed for any unlawful purpose must be utterly insignificant. Such recordkeeping, imposed upon retail dealers, can have no practical result other than to discourage from commerce in pistol and revolver ammunition the reputable dealer who will observe the regulation. It appears absurd that a criminal or potential criminal would be in the least inhibited by such a regulation or that the enforcement of the Federal Firearms Act would be in any way enhanced. This is particularly true in view of the fact that such a regulation could be so easily circumvented by bootlegging, theft, or purchase through black-market channels.

4. The proposal that a person purchasing a firearm or pistol or revolver ammunition in over-the-conuter sale or distribution must acknowledge receipt thereof in his own handwriting in the prescribed dealer's records.

The Federal Firearms Act regulates interstate commerce in firearms and ammunition. It provides for the Federal licensing of manufacturers and dealers and it sets forth limitations on the transporting, shipping, or receiving of firearms or pistol ammunition in interstate or foreign commerce. The basic law does not presume to set forth restrictions or requirements applicable to individuals who purchase firearms or handgun ammunition in a retail, over-the-counter transaction. Such a requirement, binding upon an individual doing business entirely within a State, would plainly be within the prerogative of a State legislature and not within the province of a Federal statute. The Treasury Department has no authority under the Federal Firearms Act to impose by regulation, requirements binding upon individuals doing business within the various States, requirements which the United States Congress did not write into the Federal Firearms Act and which the Congress probably could not properly have written into the act.

5. The proposal that any Internal Revenue officer shall have authority to examine the books, papers, and records kept by a manufacturer or dealer, and to examine his premises and stock during regular business hours in the daytime or whenever such premises may be open at night.

This proposed regulation would appear to depend for authority on that provision of the Federal Firearms Act which requires licensed dealers to maintain permanent records of importation, shipment, and other disposal of firearms and ammunition. To enforce the maintenance of records of importation, shipment, and other disposal of firearms and ammunition, it would appear reasonable that, as in the past, dealers' records should be available for inspection during normal business hours by Federal enforcement agents in the performance of their official duties. It would appear, however, to be unreasonable and highly improper that both dealers and manufacturers should be denied, by administrative regulation, their constitutional safeguard against unreasonable search of their stocks and places of business. Nor does the authority of agents of the Internal Revenue Service to search the premises and the stock of the manufacturer or dealer appear to be a reasonable or necessary regulation to carry out the provision of a law which requires only that dealers maintain records of importation, shipment, and disposal of firearms and pistol ammunition.

Concurrently with the publishing of the proposed revisions of the regulations in the Federal Register, it was stated that consideration would be given to any data, views, or arguments pertaining to the proposals which were submitted in writing in duplicate to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington, D. C., prior to June 3, 1957. The National Rifle Association protest was filed as prescribed. In our protest we said in part:

"The National Rifle Association of America is of the opinion that the regulations enumerated above are unreasonable, unnecessary, and improper under the provisions of the Federal Firearms Act. They represent an extension of the authority of the Internal

Revenue Service not granted by the Federal Firearms Act and not intended by the Congress in the enactment of the Federal Firearms Act. The adoption of these regulations will result in an unwarranted hardship and burden upon manufacturers and importers of rifles, shotguns, and pistols and of pistol ammunition; they will impose an intolerable burden of recordkeeping upon licensed firearms dealers, and they will tend to discourage legitimate commerce in firearms and in pistol and revolver ammunition by manufacturer, dealer, and consumer alike."

As a result of the publicity given the proposed revisions by the National Rifle Association and others, many protests have been filed with the Alcohol and Tobacco Tax Division, Internal Revenue Service. Also, very gratifyingly, many protests have been registered with Members of the Congress in Washington. At press time no announcement had been made by the Internal Revenue Service with respect to the proposed regulations. It is known that all protests must be evaluated and this presumably could be a time-consuming operation. The National Rifle Association has been informed by the Internal Revenue Service that the regulations will not be made effective without prior consultation with the National Rifle Association, and presumably with other interested individuals and organizations.

Because the June issue of the American Rifleman did not reach many NRA members until after the June 3 deadline for protests to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, it is probable that many members who would have liked to be heard on the subject of the proposed regulations were denied that opportunity. It is now, of course, too late for protests to the Director, Alcohol and Tobacco Tax Division, to be effective. Also, it is too early to tell whether the protests already filed will be persuasive or successful. One avenue of approach is always open to any interested American citizen and that is through his own United States Congressman or Senator. Here, with our elected representatives, is the ultimate safeguard of our liberties. No one other than the Federal Congress should be more concerned with preserving the legislative prerogatives of Congress and with keeping within reasonable bounds the power of Government bureaus to rule by regulation.

Who Is To Blame for Discrimination at Dhahran?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Dr. Edward B. Glick, which appeared in the August 19, 1957, issue of Congress Weekly. Dr. Glick is author of Latin America and the Palestine Problem:

DISCRIMINATION AT DHAHRAN
(By Edward B. Glick)

One of this country's leading experts on the Middle East, Prof. George Lenczowski, concluded a recent book by asking "whether the American ideals of democracy and self-determination have not too often been subordinated to expediency, thus robbing American policy of the moral advantage that it once possessed and that it might well try to regain in the present revolutionary era in the nonwestern world." Perhaps there is no better example of the subordination of the ideals of democracy to the demands of expediency than the discriminatory situation at the American-leased airfields at Dhahran, Saudi Arabia, where American Christians are restricted in the practice of their religion and American Jews are excluded both from the base and the country.

The United States obtained permission to build, maintain, and use the Dhahran airfield, located on the western shore of the Persian Gulf not far from the headquarters of the Arabian American Oil Co. (Aramco), in 1945. Continually extended for brief periods of time, the lease was renewed in 1951 for 5 years and again in April of this year for an additional 5 years. Despite the fact that we have in the last decade spent some $50 million in construction alone, all new "installations and construction" as well as all "fixed properties" at Dhahran belong to Saudi Arabia.

The 1951 agreement, the basic document governing our rights and obligations at Dhahran, stipulates that American military and civilian aircraft may land, take off, refuel, and make use of the technical services of the airport. In return, the United States, besides building and maintaining the facilities, provides the weather information, radio communications, air rescue, and aircraft operations services not only for her own military planes, but also for all civilian aircraft which the Saudi Arabian Government authorizes to use the Dhahran airfield. Under the terms of the 1957 renewal, our Government has further agreed to supply Saudi Arabia with $50 million worth of military equipment, to construct new facilities at the base, to institute a training program for the Saudi Arabian Air Force, to augment its present advisory program for the Saudi Arabian Army, to train naval personnel for the desert kingdom, and to help in the expansion of the port of Damman.

Certainly no one, least of all a civilian unconnected with the Defense Establishment or the Government, can presume to challenge all of the purely military considerations responsible for America's acquisition of the Dhahran airfield. However, what can be questioned and what the State and Defense Departments have still not satisfactorily justified, is the atmosphere of bias associated with the base from our very first connection with it. Among the clauses of the 1951 agreement are provisions requiring the United States mission to submit a detailed list of the names and identity of its members and employees so that there will not be included individuals objectionable to the Saudi Arabian Government. If the mission is requested by the Saudi Arabs to send out or replace any of its personnel, it must do so promptly. Furthermore, all civilian contracting firms and their workers must likewise not be unacceptable to the Saudi Arabian Government. Last, the American mission, its personnel, and its employees must in their social activities (which apparently includes their religious affiliations and observances) take into account the local customs and laws in effect in Saudi Arabia.

The practical effect of these provisions is that American Jewish military personnel, regardless of their qualifications or the need for their services, are never posted to Saudi Arabia—nor are American Jews permitted to be employed by Aramco or any other private American firm—and Christian Americans may not publicly practice or display the symbols and insignia of their religion. United States chaplains at Dhahran do not wear the cross on their lapels and must conduct religious services in buildings which do not have the outward appearance of a church. Furthermore, to avoid incidents, Catholic priests find it necessary to perform their religious functions without wearing their customary clerical garb.

The State Department has sought to explain the discriminatory exclusion of American Jewish servicemen by invoking the canons of international usage. For example, a May 22, 1956, official statement by the Department's Public Services Division notes inter alia: "International law and practice recognize the fundamental right of a sovwhat conditions aliens may enter its territory." And in an obvious attempt to shift the onus entirely to Saudia Arabia, the statement also says: "The United States has made no agreement concerning the assignment of military personnel of the Jewish faith to Saudi Arabia, although the assignment of such persons is presently prohibited by Saudi Arabian visa regulations."

Inasmuch as the 1951 agreement was concluded during the Truman administration, Mr. Truman's interpretation of its restrictive provisions should be considered the most authoritative and presumably ought to be binding upon the State Department. The former President has explained that the agreement was "not intended to bar American Jews or any other Americans" and that Saudi Arabia has the right to exclude persons from Dhahran only "on an individual and not on a race or creed basis." In other words, while our Government may uphold King Saud's right to bar objectionable individual Americans, it is contrary to our whole tradition and to the agreement to support him in the exclusion of a whole group of American citizens because of their religion.

Yet the apparent complacency of the United States in the face of Saudi Arabian discrimination against Americans has not gone unchallenged. On July 26, 1956, the United States Senate unanimously adopted a resolution which specifically stresses the "primary principle of our Nation that there shall be no distinction among United States citizens based on their individual religious affiliations * * * [and that] any attempt by foreign nations to create such distinctions * * * generally is inconsistent with our principles." At their presidential-nominating conventions of last summer, the Republicans as well as the Democrats adopted platform planks opposing foreign discrimination against Americans such as now exists in Saudi Arabia. Last fall, both the President's Committee on Government Contracts and the President's Committee on Govenrnment Employment Policy asked the Departments of State and Defense to secure an end to the discriminatory practices involving Americans in Saudi Arabia.

Despite the Senate resolution and the actions of leading public and private individuals, the State Department renegotiated the Dhahran agreement last April without obtaining any changes in the matter of discrimination. When asked about this at a news conference on April 23, 1957, Mr. Dulles intimated that King Saud was unreceptive because of the refusal of Mayor Wagner of New York to extend official courtesies to the visiting Saudi Arabian monarch.

It has been argued, quite effectively, that any serious attempt by the United States to press Saudi Arabia on this question might result in the cancellation of Aramco's concession to exploit Saudi Arabia's oil if not the loss of the right of the United States Government to make use of the Dhahran airfield. Recently, an even more persuasive note has been added. Pressure upon Saud, it is said, would upset America's policy of trying to woo Saudi Arabia and other Arab countries away from the Soviet-Egyptian-Syrian orbit. Just how much validity do these arguments have?

No one can realistically ignore the relationship between the Dhahran installations and Saudi Arabia's position as one of the world's leading repositories of petroleum.

Undoubtedly the existence of oil in Saudi Arabia, as well as Aramco's special position there, greatly influenced the decision of the United States to acquire leasing rights at Dhahran and to accommodate herself to the prejudices and idiosyncracies of Saudi Arabia. But in so doing the government has apparently failed to appreciate that the petroleum possessing states of the Middle East are at least as dependent upon us and our goodwill as we are upon them. In the words of Benjamin Schwadran, author of The Middle East, Oil and the Great Powers, "the Arab oil producing countries are much more desperately in need of the income the West can give them for their oil and of the latter's ability to transport, use and market it than the West, as a whole, is in need of Middle East oil." In 1955 Saudi Arabia received more than a quarter of a billion dollars, or approximately 71 percent of her governmental budget, in payments from the Arabian American Oil Co. It is, consequently, exceedingly difficult to conceive that she would interfere with the Aramco concession—or with our airbase—if the United States were to insist upon nondiscriminatory treatment of our citizens.

If past experience offers any indication of future action, it is worth recalling that neither after America's support of the partition of Palestine nor after our diplomatic recognition of Israel did Saudi Arabia stop the flow of oil to the West. In fact, on February 27, 1948, a correspondent of the New York Herald Tribune reported from Dhahran that despite Arab bitterness against America for favoring the creation of the Jewish State, the late King Saud, father of the present ruler, had assured Aramco that its oil concession would not be taken away. Nor, it must be remembered, did Saudi Arabia, unlike some of her neighbors, interrupt for even a moment the export of petroleum during the recent crisis over the Sinai Peninsula and the Suez Canal. If she did not take so drastic a step in these situations, which clearly benefited Israel, it seems highly unlikely that Saudi Arabia would oust either Aramco or the United States Air Force or abruptly change her attitude toward Egypt solely because we demanded that the rights of all American citizens be respected, a circumstance which involves not Israel but only the relations between the United States and Saudi Arabia.

Unquestionably, Dhahran is of importance to the United States. It is of equal if not greater value to Saudi Arabia, a fact often overlooked. But must the price for it be the curtailment of the rights of a group of Americans? Further, is the airfield so vital that principle must capitulate to expediency?

Thomas K. Finletter, Secretary of the Air Force in 1951, when the principal Dhahran agreement was signed, stated the issue well in his foreword to the pamphlet on the Dhahran airfield recently published by the American Jewish Congress. Said Mr. Finletter:

"There has been much unfounded talk about the vital necessity of the Dhahran airfield to the interests of the United States. I think I am reasonably aware of the importance of the base structure of our Air Force and I cannot agree with the idea that any one base such as Dhahran is vital. I happen to believe that our base structure should be strengthened well beyond its present state but there are many places other than Dhahran where a substitute base for Dhahran and the additional bases which are needed could be located. I do not believe that the need for the Dhahran Airbase in any way requires us to sacrifice the principles in which the American people believe. I think, in short, that the value of the Dhahran base is relatively small and that it can be replaced, but that the value of the principle involved is high and cannot be replaced."

And the principle involved, without which this country will never regain the moral advantage it once possessed in its conduct of foreign affairs, is that there can be no distinctions made or tolerated among Americans because of their religion, race, or creed.

People, Politics, and Principles

EXTENSION OF REMARKS
OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include an article which appears in the August 10 issue of America, entitled "Men, Myths, and Politics," by Edward Anthony Connell. Mr. Connell is a prominent citizen of Stamford, Conn.

His observations on politics, principles, and politicians are most interesting, and I commend this article to the attention of my colleagues.

The article follows:

MEN, MYTHS, AND POLITICS

(By Edward Anthony Connell)

To the average citizen politics is a confusing and mystifying sort of melodrama in which all is pretense, vacillaton, and insincerity. Politicians are regarded as a two-faced and shifty group who are completely incompetent in the legitimate pursuits of life and take to politics as a frantic last resort.

Most serious is the popular notion that politics is a chaotic affair without rules or codes or standards: a pseudoprofession which exists without reason or justification, a sort of parasitic growth on the organism of government. There is a constant effort to do away with politics; to remove it from government as a surgeon would remove a malignant growth from the body.

But politics is actually the heart or the spirit, the élan vital of government rather than a superfluous and corroding growth. In another sense, government is a structure or famework and becomes responsive only when human beings begin to use it: to make decisions, to apply rules, to interpret statutes and regulations, to approve some requests and to deny others.

In brief, politics is enormously concerned with judgments and interpretations and the immediate application of the rules of government. The American people, perhaps more than any citizenry on earth, have clung to a theory of government that in many respects is totally unlike that held on any substantial scale in any other nation in the modern world. Our Declaration of Independence and our Constitution are far more than statements of governmental mechanics. They both are shot through with the language of the spirit and heavy with the implications of free will and choice.

Our nation of multitudinous groups and associations has produced hundreds of thousands of constitutions and sets of by-laws, from those of the American Institute of Architects to the recent lengthy and complex set of rules drawn up by the Springdale Civic Improvement Association. Yet strangely enough we lean over backward to make these codes cold and spiritless so that we may boast about our rule books being "free from politics."

In short, we have an almost childish belief that we should have amongst us a breed of supermen who will spell out by their actions and decisions in public life the high promise of the magnificent phraseology of our Founding Fathers. Because we believe that only men of enormous goodness could have written the great basic documents of the 18th century, we have searched vainly over the years for men of equal goodness to match them. We have petulantly branded as politicians men of great intellectual stature and patriotism, sensitive to right and wrong, whose only weakness lay in being tainted with original sin and thereby falling short of the popular concept of the man in public life.

MEN LIKE ANGELS?

We have not measured our politicians with the same yardstick we use for our business leaders, our sports heroes, our TV entertainers and our educators and social workers. We have, for instance, come to accept as normal the idea that a politician must be completely devoid of self-interest; and we are perturbed when fe learn that Mayor Zilch or Senator Sniffles owns stock in General Motors or Lukens Steel or risks an occasional $2 on the daily double.

Bertrand Russell said in a recent analysis of communism: "My objections to Marx are of two sorts: one, that he was muddleheaded; and the other, that his thinking was almost entirely inspired by hatred" (Look magazine, April 30, 1957).

The hatred of which Lord Russell wrote has many manifestations, but important among them is the hatred of the modern unrealist for the teaching that sin is universal and stains all men. The unrealist attempts therefore to create the portrait of a governing class that shows him and his associates holding aloft the phony banner of sinlessness.

Communism found a fertile ground in which to sow its seed, not only because the modern industrial system had brought about much material suffering, but also because so many people in the modern world had come to believe that the homegrown politicians they knew were interlopers and men of little faith who should be replaced at the polls, or through violent revolution if necessary, by dedicated people waiting in the wings whose hearts were completely pure inasmuch as original sin had never even touched them.

To say that "Government ought to do something about it" is not only normal but at times necessary. This is so because only the state, in the final analysis, can set new ground rules and ban the economic spitball and the industrial gouging and clipping. Perhaps more than any leader of our time Franklin Delano Roosevelt detected accurately and classified correctly the rule-violations of the 20th-century social scene. And the FDR grip remained firm and unwavering for nearly 2 decades chiefly because he was the first to see and describe and condemn the butting and the fouling that had become widespread in the uneven contest between the haves and the have-nots. But even a Roosevelt could not pull out of a hat the inexorable impartial referees and umpires who could enforce the new rules. So the T. Lamar Caudles and the six-percenters swarmed in, because men are not gods.

Perhaps it is a good thing in the long run that we have built up the tradition that the average politician is someone to be temporarily tolerated. Perhaps it is salutary that we look longingly toward the distant hills for the Lochinvar or Sir Launcelot who will pave our city streets without giving kickbacks to contractors and administer our public schools without making demeaning concessions to the head of the PTA. It is well to remind ourselves from time to time that the Christian ethic does set a high standard of conduct for men in public life. The fact

that men often fall short of the standard doesn't mean that it isn't there.

The politician in our midst will always be a person to watch with a jaundiced eye so long as we believe even slightly in the Marxian mystique of the state as the only well-spring of infused virtue. Marx did not admit that the state is the combined efforts of human beings to propagate order and justice within the limitations of human weakness. Marx taught the theory of the inherent rectitude of the state and the rub-off theory: i. e., that contact with the state of assimilation by the state will transform those assimiliated into men without sin or passion.

The politician is frequently a man who tries desperately to sublimate many of his personal interests (and frequently succeeds) and is rejected because he cannot sublimate them all. Yet the average American has not become acutely aware of this fact. We go on hoping; we reread our Ralph Waldo Emerson and peer into the darkness for signs of the arrival of the shining substitute for the politician. And, in the meantime, our politicians go about their appointed rounds with good sense and unrecognized wisdom making possible the care of the indigent, the spraying of trees in city streets, and the protection of the screwball theorist against midnight arrest and beating with a rubber hose.

Iraq Celebrates 25th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of independence of one of the 29 participating nations in the Asian-African Conference on friendly relations with the United States.

Congress will not be in session when Iraq celebrates her 25th anniversary of independence on October 3, 1957, hence, I wish to take this opportunity today to salute the people of Iraq, His Majesty King Faisal, and His Excellency Moussa Al-Shabandar, Ambassador of Iraq, in honor of this occasion.

On October 3, 1932, Iraq was admitted to the League of Nations as a full-fledged and sovereign member. Thus began her life as a new independent nation. Although small in population, Iraq has become one of the leading states of the Arab world. Since independence, the people of Iraq have continually devoted considerable efforts in the complex area of economic development with a view toward bettering conditions and raising living standards.

Iraq has been genuinely concerned with the Communist threat and seeks United States assistance to strengthen its defenses. Recent events have tested the stability of the Iraqi Government, but its anti-Communist stand and friendship with the United States have not been impaired.

As one who deeply believes in freedom, democracy, and the importance of achieving a better understanding among all nations, I want to take this opportunity to wish Iraq every success as she embarks upon a new year of independence.

Congressman McGregor Concerned Over Inflation—But Hasn't Answer

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD an article appearing in the Ashland Times Gazette, under date of August 14, 1957.

We had an informal meeting, as the editorial will describe, and I think it was mutually agreed that inflation was one of the dangerous problems facing us today.

I submit the editorial for your consideration.

CONGRESSMAN MCGREGOR CONCERNED OVER INFLATION—BUT HASN'T ANSWER

Congressman J. HARRY MCGREGOR was in Ashland Monday and Tuesday, meeting and talking with constituents.

His vists are always beneficial to him, he says, in determining the wishes and feelings of the people of his district, Ohio's 17th Congressional.

While talking with the members of the National Affairs Committee of the Ashland Chamber of Commerce Monday, MCGREGOR expressed a thought with which most people will agree.

He said he was certain that the greatest problem facing the United States today is not communism, but the threat of inflation to our economy and our well-being.

"Creeping inflation is by far our most serious problem," he said. "It will destroy us far more quickly than communism, a thing we can be aware of and fight openly. Inflation is a different battle. It can't be won in Washington or in the Halls of Congress. It has to be beaten at home."

MCGREGOR went on to say that the American people, unfortunately, are the greatest "wanters" in the world today—or in world history, for that matter.

"The time is coming," he said, "when we have got to be satisfied with what we can afford instead of what we want."

The Congressman pointed out the terrific increases in prices of weapons used in national defense. In a matter of only 4 or 5 years the costs of weapons have more than doubled and the price is up 3 and 4 times what it was in World War II.

"Yet we can't economize on defense, for the moment we do we are in trouble. And you can't explain defense economy to the people whose sons and daughters are called upon to serve our country overseas and face the possibilities of actual warfare. We have got to have the best and the latest—and that costs and costs."

MCGREGOR agreed with a statement by a local manufacturer that one of the most serious causes of inflation today is the big industries who refuse to say no to union demands for higher and higher wages.

He agreed that the plight of small industries in the face of giving in by the big fellows is almost hopeless.

Yet he saw no immediate solution to the spiral upward. He said it is impossible to tell industires how much they can pay and it is impossible to tell unions how much they can ask for.

One Ashlander said the only answer was the law of supply and demand and the power of the consumer.

The problem—not a simple one—was left at that.

But Ashland's chamber people did learn some things from Congressman MCGREGOR. They learned that the task of being a Congressman isn't an easy one and it isn't always a happy one.

MCGREGOR said he was under fire from Shelby Depot employees for blocking an appropriation of $1,900,000 for the depot because the Pentagon refused to inform him what the money was for. His effort to find out met with replies that the information was classified and he couldn't—and hasn't yet—been able to ascertain what the funds were needed for.

But he blocked the appropriation—and it will stay blocked until he can justify the expenditure, he says.

Such moves—creditable as they seem to people not directly interested—make enemies among those directly concerned.

Such is the life of a Congressman.

The Better Way

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. MOORE. Mr. Speaker, during recent weeks, I have listened with interest when some of colleagues here in the House have attacked the President for the manner in which he has supported or failed to support various legislative programs before the Congress. They have dwelled particularly on his failure to either pressurize or not pressurize the Members into voting for any one of these programs, a system, which if practiced, could do violence to our form of Government and the constitutional basis of three coequal branches of our Government. It has been my personal feeling that most of these speeches lambasting the President have been motivated by political demagoguery and to cover up for the legislative shortcomings of the 85th Congress.

My views are now reinforced by an excellent editorial appearing in the Wheeling Intelligencer on August 24, 1957, entitled "The Better Way," which places in proper perspective the role of the President and his relationship with the Congress. I commend this editorial to my colleagues, because it clearly delineates what our Founding Fathers had in mind when writing the Constitution to provide for the separation of powers between the executive, legislative, and judicial branches of Government:

THE BETTER WAY

The widespread disposition to blame Mr. Eisenhower for such lack of success as his program has encountered in Congress is an evidence of the degree to which we have accepted distortion of the presidential office.

During the course of a recent press conference, the President voiced disappoini-

ment at the refusal of Congress to go along with many of his recommendations. That is only natural. Mr. Eisenhower believed in his proposals or he would not have made them. What isn't natural is that people would lay the responsibility for this at the President's own door because he didn't take a club to Congress and drive his program through.

An analysis of the Congress-White House relationship by the Pittsburgh Post-Gazette is typical. Acknowledging the polical complexion of Congress and the enforced retirement of the President at the conclusion of this term as factors in the situation, the Pittsburgh daily says, nevertheless:

"While these political difficulties have undoubtedly contributed to the President's troubles they are not, it seems to us, the key factor in his defeats. The hard truth is, we fear, that he simply hasn't exerted political leadership of the sort that has characterized some of his predecessors, say, for example, the two Roosevelts."

Cited as examples of Presidential weakness are his "wavering" on the budget in the face of congressional and public criticism and his "faltering performance over the school bill."

Is it a sign of weakness or strength of character to acknowledge and conform to something so spontaneous and overwhelming as public rejection of a spending policy? As for the school bill, it is difficult to see what more the President could have done. In the eyes of opponents he did entirely too much.

What seems to be overlooked are two basic facts—

First, that a President's belief in and support of a project or a program doesn't necessarily make it good. He could be wrong as this newspaper believes he was, for example, in respect both to the budget and the school-aid bill.

Second, it is the responsibility of Congress, not the President, to levy taxes, appropriate money, enact law. So when the President has made a recommendation and given his reasons for it he has done all that he should do or with propriety can do. By what line of reasoning can we justify the imposition of an Executive's will on the Congress, or the surrender of Congress to his views because they are the President's, or because he is in position to exert political pressure?

There may be those who long for the days of Franklin Roosevelt and his rubberstamp Congress. There are others who trace most of the current governmental ills with which we are wrestling to that period and its influence on American life. For its part, the Intelligencer hopes the time never returns when Congress will be a mere puppet of the President. Mr. Eisenhower, it feels, has chosen the better way.

Word Does Get Around

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the August 26, 1957, issue of the New Republic, makes most interesting reading, proving again you cannot fool all of the people all of the time:

END OF AN AFFAIR

The Nation's love affair with Eisenhower is definitely cooling but only after an interval that amazed observers and that probably set a record of its kind. Eisenhower did practically nothing for 4 years and that, it turned out, was exactly what the country wanted. Now a posthoneymoon boredom is visible and disillusionment finds voice. The implicit administration premise was that doing nothing in a spiritual manner would solve all problems; it hasn't worked and problems are becoming urgent.

The second term, you remember, began with Suez. Frightened voters in November turned to Eisenhower to save them in a crisis which he had denied existed. Who knows? A more straightforward Secretary of State might have kept France and Britain in line. As it happened a debacle followed; Russia planted itself firmly in the Mideast power struggle—a spot she had sought to occupy for centuries. Eisenhower met the problem by cutting off press conferences for 10 weeks and 2 days.

The President faced 3 handicaps after the election: a Democratic Congress, a lame-duck status under the 22d amendment, and a diminution of his value to the conservative coalition to which he had given 2 enormous victories but which now needed to glamorize somebody else. Yet, we believe, these were not the controlling factors in what happened. In the aging administration the President himself showed an inexplicable lassitude and vacillation and an increasing retreat to the links.

Consider four points. After being on all sides of the budget the President finally took a position contrary to Secretary Humphrey who, after a decent interval, retired. Again, Eisenhower publicly snubbed Defense Secretary Wilson for the latter's strictures on the National Guard (to Mrs. Wilson's irritation) and, whether by coincidence or not, Wilson also has retired. Again, Secretary Folsom tried heroically to get through a school bill—Eisenhower failed to support him. And finally, Eisenhower publicly revealed doubt and disagreement over Brownell's civil-rights bill ("I was reading part of that bill this morning and I—there were certain phrases I don't completely understand.") Here is a record of mixed signals in four different instances. Now the Cabinet has lost its two strongest members.

"I NEVER HEARD THAT"

This is the time for all good columnists to writes estimates of the past legislative session. But for this reporter two minor, almost casual, comments by Eisenhower will be chiefly remembered. One was the astonishing reply made to a reporter after the school bill defeat by five votes. In a final desperate effort to get the bill through the House, Democrats swallowed their pride and agreed to accept the Eisenhower measure in toto. But no word came from the White House and the bill perished. What we remember is the President's candid revelation that he was unaware of the Democrats' switch. "I never heard that, Mr. Folliard," he told stunned reporters. "If that is true, why you are telling me something I never heard."

The second phrase was in a letter on the natural-gas bill. After the veto of last year, you recall, Eisenhower proposed two amendments to the bill in the consumers' interest this year. But when the test came, the President hastily abandoned the amendments in a phrase that sticks to our memory; they (the amendments), he wrote the House chairman, "do not represent my fixed conclusions." How fixed are any of this administration's conclusions?

The story of the weekly press conferences is revealing, too. They are the President's vehicle for expounding views, molding opinion, speaking directly to the Nation. But the President called off his July 24 press conference just before the climactic House vote on the school bill. He thereby ducked the inevitable press questions on his position. He avoided the fray. Again, he called off his press conference just before the Senate started the voting that culminated in ripping section III out of the civil-rights bill. And reporters were not surprised last week when Eisenhower dropped his regular press conference a third time—the final stage of decision had been reached in the rival Senate-House versions of civil rights. Eisenhower avoided taking a position.

ONE PIECE OF PAPER

Endless reiteration is fruitless and we try to avoid it. A critical reporter always runs the danger of becoming a common scold. We think we have made our point. Eisenhower carried no fervor over from his great election victory. As press protection is withdrawn, as NIXON begins privately to criticize his Chief, as the honeymoon sags, Eisenhower goes more to the Burning Tree Club. On some things the President feels strongly and knows his own mind and is willing to make a fight. But on nasty, complicated questions that do not lend themselves easily to staff condensation on a single piece of paper, Eisenhower finds difficulty.

Letter From the National Rifle Association of America

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. DINGELL. Mr. Speaker, the bureaucrats in the Alcohol and Tobacco Tax Division have proposed regulations which strike directly at every sportsman and hunter in this country. I am referring to sections 177.50, 177.51, 177.52, 177.54, and 177.55 which appeared in the Federal Register of May 3, 1957. Those proposed regulations, on which a hearing is being held today, August 27, 1957, far exceed the authority of the Alcohol and Tobacco Tax Division of the Internal Revenue Service and are aimed not at the protection of law-abiding people or at hindering a commission of crime, but rather at hindering the law-abiding citizen in the purchase of firearms and ammunition for sports and protection of home. Pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD a letter from the National Rifle Association of America signed by Mr. Floyd L. Parks, executive director, condemning these regulations.

I hope every Member of this House will read this criticism of these vicious regulations and will lend their individual and collective authority and prestige to the defeat of these unsound, bureaucratic and senseless regulations.

The letter follows:

NATIONAL RIFLE ASSOCIATION OF AMERICA,
Washington, D. C., May 31, 1957.

Mr. DWIGHT AVIS,
Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington, D. C.

DEAR MR. AVIS: Our attention has been called to the Federal Register for May 3, 1957, which carries a proposed revision of the Internal Revenue Service regulations relative to the movement in interstate commerce of all firearms and of pistol and revolver ammunition.

The Federal Firearms Act provides, in section 907, that the Secretary of the Treasury may prescribe such rules and regulations as

he deems necessary to carry out the provisions of the law. This authority of the Secretary of the Treasury is, we understand, delegated to the Commissioner of Internal Revenue. It is understood that Federal agencies have the authority, where so prescribed, to issue rules and regulations which are reasonable and necessary for the enforcement of Federal laws with which they are charged. However, in addition to being reasonable and necessary such regulations must lie within the framework of the law. It is the belief of the National Rifle Association of America that some of the proposed regulations are neither reasonable nor necessary. Likewise, it is our belief that some of the regulations are not supported by either the language or the intent of the Federal Firearms Act and that they are therefore not within the authority of the Internal Revenue Service.

1. Section 177.50, which appears on page 3155 of the Federal Register of May 3, 1957, provides that each manufacturer or importer of a firearm shall identify it by stamping in a manner not readily obliterated or altered the name and location of the manufacturer or importer and the serial number, caliber, and model of the firearm. On this subject the Federal Firearms Act states, in section 902, paragraph (1), that: "It shall be unlawful for any person to transport, ship, or knowingly receive in interstate or foreign commerce any firearm from which the manufacturer's serial number has been removed, obliterated, or altered." At the time of the enactment of the Federal Firearms Act, and at all times since, there have been many sporting-type firearms, shotguns, rifles, and particularly less expensive .22-caliber rifles, which it has not been the practice of the manufacturers to provide with serial numbers. According to the Census of Manufacturers for 1954, over 1 million rifles and shotguns of all types were manufactured in the United States in 1954. To the best of our knowledge, approximately one-half of all shotguns and two-thirds of all rifles currently manufactured in the United States are manufactured and sold without serial numbers. Since this has always been more or less the case, it would appear that Congress would have provided in the law that all rifles, shotguns, etc., be marked with a serial number by the manufacturer and with the name and location of the manufacturer or importer and with the caliber and model of the firearm, if such was indeed the intent of Congress. Manufacturers of firearms will be put to a very considerable additional expense to comply with the proposed regulation. Should this regulation be put into effect, a question will immediately be raised as to the status of the thousands of rifles and shotguns now in dealers' stocks and in private hands which either do not carry serial numbers or which do not carry some or all of the information required by the proposed regulation. In addition to added costs to manufacturers, which must inevitably be passed on to the ultimate consumer, a great hardship will be imposed on importers, particularly importers of obsolete weapons, should this proposed regulation be applied to them. The stamping or otherwise impressing of a number or mark of any kind upon an obsolete weapon materially reduces its market value and its value as a collector's item or museum piece.

2. Section 177.51 on pages 3155 and 3156 of the Federal Register of May 3, 1957, provides that manufacturers' and dealers' records of receipt and disposal of firearms must be retained permanently on the premises until discontinuance of the business by the licensee. Section 903, paragraph (d) of the Federal Firearms Act provides that: "Licensed dealers shall maintain such permanent records of importation, shipment, and other disposal of firearms and ammunition as the Secretary of the Treasury shall prescribe." Whether by the language "permanent records" the law implies that such records must be retained in perpetuity is not known. For many years the regulations have required that records be retained by licensed dealers for a period of 6 years. The proposed revision to require the retention of records permanently on the premises would seem to impose an unnecessary and unduly severe hardship on licensed dealers by creating a record-storage problem of some magnitude. The very concept of dealers' records retained in perpetuity seems unreasonable on its face, since it is apparent that such dealers' records must lose all value and interest to anyone once they have attained some reasonable age.

This same section of the regulations requires records of receipt and disposal of firearms by both licensed manufacturers and licensed dealers. Section 903, paragraph (d) of the Federal Firearms Act provides for the maintenance of records only by licensed dealers. The act does not require the maintenance of records by manufacturers. This requirement is apparently imposed by regulation. In this connection, a review of the hearings before the Committee on Commerce of the United States Senate, 74th Congress, April 16, 1935, reveals that the bill, S. 3, which later became the Federal Firearms Act, at the time of the hearing contained a provision which read: Section 3 (d), "Licensed manufacturers and dealers shall maintain such permanent records of manufacture, importation, shipment, and other disposal of firearms and ammunition as the Secretary of Commerce shall prescribe." When this bill came up for hearing before a subcommittee of the Committee on Interstate and Foreign Commerce of the House of Representatives, 75th Congress, on June 22, 1937, the reference to licensed manufacturers and to manufacturers' records had been deleted from the bill. In the form in which the bill was enacted into law section 3 (d) read: "Licensed dealers shall maintain such permanent records of importation, shipment, and other disposal of firearms and ammunition as the Secretary of Commerce shall prescribe." It would appear beyond question that by striking from the bill any reference to licensed manufacturers or to records of the manufacture of firearms and ammunition it was clearly the intent of Congress that they not be covered under the act.

Again, with respect to this same section in the proposed regulations, section 903, paragraph (d) of the Federal Firearms Act requires licensed dealers to maintain permanent records of "importation, shipment, and other disposal of firearms and ammunition." The proposed regulations as they appear in section 177.51 and in the succeeding section 177.52 as published in the Federal Register of May 3, 1957, would require in addition the maintenance of records by licensed manufacturers and dealers of the production and receipt of firearms and pistol and revolver ammunition. It is the position of the National Rifle Association that had the law intended dealers to maintain records of the production and receipt of firearms and pistol or revolver ammunition, this language would have appeared in the law. In support of our position it is pointed out that there are provisions elsewhere in the Federal Firearms Act where it is provided, for example, that a manufacturer or dealer must be licensed in order to receive firearms or ammunition in interstate or foreign commerce. Language with respect to the receipt of firearms and ammunition is found frequently in the act but is significantly absent from that section of the act which requires licensed dealers to maintain records specifically of "importation, shipment, and other disposal."

3. Section 177.52 on page 3156 of the Federal Register of May 3, 1957, provides for the maintenance by manufacturers and dealers of records reflecting the production or receipt and the disposition at wholesale or retail of all pistol and revolver ammunition. Such ammunition to be described as to manufacture, type, caliber, quantity, and the identity of the person from whom received and to whom sold. The National Rifle Association strongly protests the imposition of such a useless and intolerable burden upon retail dealers in pistol ammunition. Well over 25 million rounds of center-fire pistol and revolver ammunition are purchased and used in the United States for lawful training and recreational purposes each year. By comparison, the number of rounds of ammunition employed for any unlawful purpose must be insignificant. Such recordkeeping, if imposed upon retail dealers, can have no practical result other than to discourage from commerce in pistol and revolver ammunition the reputable dealer who will observe the regulation. It appears absurd to this association that a criminal or potential criminal would be in the least inhibited by such a regulation when it could be so easily circumvented by bootlegging, theft, or purchase through blackmarket channels.

4. Section 177.54 on page 3156 of the Federal Register of May 3, 1957, provides that a person purchasing a firearm or handgun ammunition in over-the-counter sales must acknowledge receipt thereof in his own handwriting in the prescribed dealer's records. The Federal Firearms Act regulates interstate commerce in firearms and in pistol and revolver ammunition. It provides for the Federal licensing of manufacturers and dealers in firearms and pistol or revolver ammunition and it sets forth limitations on the transporting, shipping, or receiving of firearms or pistol ammunition in interstate or foreign commerce. The act does not presume to set forth restrictions or requirements applicable to individuals who purchase firearms or handgun ammunition in a retail, over-the-counter transaction. Such a requirement, binding upon an individual doing business entirely within a State, would, plainly in our opinion, be within the prerogative of a State legislature and not within the province of a Federal statute. We believe that the Department of the Treasury has no authority to impose by regulation, requirements which the Federal Congress did not write into the law and could not properly have written into the law.

5. Section 177.55, on page 3156 of the Federal Register of May 3, 1957, provides that any Internal Revenue officer designated by the Director shall have authority to examine the books, papers, and records kept by a licensee pursuant to the regulations, and to examine his premises and stock during regular business hours in the daytime or whenever such premises may be open at night. This regulation would appear to depend for authority on that provision of the Federal Firearms Act which requires licensed dealers to maintain such permanent records of importation, shipment, and other disposal of firearms and ammunition as the Secretary of the Treasury shall prescribe. To enforce the maintenance of records of importation, shipment, and other disposal of firearms and ammunition, it would appear reasonable that dealers' records should be available for inspection during normal business hours, by Federal enforcement agents in the performance of their official duties. It appears however to this Association to be unreasonable and highly improper that both dealers and manufacturers should be denied, by administrative regulation, their constitutional safeguards against unreasonable search of their stocks and places of business. Nor does the authority of agents of the Internal Revenue Service to search the premises and the stock of a manufacturer or a dealer, appear

to be a reasonable or necessary regulation to carry out the provision of a law which requires the maintenance of records of importation, shipment, and disposal of firearms and pistol ammunition.

The National Rifle Association of America is of the opinion that the regulations enumerated above are unreasonable, unnecessary, and improper under the provisions of the Federal Firearms Act. They represent an extension of the authority of the Internal Revenue Service not granted by the Federal Firearms Act and not intended by the Federal Congress in the enactment of the Federal Firearms Act. The adoption of these regulations will result in an unwarranted hardship and burden upon manufacturers and importers of rifles, shotguns, and pistols and of pistol ammunition; they will impose an intolerable burden of recordkeeping upon licensed firearms dealers and they will tend to discourage legitimate commerce in firearms and pistol and revolver ammunition by manufacturer, dealer, and consumer alike.

It is respectfully urged that the proposed regulations enumerated above not be adopted and that a hearing be scheduled at whch all interested parties may have an opportunity to be heard relative to these proposed regulations.

Sincerely,

FLOYD L. PARKS,
Lieutenant General, United States Army (Retired), Executive Director, National Rifle Association of America.

Turkey Celebrates 34th Anniversary of the Declaration of the Republic

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of one of the 29 participating nations in the Asian-African Conference on friendly relations with the United States.

Inasmuch as the Congress will not be in session at the time of the event, I wish to take this opportunity to send greetings to the people of Turkey, President Jelal Bayar, and His Excellency Suat Hayri Urguplu, Ambassador of Turkey, on the occasion of the celebration of the 34th anniversary of the declaration of the Republic of Turkey, October 29, 1957.

Turkey has enjoyed uninterrupted independence since the formation of the Ottoman Empire in 1299. Republic Day stands for the Turkish people for what an independence day stands for any free nation. It is a day consecrated to celebrations in remembrance and confirmation of the principles of the Ataturk revolution, which made the continuation of the independence of Turkey possible and on which the existence, freedom and way of life of modern Turkey is based.

Modern Turkey dates from October 29, 1923, when it formally became a republic with Mustafa Kemal as its first president. The creation of the new Republic marked the birth of the new Turkey.

Seldom in history has any nation gone so far so fast as has modern Turkey since May 19, 1919. That was the day when Mustafa Kemal Pasha, who was renamed Ataturk—father of the Turks—by a grateful people for his leadership, landed at Samsun on the Black Sea and plunged into the task of transforming a series of medieval communities into a new country. No one can fail to admire the courage with which this country has tackled its huge tasks. Turkey, under Mustafa Kemal Ataturk, set out to be a modern nation and became a healthy republic with amazing vitality. In 1924, the office of Caliphate and the rule of religious courts were abolished. The charter of the new republic was a constitution and a bill of rights similar to that of the United States with the same concept of individual liberty and law. Almost overnight a social revolution, bloodless, and with an unprecedented speed, ushered in a new way of life in Turkey. All Ottoman titles, such as pasha, bey, and effendi, were abolished. The wearing of a fez, which denoted allegiance to the old Ottoman empire, the laws requiring women to veil their faces, and the oriental splendor were all things of the past. The modernization of Turkey, which was the goal of Kemal Ataturk, has been continued by Ismet Inonu, who followed Ataturk in the presidency, and by Mahmut Jelal Bayar, the current president, through the adoption of many other far-reaching reforms along Western lines.

During these past few years a rapid, overall harmonious growth has characterized the Turkish scene. This development has been secured by means of concerted policies directed toward utilizing the natural resources of the country, expanding the industrial potential and introducing new incentives for breaking inertia.

The greatest of all the resources of modern Turkey is the spirit of her people. They are determined that nothing shall stop them from getting ahead. The courage and optimism with which they are attacking their new task are infectious. Much that they are undertaking is new to them, and although they learn modern techniques quickly, they urgently need more people trained in the essential skills of an industrial society.

Ever since its inception, the new Turkish State has been based on democratic foundations. The clause in the Turkish constitution which affirmed that "Sovereignty belongs unconditionally to the Nation" became the factor which guided Turkey's entire administrative machinery. Later, the principles of the Turkish State, confirming as they did that Turkey is Republican, populist and secular, emphasized even more clearly the truly democratic character of the young republic. Turkey is going through a period of rapid expansion. Like every growth, this has its pains, and history teaches us that it is natural that it should be so. But, in recent months some observers of the Turkish scene have taken these symptoms as the substance of Turkish life—forgetting the truth expressed in the old Turkish proverb, "Falling blossoms indicate ripening fruit."

Turkey is virtually a bridge between East and West both geographically and culturally. The Dardenelles and the Bosporus are the Soviet Union's only outlets to the Mediterranean. Possession of Istanbul and the Straits would enable an aggressive power to use Turkey as a base to control the eastern Mediterranean and make air attacks on shipping there and all along the sea lanes which pass through the Suez Canal. Turkey's strategic importance is, therefore, fully recognized by all major powers. The United States has a high stake in Turkey, not only in terms of military and economic investment, but also in terms of good will and friendship. Turkey is one of America's strongest and most reliable friends, a bulwark against Soviet expansion.

Turkish loyalties are true and intense. Above all, they believe in the future of their country and not in a narrow nationalistic sense, for the Turkey of the future will serve the welfare of the entire world through her strength and the wisdom of her leaders.

Japan on Our Side

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

JAPAN ON OUR SIDE

Prime Minister Nobusuke Kishi of Japan has written in an exclusive article for the American Weekly, published with the Sun-Telegraph, that his country has taken its place permanently among the free nations, with total rejection of Communism as an alternative to complete sovereignty.

This has been accomplished in the face of one of the most intensive campaigns of Communist infiltration in the entire Orient. Japan has been continuously the target of Communist propaganda ever since the end of the Pacific war, but the full measure of its resistance is indicated by the assurance Mr. Kishi gives now of Japanese aspiration to human dignity.

Dispelling whatever doubts the free world may have had about the matter, this is the welcome appraisal of the Japanese position as Mr. Kishi presented it to the readers of the American Weekly:

"Japan will never go Communist, or neutralist.

"We will always be on the side of the free nations."

The emergence of Japan from total defeat in the Pacific war as an instrument for universal peace and security is the happy climax to a long story. It attests above all the essential justice and intelligence and humanity of the American program of occupation and administration, under the leadership of Gen. Douglas MacArthur.

From the beginning of the Japanese occupation, General MacArthur envisaged a responsible and constructive place for Japan in the family of free nations. He knew the capacities and potentialities of the Japanese people for contributions to the prosperity and progress of the civilized world. He refused to treat Japan as a conquered nation, and for almost the first time in history the helping hand of the victor was substituted for vengeance and reprisal.

The enormous dividends of this humanitarian and sensible American policy are attested by Mr. Kishi's thoughtful article in the American Weekly, an invaluable contribution to American understanding of the problems of rehabilitation after a great war.

Brooklyn Progress

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MULTER. Mr. Speaker, "Brooklyn Progress" is the title of the latest annual report issued by its distinguished borough president, the Honorable John Cashmore. We are indeed fortunate to have as our first citizen so able and efficient a public servant.

The greatest tribute we can pay him is for all political parties to renominate him and again make him our unanimous choice for reelection, as now appears certain.

However, I started, Mr. Speaker, not to talk about him but about his report. From 1834, when Brooklyn became a city, until it became a part of the Greater City of New York in 1898, such reports were issued annually. Thereafter, Brooklyn's borough presidents filed such annual reports pursuant to charter requirements.

Permit me, Mr. Speaker, with justifiable pride, to quote from the current report, as follows:

(1) Employees in Brooklyn industries earn more than $860,000,000 a year.

(2) Brooklyn has more industrial plants than any one of 39 States.

(3) Brooklyn produces a wider variety of manufactured products than any city in the world.

(4) Brooklyn manufactures enough wearing apparel each year to clothe the entire population of Texas.

(5) Forty of the 500 largest United States industrial corporations have main offices, plants, or subsidiaries in Brooklyn.

(6) The Navy's most powerful aircraft carrier, U. S. S. *Saratoga*, was built in the Brooklyn Navy Yard. Another huge carrier, U. S. S. *Independence*, is now being built at the navy yard and construction of still another carrier, U. S. S. *Constellation*, will be started there in 1957.

(7) Brooklyn has the most highly developed waterfront loading and unloading facilities in the world.

The Brooklyn waterfront which handles approximatley $4 billion of foreign and domestic commerce a year has become the scene of the largest marine terminal redevelopment program in the entire history of the Port of New York. This is the Port of New York Authority's $85 million master plan for the complete modernization of the Brooklyn waterfront in the entire area south of Brooklyn Bridge to and including Atlantic Basin.

Twenty-five of the original 26 obsolete piers are being replaced with 10 wide, single-story, steel and concrete structures. One existing pier in Atlantic Basin will be completely rehabilitated.

When the port authority's redevelopment program is completed the new piers will furnish some 2 million square feet of shedded pier area or about one-third more than was formerly available. Twenty-five efficient vessel berths will replace 44 inadequate berths.

Meanwhile, the city of New York, acting through the department of marine and aviation, has been preparing and advancing a $21,600,000 program which provides for further extensive Brooklyn waterfront improvements.

For example, preliminary plans have been completed by consulting engineers for an $11 million new shipping terminal at the foot of 39th Street. Preliminary plans are in progress for the proposed new pier 20 at the foot of Atlantic Avenue. This represents a total estimated cost of $6,055,000.

Preliminary plans have been completed by consultants and construction plans are in progress for a new $1 million wharf terminal at the foot of 29th Street. Preliminary plans also are being made to rebuild the pier at the foot of 35th Street which was destroyed by fire. Demolition and salvage operations have been completed. The rebuilding of this pier represents a total estimated cost of $3 million.

In 1956 construction of a new transit shed at the foot of 36th Street was completed at a total estimated cost of $600,000.

These waterfront improvements will have the effect of strengthening Brooklyn's preeminent position as the crossroads of the world's transportation.

Brooklyn waterfront facilities are used for more than 60 percent of the total export-import cargo which is handled in New York City.

The Port of New York Authority has stated that 500,000 persons in Brooklyn earn their livelihood, either directly or indirectly, through the operation of Brooklyn's transportation services. This includes the handling of commerce or in the servicing or supplying of agencies or facilities that are engaged in its handling. The estimates of the buying power generated by Brooklynites engaged in these transportation services amounted to about $800 million in 1956. This total is expected to become even larger in the next 10 years.

A large part of the area where the Port Authority's waterfront redevelopment program is now in progress is in close proximity to and is served by the Brooklyn-Queens Connecting Highway. Planned and built by the Borough President's office, this highway is used by commercial vehicles as well as passenger cars and is now open to traffic between Brooklyn Bridge and Hamilton Avenue.

While practically all segments of Brooklyn industry have thus continued their growth and expansion, it is true that manufacturing plants do occasionally move to other areas. Experience has shown, however, in practically every such instance, that some other business which is expanding its facilities takes over the vacated property or that such property is sub-divided to provide space for other diversified occupancies.

It is true likewise that manufacturing concerns which leave Brooklyn to locate elsewhere have found it to be their advantage to return to the borough.

Our great borough president, John Cashmore, who is always on the job, is in large measure responsible for Brooklyn progress. The Brooklyn congressional delegation will continue to cooperate with him to the fullest degree.

More Power to Us

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to bring to the attention of my colleagues an announcement that should be of great interest to them as Members of the Congress.

In recent months there has been a great outcry by certain Members of the House and the other body that the Pacific Northwest was being sold down the river, in this case the Columbia and its tributaries, by Congress not reaching down into the sock and appropriating vast sums for grandiose dam building at the last undeveloped power site in the Northwest.

I would like to bring to the attention of my colleagues the fact that while these power politicos were noisily generating confusion and bluster, a group called the Puget Sound Utilities Council was quietly and firmly going ahead with plans to give the Northwest all the power it needs through its own efforts and through partnership with the Federal Government in sound, solid, feasible, economically reasonable projects throughout the Northwest.

But this group is not going to come running to Washington, hat in hand, to demand a governmental subsidy for all its power development. This group is going to spend $1 billion of its own money during the next 12 years in developing hydroelectric power from sites that the blockaders, the Federal-or-nothing powermongers, have claimed do not exist. Engineers hired by this group, which is composed of private, municipal, and public utility district power organizations, have shown that there are several good sites with power potentials that can be developed at costs that will not require a huge raid on the public treasury. The Federal Government will be called on to augment this expenditure, as the Federal Government has an interest and a role in the development of our water resources. However, the generating facilities created through the efforts of this group will have $1 billion of its money invested, and industrial development and the continued low power rates which accompany an abundant supply will continue throughout the Northwest.

I recently entered in the RECORD an article by William Hard who wrote it for the Reader's Digest. This article described the work of the Puget Sound Utilities Council in laudatory terms. After this article appeared, the gloom-and-doom brigade immediately denounced it as looking at the picture through rose-colored glasses ,and again repeated their doleful predictions that unless the Government took over the burden of providing power for the Northwest exclusively, things would go to rack and ruin within a decade.

I am proud that the Snohomish County Public Utility District, which

serves my home Snohomish County, is a member of this council, a group that has put aside the senseless wrangling over ideology concerning power generation, and has embarked on a bold, imaginative, hard-thought-out program to provide the crackling of kilowatts on the power lines of the Northwest, rather than the powerless bugling of laments and threats, the foot stomping and hand wringing which has characterized much of the attitude of those who have chosen to make power a political device rather than what it was intended, a source of constructive energy.

Herewith is the text of an Associated Press story concerning the announcement by the Puget Sound Utilities Council:

BILLION DOLLARS FOR NW POWER FORECAST

SEATTLE.—An outlay of $1 billion for more power during the next 12 years was forecast Tuesday by the Puget Sound Utilities Council.

A report by the council said the money would be spent by its members to assure enough energy to meet the growing domestic and industrial needs of the Puget Sound-Cascade Mountain area.

The council, organized 3 years ago for joint planning, is made up of Seattle and Tacoma City Light, Puget Sound Power & Light Co., and the Snohomish and Chelan County Public Utilities Districts.

Lebanon Celebrates Its 14th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of 1 of the 29 participating nations in the Asian-African conference on friendly relations with the United States.

Inasmuch as the Congress will not be in session at the time of the event, I wish to take this opportunity to extend my sincere felicitations to the people of Lebanon, President Camille Chamoun, and His Excellency Victor A. Khouri, Ambassador of Lebanon, on the occasion of the 14th anniversary of the independence of Lebanon, November 22, 1957.

Lebanon, which gave to civilization the alphabet, navigation, glass manufacturing, and the first stone building in the world, is one of the smallest modern states—little more than half the size of New Jersey—and yet one of the richest in beauty and picturesque sceneries.

Though the Lebanese population is Arab, she is the only Middle Eastern country that is officially Christian. Lebanon became the Christian center of the Middle East in the late 19th century. Christians were being massacred in the Druse Mountains and around Damascus. France sent a squadron of warships to Beirut, and the Christians flocked down to the coast for protection. When their independence was recognized in 1943, the Lebanese made an agreement among themselves to insure protection of the rights of all religious communities.

After having heroically opposed in different epochs numerous invasions, the Lebanese still stand firm for their freedom and independence. With varying fortunes they maintained a high spirit of liberty. Grave crises have arisen to plague the new government, but these occasions of friction have had the effect of strengthening rather than weakening Lebanon's independence. Lebanon wants above all to be left in peace to attend to her own affairs. Foreign Minister Charles Malik has made it clear that on one hand Lebanon is an Arab country prepared to help defend the rights of all Arabs, but on the other she is a sovereign state defending her own interests and following her own conscience, not willing to obey blindly the dictates of other Arab states any more than those of the West. Lebanon has taken the lead in welcoming President Eisenhower's proposal for economic aid and military support to Middle Eastern states.

Firmness Has Not Yet Led to War or Defeat: Softness Has—and May

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Edgar Ansel Mowrer:

In 1952 Republicans campaigned by charging Democrats with being—or having been—soft on domestic Communists. And it is likely that impartial historians will to some extent bear them out.

It begins to look as if Democrats in 1960 can, if they choose, accuse Republicans of being soft on foreign Communist regimes, both Soviet and national brands.

Many Republicans, who consider themselves anti-Communist par excellence, will indignantly deny this charge. Are they not zealous in arresting Soviet spies? Do not their leaders denounce Communist outrages regularly in the most violent terms? Are they not feverishly helping weak non-Communist regimes to remain free? Have they not perfected the original Democratic chain of anti-Communist alliances?

They are; they have done these things. All of them are good. But that will not refute the charge. For the heart of communism is not at United States party headquarters on West 16th Street, New York, but in the Kremlin in Moscow.

Emotion in politics is no substitute for energy. Strengthening India and Jordan amount to little if at the same time one supports Tito's Yugoslavia and Gomulka's Poland.

And military alliances serve little purpose if the alliance leader is at the same time seeking peace by concessions to the enemy and cutting down military strength at home.

CONFLICTING AIMS

Here is the crucial weakness of our Government's position (which, to tell the truth, is that all of western governments—except Adenauer's Germany—and of any number of American citizens). They all dislike communism and Communist regimes. They would like to destroy them. But they also want peace and an end to terrific defense spending.

They cannot wholeheartedly pursue a policy of destroying communism and at the same time seek peace with Moscow and economy in armaments. For peace and communism of the Soviet type are incompatible. Until communism is destroyed or pushed back into the country of its origin, the world will never have peace.

This conclusion is, however, much too unpleasant for spoiled modern peoples (and governments) to swallow. Therefore, their perplexed leaders find themselves in the dilemma of making peace with an enemy they know they should destroy—and doing neither. Never in man's long history has a halfhearted government (or team) stood up successfully against one with a single aim that insists on playing to win.

SOURCE OF DEFEATS

Here is the source of the West's frustration and diplomatic defeats.

Senator FULBRIGHT, like a good partisan Democrat, may blame the Mideast situation on something as simple as Secretary Dulles' decision not to build the Aswan Dam for Egypt. Actually, it is due to something far deeper—the conviction among politically naive and self-assertive peoples that the West may be flouted (as at Sues) and the U. S. S. R. may not be—see Hungary.

It is due to the American administration's almost pathetic patience in dealing with the Kremlin—in its wistful insistence on disarmament talks in the teeth of Soviet insolence; in its fear of doing anything serious about Hungary (already we hear pleas against using the U. N. report on Hungary to condemn that butchery lest we increase tensions); in such a ludicrous matter as the administration's apparent reluctance to use Milovan Djilas' stern repudiation of all communism for propaganda in Yugoslavia lest it offend Tito and weaken national Communist regimes.

Therefore, American and other Western statesmen go from one pious (but unfounded) hope to another: that Tito will lead the satellites out of Soviet control; that Stalin's death weakened the Soviets; that the Soviet regime is decaying; that Red China can be split off from Red Russia; that the Kremlin really wants some form of disarmament acceptable to the West, etc.—anything but the sickening probability that either the West must outarm communism or that communism will destroy the West.

All of this adds up to a policy of being tough in words but soft in deeds against foreign Communist regimes.

Insurance Against War Is an Important Item

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. SCUDDER. Mr. Speaker, under permission granted me today for the extension of my remarks in the Appendix in the RECORD, I would like to point out that the foreign-aid bill as proposed by the administration is an insurance policy against war and the spreading of com-

munistic activities within the borders of our friendly allies.

As such, it is an important item in the Federal budget.

An attempt was made to restore a major part of the cut. However, it was defeated in the House—I voted in support of the amendment. I am hopeful that the Senate and the conferees will restore the money needed to do a proper job. In this respect, I am calling to your attention a splendid editorial which was published in the San Francisco Examiner last Friday, September 23, 1957. It follows:

MEN WHO KNOW

From men who are in a better position than most of us to know the needs of the Nation's security there came Monday convincing reasons for restoring all or most of the $862 million the House slashed from the administration's foreign-aid request.

They were Secretary Dulles, Admiral Radford, who retired last week as chairman of the Joint Chiefs of Staff; his successor, General Twining, and retiring Foreign Aid Administrator Hollister. Their remarks corroborated a point we made editorially a couple of days ago, that foreign aid is a misleading and inaccurate term. A better one would be bargain-rate security.

Admiral Radford drove to the crux of it when he said the alternatives to restoring the meat-axed funds would be "a major mobilization on our part" or retreat to the "Fortress America" concept.

Mobilization, he told the Senate Appropriations Committee, would mean "nearly every ablebodied young man of military age" would serve overseas for several years in place of troops of friendly foreign nations we have been supporting. "Fortress America" is an "entirely negative" concept, he said, and would lead to "an ultimate and violent showdown with international communism." In either case the cost to taxpayers would be staggering.

Mr. Dulles warned that the cuts made by the House "were so deep as to challenge and impair our basic defense policy." General Twining and Mr. Hollister spoke with similar forcefulness.

We recommend to Members of Congress the reaction to this testimony of Senator Pastore, Rhode Island Democrat. "When the security of the Nation is involved, I resolve doubts in favor of the opinion of the experts."

Sport Fish Restoration

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. DINGELL. Mr. Speaker, it is with sincere pleasure that I announce today the publication of the first 5-year report of sport fish restoration under the Dingell-Johnson Federal-aid program administered by the United States Fish and Wildlife Service.

That bill was coauthored by my late father, the Honorable John D. Dingell, of Michigan, and by the distinguished Senator from Colorado, the Honorable Edwin C. Johnson. They were good friends and good conservationists, and history is now vindicating the vision which they had in sponsoring the Dingell-Johnson Act. They had the courage to push that bill through Congress even after a veto by their good friend, President Harry Truman, when possibility of passage seemed very black, indeed.

To say that this bill has worked well is an understatement. In America we are blessed with a growing population. Each day we dump more pollution into our waters. We are increasing the use of water in home, factory, and farm, at a tremendous pace. All this has a terrific negative impact on fish and fishing.

This act has literally been the salvation of our sports-fishing resource. It has made available to the States money from fishing-tackle excises, a source not normally available to them, on a matching fund basis, which has been used for stream, lake, and fish habitat improvement; for stocking and rough fish eradication; for research; and myriad other things to improve our fishing.

My friend, Richard H. Stroud, executive vice president of the Sport Fishing Institute, has honored Chairman HERBERT BONNER, House Merchant Marine and Fisheries Committee, and me because of my dad's coauthorship of the Dingell-Johnson Act, by presenting us first copies of the 28-page report which was printed, at no cost to the Government, by the Sport Fishing Institute.

This attractive booklet illustrates well the significance of the Dingell-Johnson program to the various States.

I wish to call attention to some pertinent excerpts from this worthy publication:

Following World War II there was a tremendous upsurge of interest in fishing. The Nation's sport-fishing facilities were overtaxed. Fish-management programs were inadequate to meet the new demands.

New measures were needed. One of the most effective was the cooperative Federal-aid-in-fish-restoration program which began when Congress passed the Dingell-Johnson Act in 1950.

Anglers provide the program funds by payment of the 10-percent Federal excise tax on fishing tackle and through their purchase of State fishing licenses and permits. The general taxpayer does not contribute—unless he is also an angler.

The States and Territories select the projects, do the restoration work, and manage the completed projects. A State provides from its own funds at least $1 of every $4 spent. Federal funds are allocated to the States, Alaska, Hawaii, Puerto Rico, the Virgin Islands, and Guam by a formula based on the number of anglers, and land and water areas.

The Federal Government sees to it that projects conform to the law and are substantial in character and design, inspects the work, and audits the financial records. Fish restoration includes fisheries research, purchase or lease of lands or waters, improvement in environment, activities, and law enforcement, even though they are essential elements of State conservation programs.

The basic difficulty in fish restoration is that:

1. More people, more time for play, easier travel, means one thing—more people will be going fishing.

2. The demand for water exceeds the supply over much of the country. America faces a water crisis.

Intensified use of water resources means less water per person—for drinking, farming, or fishing.

The problem we face is:

How to get the most sport-fishing under these conditions, or, indeed, how we are to maintain any sport-fishing at all under such adverse pressures.

This report recommends the following solution to this problem:

1. Fishermen must put more emphasis on the fun of fishing than on filling the creel.

2. Our sport fisheries must be managed with knowledge from scientific research; guesswork won't do.

3. Our potential fishing waters (freshwater and marine) must be managed and developed for greatest usefulness. The solution is in the hands of the American angler. He must insist on and support programs keyed to modern needs.

Communist Strategy Is Plain—and Succeeding: (1) Consolidate China, (2) Take Over India, (3) Divide Europe, (4) Keep the Pot Boiling in Africa, (5) Isolate America

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JUDD. Mr. Speaker, little by little and piece by piece truth eventually comes out. The Communist-engineered deception of the United States Government and people regarding Nationalist China through the years 1943 to 1950 was one of the most brilliantly successful operations in mass psychology in all history—and one of the most disastrous. Because Americans did not understand their own faith and the nature of the forces of freedom and of Communist enslavement in China, they could be taken in by the Communist propagandists—and their unwitting advocates—who did understand their faith, and believed in it.

One American who witnessed it firsthand for 7 years in China was Leonard B. Allen, a wartime correspondent for International News Service and Voice of China commentator in Chungking. Mr. Allen sees clearly our own responsibility for the almost hopeless treadmill in which we now find ourselves running. We got into it because of ideological and moral confusion. We will be able to end it when we gain ideological and moral clarity—and dedication. Mr. Allen's article from a moral rearmament publication follows:

AMERICAN RESPONSIBILITY IN CHINA

(By Leonard B. Allen)

Recently an Indian Communist leader described the current world strategy of international communism. It is a five-point program, beginning with China: (1) Consolidate China, (2) take over India, (3) divide Europe, (4) keep the pot boiling in Africa, (5) isolate America.

I was in Canton just before Chiang Kai-shek's government abandoned their last hold on the mainland to the Communists in 1949. Street barricades of sharply pointed logs were being erected. Nationalist currency,

quoted at 36 million yuan to 1 United States dollar, drifted down the streets in the wind like autumn leaves. The American State Department, bewildered by the failure of our dollars and bullets to save China, had just published a white paper—over a thousand pages of finger-pointing blame leveled at Chiang's government.

Twenty years of Communist strategy had now succeeded in driving Chiang from the mainland. Without any answering ideology, the Americans decided to let the dust settle.

YEARS OF CONFUSION

We finally left Canton—a Reuters correspondent and I—aboard a blacked-out British ship at night, with decks lined waist high with sandbags for the trip down the Communist-infiltrated shores of the Pearl River to Hong Kong.

Over a period of 7 years prior to Chiang's withdrawal to Taiwan I witnessed the effect in China of America's ideological confusion—first in Chungking, later in Nanking. In Chungking from 1942 to 1944, living with journalists from East and West at the Press Hostel, I saw the beginnings of the concerted Communist attack on Chiang's regime through the world press.

"The best job we can do now," I heard a European Communist, who now edits a paper in Peking, tell another correspondent who later wrote one of the leading books against Chiang, "is detructive criticism." Many others took this cue. From 1943 on, Chiang, who had been a great hero of the free world, especially in America, was blackguarded in the world press. America was confused. Many other countries abandoned Chiang and courted Mao Tse-tung.

BLIND AMERICAN

The result of that world press attack lasts till today. People who understand the cost of a divided Germany, a divided Korea, and a divided Indochina, fail to see the cost of a divided China. And they fail to understand that Free China is the only divided nation to be represented in the United Nations, which makes her a prime target of Communist diplomatic strategy.

As an American I was blind to the ideological implications of what I saw in Chungking 15 years ago. Like our Government, we Americans had our eyes glued on immediate objectives—the winning of the war, getting back home, reestablishing Chiang's government in Nanking. But the people with an ideology, living right alongside of us, were working night and day to confuse the free world, and to take over China as a master stroke in a global strategy.

The root of our ideological blindness I now see is moral. Until I accepted absolute moral standards in my life, I did not understand the ideological struggle in the world. You cannot live crooked and think straight.

ON THE REAL POINT

A Chinese student, after several years in an American university, put his finger on the real point. He said, "You Americans have taught us technological know-how, but not ideological know-why."

Russia did not make that mistake. In 1925, a year before Chiang Kai-sek emerged from Canton to lead the northern expedition that unified China, the Communists established in Moscow the Sun Yat-sen University to train Chinese youth in Marxist ideology and revolutionary techniques. An American journalist who visited this university in Moscow in 1926 was told by its president, Karl Radek: "In 20 years these Chinese students will be ruling China." Radek missed his calculations by just 3 years. China fell in 1949.

Until America learns to live and give a superior ideology we shall go on being outthought and outmaneuvered, as in China.

The Timely and the Timeless

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. MACDONALD. Mr. Speaker, Dr. Harold C. Case, President of Boston University, recently delivered a challenging commencement address at the University's annual summer commencement exercises, in Boston's Symphony Hall. President Case's address was entitled "The Timely and the Timeless."

This splendid address has an unusual inspirational message for youth and should be given the widest possible circulation. President Case's remarks are the product of many years of educational experience and practical wisdom. Because of the sound and basic philosophy embodied in his speech and because of my very high regard for President Case, I am delighted to have this opportunity to share his address with Members of Congress and the general public.

President Case's able address is as follows:

In the current issue of Harper's Magazine, John Fischer writes in the section "The Editor's Chair" about an innocent sounding, but dreadful book published recently in England with the bland title, Uncommon People. Its author, Paul Bloomfield, discusses an apparently harmless individual, George Villiers, who lived 350 years ago in England, and his descendants who have lived during the three and one-half intervening centuries.

It sounds like a tedious genealogy. Actually, it is a modern heresy. This is the Century of the Common Man—let no one make a mistake about it. And yet, John Fischer is talking about "uncommon" men and women too.

George Villiers was an undistinguished farmer who lived through the reign of Queen Elizabeth I, in comfortable obscurity. Yet his record, especially as expressed in the exploits and outstanding leadership of his descendants, marks him as one of the greatest men of all time.

The members of his line have been running England much of the time during the past 300 years. Sir Winston Churchill and Queen Elizabeth II are numbered among them. But so is the Duke of Marlborough, as well as two noted Pitts. The writer says that they collect honors the way a blue serge suit collects lint, so that even to American ears a list of their names sounds like a roll call of chieftains—Salisbury, Cecil, Stanley, Berwick, Manchester, Athol, Hamilton, Stanhope, Cavendish, and so on.

But in intellectual affairs, the family tree boasts Bertrand Russell in philosophy, Henry Fielding in fiction, Quakers, abolitionists, industrialists, novelists.

Altogether the clans add up to a tiny fraction of the English population, yet they have been responsible for a very large portion of British civilization.

Five characteristics show up time after time, in generation after generation of George Villiers' children.

These, I think, are certain qualities that are required for unusual effectiveness for uncommon people in any nation and in every generation.

These aptitudes, if present in sufficient quality in even a relatively small percentage of the population, will determine the quality of its culture, the nature of its government, the character of its artistic life, is survival, and its civilizing influence.

Such an idea may seem to be archaic, or even subversive, in mid-20th century America. We have become dedicated to the common man. We spend our money and energy cherishing the mediocre. We coerce the exceptional into conformity. We guarantee the ordinary worker a job, or if he is out of work, a compensation, or if he is ill, hospitalization, or if he dies, a decent burial. We organize our public schools to be challenging to the average and boring to the unusually bright child. "Social" promotions in public schools are popular when academic promotions are impossible.

For such a long time we have been reiterating the worth of the common man that we have unconsciously come to doubt whether there is anyone else, or, if so, whether the genius is not more odd than important.

We discourage distinction among the professions and major on low pay for teachers and public servants. So an educator gets 5 percent of the salary of a top TV comedian, and even a United States Senator must be satisfied with one-tenth of the pay of a top-ranked movie star.

It is a miracle that, in the face of such resistance, outstanding people in large numbers are involved in the lower-paying professions—and indeed that they are the persons who shape the trends in the Nation. In spite of all of our opposition, many of them manage to be uncommon.

There is a deadly contemporary aspect about being mediocre. But there is historical and social timelessness to becoming uncommon—outstanding, extraordinary, an authority. This is true today. And the vast shortage of people in the most demanding phases of leadership illustrates the dearth of uncommon people, and the crucial need for more of them.

What are the recurring characteristics in the descendants of George Villiers and in the children and grandchildren of every family in which greatness emerges?

Sandburg, (in The People, Yes, p. 284) says,

"Between the finite limitations of the five senses and the endless yearnings of man for the beyond the people hold to the humdrum bidding of work and food while reaching out when it comes their way for lights beyond the prison of the five senses, for keepsakes lasting beyond any hunger or death."

This is actually how people are—reaching out for the uncommon, striving for the timeless, trying to perform as none has ever done before them, to enter into the procession of the great, from whose influence the humanizing and enduring values of life have become enticing and possible and contemporary.

We see these people—reaching every day. Quite recently I passed a one-room house occupied by a man who works in the woods, cutting and trimming trees, for a lumber company. He has built that little house, and its first room is the promise of another to come. He has painted it gleaming white and has put a homemade picket fence in front of it, along a country road. It was about noontime on a Sunday when I passed his house. He was siting in front of it on an antique pine chair. He was wearing a white shirt open at the neck and he was accompanying himself with a tiny accordion as he sang quaint folk songs. In him, I saw this outreach for the timeless.

Can these characteristics, a hundred of them in a million people, become the new habit patterns—the love of the ultimate and

the disciplined effort now in behalf of that far goal? I think so.

In 1928, Margaret Mead, a young anthropologist, went to Manus Island, a 600-square-mile patch of rock and jungle, off the northeastern corner of New Guinea. She found the Manus divided geographically and culturally into three groups: the boat people living in villages built on piles off the shore of the main island; the island bush people; and the inhabitants of the smaller islands. The Manus, having no source of raw materials except the sea, fished. They traded their surplus with the island dwellers, obtaining vegetables, clay for pottery, and virtually all other material possessions. They were modern primitives, with a strict cultural system.

In 1953, Dr. Margaret Mead returned to the Manus. She found that in 25 years, these people had passed from the Neolithic to the Atomic Age, without the intervening cultural steps which cost our ancestors 5,000 years of progress. Moreover, she found that the Manus had made this transition successfully.

They have moved to the shore, where they have built new villages; they have developed democratic self-government; have become literate. They have outlook, codes, morals, and are moving into our modern age. As a result of her two studies of these people in transition from a prescientific to this modern scientific era, Dr. Mead has concluded that culture is transmitted from adult to adult, without regard for the nature of early training.

Margaret Mead has projected a new set of principles of culture change, capable of global application. She has deemphasized the Dewey idea that children's upbringing determines their cultural behavior as adults. She has become convinced that there is hope for greatness among normal adults anywhere—given the insights, the impulses, and the disciplines.

What, then, are the five uncommon characteristics to be cherished and nurtured and bred for the sake of the timeless in the midst of the timely?

1. Intelligence: No premium can be placed upon stupidity in our modern life. Sharp discernment, real capacity for learning, and the insistence that the future needs for intellectually competent persons will be so numerous as to make it imperative for unusual capacity to mate with unusual capacity—to produce uncommon children.

2. The ability to take it, whatever "it" may mean. Over the entrance to every life is the sign, "Danger." The common person shrinks from it and retreats to safety. The uncommon person knows that every situation wears a veiled outcome. There are no advance guaranties. We must strive before we know the outcome. So, we must ask, "What ends are worth what risk?" Having decided that question, we are obligated to take the risk boldly.

Every injustice, prejudice and dogmatism thrives because a few zealots, joined by some insecure persons who go along and by many timid followers, form a crusade.

Every demagog depends on active support from malcontents who will welcome a scapegoat as an excuse for their own failure.

Any evil policy or behavior can gain strength only if the large timid group, by its silence, gives consent, or at least gives support by apologetic rationalization.

The cumulative result of ignorance, lack of concern, and playing it safe is an antidemocratic movement.

The extraordinary people exhibit heights of courage, idealism, and sacrifice, likely to summon the timid to heroism, and so to the support of the best interests of mankind.

Poise, by which we mean physical control, mental balance, and spiritual discipline, is the ingredient of life out of which the leader emerges.

3. Energy: Uncommon people work, make love, strive, play, speak, and pray harder than ordinary mortals. Their sheer vitality often carries the day. They move over and beyond passive resistance or indolence; and, by the power of their mental and spiritual energy, they win the argument.

The members of the Boston University football team used to say that having Harry Agganis on the field when they were playing a game was not only like having a coach at their side, but like having unique strength added to their physical power. He knew no fear or tension, even under the most disastrous circumstances of intercollegiate football, and by his consistent spirit he energized the others.

This is true of greatness everywhere—it is an energy-giving element.

4. Charm: Many a cause is won by the ability to put it into a setting in which the obvious choice is the right one. My father used to say to me, "Never needlessly multiply the points of an antagonism." There will be opposition—make it a minimum by winning to the cause in which you are investing your life, all who can understand it, believe in it, and support it.

I think of the old article in the Boston Transcript which attacked an individual. The man was furious and went to President Eliot of Harvard, asking what to do about it. Dr. Eliot replied, "My dear fellow, I advise you to do nothing. Half of the people in Boston do not take the Transcript. Half of the people who subscribe to it do not read it. Half of the readers did not see this article. Half of those who read the article did not understand it. Half of the people who understood it did not believe it. And, as for the others, they really do not matter."

A quality of charm is an asset in uncommon—timeless—living.

5. Responsibility: There is an undeviating sense of duty among the uncommon people. They are never detoured, detracted, removed from the scene, and they get their way.

The legend of the Dutch boy with his finger in the hole in the dike is appropriate to this theme. Lesser persons would have run away to play. But all of the people were dependent upon that responsible lad.

I knew the man who rescued the little girl, Cathy, from a well in San Gabriel, Calif. He was a robust workman, ordinary in any way you could discern. He learned about Cathy, and he knew the quality of that soil and underground tunneling. It did not seem queer to him that he volunteered to risk his life on the chance that his knowledge would bring a result no one else could achieve. When he reached her—and she was alive—and he signaled to the crowd at the top, it did not occur to him that he would become a national hero. He was merely a responsible father doing for that little girl whatever he hoped some other father would do for his child, if the need should ever arise.

May I leave you graduates with this message today. You are the minority—the uncommon, the disciplined, the intelligent, charming, determined, responsible people.

Build the timely into the timeless. It will be a good lifetime for you if you will do that.

Communists in Power in a Province in India Follow the Same Pattern as in China—Why Did Anyone Expect Anything Different?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of August 6, 1957. It records the tiresome repetition of what Communists always do wherever and however they get into power—regardless of their glowing promises. Central China in the twenties; north China in the thirties; all China in the forties; now India and Syria. When will their intended victims learn—especially those in America?

The editorial follows:

BAD NEWS FROM KERALA

The news from Kerala continues to be a matter of concern to the free world. Kerala, it will be recalled, is the Indian state in which the Communists won control in the elections earlier this year.

The Communist government there is now sponsoring an education bill that may lead to regimentation of education and liquidation of hundreds of privately managed Christian missionary schools, according to a dispatch to the New York Times.

The most objectionable provision, according to the dispatch, relates to the appointment of teachers. Under the bill, the private management of the mission schools no longer would be able to recruit its own teaching staff. Instead, it would be required to appoint teachers from a panel prepared by local educational committees which no doubt would be dominated by Communists.

Indian antipathy to privately managed mission schools may be explained perhaps by the strong nationalistic desire for India to be independent of the West in all things. But the legislation proposed is of such a nature as to recall the ouster of mission schools and missionaries from China after the Communists took over.

Indeed, one observer recently found remarkable resemblance in Kerala to what went on among the Chinese Communists in their Yenan base during the Sino-Japanese War. In Yenan, the Chinese Communists played down communism, played up socialism, and pretended to be simple agrarian reformers. At the same time, the Chinese Reds spread their influence from Yenan across China.

In Kerala, the Communists appear to be trying to follow the same course. They are taking a moderate line, talking in terms of socialism rather than communism, trying to establish themselves as good Indians who want to improve the lot of the people.

Before the Indian elections, the Indian Institute of Public Opinion took a nationwide poll. In Kerala the poll showed that the Communists had great strength among the younger voters from 21 to 35, among the lowest income group, among the illiterate and

poorly educated, and among the working classes.

These groups constitute a formidable base upon which the Communists may be able to build, not only in Kerala but in other areas of India. In view of the parallels between the Communists' performance in China and their plans in Kerala to date, the world will watch with great interest—and considerable apprehension—the future happenings in the Communist state of Kerala.

For a Last Ditch Fight

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. TUCK. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include an editorial from the Richmond Times-Dispatch of Sunday, August 25, 1957, advocating a fight to the last ditch against this so-called civil rights plan. I approve of the views expressed in this editorial, which is as follows:

FOR A LAST DITCH FIGHT

The so-called "compromise" on the jury trial amendment to the civil-rights bill is a sell-out of the principle on which the amendment was based. In a frantic desire to cater to the Negro vote, and to adjourn as soon as possible, leaders of both Houses of Congress have made this deal.

If it was important some weeks ago to guarantee a jury trial in certain cases, in order to uphold a right written into the Constiution of the United States, it is important today. Weasel words describing this sabotaging of a basic principle as "constructive and fair" (Senator KNOWLAND) and as a "forward, progressive step" (Representative JOE MARTIN) are so much tripe.

Speaker SAM RAYBURN was at least honest enough not to indulge in this nonsense. A practical politician, who knows how badly the Democrats will need Negro votes in coming elections, he said merely "I am willing to support that amendment."

Several aspirants for the presidency are involved in this business, and they have a weather eye cocked on votes for 1960. Senator LYNDON JOHNSON of Texas, who is badly bitten by the presidential bug, says he is pleased that the bill will be passed next week." Senator KNOWLAND is an obvious aspirant also, and Vice President NIXON, his chief rival in the GOP, has been pushing behind the scenes for maximum concessions to the colored voting bloc.

This deal should be fought with every legitimate weapon at the South's command. Under the terms of the so-called compromise, jury trials will be almost eliminated. Senator RUSSELL of Georgia says of the compromise:

"It will deny the right of a jury trial to many citizens charged with criminal contempt who now enjoy that right under existing law. The new policy of blanket injunctions adopted by some Federal judges will cause many innocent people to suffer severe punishment with out being able to submit proof of their innocence to a jury."

Senator A. WILLIS ROBERTSON, of Virginia, declared rightly that the comprise is not at all satisfactory to the southern Members," and that the plan allows a man to be tried twice at his own expense. He said "I can stay here till October, if necessary, to defeat this."

That is the proper spirit. A principle is a principle, and if a majority of Congress is willing to sell a principle down the river for the sake of votes, then the minority can, and should, resort to its last, desperate expedient of a filibuster, the same expedient that a lot of the liberals have resorted to in the past when they felt it to be necessary.

It is possible that some of those Senators and Congressmen from the North and West who stood out so valiantly, on principle, for the jury-trial amendment before it was emasculated, will raise their voices effectively again, and stop this piece of political jobbery.

It is necessary to appeal to the consciences of those who voted for the original jury-trial amendment. If they turn deaf ears, nothing will be left but a filibuster.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Lausche, Clark, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, Morse, Frear, Clark, Beall, Morton, Javits, ———.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Yarborough, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Neely, Ervin, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Texas Co-op Leader Condemns Proposed Higher Interest Rates on REA Loans

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. JOHNSON of Texas. Mr. President, a Texas co-op leader, Mr. R. M. Korth, president of the board of directors of the Karnes Electric Cooperative, recently voiced strong condemnation of the proposal to increase interest rates charged by the Rural Electrification Administration.

Such an increase, Mr. Korth said, would be completely unfair to farmers.

I ask unanimous consent that a report of Mr. Korth's address, published in the July issue of the publication Texas Co-op Power, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The proposal to increase REA interest rates was strongly condemned by the president of the board of directors of the Karnes Electric Co-Op at the annual meeting June 13.

R. M. Korth told a large crowd at the Poss Johnson football field in Karnes City that the proposal is completely unfair to farmers.

"Farmers' incomes in recent years have decreased 27½ percent," he said. "Yet the administration in Washington is proposing to raise the interest on REA loans from 2 to 3½ percent. That's a 75 percent increase the farmer will be expected to pay out of his reduced income.

"At the same time," Mr. Korth added, "the United States has just completed arrangements for a loan of $4.4 billion to Great Britain. This loan is at 2 percent interest and is to be paid back in the year 2000."

Mr. Korth then demanded, "Are we less important than the British?"

He noted also that REA now has a large profit on its loans to date. He urged the members to let their Congressmen know how they feel.

"We can voice our opinions on a 2-cent post card," he said. "And we'd better start telling our Congressmen how we feel."

He pointed out that the profit utilities have millions of dollars to spend for propaganda and for the expenses of lobbyists.

"They call the co-ops subsidized. They tell the taxpayers the co-ops are costing them money. These charges aren't true and they know they aren't," he declared.

Mr. Korth also charged that the profit utilities in Texas alone have been given by the Government, in the form of fast tax writeoffs, more than has been lent to co-ops in the entire program.

"In self-defense we must combat these false accusations," he declared.

Oregon Highway Construction

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. NEUBERGER. Mr. President, as a member of the Senate Committee on Public Works, I am particularly conscious of the need for effective and honest State highway bodies. In my capacity on the Roads and Highways Subcommittee, I already have seen a situation in certain States where a lack of integrity and official responsibility has retarded the interstate highway program which we have authorized.

Fortunately, my own State of Oregon for many years has been near the forefront of our country nationally with respect to outstanding achievement in the construction and operation of highways. This has been due to men of honor and great capacity for public service. On August 13, 1957, the East Oregonian of Pendleton, Oreg., published an editorial giving credit to these individuals in Oregon's recent history. The title of the editorial is "Oregon's Proud Record." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OREGON'S PROUD RECORD

Because the opportunities for wrongdoing are rather immense, Oregonians can be proud of the fact that their State highway commissions never have been tainted by corruption. Some sordid cases of highway commission corruption have been recorded in several of the 48 States.

The list of men who have served as Oregon highway commissioners since the commission was created in 1918 readily reveals why the State's highway business has a clean bill of health. Oregon's governors have weighed their selections carefully and they have been able to induce capable citizens to serve.

Here is the list: E. J. Adams, Eugene lawyer and contractor; W. L. Thompson, Pendleton banker and rancher; Simeon Benson, Portland lumberman; R. A. Booth, Eugene lumberman; J. N. Burgess, Pendleton rancher and businessman; E. E. Kiddle, Island City flour mill owner; J. B. Yeon, Portland industrialist; W. B. Barratt, Heppner rancher; William Duby, Baker rancher; H. B. Van Duzer, Portland lumberman; W. H. Malone, Corvallis businessman; C. E. Gates, Medford businessman; Robert W. Saywer, Bend publisher; M. A. Lynch, Redmond businessman; Charles K. Spaulding, Salem lumberman; William Hanley, Burns rancher; J. C. Ainsworth, Portland banker; Leslie M. Scott, Portland publisher; Carl Washburne, Eugene merchant; E. B. Aldrich, Pendleton editor; F. L. TouVelle, Jacksonville rancher; Henry F. Cabell, Portland banker; Huron Clough, Canyonville rancher; Herman Oliver, John Day, rancher; Merle Chessman, Astoria publisher; T. H. Banfield, Portland industrialist; Arthur Schaupp, Klamath Falls lawyer; and Ben Chandler, Coos Bay banker.

Present members of the commission are Charles Reynolds, La Grande businessman; Milo McIver, Portland businessman; and Robert Chessman, Astoria publisher.

This Milwaukee (Wis.) Journal editorial discusses some of the possibilities in the realm of highway commission corruption:

"Sixty-five million dollars is a lot of money. That is how much the Federal Government allocated to Wisconsin last week for highway construction for the year beginning July 1, 1958.

"Three hundred and eighty-one million dollars is even more money. That is the amount of the State highway budget for the next 2 years. It includes Federal allocations.

"In the history of the State, no official nor official body has ever had the responsibility of spending so much money in such a short time. And this kind of spending is going to continue for more than a decade, with the Federal Government pouring out many millions to States to speed construction of 41,000 miles of new interstate roads.

"Such spending is going to result in tremendous changes in the landscape. It is going to influence the economy of the State, aggravate urban and rural woes, stir new problems, and affect the lives of all of us.

"It is also going to tempt the corrupt and invite extravagance and waste. Big highway spending always has.

"Two current examples are at hand. A Pennsylvania jury has just convicted five men, including a former chairman of the turnpike commission, of trying to defraud the commission of nearly $20 million. The case involved a contract to fill abandoned coal mines that lay beneath a turnpike route.

"Three former Indiana highway officials, including a commission chairman, have been indicted in connection with a land acquisition program alleged to be honeycombed with fraud.

"Wisconsin has never experienced a major highway scandal. So far as press and public know, State highway commissioners have been honest and have not knowingly condoned waste of highway funds or cheating by contractors.

"This State's headache has been a system which fostered inefficiency and loss of integrity by turning over too much money and responsibility to counties. Efficiency and integrity at the county level have not been uniformly high by any means.

"The fact that the past record is good, on the whole, is no guarantee of future virtue. More than a billion dollars will flow from Federal and State treasuries in the next decade to Wisconsin property owners, contractors, equipment salesmen, and construction crews. Eager crooks will certainly be trying to get hands on some of this sugar.

"It would be a reassuring thing if closer surveillance were established over this vast highway expenditure program by State officialdom, the press, and John Taxpayer."

Opposition to the Proposal To Change From the Bushel to the Hundredweight as a Unit of Measure

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Mr. P. E. Paquette, president of the Minneapolis Terminal Elevator Association, and an enclosed editorial, both being in opposition to the proposal to change from the bushel to the hundredweight as a unit of measure.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

MINNEAPOLIS TERMINAL
ELEVATOR ASSOCIATION,
Minneapolis, Minn., August 23, 1957.

The Honorable WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR LANGER: In addition to the information we have recently sent you regarding the "bushel versus hundredweight" problem, we are attaching a copy of an editorial recently published by the Northwestern Miller. We believe this will be valuable additional material against the proposed change.

Practically all the grain trade, as well as many millers and other related industries, seem to be opposed to this change and we believe the Commodity Stabilization Service would not be justified in adopting the new procedure without much further study and consultation with the trade groups.

Sincerely yours,

P. E. PAQUETTE,
President.

[From the Northwestern Miller of August 13, 1957]

BUSHEL VERSUS HUNDREDWEIGHT

Members of the feed trade have been vociferous in putting forward a plea for a switch from the bushel to the hundredweight as a unit of measure. Such was the steamroller effect of their demands—Hundredweight in 1958 was the slogan adopted—that for a time it looked as though no one was going to bring forward any strong objections. Grain and flour traders stood aloof and made few comments on the matter.

Only in the past few months has any degree of opposition become apparent. That opposition is now coming from authoritative quarters, particularly a strong statement from the Terminal Elevator Grain Merchants Association. That statement was so important that the American Feed Manufacturers Association was compelled to make counterarguments. The AFMA case appears in the news columns of this issue.

The reported intention of Walter C. Berger, administrator of the Commodity Stabilization Service, to make the switch effective July 1, 1958, may have been governed in part by the paucity of the early opposition. Only now is it being brought home that there is strong disfavor for the plan in grain and flour circles. True, there does appear to be a split on the issue. Some feel it is not worth making a big fight of the matter; others are expressing a vehemence equaled only by AFMA in propounding the proposal.

The decision to switch will be a wholly administrative one. The decision does not need the approval of the board of the Commodity Credit Corporation. Administrative decisions often lend themselves to being classed as arrogant and arbitrary. Mr. Berger undoubtedly will never let his organization be placed in line to collect that accusation. That is why more thought must be given to the subject before an irrevocable decision is made.

The opposition is making itself heard. The three major exchanges of Kansas City, Chicago, and Minneapolis have voted against the switch. Futures traders, terminal elevator operators, and commission men are opposed with varying degrees of violence. This is disagreement to be reckoned with; the views of people who make their living handling grain cannot be dismissed lightly.

Perhaps overlooked has been the fact that state grain laws require the issuance of warehouse credit certificates on a bushel basis. Those laws would need amendment. And it's common knowledge just how confusing an issue can become when State legislation is involved. That's just one of the problems.

The feed business is an important segment of the American trading picture. But there are other segments and they do not bow in any way to the omnipotence of the feed men. Mr. Berger has been subjected to some heavy pressure. The plan runs contrary to the best interests of important parts of the grain trade. The matter should be reappraised.

Former Senator Wilton E. Hall, of South Carolina, and Scholarships to Anderson College

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I have a copy of the summer edition of Dixie Business in which appears an article about former United States Senator from South Carolina, Wilton E. Hall, who is now publisher of the Anderson Independent, Anderson, S. C. This article reports that Senator Hall has given more than 150 scholarships to students in order that they may attend Anderson College, Anderson, S. C.

Needless to say, the people of my State are grateful to the generosity of Senator Hall for his contribution to our future leaders of our Nation. At this time there are 11 students at Anderson College on scholarships given by Senator Hall. These young men and women are Miss Dotty Clamp, Miss Gloria Jones, and Miss Jane Martin, all of Anderson, S. C.; Miss Joyce Pollard Clark, of Starr, S. C.; Billy John Moorhead, Hartwell, Ga.; Miss Marianne Givens, of Anderson, S. C.; Miss Eloise Broadwell, of Pendleton, S. C.; Miss Peggy Harris, of Anderson, S. C.; Miss Dianne Ragsdale, of Williamston, S. C.; Miss Gail Teasley, of Anderson, S. C.; and Miss Rose Ann Compton, of Anderson, S. C. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OVER 150 SCHOLARSHIPS TO ANDERSON COLLEGE GIVEN BY ANDERSON PUBLISHER

(By Antoinette Jones)

Families who know the pangs—both of the pocketbook as well as of the heart—when members of the family are sent through college, should ponder the case of a man who, to date, has provided more than 150 students with scholarships to Anderson College.

Such a record belongs to Wilton E. Hall, publisher of the Anderson Independent and Daily Mail and owner of WAIM radio and TV.

Many of the students have attended 2 years, receiving degrees or diplomas from the 2-year college; others have attended 1 year receiving the commercial certificate or 1 year of liberal arts to help them in their search for a better and more well-rounded life.

From the over 150-member family group of Hall scholarships have come many who are today distinguishing themselves in work of all kinds, as homemakers and civic leaders. Among them are teachers, ministers, secretaries, churchworkers, students, officers in the armed services; members of the newspaper, radio, and television professions—in almost every field there is a representative from those who have been awarded Hall scholarships to Anderson College.

It would be impossible to mention each of the students who received these scholarships, but the group counts among its members one (Miss Violet Medlin) who is private secretary to Rev. J. L. Sullivan, executive secretary of the Sunday School Board of the Southern Baptist Convention. From one of the earliest groups, there is a major (Charles Hall) in the armed services, now in Europe; another who teaches in the local high school (Eugene Abrams). The production manager of a newspaper in Winchester, Va. (Rufus Josey) received his early education at Anderson College on a Hall scholarship, as did his wife (Ann Elizabeth Earle).

Currently heading the Anderson College Alumni Association as president is another who was awarded a Hall scholarship, Mrs. Evelyn Mahaffey Welborn; one who received her early musical training at Anderson College through a Hall scholarship is now back home as a member of the college music department faculty, Jimmie Ruth Erskine.

Thanks to the start given to them by the scholarship, there is now a public school teacher in Florida, James Aderhold; a member of the high school faculty and outstanding civic leader in Swainsboro, Ga., W. W. Gambrell; a home demonstration agent and teacher of home economics at Fort Mill, S. C., Ford Moore Griffin; an outstanding minister's wife, active in the work of her husband's church in the State, Sybil Moore Ray; secretaries and other personnel in local banks, Beatrice Clamp, Emilie Chamblee; and other businesses, Doris Willingham, Marian Findley Smith, and others.

There is also in the group the owner of a photography studio, James Nash; a member of the advertising staff of an Athens, Ga., radio station, and a student at the University of Georgia Department of Journalism, Joann Rice; a ministerial student, Don Hubbard; and countless others. Many are doing invaluable, yet unpublicized work as civic leaders, ministers' wives, and community workers.

Over a period of some 25 years, the number of Hall scholarships has averaged slightly over 6 per year, with the number totaling 8 to 10 for many years. The 1956–57 current group, largest number yet to receive the Hall scholarship, totals 11.

Among them is the business manager of the school yearbook, the Columns; a talented music major who accompanies for the college choir and for numerous other college events and groups; members of the student newspaper staff, and of the college players; one who works for a newspaper and radio station during his time off from classes; and the associate editor of the college yearbook.

Records and letters from holders of these Hall scholarships show that many, who are now serving their communities in so many ways as valuable citizens, would not have had opportunity for further education had it not been for these scholarships. Many did not seek them, but had them offered to them.

One of the recent graduates who is now serving in the Armed Forces in Germany whose letter is typical of many received by the college, writes:

"My years at Anderson College have enabled me to appreciate, and to take advantage of, the many opportunities offered me now, and with my coming trip through France, Belgium, Holland, Luxembourg, and England, I will have seen all the major countries of Europe" (Eugene Smith).

OTHER LETTERS

"I, as one of the recipients of the Hall scholarships, would like to express my appreciation to Mr. Hall for the opportunity he gave me to attend Anderson College. Daily I see the benefits I gained from my 2 years at Anderson College and I am very grateful to Mr. Hall for making the opportunity possible" (Emily Chamblee).

"Mr. Wilton E. Hall's scholarship made it possible for me to attend Anderson College, and I shall always be grateful to him. My husband is pastor of Baptist Church and we are, of course, engaged in full time Christian service" (Mary Elizabeth Marett Lord).

"Learning of my plans to attend Anderson College, Mr. Wilton Hall offered me a scholarship for which I am most grateful. I have learned to appreciate him as a real true friend, and one who is interested in helping to develop the fine type of manhood and womanhood that is needed for the leaders of tomorrow. It would be impossible for me to tell all of the benefits, both now and in the future, that my contacts with the fine teachers and students of Anderson College during my 2 years there will have for me" (Marshal Watt).

Resolution of the Committee for Hungarian Liberation

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the the Appendix of the RECORD a letter, with enclosed resolution, which I have received from the Committee for Hungarian Liberation.

There being no objection, the letter and resolution were ordered to be printed the RECORD, as follows:

COMMITTEE FOR HUNGARIAN LIBERATION, INC.,
Cleveland, Ohio, July 1957.

The Honorable WILLIAM LANGER,
United States Senate,
Washington, D. C.

DEAR SENATOR LANGER: We are enclosing a resolution brought at our public meeting and are respectfully asking you to promote same and to help to restore the freedom and independence of the Hungarian people.

Very truly yours,
Gen. JULIUS KOVACS,
Chairman of the Meeting.

Although the free western world enthusiastically received and helped the refugee freedom fighters, they did not defend the Hungarian people from the Soviet Union's revengeful attack, and to this day, the free West stands idly by, as the executions, persecutions, imprisonments, and genocide continue without any letup.

For 6 months now, before the eyes of the peoples of the free world, their governments and the United Nations, Soviet Russia continues its murderous attack against the most elementary human rights and the Hungarian people.

This delay has cost the lives of thousands of Hungarian heroes and martyrs. Further delay will cause history to condemn the peoples of the free world, their government, and the United Nations for their inaction.

In the name of all the enslaved peoples, we ask you, who have done so much for the Hungarian people, to use every means at your disposal to expedite a special meeting of the General Assembly, so that the report of the United Nations' Special Committee on the Problem of Hungary may be brought before the world tribunal and some effective measures may be taken to help the Hungarian people.

The free world must not darken with idle silence the last rays of hope for freedom of the Hungarian people and of the enslaved nations.

Subscribed to by the following organizations present at the public meeting held on July 7, 1957, at Cleveland, Ohio:

American Hungarian Federation, Cleveland branch No. 1
American Society of Trans-Danubian Hungarians.
Catholic Hungarian Sunday.
Collegial Society of Hungarian Veterans, Cleveland group.
Committee for Hungarian Liberation, Inc.
Committee of Hungarian Press in Cleveland.
Committee of Transylvania.
Committee of Western Hungary.
Council for Liberation of Southern Hungary.
Hungarian Athletic Club of Cleveland.
Hungarian Business and Tradesmen's Club.
Hungarian Freedom Fighters Federation, Cleveland group.
The Hungarian Self-Assistance and Cultural Society.
Hungarian Youth.
Magyar Society for Self-Culture.
Mindszenty's people.

St. Stephen's Dramatic Club.
Student Action Committee for Free Hungary.
Sub-Carpatho-Ruthenian Liberation Movement.
Technical and Scientific Association of Cleveland.
Transylvanian Hungarian Society.
West Side Hungarian Reformed Church.

Gen. JULIUS KOVACS,
Chairman of the Meeting, Vice President of the Committee for Hungarian Liberation, Inc., Cleveland, Ohio.

Hon. Samuel K. McConnell, Jr.

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. JUDD. Mr. Speaker, the Chinese have an apt saying that goes something like this: "With clothing, the new is best; with friends, the old are best." That is true of our experience here in the House of Representatives. New Members are constantly coming and we welcome them. But it is hard to lose the old—those who have been tested and tried and proved true. Some Members flash across the sky like a meteor but are soon gone. But some leave a permanent imprint on the Congress as well as on us who have been privileged to come to know them well. With friends the old are indeed best; and we hate to see SAM MCCONNELL leave us.

He has in an unusual degree the qualities that we most admire in others and wish for ourselves. First, a good mind. Whenever he gets up to speak on any issue, he knows what he is talking about and he explains it clearly. He has done his homework. He knows the fine print as well as the big print, and we can always count on what he says. It illuminates.

Second, a warm heart. He not only knows, but he cares about the needs of human beings and the well-being of our country.

Third, undergirding everything, he is a man of sterling character—unimpeachable and impressive.

It is a great loss, not only to us as his old friends but to our country, for him to leave this body. But it is an equally great gain to the work for the handicapped and the crippled youth of our entire country—now and in the years ahead. We wish SAM MCCONNELL Godspeed in this his new mission and we hope his work will bring him back to Washington and to the House of Representatives frequently.

Texas Electric Cooperative Commends REA Administrator

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. JOHNSON of Texas. Mr. President, the board of directors of the De Witt County Electric Cooperative, Cuero, Tex., recently adopted a resolution commending the REA Administrator and asking that he retain full authority to administrator the rural electrification program.

The text of the resolution is contained in a letter I have received from Mr. Fain McDougal, manager of the De Witt County Electric Cooperative. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DE WITT COUNTY ELECTRIC COOPERATIVE, INC.,
Cuero, Tex., August 23, 1957.

Senator LYNDON B. JOHNSON,
United States Senate,
Washington, D. C.

DEAR SENATOR: The board of directors of this cooperative have been very much con-

cerned with the recent encroachment upon the duties of the REA Administrator David Hamil by the Secretary of Agriculture, and in their last board meeting made the following resolution:

"Be it resolved, The board of directors of the De Witt County Electric Cooperative, Inc. hereby commend REA Administrator David Hamil for the fine manner in which he has endeavored to carry out the duties of his office; be it further

"Resolved, The board wishes to call to the attention of Senators JOHNSON and YARBOROUGH and Congressman YOUNG the need for such fine administrative leaders as Mr. Hamil and, therefore, urge that they assist in seeing that the duties as originally outlined for the Administrator of the Rural Electrification Administration are not destroyed and that Administrator Hamil retains full authority to administer the rural electrification program."

The directors and all members of the cooperative are vitally interested in the operation of a sound program by the Rural Electrification Administration and wish to call upon you to do everything in your power to see that the program is not curtailed by other interest. Please keep the REA program strong and in good hands.

Very truly yours,

FAIN MCDOUGAL,
Manager.

Refrigerator Deaths

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. ROBERTS. Mr. Speaker, during the 84th Congress, there was enacted into law legislation which I introduced to require the installation of safety devices on household refrigerators shipped in interstate commerce, so as to enable a trapped individual to open the door from the inside.

This legislation is now being implemented. The Bureau of Standards recently issued criteria for use in the manufacture of new refrigerators. However, there are many old refrigerators and iceboxes, either in use or discarded, which remain potential deathtraps.

This fact is pointed up in an editorial appearing in the Selma (Ala.) Times-Journal on August 25. Under leave to extend my remarks, I submit the editorial:

REFRIGERATORS STILL DEATHTRAPS

Although a great deal of progress has been achieved in reducing the toll of child deaths in abandoned refrigerators, which seem to have deadly fascination for playing youngsters, from time to time we are reminded that this menace still has not been eliminated.

The latest demonstration comes from Midland, Tex., where two young girls were found dead in an abandoned icebox, hours after they disappeared while playing. The tots were discovered huddled side by side in a discarded refrigerator of the type which unlocks only from the outside.

Largely through the efforts of Alabama's Fourth District Congressman KENNETH ROBERTS, such refrigerators are on the way out because of Federal requirements of inside latches for all iceboxes shipped in interstate commerce.

But there are uncounted thousands of iceboxes which do not meet this requirement still in service, and eventually they will be junked. Unless continuing care is taken, many of these refrigerators will be left in places where inquisitive children can explore them, thus opening the way to new suffocation tragedies.

This makes it mandatory that all our citizenry should be alert to safe abandonment of refrigerators until all unsafe types have been replaced by models complying with provisions advocated by Representative ROBERTS.

Proposed Visit of American Newsmen to China

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an informative and thoughtful column from the Oregon Statesman, of Salem, Oreg., of August 23, 1957, entitled "It Seems To Me." This column, which deals with our policy regarding the exchange of newspaper correspondents between Red China and the United States, has been written by one of Oregon's most outstanding journalists, former Gov. Charles A. Sprague. In addition to his service as chief executive of our State, ex-Governor Sprague has been an alternate delegate of our country to the United Nations, and the winner of many awards for conspicuous achievement in the field of publishing and editing.

I endorse the views of former Gov. Charles A. Sprague with respect to the wisdom of permitting our newspaper correspondents to report to us about the activities and problems of the one-half billion Chinese people who live on the continent of Asia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

(By Charles A. Sprague)

Secretary of State Dulles has capitulated, in large degree, to the demands of the American press for permission to "cover" Red China. He has decided to issue visas to 24 representatives of news agencies. This is on a 6-month experimental basis. Presumably if nothing untoward happens the time will be extended. Included in the list is the Associated Press, of which the Statesman is a member, also other press associations, newspapers such as the New York Times, news magazines and broadcasting networks. Of these 12 were represented in China before the Red revolution.

The press services had insisted on full freedom, with no limitation on the number or representation, and were averse to the 6-month time limit. The number has been greatly increased from the half dozen first proposed by Mr. Dulles, and probably includes all who want full-time representation in China. It would be better, however, if provision were made to allow other professional journalists to visit China on special assignment.

China was first to move to sunder the Bamboo Curtain by inviting a dozen United States journalists. The State Department at that time refused to issue passports. In the interval the Department made some retreat, and now Mr. Dulles has made a virtual capitulation. At the same time he announces no reporters from Red China will be allowed to visit this country. Also, it is not clear whether China will renew its invitation to United States journalists or what number it is ready to admit.

Access to information is what the American press has been demanding on all news fronts. It is ready and willing to send reporters to Red China if they will be permitted to observe and report without molestation. Mr. Dulles warns that such correspondents face "abnormal personal risks," having in mind no doubt the hardships and cruelties suffered by other Americans who were held captive in China following the overthrow of the Nationalist regime. With any sign of such treatment press agencies would undoubtedly withdraw their representatives.

Mr. Dulles explains the withdrawal of his original complete ban on "new factors" that have come into the picture. The most significant factors have been the resolute opposition of the news gathering agencies to the original ban and to his narrow limitation in the second place. The 24 now allowed is adequate for the present, probably not all of them will want to maintain permanent bureaus in Red China. But provision should still be made for the entry of observers on single missions.

Admission of professional reporters is a different matter from approving the jaunt of the 41 American youth to Peiping. This savored of a personal defy of their Government, a combination of taking a dare and satisfying their curiosity.

In view of Washington's position that a quasi-state of war exists with Red China, its refusal to admit reporters from Red China is understandable though the actuality is rather fictitious. Is the United States determined to preserve the "quasi" the same as Egypt with relation to Israel? Is our Government so tied to the rump China on Formosa that it cannot bargain for ending the "quasi"?

The concession respecting United States correspondents in China marks a little "give" in the previous position of the State Department. If it can be followed with constructive bargaining to restore normal or even formal relations with the half billion Chinese on the Asian continent it would be helpful; but such bargaining will call for concessions by Red China as well.

Wheat Statistics

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. MORRIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statistics furnished by the United States Department of Agriculture relating to wheat:

1956 wheat—June 1957

ARKANSAS

District	County	Number of farms with allotments (1)	Total acreage allotted (2)	Total wheat production (thousands of bushels) (3)	Value of wheat (thousands of dollars) (4)	Average acreage per allotment (5)	Average production per allotment (bushels) (6)	Average value per allotment (dollars) (7)	Total estimated acres seeded (8)
1	Benton	532	1,528	142	270	3	267	507	6,960

Why Farmers Are in Trouble

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MARSHALL. Mr. Speaker, the present situation in agriculture has far-reaching effects in the great rural areas of America and no one knows it better than the smalltown businessman. An editorial reprinted by the Askov American of Askov, Minn., puts the problem in the language of Main Street. It was written by Gordon Spielman, editor of the Triumph-Monterey Progress, published in Martin County, Minn., and is worthy of consideration by Members of the House. Under leave to extend my remarks, I ask that it appear at this point in the RECORD:

There has been a lot written and more said about the farm problem. There are arguments about parity and support, about free market versus fixed prices, about acreage allotments and controls, to a point that the average person shakes his head and wonders what it is all about.

Stripped of all the fancy talk of the farm economists, the farmers are in trouble simply because since 1952 they have been taking a big pay cut. While the price of everything has been steadily going up, the price of farm products has been going down.

For example, in 1952 a farmer had to sell 951 bushels of wheat at $2.06 to buy a tractor at $1,960. Today the same farmer would have to sell 1,130 bushels of wheat at $1.91 to buy the same tractor at $2,160.

In 1952, the farmer could sell 147 bushels of corn at $1.73 to buy a 2-bottom plow at $255. Today, it takes him 214 bushels of corn at $1.22 to buy the same plow at $262. In 1952, it took 56 hundredweight of cattle at an average of $26.20 to buy a combine worth $1,490. This year, with the average price of cattle at $17.70, it took 89 hundredweight to buy the same combine at $1,590.

Back in 1952, before Ike, Benson and the new look in agriculture, it took 447 hundredweight of milk at $4.38 to buy a 2-ton truck then worth $1,960; now it takes 744 hundredweight of milk at $3.84 to buy the same truck at $2,860. And yes, ladies, in 1952 it took 390 dozen eggs at 34 cents to buy a washing machine worth $132. Now it takes 562 dozen eggs at less than 25 cents to buy the same washer, now selling for $140.

Similar stories may be told about chickens, rye and other farm products.

Simply told, it means that while almost every other section of our population has been getting more for what they produce, the farmer has been getting less. And that hurts. It hurts not only the farmer and his family, but all of us on Main Street who depend on the farmers' ability to buy for our own living.

Thus the question becomes not one of philosophy, or of political ideology, but simply one of how are we going to get the farmer back in line with the rest of the Nation's economy before the balance becomes upset and, Humpty-Dumpty-like, we all fall. Obviously either of two things can be done. We can raise the prices received by farmers until they are in line with other prices, or we can lower the prices on all commodities to the same levels as those received by the farmers for their products.

We prefer to believe that it would be easier to raise the prices received by the farmers.

Election of Ted Budzinski

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. IVES. Mr. President, the Catholic War Veterans of the United States of America, at their recent convention in Milwaukee, selected Mr. Ted Budzinski, first vice commander of Astoria, L. I., Post No. 1 of the Catholic War Veterans, as the outstanding promoter of Americanism in this most important, nationwide organization. I ask unanimous consent that there be printed in the Appendix of the RECORD the citation accompanying this award to Mr. Budzinski.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

To Ted Budzinski, first vice commander and Americanism chairman of the mother post of the Catholic War Veterans of the

United States of America, Astoria No. 1: For having given outstanding service in the performance of his duties; for having demonstrated beyond any questions an untiring and continuing ability to produce all manner of lawful actions promoting and fostering a greater America under God; for his boundless energy, as evidenced by his voluminous writings, correspondence, and speech preparation which all have been accomplished in the name of the CWV; for having deeply probed and reacted in a true forthright American and Catholic manner into all anti-American areas; this first annual Senator Joe McCarthy gold medal Americanism award is presented."

The Ryukyus

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters which I have just received from Generalissimo Chiang Kai-shek, President of Nationalist China, and the Honorable Syngman Rhee, President of the Republic of Korea:

THE PRESIDENT OF
REPUBLIC OF CHINA,
Taipei, Taiwan, August 24, 1957.

The Honorable CARROLL D. KEARNS,
Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN KEARNS: This is to acknowledge the receipt of your kind letter of August 5, 1957.

Your deep concern over various aspects of the situation here is sincerely appreciated. I am particularly thankful for your good report before the House of Representatives on Taiwan.

Regarding my book, I am glad to learn that you think it offers some points for consideration in this stage of international developments. I feel very strongly that the free world is courting disaster if it continues to toy with the idea of having peaceful coexistence with international communism.

Thank you very much for speaking of me in such glowing terms. I am fully aware of the fact that I have yet to discharge my responsibility to my people, and I shall need every bit of help good friends like you can give me.

Madam Chiang joins me in sending you our best wishes.

Yours sincerely,

CHIANG KAI-SHEK.

KYUNG MU DAI, SEOUL,
August 13, 1957.

The Honorable CARROLL D. KEARNS,
House of Representatives,
Washington, D. C.

DEAR MR. KEARNS: A few days ago I had the pleasure of reading a newspaper report about a speech which you made in the House of Representatives after your recent trip to the Far East in which you said that the United States must keep Okinawa far into the foreseeable future.

I know I speak for all Koreans and other free people in Asia when I thank you for the encouragement your words have brought to all of us who recognize the grave dangers inherent in Japan's agitation for the return of this strategic island.

We are deeply concerned when President Eisenhower, following the Japanese Prime Minister's recent visit to America, declared America's future expectation to return the Ryukyus to Japan when the threat of Communist aggression had subsided enough to permit it.

Ryukyu, like Korea, was an independent island kingdom until Japan took it by force of arms and exploited it to extreme poverty. Few people realize it was the refusal of a Ryukyuan king to give military assistance to Japan against Korea toward the end of the sixteenth century that led to the Japanese invasion and consequent domination of the Islands. After their liberation by the United States in 1945, the Ryukyuan people had every reason to hope for the restoration of their freedom and independence.

Rather than taking the position that the Ryukyus should be returned to Japan's dominating control, which would be a bitter disappointment to a countless number of free Asians and a major step toward realization of Japan's aggressively resurgent dream of expansion, the United States should reaffirm her position as a stanch defender of self-determination and the right of all individuals to be free.

I sincerely appreciate the stand which you have taken on this important issue, and wish you every success.

Sincerely,

SYNGMAN RHEE.

Daily Radio Roundup of the Farmers Union Grain Terminal Association

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Daily Radio Roundup of the Farmers Union Grain Terminal Association, of St. Paul, Minn., for August 22 and 23, 1957.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, AUGUST 22, 1957

We would like to read for you two communications received here at the GTA office. The first is a United Press teletype report received this morning. It says, "(Washington) The cost of living rose to an alltime high in July. The Bureau of Labor Statistics said it was the 11th straight month of increases, mostly caused by rising food prices." The second is a letter from Mr. William Larson of Page, N. Dak., to M. W. Thatcher, general manager of GTA, in which he says, "We listen to the GTA radio broadcast every day. Isn't there someone who can tell consumers that people are paying for all this packaging and processing of food, making for these high prices?"

Now, obviously, Mr. Larson is sick and tired of hearing farmers blamed for rising food prices and the high cost of living, when he knows it is not true because his farm prices have gone way down instead of way up. We've told the story many times—the true story—on this GTA radio program. But the GTA network of 12 radio stations is only a squeak in the thundering communications machinery which right now is spreading far and wide the Government's report that we read to you off the United Press wire.

Yet there is another Government report that tells the true facts—facts that the news services and newspapers and TV and radio stations are neglecting to give to the public. This report is buried in a USDA publication called The Marketing and Transportation Situation. Here is one significant paragraph from the report:

"Retail prices of farm-produced food products were about 3 percent higher in the second quarter of this year than in the same period of 1956. A 6-percent increase in marketing charges accounted for the higher retail prices, as prices received by farmers averaged about the same as last year."

In other words, the big factor in pushing up the cost of living is not the price of raw material from the farms, but the cost of services. Consumers, whether they realize it or not, are paying a pretty price for pretty packages and tantalizing sales promotions. It's all part of the big race to catch the housewife's eye as she trundles her cart up and down the supermarket aisles. Just to get people into the stores, the big markets are giving away everything from suckers for the kids to lottery tickets on new Cadillacs, and the consumer pays for it all.

All of which explains a situation, but does not answer the farmers' problem of getting better prices and income. That's a problem which must be solved in Washington through legislation; by the farmers themselves, through stronger organization; and by cooperatives like your GTA, where neighbor joins neighbor to build marketing power.

GTA DAILY RADIO ROUNDUP, AUGUST 23, 1957

We all like to sit back and relax once in a while—and most of us do—but unfortunately that isn't the way we get jobs done. That is particularly true today for family farmers who are in an economic struggle for survival. But even though farmers know that something should be done, they are hard-pressed to know just what it is.

The latest issue of the GTA Digest, which is coming off the press today and will be in the mails tomorrow, gives farmers a lead on the right course to take. The Digest, which circulates to some 35,000 farm co-op and community leaders in the upper Midwest, has this to say: "When farmers organize, jobs get done and problems get solved. More and more farmers are becoming convinced that they can best tackle the present farm problem through stronger organization at home and in Washington."

The Digest cites what farmers have done at home through their cooperatives as "one of the great national achievements. The co-op grain elevator has become the dominant symbol of what farmers can accomplish by working together." Although the administration in Washington has waged a 6-year campaign against farm price supports, resulting in lower and lower farm prices and a generally weak farm economy, it is encouraging to see that farmers are helping to combat this by building their cooperatives stronger.

Just to cite a couple of examples—the Farmers Union Elevator at Harvey, N. Dak., has completed a new 100,000-bushel annex boosting its total capacity to 205,000 bushels. That means, of course, that the farmers will have more efficient handling of their grain crops and will be able to store more grain until market prices are more favorable.

But these farm co-ops don't concentrate entirely on storage space. Up at Climax, Minn., for example, the Grain Cooperative Association has put into operation a new $30,000 seed plant. That means assurance for farmers of the area—that the seed they put into the ground will be the finest available.

These are not isolated examples. All through the farm areas of the Nation cooperatives are expanding and improving their facilities, because the farmers who won them

demand it. Slowly but surely co-op farmers are closing their ranks, organizing better, to combat the cost-price squeeze which has its roots in Washington. They are working toward the day when they will be organized as industry and labor are organized and can lay claim to a fair share of the national income.

Helping farmers toward that goal is the great regional grain marketing cooperative they have built—the sponsor of this program. Join them by marketing your grain GTA, the co-op way.

Opposition to the Selling of Merchandise on Sundays and National Holidays

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. Arthur L. Quinn, counselor at law, Washington, D. C., addressed to the publishers of the Washington newspapers. In the letter, Mr. Quinn protests against the widespread Sunday merchandising and selling of all types of goods on Sundays and on our great national holidays. I think the letter will be of interest to those who read the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *July 13, 1957.*

To the Owners, Publishers, and Editors, the Evening and Sunday Star, the Washington Post and Times-Herald, and the Washington Daily News.

GENTLEMEN: As one who has reached the age of 50 plus 7, native born, spending about two decades of my life in my native New Hampshire and the balance of my years here in Washington, I believe there is need for reflection, serious reflection, which causes me great concern, and which, likewise, should cause you concern. I refer to the decay that has set in among our citizenry in moral, religious, and patriotic values. Sundays and holiday; nationally proclaimed holidays, have always meant a great deal to me. From my earliest days, I was trained and taught that Sundays and public holidays called for respect to God and country.

Look at what has happened in the last decade. Sundays are being bargained into just another day for business as usual. First, they tried it out on the fringe line of our city and apparently noting no resentment thereto, they, impudent and disrespectful merchants, or hucksters if you please, splash their message and huckster their wares in the very heart of the city. Through glaring 2-page ads, they entice, persuade, and blatantly cajole the gentry to join the marathon, 24- or 48-hour marathons, for so-called Sunday bargains on used floor samples, slightly defective merchandise, etc., etc., used cars, appliances, etc., etc.

What of the American holidays—Washington's Birthday, Independence Day, Memorial Day, Thanksgiving? All have degenerated into carnivals of bargain (junk) clearance sorties.

How can religious and patriotic values be imparted to the youngsters of today under such flagrant and bold disrespect of the significance of the day?

Why am I addressing you jointly? Because, you, together, can do more than any law that inevitably will be forthcoming from Congress. You can take the step that will help, beyond all doubt, to eliminate the evil. How? By jointly refusing to take copy for ads that invite violation of the significance of the sabbath and publicly proclaimed holidays set aside to pay respect to God and homage to country.

What about the loss in revenues? The merchandise will be there the other 6 days of the week, as it is with reputable stores, for the hawkers to sell and for you to advertise. Righteous competition, fair competition, will make up any feared losses.

Surely, the medium you own and control owes something to the community besides the taxes you pay and the employment you afford. You have a great moral duty to help preserve the religious and patriotic values of our community—our Nation.

I am not a shareholder in any of your enterprises but I am a shareholder in the community that makes up the District of Columbia. I value that investment. You should, too.

Do not wait for the legislative cure to this fast-growing evil of total disregard and disrespect for God, our institutions, our country.

Lead the way. The door is wide open to you.

Yours very truly,

ARTHUR L. QUINN.

Campaign Against Certain Latin American Republics

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. REECE of Tennessee. Mr. Speaker, the New York Times on Thursday, August 22, calls our attention to another interesting chapter in the unprecedented campaign of the gentleman from Oregon against the sovereign governments of certain allied Latin American Republics. The gentleman's latest exploit entailed his unusual appearance before a Federal grand jury in Washington. This particular grand jury was impaneled on December 27, 1956, and is reportedly investigating the disappearance of Dr. Jesus de Galindez and Gerald Murphy. One would gather from reading the Times that this story was published as a result of a press release from the gentleman's own office in the House of Representatives. There can be no doubt that the gentleman's espousal of the revolutionary cause of certain Latin American exiles has brought him publicity not usually attendant to the office of a freshman Congressman. The fact that he was asked to appear on the Meet the Press program is indicative of the attention his activities have aroused. While there are very few, if any, of us who do not enjoy the favors of press coverage of our activities, there should be some restraints on the methods of procuring public recognition.

The grand jury is an institution basic to the fundamentals of Anglo-American jurisprudence. It was originally conceived and continues to be regarded as the only practical method by which a free society could bring to justice its enemies. In proceedings before the grand jury one is not protected by the normal safeguards of justice such as are available in open court. The availability of such safeguards would necessarily hamper and probably completely thwart the scope of investigation of the grand jury. Substituted for these basic safeguards is the historical secrecy of grand jury proceedings. Without such confidence, names and reputations of many innocent persons would be destroyed. The grand jury is one of those inviolate institutions of American justice which has gained the admiration and respect of peoples throughout the world. It is for this reason that I am amazed to see a Member of this body utilizing a Federal grand jury as a vehicle for promoting his own political well-being. What other reason could the gentleman have for making public statements from his office in the House of Representatives to the effect that he had made an hour appearance before this jury?

Not only did the gentleman announce that he had made such an appearance, but according to the New York Times, he volunteered the contents of some of his testimony. According to his press release, the gentleman from Oregon made two specific suggestions. One was that the grand jury indict Trujillo himself, and the other was that the grand jury call the Dominican Ambassador to the United States as a witness. The fact that the gentleman made public these suggestions is not nearly as amazing as the fact that he, a lawyer, seriously made such proposals to a Federal grand jury. Aside from the propriety of a Member of this body suggesting American legal action against the sovereign of an allied country and its duly accredited representative to the United States, the gentleman as a graduate lawyer must be aware of the traditional rules of international law in this regard.

In 1812 the great Chief Justice of the Supreme Court, John Marshall, who more than any other jurist was responsible for the development of American law, had occasion to address himself to the subject of American regard for the sovereign rights of other nations. Chief Justice Marshall made the following wise and prudent comments:

> One sovereign being in no respect amenable to another; and being bound by obligations of the highest not to degrade the dignity of his nation, by placing himself or its sovereign rights within the jurisdiction of another, can be supposed to enter a foreign territory only under an express license, or in the confidence that the immunities belonging to his independent sovereign station, though not expressly stipulated, are reserved by implication, and will be extended to him.
>
> * * * A foreign sovereign is not understood as intending to subject himself to a jurisdiction incompatible with his dignity, and the dignity of his nation.
>
> The assent of the sovereign to the very important and extensive exemptions from territorial jurisdiction which are admitted to attach to foreign ministers, is implied from the considerations that, without such exemption, every sovereign would hazard his

own dignity by employing a public minister abroad. His minister would owe temporary and local allegiance to a foreign prince, and would be less competent to the objects of his mission. A sovereign committing the interests of his nation with a foreign power, to the care of a person whom he has selected for that purpose, cannot intend to subject his minister in any degree to that power; and, therefore, a consent to receive him, implies a consent that he shall possess those privileges which his principal intended he should retain—privileges which are essential to the dignity of his sovereign, and to the duties he is bound to perform.

Throughout our history, learned justices and statesmen and private citizens have restated in words far more meaningful than mine, the absolute precept of equality of sovereigns and the inviolability of their actions to the jurisdiction and judgment of the courts of other lands. The principle that the conduct of one independent government cannot be questioned in the courts of another rests upon the highest considerations of international comity and expediency. As Mr. Justice Clarke of the Supreme Court said in 1917, to do otherwise would "imperil the amicable relations between governments and vex the peace of nations." The very fact that an American grand jury, under principles of American and international law, has no jurisdiction over Generalissimo Trujillo or Ambassador De Moya makes more reprehensible the suggestions of the gentleman from Oregon. Since there could be no such indictment or summons process issue from this grand jury, the gentleman's suggestions can only serve the purpose of prejudicing grand-jury deliberations and promoting the gentleman's own political ambitions.

I cannot understand why the gentleman from Oregon was called to testify before this grand jury and thus allow him to use this sacrosanct institution as a political sounding board. The gentleman's anti-Dominican campaign has no place in grand-jury deliberations. From his previous statements both on the floor and to the press, the gentleman has not indicated knowledge of any concrete evidence which could be of benefit to this grand jury.

I trust that in the future, the grand jury will exercise more restraint in calling witnesses and confine itself to the detection and prosecution of citizens and residents who may be guilty of some violation of law. An intrusion into the delicate field of international relations by a Federal grand jury is unprecedented.

TVA Launched America's Present Electrical Age

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and factual article entitled "TVA Launched America's Present Electrical Age," written by Ray Tucker, and published in a recent issue of the Savannah Morning News, of Savannah, Ga. It relates the part which the Tennessee Valley Authority has played in leading in the extension of the use of electrical power, and in reducing the rates charged for electricity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Savannah (Ga.) Morning News of August 25, 1957]

TVA LAUNCHED AMERICA'S PRESENT ELECTRICAL AGE

(By Ray Tucker)

Despite expiring arguments over the question of Government competition with the private utilities, today's electrical age really began with Franklin D. Roosevelt's inauguration of the Tennessee Valley Authority experiment, which started operations in 1940.

A review of the 17-year results of his yardstick threat, which has special timeliness now because the private versus public power controversy on Capitol Hill has virtually ended, shows enormous benefits for millions of old and new consumers, and for the private utility industry. The fierce battle has wound up in a draw that seems generally satisfactory, despite grumbling by extremists on both sides.

Other factors, of course, have contributed to this miraculous development. Vast new sources of electricity were needed for World War II, which could have been lost without their contribution. There has been a tremendous increase in population and unparalleled industrial growth. Every home has gone electrical from kitchen gadgets to radio and television sets in the living room.

Much more energy from coal. The private industry, frightened and inspired by the yardstick competition, fought for survival by innovations and improvements which brought down the price of electricity. It gets 3 times more energy from a ton of coal than it did 17 years ago. It rid itself of speculators like Sam Insull and substituted for him a Wendell Willkie.

The statistics tell the story. In 1940, when TVA made its timid entry into the power field, the total consumption of electricity was only 160 billion kilowatt-hours. Today, it is 500 billion. Few farms were then electrified, mainly the great corporation holdings. Today, more than 90 percent of rural homes and farms are so equipped.

Electrical costs lowered. Mass production and consumption have lowered electrical costs. In 1940, the average price for a kilowatt-hour was 3.34 cents, as against 2.59 cents in 1956.

Based on an annual total consumption of 500 billion kilowatt-hours, this drop of 1.25 cents indicates an annual saving of more than $6 billion in the Nation's electricity bill. It should go even lower as air-conditioning in homes and factories, especially in the South, becomes even more general than it has since World War II.

The average annual bill in 1940 was $36.56 for nonfarm consumers, as against about $78 today. In view of the cut in unit costs, the increase here reflects the greater use of electricity by both urban, farm, and industrial users. There are almost as many television and radio sets and electrical appliances in the wide open spaces as there are among city dwellers.

Private utilities in sound shape. Oddly enough, in view of its original fears and fights over FDR's "invasion" of their field with the "TVA experiment," as well as the construction of Bonneville and Grand Coulee systems in the Northwest, the private utilities were never in sounder shape.

Their profits and dividends have not suffered. The executives and managers are now known as enterprising operators. They are giving better service. Privately, the more enlightened utilitarians admit that they needed the 1940–TVA "shot in the arm."

They have survived the New Deal threat. Now, and it is their chief concern, they aim and hope to prevent Uncle Sam from taking over the field of atomic power, even though that source of electricity will not become generally available for another generation.

The Port of Detroit

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. POTTER. Mr. President, the port of Detroit, Mich., has always been an important shipping center for domestic and North American commerce. As the completion of the St. Lawrence seaway approaches, and the Great Lakes become the fourth sea coast of the United States, it will be increasingly important in foreign trade.

Gerald Warren, secretary of the St. Lawrence seaway committee, recently summed up some of Detroit's significance as a port in the weekly publication, the Detroiter, and I ask unanimous consent to have his article printed in the Appendix of the RECORD along with a traffic analysis which has also been supplied.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DETROIT, TAKE PRIDE IN YOUR PORT

No port publication would be complete without directing attention to the pride we hometown folks should take in our port. The coming of the St. Lawrence seaway and the attendant excitement caused great ridicule to be cast on local port activity. In the 3 years since the seaway legislation passed it has been the rule for just about everybody in the Great Lakes to tell the other fellow how best to prepare for the opening of the modernized waterway in 1959.

Much of the talk didn't make sense to the shipper and during the excitement that important fellow remained serenely silent. It did reach a point, however, where some were sure Detroit would never recover from the severe complex developed over reports on the sorry shape of our port. Today it appears that the situation has settled considerably and that all concerned are working toward a common goal of planning realistically for tomorrow's port needs.

Detroit can and should be proud of its port. Last year our port handled 27 million tons of cargo. Iron ore, coal, steel, limestone, and chemicals made up the bulk of the port's domestic business. On a tonnage basis our port outranked the ocean ports of Los Angeles, Boston, or Mobile. Unofficial figures indicate that we rank with the top dozen ports in the Nation in size.

The Detroit River is the busiest waterway in the world. It has unlimited favorable navigation characteristics—no harbors to be dredged or low-level bridges to hamper traffic—and a natural accessibility enjoyed by few ports in the world. These attributes of a natural port put us far and away ahead of our other lake competitors who must go

to Washington for funds to get their harbors in shape.

HEAVY-LIFT CARGOES HANDLED EASILY AT THE PORT OF DETROIT

The port of Detroit is equipped to handle the heaviest cargoes shippers can send by water. A giant 100-ton shear leg crane is available at our port to handle the very heaviest single-lift loads that can be hoisted aboard an ocean vessel. Great Lakes Engineering Works is probably the best equipped firm on the Great Lakes to give service to shippers that have especially heavy and difficult cargoes to handle.

Last year, for example, Ford Motor Co. wanted to send heavy machinery to its Bremen, Germany, plant. In most lake port cities, cargo of this type would have had to be sent to the east coast for shipment to Europe. Not so at the busy port of Detroit. Loads were hoisted aboard in excess of 85 tons. Ford reported a substantial saving and at the same time got unexcelled service at the port of Detroit.

McLouth Steel Corp. wanted to send a steel mill to Spain. In a run-of-the-mill Great Lakes port this would be an impossibility. Not so at the dynamic port of Detroit. Several 70-ton loads were lifted aboard the ocean vessel sitting in the deep water at the dock on the Detroit River, and with no more effort than is exerted on any busy workday this job was done in short order.

LARGEST LAKE FREIGHTER TO BE BUILT AT DETROIT

A true story of our port couldn't be told if we didn't also note that the Great Lakes Engineering Works is presently building the largest boat (yes, boat, that's what they're called on the Great Lakes) ever to be built on the Great Lakes. Work was started on the 730-foot boat last year and it is scheduled for completion in July of 1958. The vessel will cost in excess of $8 million. The vessel is owned by the Northwestern Mutual Life Insurance Co., and when finished will be operated by Columbia Transportation Co.

It is reasonable to expect that Great Lakes shipyards will find an increasing number of orders on their desks for the more modern and efficient bulk lake carrier. The Great Lakes fleet is, for the most part, outdated and with the deepened connecting channels, the race will be on among the lake carriers to modernize their fleets. All in all, this spells happy days for the Great Lakes shipbuilding industry. Other major companies on the Great Lakes are Defoe Shipbuilding Co., Bay City, Mich.; Manitowac Shipbuilding, Inc., Manitowac, Wis.; and American Shipbuilding Co., Cleveland, Ohio.

PORT TERMINALS ANXIOUSLY AWAIT MORE OCEAN BUSINESS

Along with the staff at the Port of Detroit Commission and the steamship agents whose job it is to see that shippers use the port of Detroit, the port terminal operators in Detroit are doing their level best to see that the shipper gets the best possible service at our port. Their record to date has been noteworthy. Shippers have high praise for the capable and efficient manner in which their shipments are handled at the port of Detroit. Ship captains are especially pleased with the speedy and efficient equipment available to help cut down in-port time at Detroit.

In 1956, the Detroit Harbor Terminals, Inc., was worked to slightly over 20 percent of capacity. There were 51 days during the shipping season in which there were no ships at the docks of the terminal, and on another 58 days there was only 1 ship per day that discharged cargo. The terminal operator is exceedingly anxious that the shipping season of 1957 will see more production of cargo over his docks. Effective trade development programs are being pursued to produce this new business.

Much the same story can be told for Detroit's other terminals that handle foreign cargo. The Detroit Marine Terminal has specialized in cost-saving cargo-handling techniques which have gotten wide attention. Simply stated, the terminal operator does everything he can to avoid putting the shippers' cargo in the transit shed. Every effort is made to short circuit the usual ship-to-dock, dock-to-transit shed, and shed-to-truck cycle. The streamlined system in use at the Detroit Marine Terminal cuts out these steps by use of stop-watch timing which starts before the ship arrives in port, from the ship to truck or rail car. This close attention to cargo control saves the shipper money.

DETROIT SECOND IN FOREIGN TONNAGE ON THE GREAT LAKES

The port of Detroit has held second place in foreign overseas business since this business started to blossom forth shortly after the end of World War II. Every indication points to the fact that our port is going to stay in the forefront of the race between port cities for cargoes in and out of the industrial heartland of the United States. Year in and year out, our port has handled more foreign business than Milwaukee, Duluth, Toledo, Buffalo, or Cleveland. This calls to mind a rather amusing incident that happened last year when Milwaukee's port director was paid to come to town and tell us how inadequate we were. Luckily our folks didn't put much stock in what was said at that time and our port business still continues to soar above that of Milwaukee.

POLITICIANS KEEP STEADY KEEL

Our local political leaders have been blessed with wisdom to meet the needs of our port. The Wayne County Board of Supervisors has repeatedly refused to be rushed or pressured into ill-conceived port schemes or programs. That body which has the responsibility of raising the money for our port development program has buttressed itself with the best know-how available in getting all information in before making decisions that could conceivably waste millions of the taxpayers' money.

The port commission itself has cast off that idle dream of governmental autonomy and has at last taken its proper role as an agency of Wayne County. As a result, the commission is getting the kind of support from the supervisors that is needed to build for our future port needs. The commission's program for development on the riverfront near West Jefferson and West Grand Boulevard will get the most serious consideration when presented to the supervisors in the near future.

Traffic analysis, ports of Milwaukee and Detroit, 1952–55

Year	Port	Total traffic	Total overseas	Total Canadian	Total lakewise
1952	Milwaukee	5,704,003	19,052	331,278	5,314,338
	Detroit	22,440,231	43,685	718,564	21,051,793
1953	Milwaukee	5,742,348	35,341	460,550	5,234,249
	Detroit	25,463,140	155,584	627,146	23,838,727
1954	Milwaukee	5,462,529	40,812	358,859	5,055,302
	Detroit	21,211,941	59,528	819,272	19,588,902
1955	Milwaukee	6,201,842	65,989	352,266	5,761,319
	Detroit	26,497,792	90,286	1,077,615	24,681,017

"Safe" Radiation Seen Lower Than Estimated

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 28, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'Safe' Radiation Seen Lower Than Estimated," published in the Washington Post of August 27, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"SAFE" RADIATION SEEN LOWER THAN ESTIMATED

PALO ALTO, CALIF., August 26.—A noted Baltimore biologist warned today that scientists may have to drastically lower the present estimated danger level beyond which radiation can cause disease or threaten the health of the unborn.

The warning was contained in a paper delivered by Dr. Michael A. Bender of Johns Hopkins University before the 5-day convention of the American Institute of Biological Sciences.

Bender reported on experiments in which normal human cells were given radiation doses for the first time and their effects measured. The experiments, he declared, indicated that the maximum permissible dose set by the National Academy of Sciences for the Nation's population may be too high.

He warned: "If the rates of this and other types of radiation induced damage to human tissues are found to be correspondingly high in further experiments, a sharp revision will have to be made in our estimates of 'safe' doses of radiation."

In a report last year the National Academy of Sciences listed 10 roentgens as the maximum permissible average radiation dose to human reproductive organs for persons up to the age of 30.

The report said this dosage would probably cause considerably less damage than twice the amount of so-called "background" radiation received from nature.

However, Bender asserted that his experiments indicate that the dose required to double the spontaneous breakage rate (of cells) is less than 10 roentgens.

He added that the breakage rate of the cells in his study is much higher than which has been generally assumed to occur for such low doses. In fact, the present experiments taken by themselves, lend great weight to the belief of many geneticists that there is no safe dose of radiation.

Bender's research is being financially sponsored by the Atomic Energy Commission and the National Institutes of Health in Washington.

An Engineer Versus War

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 27, 1957

Mr. JAVITS. Mr. President, there is an article in the September issue of the American Engineer entitled "An Engineer Versus War," which is a challenging and stimulating analysis of some of the problems facing mankind in the quest for peace. Mr. Kurtz, the author, I think has done a very thoughtful and worthwhile job which deserves reading by every Senator.

I ask unanimous consent, Mr. President, that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ENGINEER VERSUS WAR
(By Howard G. Kurtz, Jr.)

As an engineer approaches the phenomenon of war, his analysis of the problem is in two stages: (1) He attempts to list all possible causes suggested from all sources, and (2) he further analyzes these causes in search for tangible factors which are subject to engineering study and development.

Before proceeding further, the engineer would admit several prejudices, subject to later confirmation.

1. If there really are as many different causes of war as have been suggested from the many different academic approaches, the problems would be hopeless.

2. Since the observable aspects of war are so similar in every case where the phenomenon occurs, it would be assumed that it must be brought about by the same dynamics each time * * * and not by some different cause each time. All wars basically are similar in the same way that all frontal thunderstorms are similar * * * and brought about by similar dynamics * * * although each storm may vary in minor detail, severity, duration, location, and rainfall.

3. While all the causes of war suggested may have validity, it can be suspected that there is a single dynamic common to them all which is the strategic factor for which we are searching. It must be a dynamic which meets two requirements:

1. It must be present in every case where war between nations occurred; and

2. War could not occur if the factor is absent.

It is just such a critical tangible factor which has been isolated.

The critical or strategic factor in the phenomenon of war makes possible rational evaluation of all the different causes suggested by the scientists. Each such cause has a provable relationship to war only to the extent that it contains the critical factor we shall isolate.

It would be necessary to try to check each suggested cause against every war in history to find one that is present in every case where the phenomenon occurs. One great difficulty in the way of such an engineering analysis is the resistance against giving up superstitions, phantoms, and beliefs which one wants to continue to cling to. Here are two examples:

"All evil in the world today is caused by wicked men who do not believe in a Supreme Being and who claim to believe only in material values."

In many different ways, this theme is repeated constantly to religious people as the explanation of the cause of the oncoming war. And yet there is no observable evidence in history that spiritual or philosophic beliefs are the strategic factor in war, despite historians trying to prove otherwise.

Example: The American people are a Christian people. And yet every war that the American people have fought has been against similarly Christian people—against Christian Englishmen, against Christian Spaniards, against Christian Mexicans, and Christian Germans twice in one generation—in present times.

"All evil in the world today is caused by the fact that the national government owns the automobile factories in the Soviet Union, while private corporations own the automobile factories in America."

In countless variations this theme is hammered into the minds of the American people through billions of dollars' worth of national advertising, pronouncements by business associations, political speeches, ghost-written feature articles and other means of molding public opinion. (The constant repetition of the theme in an effort to sell the public is quite parallel to the similar efforts in the U. S. S. R. to sell the Russian people on the idea that the war is being brought about because of the American beliefs in "capitalism.")

This thesis is devoid of support from any objective analysis of the phenomenon of war.

Example: America is mobilizing for possible large-scale war in 1957 with observable patterns almost identical to American mobilization in 1941.

But within this short period America has mobilized against two radically different national political economies.

In 1941, Americans were mobilizing for defense against a threatening Germany which encased "capitalism" so similar to American capitalism that some American citizens had invested more than $500 million in the German industries which manufactured Hitler's military might.

But in 1957 Americans are mobilizing against a threatening Soviet Union which encases "communism" radically different from American political beliefs.

The American people can observe from their own recent personal experiences that the kind of politics encased in a nation threatening to America, is of no controlling interest. When threatened, the American people can be mobilized to fight against a country professing beliefs in capitalism, or communism, or any other kind of ism. When threatened, the American people can be mobilized to fight against the threatening nation with utter disregard for the current peculiarities of the political faiths of the opposing people.

From a list of all wars between nations since nations were formed, one critical factor would be found to be present each time the phenomenon occurred.

That critical factor is national military power.

This conclusion is so blunt, and so obvious, that one's first reactions are to feel that it is frivolous.

But it can be proven to be a valid and important conclusion.

Is national military power the strategic factor in the phenomenon of war between nations?

The conclusions of the writer are twofold:

I. National military power is the single, strategic, tangible factor in the phenomenon of war. If national military power had been absent, none of the wars between nations would have occurred. But with national military power present, and controlled by individual nations, the patterns of war generate, endlessly, with the dynamics of a new war emerging immediately after the grim conclusion of each last war. These patterns are predictable to an important degree, and will be sketched later in greater detail. National military power is the critical factor which makes the phenomenon predictable, in an engineering sense. It is the concrete factor which can be found in all of the academic causes of war when there is some real correlation between the cause and war.

Strange, exotic spiritual or philosophic beliefs may be subjects for academic study, but they are not a cause of war until they are encased in a foreign nation which has become a military threat. Differences in economic ritual are subjects for endless scholarly analysis, but they are not a cause of war until they become encased in a foreign nation which has become a military target.

II. The human dynamic aroused by a threatening national military power is in a realm beyond the jurisdiction of the conscious mind, in which people intentionally are taught different theological, philosophic, or political beliefs, and beyond the conscious identifications of race, color, and nationality which tend to erect barriers between people. This human dynamic is anxiety. Anxiety is a complex, instinctive, automatic, compulsive human reaction to potential danger under certain conditions. These conditions are met when a person's existence appears to be threatened, and when normal reactions to such danger are thwarted and frustrated. Under certain specific environmental conditions, anxiety generates, and human judgments, attitudes, and actions become predictable.

It is here that the research into the dynamics of war tends to coincide with the writer's 20 years of work and study of the controls which anxiety exerts over public judgments, attitudes, and actions among people of all races, colors, creeds, and nationalities. It has been study of passenger reactions in flight on air transport planes along the world's airways.

There is increasing evidence that this work can be verified and agreed to by people of all differing faiths and beliefs. People of all races, colors, creeds, and nationalities tend to have judgments, attitudes, and observable actions similar to people of all races, colors, creeds, and nationalities when they are placed in the same environment which arouses anxiety. Judgments, attitudes, and behavior are predictable under these conditions.

These are observations in the changing environment of potential hazard which precedes a war and the changing behavior patterns of people in this changing environment.

During the prolonged period of observation, it is assumed that there is an increasing threat to this Nation under the observation from an expanding foreign national military power.

As potential danger intensifies, both normal fear-reactions are frustrated and thwarted in the citizens of this nation; (1) escape is impossible or impracticable and (2) it is equally impossible for the individual citizen to remove the threat or control of his own destiny. The citizens are in a situation similar to passengers in an airplane, in flight, when something has happened to arouse apprehension.

It is possible to observe important changes in the behavior of the citizens as anxiety is intensified.

In contrast to the observed behavior of these same citizens at some other time when no hint or threat of war exists, there are noticeable changes in general behavior over a period of years as the potential threat from a foreign military power is increasing. Many pages could be filled with these observable behavior changes.

But defensive expansion is the over-all label which tends to identify all observable behavior of the people in a nation existing under increasing threat from a foreign military power.

But why is the foreign military power expanding its threat to the nation being observed? Why is it aggressive?

This leads to the observable patterns of the generation of war. As 2 electric fields interact upon each other, in an engineering laboratory, when 2 magnets are brought into a critical relationship to each other * * * so here is a new dynamic when 2 powerful national military powers emerge in a special relationship to each other.

The phenomenon we have been observing is in two parts where (1) the national military power of one nation (2) creates an environment in a second nation which intensified anxiety and apprehension in this second nation.

A new dynamic emerges when this second nation's national military power creates a similar environment of anxiety and apprehension in the first nation.

The national military power of each nation generates anxiety among the citizens of the other nation.

After each war, this dynamic environment in which war can generate becomes available again between the two most powerful concentrations of military forces which are within mutual range of each other's capacities for decisive destruction. War between these two nations becomes a live potential.

The matter of range is important. The dynamic interactions of war do not generate between military powers which are beyond the range of each other's capacity to do harm. Wars do not emerge in history between nations which could not hurt each other.

The polarity of two dominant concentrations of national military power is important. These dynamic patterns do not generate between a dominantly powerful nation and a weak neighbor. Although the defensive expansion of the larger nation may overpower the weak neighbor economically, diplomatically, or even militarily, the dynamic forces of major war generate only when the defensive expansion patterns of two powerful military nations come into overlapping conflict.

In modern times each nation's military department has a planning agency. This agency has the responsibility to scan the military horizon, constantly, to detect the foreign military power which is becoming the most dangerous potential threat. As this potential enemy is brought into focus, all national foreign policy becomes conditioned toward defensive expansion against this potential enemy.

The foreign policy of each of the two major powers within mutual range, thus, begins to focus upon the potential hazard of the other national military power.

Potential threat is all that is required to spark the dynamics of anxiety behavior.

The dynamic interactions of war can generate as they have in recent years between the United States and the U. S. S. R., without either nation's soldiers having killed any citizens in the other country, by military command. It is the increasing potential danger which sparks the national anxiety behavior.

This whole build-up is a continuing change in the specific environment in which the citizens of a nation exist. The environment becomes increasingly charged with potential danger. Human beings react differently when placed in situations of deep apprehension.

Aroused and intense public anxiety is the vital ingredient required before any nation full of people can be manipulated into going into war. Public anxiety is the secret weapon which motivates people toward the sacrifices, sufferings, and disaster of war. Unless public anxiety can be sustained at a high pitch no small clot of political leaders can push a people into war. No matter how compulsively an international Communist may dream of increased personal power in foreign lands * * * no matter how compulsively a colonial baron may dream of increased personal power abroad * * * no matter how compulsively an international capitalist may dream of owning all of the oil in the world * * * these dreams are empty personal crises unless they are supported by a well-armed people driven involuntarily by intensive anxiety into fighting a defensive war against an evil enemy.

To the people on each side of the buildup for war, the opposing people are portrayed as being "aggressive," "immoral," and "evil," while identical behavior on one's own side must always be explained as being "defensive," "moral," and "good."

The national military power of each side provides the essential environment of potential danger to the people of the opposing side. If national military power did not exist, it would be impossible to create this environment of potential danger on a reciprocal basis which is a prerequisite for war between nations.

But as long as individual nations are allowed to control individual national military forces, wars will continue to generate endlessly in roughly predictable patterns. National military power is the strategic factor. It can be controlled.

The above reciprocating environments of anxiety can be observed in relation to wars throughout modern history, at least.

Only one basic change now is noticeable. The new dimension of airpower has increased the range of fear and anxiety from foreign military power to its near global limits.

The area of the world involved in a single war used to be limited by the basic range of military power.

Other nations become involved in a war only when they come within range of potential disaster, to arouse their national fears and anxieties.

Airpower, today, has brought the United States and the U. S. S. R. into a new closeness which never has existed before in history. Today each of these two dominant military powers remaining after the last war is within immediate range of the other's capacities to drop crippling atomic and hydrogen and more terrible bombs. Intense American public apprehension is pegged to the potential threat of Soviet military power, and intense Soviet public apprehension is pegged to the potential threat of American military power.

If each nation simultaneously could be deprived of the control of national military power, this whole phenomenon of war would disappear like the disappearance of an electric field when the electricity is turned off.

But as long as each nation is allowed to continue to control national military force, the back-and-forth, back-and-forth increasing regeneration of anxiety will continue to build up explosive human motivations until war comes as a release from tension and frustration.

Beliefs in materialism or particular religions are not critical, or even important factors in the generation of war. Beliefs in peculiar national political systems are not strategic or even important factors in this buildup for the most awful war civilization will ever have seen. These are merely the themes of the speechwriters, exhorters, manipulators, politicians, circulation builders, editorial writers and historians who try to explain their predicaments in terms of superstitions and fantasies of imagination.

The critical factor in the phenomenon of war is tangible, real, concrete, and observable.

It is national military power. It has been conceived by scientists, designed by engineers and mobilized by people on both sides who are afraid. Once the deadly dynamics of war have built up between two nations, it then would be suicidal if one nation suddenly disarmed or decreased its military power. It would be overrun by force of the pentup fears and anxieties of the opposing people.

Today's critical situation might be visualized by watching two armed men on the opposite sides of any war. Each has raised his loaded gun to firing position, cocked it, aimed it at the other's heart and placed his finger on the trigger. Each man is of a different faith, each has a different patriotic loyalty, each is deeply convinced that the other is about to kill him and is now willing to die in self-defense. Although starting from different conscious loyalties and ideals and identifications the universal controls of anxiety have taken command of the behavior of both men to the point where they are doing exactly the same things, in exactly the same way, with exactly the same motivations. Fear and anxiety are common ground which tend to make people of all races, colors, creeds, and nationalities react with identical actions regarding the thing which has aroused the anxiety.

The crucial question of this age is whether it is possible to enter this tense picture and take away the guns from these two men.

If this is possible, we will have taken action in the physical world, by removing the guns.

We will have changed the psychological atmosphere by removing the explosive charge of anxiety which had been built up between the two men.

We will not have intruded into the realm of spiritual or philosophic contentions, nor into the realm of national loyalty and patriotism.

Each man can continue to be unequivocally patriotic and loyal to his country. It is not necessary to kill foreigners to be patriotic, if one's own nation is not threatened.

Each man can continue to worship as he choses. It is not necessary to kill in order to believe.

By removing the guns, we will not have trespassed into the realm of each person's patriotisms and beliefs.

When national military power is recognized as the strategic factor in the phenomenon of war, it becomes possible to evaluate actions and policies aimed at averting war.

The League of Nations failed to prevent the buildup for war because it failed to control the strategic factor of national military power. The United Nations has failed to prevent the buildup toward an even more dreadful war because it failed to control the strategic factor of national military power.

All efforts will fail to prevent the buildup for war until a worldwide safety organization is brought into being which has a monopoly control of military power and can prevent any nation or group of nations from waging war, or threatening to wage war, against any other people.

During the period of growth, before all nations in the world belonged to this safety organization, it will have two primary missions (1) to prevent war between any member nations or areas and (2) to defend all member areas from any threat from outside powers.

Checks and balances of multinational political control will have to be worked out to guarantee that this worldwide safety organization will not, itself, become an instrument of tyranny or oppression.

The impact of science on society today is to raise the question whether or not it is possible to create from the U. N. such a worldwide safety organization which can prevent war. It is a practical question of large scale organization.

The question of this age is whether large scale multinational collective strength can be created in a worldwide safety organization committed to the mission of preventing

war. This will mean the elimination of individual national freedom to threaten war unilaterally.

Safety is a universal objective.

Testimony of Paul Sayres Before Committee on Agriculture and Forestry, June 26, 1957

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. HUMPHREY. Mr. President, in June of this year the Senate Committee on Agriculture and Forestry held hearings on the policies and operations of Public Law 480, 83d Congress. This is a vital law providing for the disposal abroad of our surplus agricultural commodities. As such it is a key to our foreign policy. One of the witnesses at the hearings was a distinguished and successful New York businessman, Mr. Paul Sayres, president of the Paul Sayres Co., engaged for the last 28 years in food distribution in New York City.

He appeared on June 26, and I considered his testimony to be most interesting and important.

Mr. Sayres plans to go to India in behalf of himself and a committee of the food distribution industry. I have asked Mr. Sayres to report to me his observations and recommendations. This trip is in the national interest, but it is being financed completely by Mr. Sayres. I ask unanimous consent to have Mr. Sayres' testimony printed in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF PAUL SAYRES BEFORE COMMITTEE ON AGRICULTURE AND FORESTRY, JUNE 26, 1957

Mr. SAYRES. Senator HUMPHREY, Senator MUNDT, and members of the committee, my name is Paul Sayres, of Paul Sayres Co., presently engaged for the last 28 years in food distribution in New York City.

It is with deep feeling and a sense of urgency that I am here today to discuss with you the workings of Public Law 480 and to explore the various avenues by which disposal abroad of our surplus agricultural commodities in food, under this law, can be most effectively accomplished and best utilized to advance the interests of the United States in world stability and harmony.

I should first like to commend you purposeful gentlemen, and you, Senator HUMPHREY, for conducting this hearing and bringing into proper perspective the great importance of this subject, and the international implications involved to our Nation.

There has been a great deal of debate here only recently on the subject of foreign aid, with the pros and cons of to what extent we should help friendly nations, capturing headlines throughout the country as well as the fervor of Congress.

It is not my intention to get into this debate on foreign aid. Today, we are discussing surpluses, honest surpluses of the most essential commodity relevant to man—food. Surpluses that do not do one any good by being surplus. Surpluses that are an economic liability at home, but which put to the proper use in effectively organized disposal programs to needy friends abroad can be translated into not only an economic boon, but a social-ideological one as well. That the use of our surpluses in such a manner may also be classified as a form of foreign aid is incidental.

My primary purpose today is to express my views and those of many others of this country's food industry on what we feel has been largely overlooked by our Government in its pursuit of good will through foreign aid under Public Law 480.

In the final analysis, the problem evolves into three separate segments: how we can do a more effective job; how foreign nations can best utilize their food supplies; and how we can dramatize our humanitarian efforts in keeping with our dignity as a great Nation.

In these endeavors our country is performing in a manner akin to any company with an item to sell, but we are selling ideas and good will in a market where the world's future is at stake. Any good salesman sees to it that his client makes the most effective use of the purchased item. It is our obligation to ourselves as well as to these nations to help them achieve the maximum benefits from the foodstuffs we provide to them. This calls for much greater application of food-distribution assistance.

It is for these reasons that I feel most strongly that Public Law 480 is in need of guidance from this country's food industry; guidance and cooperation completely disassociated from politics. I think that no one here will disagree that people working successfully in our food industry, day in and day out, are well qualified to help their Government.

You might not be aware of this, but the food industry of the United States, as such, is by far the largest industry in dollar volume in the world.

In food distribution, as in many other fields, the United States possesses the most advanced methods and techniques and it must be a part of the machinery of Public Law 480 to help other countries achieve for themselves more efficient food distribution.

Senator HUMPHREY. Does the Government make available funds to the food industry, or have any programs with your industry for the advancement of food distribution? I ask that question because you know the Government does make available to some of the commodity groups funds for the development of markets.

Mr. SAYRES. But I do not believe as far as distribution of foods, which is the thing that I am covering here, that any funds have been available. If they have been, I do not know of them.

Senator HUMPHREY. Has there been any encouragement to you?

Mr. SAYRES. None that I know of.

Senator HUMPHREY. We will talk about this as we go along.

Mr. SAYRES. India, with a population more than double that of the United States, is a country moving steadily to greater prominence on the international scene. Occupying a key geographic position in the Asias, India, as a country of great potential and important meaning to the free world, is one specific area where we can be of particularly meritorius service.

I propose that to upgrade the food distribution machinery of Public Law 480 we utilize the services of a food industry committee, composed of 4 or 5 leading representatives of our food industry—manufacturers, brokers, wholesalers, retailers.

I have discussed this solution with a member of top level authorities in our food industry and find them not only receptive but enthusiastic. In fact, I have available right now the men to make up such a committee, a Committee on Food Distribution Assistance for India. Others, naturally, can be set up for other countries.

My colleagues and I feel so strongly about such a program that we want to do something on our own as a contribution of the food industry to the people and the governments of our own country and those of friendly nations. I am now in the process of formalizing plans to go to India, with the encouragement of others of the food industry.

Whether our committee is successful or not will depend on our getting the full cooperation of the pertinent government agencies. Problems cannot be solved properly unless they are fully understood, and the only way to understand them is to see them and evaluate them at first hand.

I am sure you understand that unless we get that cooperation it will be very difficult to succeed.

Such committees would function by studying the food distribution system of the country involved, speaking with representatives of government and industry of those countries and then attempting to draw up specific techniques for improving the flow of foodstuffs in these countries in a workable plan that will promote the maximum from our shipments under Public Law 480 and that takes into consideration the social, national and religious makeup of that country.

It may be advisable to establish small field offices in these countries to work with the food industry there. This would be another matter for study.

I understand this is possible under Public Law 480. Such offices not only could provide a continuing flow of information and suggestions, but also would prove invaluable as a public information branch for this country, helping friendly peoples to efficiently utilize their food supplies, suggesting spoilage control and preservation techniques, practical and economic recipes, packaging and marketing data and so forth.

If we are to spend our money and resources, it is our duty to our people and to the world to spend wisely and properly to achieve the utmost value. We have before us an inspired opportunity to use American ingenuity and know-how to foster good will and to dramatize the overwhelming advantages of the democratic way over the forces of tyranny. Guns cannot mold man's ideas. But people, decently fed, can stand up and do things for themselves and are not apt to be swayed by false doctrines and ideologies.

In our surpluses, Public Law 480, and with experienced industry men, we have the three essential tools to convert a liability at home into an immeasurable asset in the interests of our democratic principles and world stability.

So let's do the job right.

Senator HUMPHREY. Mr. Sayres, first of all I want to personally congratulate you on your fine statement and to congratulate the industry that you so ably and capably represent. Also, it is heartening and very encouraging to have a man like yourself come before a committee of Congress and indicate to us a specific plan, as well as your willingness to undertake some effort to forward this plan.

As I understand it you are planning on going to India?

Mr. SAYRES. That is right.

Senator HUMPHREY. And as I understand it you are planning on going on your own resources, there is no government trip or anything like that?

Mr. SAYRES. That is right.

Senator HUMPHREY. Well again, I want to wish you a very pleasant trip, but also an informative one. In your testimony you say, "My colleagues and I feel so strongly about such a program that we want to do something on our own as a contribution of the food industry to the people and the

Government of our own country, and those friendly nations."

For that I commend you and congratulate you on your patriotic service. Then you say, "I am now in the process of formalizing plans to go to India, with the encouragement of other of the food industry. Whether our committee"—quoting now again from your statement—"is successful or will not depend on our getting the full cooperation of the pertinent governmental agencies." Do you mean the full cooperation of our United States Government agencies?

Mr. SAYRES. Both of the United States Government agencies and the Indian counterparts.

Senator HUMPHREY. I see.

Mr. SAYRES. I mean, I feel that we just cannot get the information that we need in order to get a proper plan that will really be worthwhile and workable, unless we are able to see the thing firsthand and know what we are contending with.

Senator HUMPHREY. So you would like to be able to visit with the man or woman who is in charge of, let us say, the food ministry or the agricultural ministry, people in the Government?

Mr. SAYRES. Yes.

Senator HUMPHREY. Of India?

Mr. SAYRES. Yes.

Senator HUMPHREY. As well as our own people prior to your leaving?

Mr. SAYRES. That is right, and also while I am there.

Senator HUMPHREY. And visit our own people in the Embassy and the ICA and others while you are there?

Mr. SAYRES. Yes, for assistance to the point where we can actually find out what we need to know if we are going to do the job.

Senator HUMPHREY. There is no reason that should not be forthcoming. I will be more than happy, as one individual and the presiding officer of this subcommittee to send a letter to our Ambassador asking that he give you all possible cooperation. And this will, of course, extend all the way through our United States mission in India. The same thing can be done, I suggest, with the Indian Ambassador in Washington, who would be a good contact for you before you leave—Ambassador Mehta, he is a fine man, a businessman from India, a good friend of mine personally, and an able and extremely capable representative of his country.

I would suggest that you meet with him before you go.

Mr. SAYRES. I would be very happy to do so.

Senator HUMPHREY. We will be very happy to make any arrangements if you need them, since you are going to go, and I wish I was going with you——

Mr. SAYRES. Come along——

Senator HUMPHREY. I guess I better stay home for a while. While you are there, and you are going to make this study, I wish you would share with us your views and observations when you come back. I do not have any powers of appointment but I would like to have you bring to my attention on your return whatever observations you have and conclusions, to act as a sort of reporter for me. Can you do that?

Mr. SAYRES. I will be very happy to do that.

Senator HUMPHREY. Since I cannot take the trip I will let you do all the work.

Mr. SAYRES. I will be very happy to do that, and I am sure you are going to be of great assistance in seeing that something is done about this if we bring back the correct data.

Senator HUMPHREY. I would like to review what you have in mind and what your findings are when you return. We will cooperate with getting the necessary introductions. Is that all right?

Mr. SAYRES. That is wonderful.

Senator HUMPHREY. And you can go with the blessings—if they mean anything—you have my blessings, but I suggest you get somebody else's too.

Mr. SAYRES. I think I will need them.

Senator HUMPHREY. I think that is just wonderful. I am very pleased with your statement. Thank you for coming down. I understand you have to catch an airplane. I hope I have not kept you too long.

Mr. SAYRES. We will have just time to get it. Thank you very much.

Senator HUMPHREY. Good luck to you and have a nice trip.

Mr. SAYRES. Thank you.

Ronne at Earth's Loneliest Outpost

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Thomas R. Henry concerning Capt. Finn Ronne, United States Naval Reserve, who is presently stationed at what Henry terms the "earth's loneliest outpost," the southern border of the Weddell Sea area.

This article is a splendid tribute to a remarkable man who has dedicated his life to the exploration of the Antarctic for scientific purposes. Senators will be interested to learn that the interest of Captain Ronne in the Antarctic is almost hereditary, for his father had journeyed to the Antarctic under Amundsen and Admiral Byrd.

I commend this article to the Senate's attention, and I know that Senators will be interested in reading it, in view of our participation this year in the International Geophysical Year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RONNE AT EARTH'S LONELIEST OUTPOST

(By Thomas R. Henry)

Recently a messenger from Red Cross headquarters delivered a radiogram:

"Warm greetings to you from southern border of Weddell Sea, Edith Ronne Land. Here 38 men now passing darkest winter night with me and looking forward to return latter part of August. All well. Best wishes to you.

"FINN RONNE."

Capt. Finn Ronne, United States Navy, is in command of 38 Americans at the remotest and loneliest outpost on earth.

Their camp now is established near the southern end of the Weddell Sea in Antarctica.

Its commander is a true son of the polar regions. His father was an Arctic explorer, a ski expert, a dog team driver, skilled in handling open boats in the world's roughest seas.

Finn Ronne was 9 years old when word was flashed to his home in Horten, Norway, that his hero Amundsen, accompanied by his father, had planted the flag of Norway on the bottom of the earth. Martin Ronne expected his son to follow in his footsteps.

In the black tent set up by Amundsen at the pole a message was left for the boy. Martin Ronne was confident that Finn would pick it up someday. This was, of course, a futile hope. In nearly a half century the tent and all it contained have sunk fathoms deep in the ice.

FATHER AIDED BYRD

When Adm. Richard E. Byrd was planning his first Antarctic expedition in 1929, Martin Ronne's advice and experience proved of inestimable value. The admiral wrote later that he considered the Norwegian one of the greatest men I have ever known.

At the time Admiral Byrd was planning his second expedition Martin Ronne was to have been his righthand man. At the age of 71 the grizzled hero of the Arctic and Antarctic died suddenly in Norway. A few days later Finn received a radio message from the admiral:

"If you are half the man your father is, I want you on my next expedition," Admiral Byrd radioed.

That message started Finn Ronne on the realization of dreams of his lifetime.

Some of the most daring explorers and navigators of all time for more than a century have struggled in vain to reach the coast where Captain Ronne's party now is.

The 38 American scientists and sailors mentioned in the radiogram have slashed and crashed their way through monster-infested solid wheat seas to the 250-foot-high walls of blue ice with which this Ultima Thule of the 20th century faces the rest of the world. Edith Ronne Land, northeastern corner of the Antarctic Continent bordering the Weddell Sea, hitherto has proved unreachable.

The unexplored country now bears—with the approval of the United States Board on Geographic Name—the name of Captain Ronne's wife, one of the two women who has ever stepped on the Antarctic Continent.

Expedition after expedition came to grief in efforts to reach the ghostly Edith Ronne Land. The British mariner James Weddell, first to enter the berg-filled seas which bear his name in 1823, failed. The German Filchner, for whom is named the great and hitherto supposedly impenetrable ice shelf which extends outward from the coast, failed. So did the Scotch explorer, Bruce, and the Swede, Nordenskjold. Sir Ernest Shackleton, whom many consider the greatest of all Antarctic explorers, disastrously failed.

One morning just after plans for the present expedition had been announced, a messenger boy rang Captain Ronne's doorbell in Washington and handed him a cablegram which seemed like a message from the dead. It was from Zurich, where the 85-year-old Capt. Wilhelm Filchner now is living in close retirement. "Good luck," the message said.

RAIN OF ICE CAKES

The obvious reason why all these heroic figures of antarctic exploration failed to reach the coast of Edith Ronne Land is that it is probably the most difficult place to reach on the face of the earth. A strong coastwise current sweeps in large quantities of pack ice through which it is almost impossible to navigate.

But Captain Ronne has flown over some of the country, observing that the Filchner Shelf appears to front, at least for considerable stretches, on a narrow strip of open water.

The major problem was to reach this open water and then skirt the shelf until a landing place suitable for getting provisions ashore and setting up a camp was found. This required slashing through about 1,500 miles of a white desert of ice, from 10 to 30 feet thick, by 2 Navy ships—the icebreaker *Staten Island* and the cargo ship *Wyandotte*—by a round-about route which had been partially surveyed.

The vast interior of Edith Ronne Land will be explored on the ground with dog teams and motor sledges.

The major objectives of the Edith Ronne Land party are scientific observations of the

sort prescribed in the International Geophysical Year program—observations of the winds sweeping northward from the pole, of the stratosphere which here dips low over the earth, of the movements of the mighty ice rivers into the sea, and of a hundred other natural phenomena.

Tight Money Policy Hurting Small Business

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Fall River Canning Co., of Fall River, Wis.:

FALL RIVER CANNING CO.,
Fall River, Wis., August 22, 1957.

Hon. ALVIN E. O'KONSKI,
House Office Building,
Washington, D. C.

DEAR MEMBER OF CONGRESS: We are ordinarily reluctant to write our representatives in Congress because we know they receive letters in great volume containing biased requests for favors and special considerations. It is only human for the recipients to consider these requests rather light heartedly.

Ever since President Eisenhower assumed the presidency, however, it has become increasingly apparent that his administration is dedicated to the interests of big business. It should not be necessary for me to document the facts supporting this conclusion; they are pretty much common knowledge to all interested citizens.

I was prompted to direct this letter to you after receiving in this mornings' mail notification from our banks that our interest rates on funds borrowed against warehouse receipts would be increased one-half of 1 percent. The age-old explanation was given that the Federal Reserve Banks had raised the rediscount rate the same amount. For your information our interest rates in September of 1950 were 3½ percent. Prior to that time they were still lower.

The policies of the administration to curb inflation may be theoretically correct in a degree. However, the record would seem to indicate that their policies are enriching the coffers of the money lenders at the expense of small business and individuals.

You must remember that the canning industry has problems closely akin to those of agriculture. This is true because we have no control over weather conditions which greatly affect yields and production. For example, this year the acreage of peas for canning was reduced by 4 percent. However, ideal weather conditions throughout the country have given us a national pack of 37 million cases as against 33 million last year, or an increase of 12 percent. The point is this: unlike other industries who regualte their production to correlate supply with demand, we have very little control over these factors. Consequently when we are confronted with increased costs and overproduction we are unable to pass along the increased costs as other industries do, especially those industries where competition has been almost eliminated.

If the sole result of the hard-money policy was that our interest rate was 5½ percent, the situation would not be too burdensome. However, what are the large banks doing? They are insisting that each borrower carry compensating balances based on 20 percent of their total borrowings. It does not take a mathematician to conclude that the effective rate of interest is considerably more than the quoted rate. You may ask "Well, isn't big business subject to identical demands?" True, but big business usually has adequate working capital because of their inherent competitive advantages which means that their bank balances have been consistently above requirements; consequently they are not meeting the demands required of small business.

The fallacy in catering to the whims and wishes of big business is this: Because of very limited competition they merely add and pass on to the consumer increased costs. The highly competitive industry, unable to do likewise must either reduce its costs or face obliteration. The desire to limit competition has even been inculcated into the Big Four of the canning industry. Their goal, although not openly declared, is to drive out the independent canner, after which they will be able to charge whatever the market will bear.

In conclusion, I am objecting very strenuously to the hard-money policy as it affects small business. In addition, if this country is to remain with any semblance of small business as a part of the economy, our representatives in Government had better familiarize themselves with some of the more basic problems. Unless some very serious thought and applicable remedial action is taken, we will all be subject to the wishes of a very, very small minority.

Very truly yours,

W. W. EVANS.

Safety Award Forum Is Scheduled by Safety First Club of Maryland for March 10, 1958

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. FRIEDEL. Mr. Speaker, this morning I received in the mail a clipping from the Baltimore Beacon for September 1957 telling of the plans being scheduled by the Safety First Club of Maryland. The article not only reviews some of its past projects, but sets forth its presently scheduled plans, among them being a safety award forum for March 10, 1958, wherein recognition will be given to persons who have made contributions to safety on our highways. The club is planning the formation of a community safety council to coordinate the efforts of the various organizations and firms in the carrying on of its safety program.

Mr. Speaker, the article goes on to say that "Safety is everybody's business." How I wish that it might be possible to instill this thought in the consciousness of every man and woman, boy and girl who lays hand on the steering wheel of an automobile, truck, or other automotive vehicle, releases the brake, and steps on the gas, that each one of them is a part of that group called everybody, and that it is highly essential for them to operate that vehicle with utmost care that they may not snuff out either their own lives or the lives of innocent victims.

Mr. Speaker, under unanimous consent I insert this article in the CONGRESSIONAL RECORD:

SAFETY FIRST CLUB OF MARYLAND REVIEWS ITS ACTIVITIES

The Safety First Club of Maryland, a nonprofit organization dedicated to traffic safety, was organized on February 13, 1956, in Baltimore, with the premise that safety is everybody's business.

The organization believes that traffic supervision and control belong in the sphere of duly-constituted experts and authorities; but, nevertheless, such groups as the Safety First Club of Maryland can render services through a planned and consistent educational safety program aimed at helping to reduce the tragic traffic toll.

Among its various activities the Safety First Club of Maryland, under the leadership of J. O. Shuger, president:

1. Sponsored in March 1957 a banquet at which Wheelmaster awards were presented to Charles Adler, Jr., noted inventor, and Henry A. Barnes, Commissioner of Transit and Traffic of Baltimore City, in recognition of their eminent contributions in the field of safety.

2. Is launching a series of safety forums, in branches of Enoch Pratt Free Library, to familiarize the public at large with the seriousness of the traffic problem.

3. Has enlisted the cooperation of outstanding safety leaders to serve as members of its advisory board and provide guidance in its program.

4. Has scheduled a safety award forum, for March 10, 1958, at which recognition will be given to personalities who had made contributions in the field of safety, during the past 12 months.

5. Includes on its board leaders in the business, industrial, and professional spheres in Baltimore City.

6. Is planning the formation of a community safety council to enlist the efforts of various organizations and firms in the furtherance of the traffic program.

Rewarding Careers for Engineers and Scientists

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, Parallel Progression—Careers for Non-Supervisory Engineers and Scientists, by Robert D. McMarlin.

This article points out that many scientists and engineers have been led to leave their creative work to get into supervisory or administrative positions. It will interest Senators to learn what is being done about retaining these trained men in their professional fields.

The author is acting executive officer of the Engineer Research and Development Laboratories, Fort Belvoir, Va. The Engineer Research and Development Laboratories is the principal research establishment of the Corps of

Engineers, United States Army. A career Army employee, Mr. McMarlin, has served as Civilian Personnel Officer of the Research Laboratories, and the Engineer Center, Fort Belvoir. Earlier he was Director of Civilian Personnel for the Military District of Washington.

I commend the article to the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARALLEL PROGRESSION—CAREERS FOR NONSUPERVISORY ENGINEERS AND SCIENTISTS

(By Robert D. McMarlin)

The nationwide shortage of technical personnel makes maximum utilization of engineering and scientific talent of vital importance to national defense and industrial progress. One method of achieving this utilization, by establishing a nonsupervisory career plan for engineers and scientists is, however, being neglected by Government and industry alike. By and large advancement in technical fields seems to depend mainly on increased managerial duties.

Despite the fact that civil-service regulations make it possible for a Government agency to employ professional personnel in high-level positions without supervisory responsibilities, the belief seems to persist that advancement in the higher grade levels must always be preceded by increased supervisory responsibilities. No known Federal establishment has developed a specific nonsupervisory career plan, while few, if any, private concerns have devised a pay plan to include a nonsupervisory career ladder.

PRACTICE IN THE BRITISH SYSTEM

In exploring the work done on this subject, the recent paper by Edward McCrensky on scientists in the British civil service was examined with interest.[1] It contains several references to a nonsupervisory ladder. It appears that in the British civil service certain high-level positions are set aside and made available to creative scientists engaged in individual research.

Mr. McCrensky's paper states that a panel of senior scientists annually appraises every employee to determine professional development, progress, and decides upon promotion; also that selection for promotion in the British scientific civil service is in recognition of employee accomplishment, personal development, and future potential. Although a change in responsibility is theoretically unnecessary for a promotion, greater work responsibility usually accompanies the action.

This subject was also discussed with two British scientific officers visiting this country. They indicated that a few individuals, possibly five each year, are assigned to such nonsupervisory positions, and that the scientific eminence of the individual is the principal consideration for such assignments. A total of about 20 persons currently occupy such high-level nonsupervisory positions.

REVIEW OF PLANS IN BUSINESS

The American Management Association was contacted for names of firms that have developed nonsupervisory career plans. AMA was aware of widespread interest on the subject but had no material on it. It provided, however, the names of three internationally known firms believed to have developed a plan.

Only one had actually done any work on the subject. This firm, employing 1,900 persons, about half of whom are scientists, has established a nonsupervisory ladder with 2 levels as a part of their pay plan, but only 7 nonsupervisory positions exist in the entire company. The firm has no committee for reviewing professional competence, this function being performed by the appropriate supervisory level. It does, however, have a very explicit statement of qualifications for all positions, with heavy emphasis placed on education.

Another firm supplied this rather interesting information:

"We have discussed your inquiry with our research department, and although they are familiar, in a general way, with the procedure (a parallel progression plan) you describe, they have had no experience with it. They state that this matter is frequently discussed among research people and that it is a highly controversial subject."

One of the firms mentioned a pitfall in the use of a nonsupervisory ladder—specifically that great care must be used to prevent it from becoming a dumping ground for weak supervisors.

REVIEW OF FEDERAL AGENCY PLANS

Five nationally known Federal research establishments, all located in the Washington area, were contacted. None has a specific nonsupervisory career plan. All, however, acknowledged that under the Federal classification plan, high level nonsupervisory scientific positions may be established. In fact, all have established a small number with each such position based on a need by a particular program or project for the talents of an individual possessing extensive knowledge of a narrow specialty. One has a well-developed plan that includes use of a top-level committee to review all promotions to GS–12 and above. The committee explores several factors in considering all promotions including background of candidate; organization and personal responsibility, including leadership; productivity; professional growth; and prime movers (potential).

In a pioneering effort to provide engineers and scientists a means of progression parallel to those in supervisory positions, the Engineer Research and Development Laboratories (ERDL) have instituted a career plan that will enable professional employees with talent to attain positions of eminence without the necessity of supervisory responsibilities.

ERDL PLAN

Under the ERDL plan the nonsupervisory career ladder for engineers and scientists will normally begin at the GS–13 ($8,990–$10,065) civil service classification grade level. Persons employed at grades GS–5 ($4,480) through GS–12 ($7,570–$8,645) will follow the same promotion path. They may, subsequently, under the criteria outlined below, advance either in the supervisory or nonsupervisory career ladder.

The purpose of the nonsupervisory career ladder is twofold. It provides first a career plan for the progression of certain persons who have materially advanced in their professions to the point where they are recognized as specialists, but who may not possess an aptitude for or interest in supervisory positions. Secondly, it provides a means of bringing into the laboratories specialized knowledge and specialized training needed for one or more projects or programs.

ESTABLISHING JOB VALUE

The mission or overall program of the laboratories is regarded as comprising four program organization levels, with those in charge at each level known as program heads. Program levels are identified, for convenience, as follows: First level, the engineer research and development laboratories as a whole; second level, department (the laboratories have six technical departments covering topographic, electrical, mechanical, civil, and military engineering, and technical services); third level, branch (the number of branches varies with each department); fourth level, section (the number of sections varies with each branch).

It is assumed that the grade level assigned the head of a program organization is a significant reflection of the relative value of a given program in terms of scope and breadth of responsibility, complexity, and relative value to the total mission of the laboratories. Accordingly, the grade level assigned to the head of a program organization will be a significant factor in the assignment of a grade level to a given position in the nonsupervisory career ladder.

The grade of the position, except as outlined below, will not normally exceed that of the program head to whom the scientist is assigned for his principal duty, but may be lower. In all cases, the grade level will be based on a comparison of the scope and complexity of the work assigned to the scientist with provisions of the civil-service class specifications for such work.

If the work of a nonsupervisory engineer or scientist extends beyond that of the program organization to which he is assigned to include work on other programs, his grade may be higher than that of the program head. Where the employee performs such extraorganizational work, a determination will be made of the level of work performed outside the assigned organization. If the level of work performed is the same or lower, no special credit will be granted. If it is higher than that of the program to which he is primarily assigned, however, the grade of the employee will be established as the higher grade, provided the work in the other program is regularly assigned and consumes an average of at least 15 percent of the employee's time.

From time to time, a program head may have a need for the extraordinary knowledge of a national or international authority with an extremely narrow specialization. In such case, evaluation of tasks to be performed will be in terms of complexity of work assigned and total importance to the program of ERDL. Where such talent is needed at the first program level, it will be assigned organizationally to that level. Where such talent is needed at, or below, the second program level, it will be assigned to the second program level.

It is felt that a person who advances in his profession to the point where he is considered an outstanding specialist, but who may not possess aptitude for or interest in command positions will gravitate toward this nonsupervisory career ladder. Inasmuch as persons selected and assigned these positions will be regarded by their associates and contemporaries as high-prestige individuals, every effort will be made to guard against selections that will tend to lower the prestige of the plan, for example, selection of a person mainly because he cannot adjust to the typical pyramidal supervisory structure or who fails as a supervisor.

REQUIREMENTS

Candidates recruited both externally and internally must meet certain minimum requirements for entrance into the nonsupervisory career ladder, and for promotion within that ladder.

An applicant must meet established United States Civil Service Commission minimum qualifications required for the field of work and grade level at which he is to be employed, plus certain supplemental requirements in educaton, experience and professional stature.

A master's degree is required for the initial level nonsupervisory position and doctorates for the remainder, although these may be waived for an outstanding candidate with equivalent experience. Professional stature is judged by the extent to which the candidate is recognized by authorities in his field, as well by several other

---

Footnote at end of speech.

factors. These include his participation in professional society activities, his publications, his awards, his consultant work for industry, Government and educational institutions, and the professional standing of individuals and agencies with whom he has been associated.

A professional review committee will consider candidates for entry into and promotion within the nonsupervisory career ladder. Headed by the laboratories' technical director as chairman, it will include two ERDL department chiefs, 2 members representing the appropriate discipline from outside the laboratories, and the ERDL director of research and the civilian personnel officer, as advisers without vote.

The head of a program organization desiring the employment of a specialist under this plan will prepare a request in two parts. Part I outlining the basis of need will be transmitted through the director of the laboratories for approval of establishment of the position, to the civilian personnel officer for action. Upon recruitment of a candidate, part II detailing the candidates qualifications in education, experience, and professional background will be submitted to the professional review committee for consideration. The committee's findings will then be submitted to the laboratories' director for decision.

Although no concrete evidence of its impact is available at this stage, it is hoped that the nonsupervisory career plan will result not only in better utilization of engineers and scientists at the laboratories, but may also encourage others in Government and industry to provide similar plans.

The Chinese Reds Zig-Zag on Reporters—As on Everything Else Where They Believe They Can Make Propaganda or Diplomatic Gains

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. David Lawrence from the Washington Star of August 27:

RED CHINA FLIP-FLOPS ON REPORTERS

What's the matter with the government of Red China anyway? Hasn't it read about how the American Constitution—as was argued in the recent debate here—guarantees the right of American newsmen to gather information freely anywhere in the world, even when a quasi-state of war exists? By what right does the Peiping government now say it will not allow American newsmen to enter Red China unless Communist newsmen are admitted to the United States? Doesn't the Red China regime know that governments aren't supposed to put any conditions whatsoever on the "right to travel" by Americans and that the American Civil Liberties Union has said so?

But maybe the Red Chinese officials do have a sense of shrewdness, if not a sense of humor. For they know now that, by continuing their organized blackmail, they may gain converts for their objective—formal diplomatic recognition of the Peiping Government. They are counting perhaps on some of the so-called "liberal" Democrats in Congress to put partisanship above everything else as the cause of Red China is openly championed.

Already, for instance, some Democratic Senators are declaring that Red China's demand that her newsmen be allowed to enter America should be granted. They say this even though the State Department pointed out a week ago that, while relaxing its rule about withholding passports to American newsmen, it didn't intend to engage in any reciprocal arrangement whereby Red China's newsmen could come to the United States. For the Red Chinese journalists, the Department says, are a part of the Peiping Government, and to admit any governmental personnel is the same thing as admitting the staff of an embassy—it all amounts to diplomatic recognition.

One of the reasons the State Department is so strongly opposed to recognition of Red China is that it could bring on a third world war. Extension of recognition now would force the issue as between the armies on Formosa and on the mainland, and could lead to an attempted invasion by the Chinese Nationalists out of sheer desperation. It could dishearten the Philippine Government and the South Koreans, too, who have sacrificed so much in their fight against communism.

But the Peiping Government evidently is counting on some highly influential Democrats in Congress to take up the case for the admission of Red Chinese newsmen, believing that these Democrats will do almost anything to embarrass their own Government. The Red Chinese, however, are mistaken about the Democratic Party as a whole. While a handful of Democrats favor the idea of letting Communist newsmen into America and would yield to the blackmail tactics of Peiping, the majority will not.

The argument is made by some Democratic Senators that Soviet newsmen have been allowed to enter the United States, but it so happens that there are diplomatic relations between Washington and Moscow. So the cases are not parallel. Also, a year ago Peiping invited 15 American newsmen to come into Red China and did not request a reciprocal exchange.

What Red China from the beginning has been playing is a propaganda game—to endeavor to use American newsmen as the tool of its own foreign policy in order to gain diplomatic recognition from the United States and a seat in the Security Council of the United Nations.

Actually, Red China has never been too much interested in admitting American newsmen from the standpoint of getting news attention to what's going on there. Many newsmen of Britain, Canada, and other countries have been stationed in Peiping for some time and, if they had been permitted to learn anything worth while in the way of news and had transmitted it to the outer world, the information would have been promptly reprinted in the American press.

So the controversy from the Peiping end is a phony, and the Red Chinese have been trying to add fuel to the flames of partisanship in America. There was a time when all Americans—Democrats and Republicans—were united in the Korean war against the common enemy—Red China—but evidently the sacrifices of the 142,000 American casualties now are virtually forgotten as many so-called liberals here and abroad seem willing to reward the aggressor. They would today extend to the Peiping government all the "courtesies" it demands, notwithstanding the fact that six Americans are not getting the "courtesy" of freedom but are still languishing in the jails of Red China on trumped-up charges.

The partisans on Capitol Hill probably will find a way in the end to blame it all on John Foster Dulles—who happens to be the staunchest fighter against communism America has ever had in the office of Secretary of State. He, however, has the laugh on his critics today as they read that it isn't Dulles, but Red China's government, which has the real say as to whether there will be "freedom to gather information" in Red China.

It still is sound doctrine to "quarantine the aggressor," as the late President Franklin D. Roosevelt heroically proclaimed in 1937—only to be met with the sneers of those who shortsightedly insisted that "you can do business with Hitler."

Visit to Dayton, Oreg., by Mrs. Anna Hedgeman

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Visitor to Dayton," written by Betty A. Dietz, and published in the Dayton News of August 16, 1957, dealing with the visit to Dayton, Oreg., of Mrs. Anna Hedgeman, assistant to the mayor of New York.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VISITORS TO DAYTON—LEISURE'S SCARCE COMMODITY FOR NEW YORK MAYOR'S ASSISTANT

(By Betty A. Dietz)

Being a member of Mayor Robert Wagner's cabinet in New York City is pretty much a 24-hour a day job, says Mrs. Anna Arnold Hedgeman, only woman in the group.

"Some of that is my own disposition but the job keeps you on your toes," she admits. Most of her evenings find her speechmaking and weekends she curls up with a briefcase full of work involving many of the 8 million people in New York.

For a number of years assistant to the Federal Security Administrator, Mrs. Hedgeman says the main difference between Federal and city posts is that in the one she dealt with officials and now she works with the people.

"New Yorkers, surprisingly enough," she explains, "take their problems to city hall when they can't adjust them elsewhere. They take their city government seriously and they flock to open meetings," she says admiringly.

Mrs. Hedgeman, a handsome graying woman with a lively sense of humor, is in Dayton this weekend to be principal speaker at the National Association of College Women's dinner Saturday at the Miami Hotel. The organization's 34th annual convention got underway here Thursday night. While in Dayton, Mrs. Hedgeman is the guest of her niece, Mrs. Paul Harris, of Mt. Clair Avenue.

"Today, when the individual has lost so much of his importance, it's doubly important for officialdom to give him attention," Mrs. Hedgeman says. "I see anyone, with or without an appointment. They may have spent their last nickels to get there."

As liaison officer for the welfare department, United Nations, libraries and museums, air pollution control, personnel and purchase departments, she finds herself hopping about the city, speaking one day to a Jewish group, another time in Chinatown or shepherding a Danish city councilman around the town.

A better than usual grasp of language would come in handy in her job, Mrs. Hedgeman admits, "but I'm stupid about things like that." She says she's forgotten most of the German and French she once knew.

"Would have helped a lot last year when I was in Germany and the Middle East," she says ruefully. On leave for 6 weeks, she went with the American Christian committee to Palestine and the Middle East and to Europe for the United Seamen's Service, for which she is secretary of the board of trustees.

Most of the officials in other countries have got over the shock of seeing women in important positions but "I'm quite sure the rank and file were shaking their heads about those 'strange Americans'", she says with a quick grin. "I'm glad we couldn't always understand what they were saying."

The present controversial civil rights bill just passed by the Senate finds Mrs. Hedgeman opposed.

"I know that many liberals believe that it is wise to accept this bill since it is the first one. This may be important but our world relationships and our jury system are more important. No less a constitutional authority than Senator WAYNE MORSE has indicated clearly that this is no time for piecemeal approach to the democratic rights of any citizen.

"This is a weak bill which undermines our judicial system and says to the world that part of the population is not fully recognized in our culture. This is, of course, unfair to the Negro. It is in addition tragic for America and her world relations."

Mrs. Hedgeman's hectic schedule leaves her little time for relaxation but she did take time to see her niece, Ellen Holly, make her Broadway debut in Too Late the Phalarope.

"I'm a frustrated actress. We didn't mention the theater in my family, except to my mother who studied with Richard Harrison of Green Pastures fame."

But life itself is full of drama and Mrs. Hedgeman is making the most of her present vitally important role.

Cement Versus Asphalt in Highway Construction

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD a letter from the Bureau of Public Roads which discusses the construction of highways with two competitive materials: asphaltic concrete and portland cement.

I requested that information from the Bureau of Public Roads after receiving a letter from the Asphalt Institute which claimed that $3 billion could be saved by paving the Interstate System with asphalt. I have been serving on the Subcommittee on Public Roads for 7 years now and during that period I have always felt that we should investigate every possibility of constructing highways as economically as possible.

We were greatly interested to learn that the Bureau feels that the annual maintenance costs between portland cement and asphalt is reasonably close and that there is no available conclusive evidence that one is better than the other under designs appropriate to climatic and service conditions.

In the selection of materials the Bureau notes that consideration must be given to climatic conditions, subgrade soil, availability and suitability of materials, character of traffic and other factors. The Bureau observes that excellent surfaces may be constructed by either bituminous concrete or portland cement concrete and that there is considerable advantage in having the two materials in active competition with one another.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF COMMERCE,
BUREAU OF PUBLIC ROADS,
Washington, D. C., July 15, 1957.

Hon. FRANCIS CASE,
United States Senate,
Washington, D. C.

DEAR SENATOR CASE: Your letter of June 12, 1957, with an enclosed letter of June 4 to you and a brochure on highway construction from the Asphalt Institute, has been read with interest.

We are aware of the concentrated efforts being made by advocates for the uses of various types of construction, construction materials and construction equipment, in competition with others, and claims made of advantages or cost savings, one over the other. This is to be expected as a result of the exercise of free enterprise.

The subject submission concerns itself principally with comparisons between asphaltic concrete and portland cement concrete pavements. Excellent surfaces may be constructed of either bituminous concrete, or portland cement concrete, and there is considerable value in having the two types actively in competition.

In either case it is highly important that consideration be given to climatic conditions, subgrade soil, availability and suitability of materials, character of traffic, and other contributing factors in determining the type or types considered by engineering judgment to be the best suited to the given conditions with resultant overall economy.

As highway work is regularly awarded to contract only after public advertisement and competitive bidding, the ranges of bids received serve as a fair measure of the cost variations whether the bid invitation is on a selected type or on alternate types. These bid cost variations often represent greater difference than cost advantage differences claimed by the advocates of either type of pavement.

The actual service lives of bituminous and portland cement pavements are not the same nationwide, nor are the maintenance costs the same nationally. The true measure of cost is the annual cost arrived at by dividing the first cost plus maintenance cost by the number of years that the pavement provides a satisfactory road surface. There is considerable difference of opinion between proponents of the two types of pavements as to which has the lower annual cost because of differences in the method of calculating these costs. In general, it may be said that under comparable service conditions, and with comparable designs, the annual costs of the two types are reasonably close. We do not have available conclusive evidence that would justify taking any other position than this on a question which has long been of interest and concern to engineers.

We are not unmindful of the responsibility of public officials entrusted with the improvement of our highway system, to exercise every equitable means toward realising the utmost economy in that accomplishment.

This Bureau's policy has been one of neutrality on pavement types, bridge types, and various other competing types of highway construction, accepting either one or another when of comparable design, but reserving this right to require adequate design of the type or types chosen, and that where comparable types are bid in competition, the award be made to the lowest bidder.

The asphalt industry has given us assurance that it now has, and will continue to provide, ample capacity to supply the types of bituminous products currently in demand and as anticipated to meet future demands for accomplishment of a long-range highway program. Assurances have been given similarly by other producers of materials required for highway construction.

We are convinced that continued use of competitive construction types, construction materials, construction equipment, and construction bidding will result in the most economic accomplishment of the long-range highway program and utilize the highway dollars provided in the best public interest.

We are returning Mr. Buchanan's letter and the accompanying brochure, as you requested.

Sincerely yours,

C. D. CURTISS,
Commissioner of Public Roads.

Federal-State Relationships

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MAY. Mr. Speaker, this fall, the Intergovernmental Relations Subcommittee, in which I am a Member, chaired by the very capable gentleman from North Carolina [Mr. FOUNTAIN] will hold a series of hearings throughout the United States dealing with the very important subject of Federal, State, and local relationships.

The Federal Government has come to play a role of increasing significance in relation to the affairs of the States, the municipalities, and the individual citizens themselves. One of the most important aspects of the involvement of the Federal Government at the State level has been the grants-in-aid programs. Many of these programs have performed a very useful and clearly defined function. Over a period of time, however, two significant trends have developed which deserve careful consideration. First is an increasing attitude on the part of many of the States that they must depend more and more upon the Federal Government for the solution of their problems which can only lead eventually to a lack of initiative at the State and local level.

In the second place, a certain amount of confusion has developed on the part of

not only the people but their elected Representatives as to what areas properly lie within the jurisdiction of the Federal Government, the State or the Municipality.

It is my hope that the message of the President at the recent Governors Conference, the Kestnbaum Report and the coming investigation by the Intergovernmental Relations Subcommittee will serve to clarify the areas of responsibility which accrue to the Federal Government, the State governments as well as their units and subdivisions.

I submit at this time for the RECORD a study of the Federal grants-in-aid to the State of Connecticut, its units and its individuals. I believe that these figures will be of help to the officials of the State and the municipalities who may wish to express their views on this important subject before the hearings which will be held in Boston and Hartford, Conn.

Federal grants-in-aid to State of Connecticut, local units, and payments to individuals, 1956

DEPARTMENT OF AGRICULTURE	
1. Agricultural experiment stations	$285,044
2. Cooperative agricultural extension work	230,217
3. State and private forestry cooperation (forest-fire cooperation)	60,127
4. Agricultural conservation program	461,963
5. School-lunch program	707,048
6. Special school-milk program	442,510
7 Cooperative projects in marketing	18,901
8. Removal of surplus agricultural commodities	951,595
9. Donation of agricultural commodities through Commodity Credit Corporation	685,068
10. Commodity Credit Corporation value of dealers' certificates issued incident to supplying feed to farmers in drought-stricken areas	107,383
Total	3,949,856
DEPARTMENT OF COMMERCE	
1. Civil Aeronautics Administration Federal airport programs	31,482
2. Bureau of Public Roads, regular grants	3,604,116
Total	3,635,598
DEPARTMENT OF DEFENSE	
1. Army National Guard	3,119,564
2. Air Force National Guard	1,780,038
3. Lease of flood-control lands, Army	465
Total	4,900,067
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE	
1. Colleges for agriculture and mechanic arts	90,023
2. Cooperative vocational education and rehabilitation	315,367
3. Education of the blind, American Printing House for the Blind	3,392
4. Old-age assistance	7,504,080
5. Aid to the permanently and totally disabled	1,115,854
6. Aid to dependent children	4,133,307
7. Aid to the blind	163,434
8. Maternal and child health services	144,763
9. Services for crippled children	$211,583
10. Child-welfare services	68,449
11. Venereal disease control	2,414
12. Tuberculosis control	48,759
13. General health assistance	92,646
14. General health assistance, poliomyelitis, emergency grants	25,920
15. Poliomyelitis vaccination program, emergency grants	346,065
16. Mental health activities, regular grants	35,671
17. Heart disease control, regular grants	16,331
18. Hospital survey, planning and construction	111,646
19. Cancer control, regular grants	27,694
20. National Heart Institute activities	160,769
21. National Cancer Institute activities	370,872
22. National Mental Health Institute activities	535,275
23. National Arthritis and Metabolic Disease Institute activities	161,256
24. National Neurological Diseases and Blindness Institute activities	99,277
25. National Institute of Allergy and Infectious Diseases	36,173
26. Division of Research Grants and Fellowships	149,645
27. Office of Vocational Rehabilitation	440,459
28. Office of Vocational Rehabilitation training and traineeships	7,547
29. Maintenance and operation of schools	1,196,544
30. School construction and survey	1,413,804

2. Fellowship awards	62,536
Total	477,589
Total grants-in-aid	46,859,190

The New Soviet Strategy

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. DOOLEY. Mr. Speaker, I ask unanimous consent to include in the Appendix of the CONGRESSIONAL RECORD the following editorial from the New York Times of August 26, 1957 concerning the new Soviet strategy. With the emphasis switching from military force to world opinion in international relations, the Soviets have adopted a more insidious strategy to achieve their objectives. The editorial sums up the situation succinctly.

THE NEW SOVIET STRATEGY

The current events in Syria, which have thrown the Middle East into new turmoil, dramatize to a greater degree than any other recent developments both the nature and the danger of the new and world-wide Soviet strategy masterminded by Party Chief Khrushchev.

Due to the deterrent effect of the hydrogen bomb, which threatens annihilation to both sides, this strategy no longer courts armed warfare, such as Stalin promoted in Korea and Indochina, to advance the Soviet goal of world domination. The Soviets by no means renounce their military might; as shown by their tortuous course in the disarmament talks, they are doing everything to maintain and even enhance it relative to the West. Nor do they hesitate to throw it into the balance in crushing revolts against their domination where it has already been established, as in Hungary. But the primary purpose for which they now employ it is to wage war by means short of a hot war—to back up their new strategy, and above all to discourage the West from interfering with it.

These means, which are not new but are at the present the principal Soviet weapons, are political, economic, and ideological penetration and subversion backed by military and economic aid, by infiltration of the political, economic, and social organizations of other countries, by the exploitation of international and domestic differences and personal ambitions, by plots against established governments involving even assassination, by coups d'etat, and where opportunity offers itself even by little proxy wars and proxy revolts serving Soviet ends. These are the methods of the peaceful competition proclaimed by Mr. Khrushchev, and they are not without success.

Virtually all these factors are at work in Syria. There Soviet promises of military and economic aid, coupled with exploitation

of both Arab resentment against Israel and the West and of the personal ambitions of a small military clique, led to a virtually military coup d'etat which threatens to make Syria a Soviet satellite. The Soviet press already brackets Syria with Czechoslovakia, which the Soviets took over by analogous means. Since a Soviet base in Syria would permit Moscow to leapfrog the northern tier of Western defense, the menace to the whole Middle East is self-evident.

But the Syrian development is only a logical consequence of the prior events in Egypt. For it was President Nasser who, in his ambition to build a pan-Arabic and ultimately pan-Islamic empire, permitted the Soviets to bait him with Soviet arms into building the antiwestern Moscow-Damascus-Cairo axis that led to the seizure of the Suez Canal, the British-French-Israeli military intervention, the Egyptian-Syrian-Communist plot against Jordan, the little anti-British war in Oman and the intensified Arab support for the anti-French revolt in Algeria. The Syrian partner of the axis now goes even further than Nasser might like.

However, the same Soviet penetration is becoming evident throughout Asia. It is evident in Indonesia, where President Sukarno has been persuaded to abandon western-style democracy and where the Communists have just won an election triumph; in India, where the Communists have captured a state government, and also in Burma, Laos, Cambodia, Thailand, and Singapore, where Communist activity is rising. It is evident even in the Americas, where Communists assassinated the President of Guatemala and where pro-Communists won an election victory in British Guiana.

This new Soviet strategy is all the more dangerous because it works primarily through local agents, partners or dupes who all too often are able to conceal their activities under a cloak of seeming legality or local concern leading to the claim that the Soviet penetration is a purely domestic affair of the countries concerned. This renders it difficult for the West to cope with it, despite NATO, METO, SEATO, and the Eisenhower doctrine, which are primarily aimed at external aggression. But cope with it we must, for otherwise more parts of the free world could slide behind the Iron Curtain, and we could lose the peaceful competition by default.

Computers Help Management Cut Clerical Loads

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. JUDD. Mr. Speaker, the New York Journal of Commerce periodically invites outstanding business leaders to write bylined articles pertaining to business problems or their solutions. One of these recently was written by Walter W. Finke, president of the Datamatic Corp., a subsidiary of Minneapolis-Honeywell Regulator Co., which produces large electronic data-processing systems along with its many other electronic and related devices. Mr. Finke, himself, was formerly secretary of the Minneapolis Chamber of Commerce.

Mr. Finke's informative and understandable article shows the important role these computer devices now play in our economy, and emphasizes the even bigger job they will have in the future as the economy expands. His article stresses the fact that, far from being an expensive drain on a company's pocketbook, a large data-processing system can help the firm balance its production worker-office employee ratio, thereby holding down office overhead costs.

This is but another example of the way in which Minneapolis-Honeywell has pioneered in this field. Steps which boost actual income from each man-hour of production hold the key to an increasingly greater gross national product, and therefore to a better standard of living for our people.

Mr. Speaker, Mr. Finke's article from the Journal of Commerce of Wednesday, August 14, 1957, follows:

AS BUSINESS LEADERS SEE IT—COMPUTERS HELP MANAGEMENT CUT CLERICAL LOAD

(By Walter W. Finke)

Large-scale electronic, data-processing machines are going to flatten the rising ratio of paper workers to production forces, and thus solve a problem of increasing gravity for major industries.

Changing over a company's accounting to use electronic data processing has been described as learning another language. It goes further than that. The innovators who switch from machine-aided manual accounting to the electronic kind enter another world. The shift isn't worth making unless all the data can be moved out of the world of touch and sight in which one lives, and into the world of magnetic impulses in which the electronic data-processing system functions.

Naturally, people must be able to reach into the electronic world from time to time and draw out data in a form they can absorb. Information, generally set into this system via punched cards or tape, is converted to magnetic signals and electronically sorted to punched-tape files. Here it is stored for immediate or later use. Ideally, all of this should be then used with a system that has the ability to file, withdraw, and read information in the magnetic files at speeds that equal the rapidity with which the internal electronic section can accept and handle it. It is such problems as these that account for the half-million-dollar studies I have mentioned.

These feasibility studies take a year or more. When the data-processing system has been chosen and purchased, there's another 2 years of programing—that's the word we have given for this transfer and retransfer from the world of people to the world of magnetic impulse—before the full benefit of the change can be obtained.

Why is this worthwhile, this vast expenditure of time and money? It's worthwhile, for any business whose size and complexity require a large enough amount of figure work, because it's cheaper and, to repeat, simpler.

Time was, in the constant trend of this country's economy from an agricultural to an industrial basis, that the clerical and shop forces grew at about the same rate. In the decade since the war the clerical-worker curve has been shooting up at a rate several times that of all industrial workers. Some of this is not only necessary but natural. We make more complicated machines. Industries have grown so huge that their operations can no longer be kept under any man's hat, no matter how capacious. Statistics have replaced inspiration as the source of many decisions.

A whole new science of management has arisen in the last generation, which uses statistics in place of the flights "by the seat of the pants" that marked the industrial geniuses of a generation ago. Rightly or wrongly, we have chosen to do a lot of things communally that we used to do more or less individually. All this makes for bookkeeping.

The large-scale electronic data-processing system will relegate this bookkeeping into the corner the bookkeeper used to occupy in more primitive days. It will be a bigger corner because the business itself is bigger, but it will be a great saver of time, salaries, and space from the present system of proliferating human workers manipulating comparatively small machines.

Forty thousand dollars a month for a data-processing machine, which must then be groomed and tended by a staff costing another two or three thousand, sounds like a lot of money. But the pay of 300 or 400 minor clerical employees, plus the headache of supervising them and replacing them as they grow tired of their modestly paid jobs or bored with repetitious routine, is a lot more money when everything is taken into consideration.

The Do It Yourself Farm Program

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. JENSEN. Mr. Speaker, after many years of searching for a cure-all farm program dictated from Washington, D. C., and paid for by all our taxpayers, the farmers, especially our grain and livestock farmers, find their economy in a disturbing, unstable condition. Never do they know just what to expect from one crop year to the next. Always the question those farmers ask, is what kind of a farm program will we get next year? Will we get higher or lower supports. Will the Soil Bank Act be extended? Or will the whole Federal farm program be scuttled? It is no wonder they are asking those questions. You and I would be asking those same questions if we were in their shoes. The only honest answer must be that only time will tell.

There was a day, and not so long ago, when the Members of Congress from agricultural States held the balance of power in Congress when legislation beneficial to all our farmers was at stake, but the exit from the farms to the cities has considerably weakened that power. Then, too, the southern farm bloc, who are in control of farm legislation in Congress, are not concerned about the grain and livestock farmers of the Middle West. Add to that the Members of Congress in both parties from the large consuming centers who want cheap food and feed for the people they represent. They constantly complain about farm subsidies, and say their people just don't like to pay taxes to subsidize our farmers while at the same time their cost of living is constantly going up. We keep explaining to them that the farmers receive only about 40 cents of the dollar they pay for food. Yes, the time may come when the whole Federal farm program might be scuttled, and that time may come sooner than we think. So we

best play safe and start now to put into effect a supplemental farm program which does not depend on acts of Congress or anyone else, except being up to those who live in the breadbasket of America.

Now, of course, the question will be asked, by what magic can that be accomplished? The answer is by no magic means, but simply by doing that which should have been done long years ago. Is it any wonder that we have great surpluses of grain? Listen to this. Before the advent of the auto, truck, and tractor, our horses and mules ate the crops produced on 43 million acres of our land. Since that time per-acre production has increased by leaps and bounds, adding to our price-depressing surpluses, except in time of war when we were not only feeding ourselves, but also many of our allies to a very great degree; and that was accomplished even though over 3 million young farmers were serving in the Armed Forces all over the wide world. Produce, produce, produce, was the order from Washington to our farmers, and they did produce, and are still producing to the end, may I say, and the records will prove my statement, that the American people are today spending less than 26 percent of their income for food; while the rest of the people of this world are spending an average of over 65 percent of their income for food.

Now getting back to the problem of the hour. I said we best start now to put another or supplemental farm program, so to speak, into effect, because of the situation I have explained. I am sure that everyone who has studied the problems of our livestock and grain farmers of the Middle West is well aware that we must find more new uses for grain in order to stabilize grain prices, and which in turn will stabilize livestock prices all at a higher level, so that the farmers' dollar will be worth 100 cents at the counter.

Mr. Speaker, as you know, Senator KARL MUNDT of South Dakota and I introduced a bill in the 1956 and 1957 sessions of Congress, which provided that all motor fuel shall contain at least 5 percent blend of agricultural alcohol—agrol—made from grains which are declared in surplus by the Commodity Credit Corporation, but it seems a majority of the members of the Agriculture Committees of Congress, most of whom are from the oil-producing Southern States, are not at all interested in our bill. One of them was at least honest enough to say he would have to oppose our bill because a lot of oil was produced in his State. So Senator MUNDT and I and others have come to the definite conclusion that there is an effective solution to the problems, and that is "Do it yourself, Mr. Midwest Farmer."

Here is the plan in a nutshell. Feed our surplus grain in liquid form to the Iron Horse, just as we used to feed it in the raw to our horses and mules. Now of course that is not a new idea; nonetheless, it is more necessary now than ever before that we carry the idea through to reality. After much thought this is what we suggest.

Form an organization; call it "The Do It Yourself Farm Association" or any other appropriate title. Membership to include farmers, businessmen, and everybody who will sign a pledge to buy, say, at least 1 barrel—50 gallons—of undiluted grain alcohol, or 250 gallons of gasoline which contained at least 5 percent grain alcohol, from a local gasoline station, or direct from the organization representative located in each respective trade territory, in the event no dealer in that territory cooperated in the program—that pledge to constitute his or her membership dues in the organization, except for a small voluntary contribution to defray necessary expenses for stationery, stamps, and a limited amount for secretarial hire to distribute membership blanks and so forth.

We are now told that grain alcohol produced from corn, for example, costing the refinery $1.50 per bushel can be sold to the consumer for about $1 per gallon retail, and that the added miles per gallon from gasoline mixed with grain alcohol will almost, if not fully, offset the cost of the alcohol, to say nothing about a smoother running motor. What is true of corn is almost equally true of wheat, especially soft, low-grade spring wheat. Also we are told that a bushel of low-grade corn contains almost as much alcohol as the higher grades. Each will make about 2½ gallons to the bushel. Now, of course, you are asking yourself, Where will this alcohol be made? There were a number of grain alcohol distilling plants built during the war years in the Grain Belt that are now standing idle or almost idle. One such plant is in Omaha, Nebr., and another at Davenport, Iowa, which would go into production as soon as sufficient orders were received, and certainly large and small distilling plants would spring up all over the Grain Belt as soon as the demand justified the investment. Hence, a new great industry would be in the making, giving employment to townfolks and to many farmers who have extra time off the farm. Some may say such a program would take a long time in bringing the desired results, and our answer is to the contrary, for the very simple reason that even though it would take possibly 2 years to get into full distillation production, the general knowledge that the price depressing surpluses were being gradually reduced to the level of the ever-normal granary would almost immediately have good and great effect on the market for both grain and livestock.

Mr. Speaker, may I say again that the time has come when the Midwest grain and livestock farmer should waste no time in putting this program into effect for the very reasons Senator MUNDT and I and others so humbly and sincerely recommend. God helps those who help themselves. We Americans dare never forget that admonition.

Senator Paul H. Douglas, of Illinois

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MACK of Illinois. Mr. Speaker, for 9 years the country has benefited by the presence in the Senate of one of the century's greatest liberals, the distinguished senior Senator from Illinois, PAUL H. DOUGLAS. Senator DOUGLAS has continually championed sound economy in Government, bringing his vast knowledge and understanding of economics to bear in determining where Government spending could best be cut to eliminate needless squandering of public funds.

Mr. Speaker, it is a pleasure for me to include in my remarks a column by William V. Shannon, from the New York Post of August 25, which points out very clearly the vital role Senator DOUGLAS is playing in the effort to keep the national economy operating on a sound basis.

Mr. Shannon's column is as follows:

PROPHET IN THE DESERT
(By William V. Shannon)

In his 9 years in the Senate, PAUL DOUGLAS, of Illinois, has fought a lonesome struggle to restore thrift to the hierarchy of liberal values.

Before the 1930's, economy in Government was identified with liberalism. It was usually the liberals who fought on behalf of the taxpayer and the consumer against subsidies, high tariffs, useless public works ("the pork barrel"), railroad-land grants and other raids on the Treasury.

All this changed during the severe deflation of the thirties, when any kind of Federal spending had at least the virtue of getting money back into circulation. Moreover, conservatives, by unwisely opposing social reforms on the fake issue of their financial cost, made liberals cynical. By 1940, anyone who raised the cry of "Government economy" was automatically suspected of having some reactionary ulterior motive.

Big spending, like big Government, is not intrinsically desirable or liberal. There is an important distinction between providing essential social services plus Federal spending on public works in times of depression to correct the business cycle and spending, year in and year out, for its own sake. PAUL DOUGLAS is a St. John the Baptist preaching this truth to the liberals in the desert.

He has morality on his side. Military bureaucrats squandering Government funds raised from the payroll deductions of us all are just as morally irresponsible in playing with other people's money, to borrow Brandeis' phrase, as were the oldtime bankers who misused stockholders' money.

He also has history on his side. Although the liberals dropped Government economy clear out of their values in the thirties, the New Deal was in practice, if not in the propaganda of the Liberty League, a thrifty operation. No businessman in this administration has surpassed Henry Morgenthau as a pennypincher or equalled Harold Ickes' zeal for cutting costs. It is one of the most honorable, though least remembered, achievements of the Roosevelt administration that in 12 years it never had a major scandal of either graft or waste.

Notwithstanding morality or history, DOUGLAS has not yet made economy fashionable in the Democratic Party or in the liberal community. Twice this summer he has made economizing forays and twice met humiliating defeat. On July 1, he tried to cut $1,058 million from the military budget. He pointed out that the military services have billions tied up in unnecessary huge inventories.

Nine out of 10 defense contracts are open invitations to waste and expense padding because they are let by negotiation rather than competitive bidding. The services engage in numerous expensive sidelines such as the Military Air Transport Service (MATS) which cost $560 million last year. DOUGLAS read off a stupefyingly long list of recreation and morale projects such as swimming pools, bowling alleys, golf pro shops, and athletic fields which the services build.

His amendment still lost, 65 to 7.

On August 8, DOUGLAS analyzed the $900 million rivers and harbors bill. Nearly one-fourth of the projects, he observed, had no probable economic justification. Sensing the mood of his colleagues, DOUGLAS did not offer an amendment to cut them but when the measure passed, 85 to 1, he cast the only dissenting vote.

There are several interesting aspects to this pair of episodes. The economy bloc is pure phantom. Senator BYRD, for example, was not on hand for either vote. The traditional conservatives exploit economy only to defeat programs they oppose, such as foreign aid.

Second, ex-Secretary Humphrey was partially correct in his essential thesis. He argued the budget would not be stabilized until the administration and Congress cut some programs and killed others outright. The issue is one not only of operating economies but also of social priorities. The Nation must choose among the competing claims of the highway program, school aid, farm subsidies, urban housing, and rivers and harbors projects.

DOUGLAS would have deferred much of the roadbuilding and harbor-deepening in favor of schools and housing. The administration and the bipartisan conservative majority in Congress have made the opposite choice.

Finally, DOUGLAS' defeats disclose a curious obtuseness in both LYNDON JOHNSON and the liberals. A public opinion poll would undoubtedly show DOUGLAS one the the Senate Democrats most highly regarded in the country. His reputation is one of the party's important intangible assets.

JOHNSON, however, has alienated himself from DOUGLAS much as Harry Truman did and for the same motives—personal pique and political regularity The 85-to-1 vote, for example, was not necessary. It was a calculated gesture to dramatize DOUGLAS' isolation.

With the cold war likely to continue, creeping inflation may be the "gut issue," the equivalent to the depression, which Democrats have been seeking. If so, rigid economy geared to social priorities is more likely to prove attractive than, say, cheap money. Both wings of the Democratic Party have failed to see the problem in these terms. When they do, DOUGLAS may come in from the desert a prophet with honor.

Battleship "Arizona" Memorial

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. PORTER. Mr. Speaker, 21 Oregon men lost their lives when the famed battleship U. S. S. *Arizona* was sunk in a surprise aerial attack at Pearl Harbor, Honolulu, T. H., December 7, 1941.

The work of many men and women to honor the 1,102 Navy men who were entombed on the *Arizona* culminated in the House last week when H. R. 5809 was approved. I understand this legislation offered by Delegate JOHN BURNS, our able colleague from Hawaii, may come before the Senate today.

This December 7 a campaign is to open to raise funds for the erection and maintenance of a shrine at the site of the battleship itself. It is befitting, I believe, to note that the Navy pays daily tribute to the brave men of the *Arizona*.

The Oregonians who will be honored are: Myrle Clarence Davis, Albany; Frank George Brown, Baker; Glendale Rex Young, Coburg; Joel Bemen Cowden and Victor Lawrence Jeans, both of Eugene; William Howard Brown, Forest Grove; Harley Wade Craft, Hoskins; James Pickens Anderson, Jr., Jordan Valley; Filomeno Santos, Medford; Ralph LeRoy Wallace, Monroe; William Robert Anderberg, Donald William Anderson, William Joseph Curry, Arland Earl Price, John James Robinson, Donald Vern Westin and Everett Norris Wick, all of Portland; Robert Lee Allen of Roseburg; Verrel Roy Heater, Sherwood; Carroll Glae Greenfield, Silverton; and Darrell Robert Howe, Sweet Home.

Seven of these young men came from my district.

A college friend of mine also went down with the ship.

It is my hope that this memorial may fulfill the longing of so many, throughout so much of the free world, for a permanent, living shrine that will dignify man's sacrifice for his fellow men of the future. The proposed U. S. S. *Arizona* Memorial would be a part of the Pacific Memorial System, whose theme is, Out of an Honored Past—Toward a Better Tomorrow.

And, to further that goal I was proud to join my colleague from Hawaii and Congressmen J. CARLTON LOSER, Tennessee; STEWART UDALL, Arizona; and JOHN J. RHODES, Arizona, in cosponsoring legislation which would provide for the memorial.

Lead and Zinc Tariff Bill and the Escape Clause

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. LANHAM. Mr. Speaker, I was greatly interested in the disposition of the lead and zinc tariff bill. It came before the Committee on Ways and Means from which it never emerged even though it was supported by both the Department of the Interior and the State Department.

From the experience with this bill it has become clear that we have done a full circle under the trade agreements program.

The Congress in 1934 delegated authority to the President to make trade agreements. This was an indication that the Congress itself no longer wished to write the tariff itself.

Seventeen years of trade-agreement making by the Executive had by 1951 convinced the Congress that it was desirable to tighten the reins on the delegated authority. It had become clear that the State Department, which actually negotiated the trade agreements was not a very zealous guardian of the interests of American industry, labor, and farmers but was inclined to cut tariffs without making sure that its ready wielding of the knife would not cripple some of our industries.

In 1951 Congress accordingly adopted the escape-clause amendment to the Trade Agreements Act. The purpose was to provide injured industries with a remedy. Should serious injury occur or be threatened to an industry it could go to the Tariff Commission and apply for relief in the form of a higher duty, that is, a restoration of the duty cut that had previously been made by the State Department in a trade agreement.

This sounded good, and should have made it possible to live with the trade agreements program. The trouble was that the Tariff Commission was not given the final word under the escape clause. It could only recommend action to the President.

After some 50 cases were processed in the 5 or 6 years of the escape clause's existence it became apparent that the law was returning an extremely low yield. The President rejected most of the Tariff Commission's recommendations, including a half-dozen unanimous decisions. Industry naturally became discouraged.

Among these was the lead and zinc industry which went before the Tariff Commission in 1953 under the escape clause. The Commission rendered a unanimous decision recommending an increase in the tariff. In 1954 the President rejected the decision.

In 1957 the industry, still facing great difficulty with import competition, decided to go to Congress rather than the escape-clause route. The Ways and Means Committee, however, pointed out that the President already had adequate authority to provide relief to the industry. That left the lead and zinc industry with no place to go other than back to the Tariff Commission.

This provides a very clear example of what may be expected in the future if the remedies provided by law fail to provide the relief that could reasonably be expected from the pertinent legislation. Other industries such as textiles, plywood, tuna, and so forth, are finding themselves in the same position as the lead and zinc industry. They do not look kindly on the executive veto that prevents a reasonable remedy from being carried out.

They know that in the last analysis recourse to Congress is their only hope so long as the executive obstinacy persists, as it has now done for six years. I do not quarrel with the action of the Ways and Means Committee. I think it simply brings to a head something that has been evident for some time.

Under leave to extend my remarks in the RECORD I include a letter that appeared in the Washington Post on this subject, written by O. R. Strackbein.

OTHER WAYS TO HELP

You are to be congratulated for printing the letter from Senator WATKINS of Utah in your issue of Aug. 19 under the heading "Worse Than It Sounds." The Watkins letter was in reply to your editorial of the same title, devoted to the proposed tariff on lead and zinc that is before Congress.

Senator WATKINS' letter brings some much-needed commonsense and down-to-earth facts to bear on the lead and zinc tariff question. It is in strong contrast to the undiluted sensationalism of Drew Pearson and the tortuous cartoonery of Herblock on the subject—albeit, quite naturally, not as interesting.

Your own editorial in reply to Senator WATKINS under the title, "Other Ways To Help," is also helpful in bringing to light the real issues.

You urge the lead and zinc industry to go back to the Tariff Commission under the escape clause for a remedy. You overlook the fact that not only this industry was before the Commission in 1954 and obtained a unanimous recommendation to the President only to be turned down but that this experience has been the usual one and not the exception—to the extent that the escape clause has become worse than useless.

That is exactly why the lead and zinc industry went to Congress and that is exactly why more and more other industries are going and will go to Congress.

The President as advised by the State Department has choked off the channel of relief provided by Congress. This is what has built the pressure that you bewail. The primary responsibility for the regulation of foreign trade is on Congress, put there by the Constitution.

Congress delegated some of this authority to the Executive but the latter has ignored the clear intent of Congress. What should Congress then do? What should the industries do when they find their remedy at law smothered by the Executive?

You say we should perhaps give production bonuses to the lead and zinc industry. That route has already been traveled its full length through the stockpile. In any case, if the industry were helped thus to produce and sell its products, would that not result as effectively in choking down imports as would a higher tariff? And would that hurt Canada, Mexico, and Peru any less?

The best way to meet this situation would be through a combination of tariff and quota under which an appropriate sharing of the market between imports and domestic producers could be worked out. Or would that be too sensible and not sensational enough for Messrs. Pearson and Herblock?

O. R. STRACKBEIN,
Chairman, Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy.
WASHINGTON.

North Awakening to Race Problem

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. FORRESTER. Mr. Speaker, the Columbus Enquirer, one of Georgia's best daily newspapers, published at Columbus, Ga., on August 25, 1957, page M–2, carried an editorial written by Hon. W. C. Tucker, editor, entitled "North Awakening to Race Problem."

This editorial is so intelligently written and states cold facts so logically that I think the Members of Congress and the public will find it to be of great interest. The editorial is as follows:

NORTH AWAKENING TO RACE PROBLEM

Recent headlines signal a strange turn in the current racial struggle which is enveloping the entire Nation.

The headlines, the surveys, the articles—most of them in the northern press—are beginning to tell a story that heretofore had been largely kept from a great many Americans. It is the story of some of the real problems that face the Negro race in America.

In the past few years Negroes have attained a whole new parcel of rights, privileges, and responsibilities. But these things have not been gained without a loss—and the loss which is becoming more apparent each day is the loss of blind sympathy on the part of most of the white population of Northern and Western States.

This is only right and as it should be. The intelligent Negro realizes that with the gain of responsibilities there is the accompanying necessity of being held responsible.

If the Negro is to escape the burden of second class citizenship, he must be prepared to accept the new burden of first-class citizenship.

For nearly a century the Negro race has struck the chord of sympathy in the hearts of most Americans outside the South. They have been all too ready to conjure up a vision of Uncle Tom's Cabin and the cruel slavemasters. This clinging cloak of protection has been used to mask faults, disguise real problems, and actually delay the day when many Negroes—both in the South and North—could stand on their own two feet and accept responsibility for their actions without having a northern politician or the NAACP as a go-between.

The northern press has perhaps been the worst offender of keeping facts about the racial problem from a great majority of the population.

But now there are encouraging signs that the press of the North is taking the lead in coupling privilege with responsibility.

Items:

1. The decision of the jury in the James Hoffa case has been roundly condemned by staunch liberals who have not hesitated in calling a spade a spade and clearly indicating that they think the eight Negroes on the jury were influenced by the fact that Joe Louis was a friend of Hoffa.

2. Negro leaders in both Kansas City and Philadelphia have pointed out that their race commits a high percentage of the crimes in those cities. These leaders—definitely not members of the NAACP—have urged their people to clean up their own linen. These Negro leaders have spoken out when white politicians in the same cities and with the same facts have hesitated because they feared the consequences of being honest with the racial problem.

3. Time magazine—a longtime exponent of Negro rights—seems to be opening its other eye these days and at least recording facts on both sides of the ledger. For instance it recently ran a photo of a New York teen-age gang of killers. Most of them were Negroes. This type of picture probably would have been suppressed earlier.

4. U. S. News & World Report, a widely respected journal of information, has compiled several articles which clearly show the problems that integration is causing in the North and the problems that it would cause in the South.

There are many Negroes—and whites also—who seem to think integration is the answer to all difficulties. Their eyes are completely shut to other solutions or to the problems which integration brings.

Actually the North has not truly had integration as yet, but with the continuing migration of Negroes to the North, integration of a sort may follow. And then the North will have to sit down and get all the facts in the light and out of the darkness which has cloaked them for so many years.

The South will be watching with sympathy and understanding—and hope.

For the real race problem has finally moved north and we shall see how the many wise men there who have been so helpful in solving our problems will be able to solve their own.

Mr. Speaker, the North is beginning to understand that the NAACP not only demands equal rights, but rights far above any that anyone else has or should have; further, they are beginning to understand that the NAACP is always demanding privileges for a group which does not assume any responsibility of citizenship whatever, and that the NAACP evidently does not understand that the Negro race should assume any responsibility.

The South has suffered much and suffered long because of abuses of the northern press which did not understand and could never understand until it saw the picture as it was. The South was not surprised at all about the verdict in the Hoffa case, with 8 Negroes on the jury and with Joe Louis appearing in the courtroom, and in the presence of the predominantly Negro jury annointing Hoffa with the blessings of the NAACP, the Red Rooser's Club, the Autherine Lucy, and the Martha Martin Luther King brigades.

I submit to my northern friends the fact that they have seen nothing yet if the Senate passes the present civil-rights bill, which contains among other things a provision which will place in the jury boxes of all of our Federal courts every Negro 21 years of age, or over, who has not been convicted of a felony and has not been restored to his rights by a pardon, if that Negro can read, write, speak and understand the English language. The North will have no one to blame except themselves because the northern membership in the Congress voted overwhelmingly for this legislation in the House of Representatives.

Progress of the Dominican Republic

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. LONG. Mr. Speaker, the steady progress of the Dominican Republic is good news for the people of the United States of America. Excellent, low-cost housing for workers in our good neighbor republic is one result of sound order and beneficient leadership under the direction of Generalissimo Rafael Leonidas Trujillo Molina, LL.D., who has devoted himself, his talents, and his undeniable genius to the welfare of his fellow citizens and the defense of the Western Hemisphere. No doubt, this was one reason why the Miami Herald could report that "the Dominican Republic is one of the hemisphere's new boomlands." This report went on to relate that "nations of the Western Hemisphere should take note of what is happening here economically." Splendid highways, new schools, irrigation works, hospitals, clinics, and modern equipment in the new University City, site of the historic University of Santo Domingo, are among the effects of peace and prosperity in the Dominican Republic.

It is well known, as my dear friend Dr. Joseph F. Thorning has emphasized, that Generalissimo Trujillo is the most conscientious, active, and successful worker in the country that he has guided to new heights. He travels to every region of the Dominican Republic, eager to develop all possible resources and to take a personal interest in the education of the youth. Part of the inspiring story is told in the following dispatch from the Herald:

DOMINICANS OFFER REAL CONCESSIONS FOR NEW INDUSTRY

(By Pat Murphy)

CIUDAD TRUJILLO, DOMINICAN REPUBLIC.—Nations of the Western Hemisphere should take note of what's happening here economically.

By all standards, the Dominican Republic is one of the hemisphere's new boomlands, its arms open to foreign dollars to tap unexploited industrial, mineral, and tourist bonanzas.

And if that's not enough, the Government will make the investment climate more attractive with 10-year tax exemptions on outside capital, or build a facility for lease.

Moreover, the Dominican's obviously strong-arm politics apparently aren't a scarecrow to corporations whose conscience more often is guided by cold-blooded profit.

Only this week, the Commerce and Industry Minister's office revealed the plans of William D. Pawley, former American Ambassador to Brazil and Peru, who is heading a whopping big deal here.

As president of La Minera y Beneficiardo Dominicana, a subsidiary of the Canadian firm of Falconbridge Nickel Mines, Ltd., Pawley is looking for a trove of untapped nickel and oil.

The Government said Pawley's group now is spending a million dollars for exploration, but is confident of hitting veins and has tentatively committed a $60-million investment here.

Such a venture, the Government said, may produce an oil boom bigger than Cuba's, and only short of Venezuela's. It means thousands of jobs in the next few years.

Pawley, who also owns Miami Transit and Miami Beach Railway bus company, was here with his brother Ed for a few days, but then returned to the United States.

Aluminum Company of America, Arthur Vining Davis' huge firm, is digging bauxite—base for aluminum production—by the shipload.

Unlike its bordering neighbor Haiti, a nation weakened by twin evils of poverty and politics and economically anemic, the Dominican Republic doesn't need outside help to exist.

Its treasury is overflowing. Multimillion dollar public works and housing programs are planting modern new subdivisions, new bridges and airports all over the 19,000-square-mile nation. Sugar, tobacco and cocoa crops are heavily productive.

It doesn't owe a cent to anybody.

With the flick of a few millions, the Government tossed up the $32-million International Peace Fair, a majestic ultramodern vista of glass-sided structures used for 2 months to attract tourists.

Then the fair became new government office buildings, a sight to behold.

In the same span of time, the government tossed off another 25 million or more for the El Ambajador, La Paz, and Jaragua Hotels, then leased them.

Essentially government operated, the country's sugar, cocoa, coffee and tobacco is bringing in millions from the world market.

But to supplement what the government doesn't or won't do, private capital is being courted to industralize the nation and boost employment (which is good anyway) and dig into the fertile soil which could yield more than agriculture.

New Passenger Liner for the Pacific

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. SHELLEY. Mr. Speaker, the Members of the House of Representatives are aware that their colleagues from the San Francisco Bay area are deeply concerned with maintaining the vigor and effectiveness of the American merchant marine, including shipbuilding and all of the many supporting activities in the American economy. We are vitally interested in making sure that the American-flag shipping companies operating in the Pacific Ocean remain strong and competitive so that the employment and purchasing which they generate shall continue as a major source of business activity in the many west coast communities. To maintain the level of merchant marine activity, it is absolutely essential that the American-flag vessels be replaced as they reach obsolescence.

It has been a matter of great satisfaction to all of us in the San Francisco Bay area that the American-flag steamship companies engaged in foreign trade which are headquartered in our area have all begun to replace their vessels with modern ships. These replacement programs are proceeding satisfactorily as as far as freight ships are concerned. However, we are now faced with the need for construction of a large, modern, fast passenger liner for the essential trade route from California to the Orient. By terms of its contract with the Maritime Administration for this route, the American President Lines is required to build such a vessel during 1958.

The needs of foreign commerce and defense on this trade route justify a vessel of approximately 26 knots with a capacity for 1,400 passengers. In order to facilitate this program, I have joined with Congressman Bow in introducing yesterday a bill authorizing construction of such a vessel by the United States and its sale to the American President Lines under the terms of the Merchant Marine Act of 1936, which act of Congress has been an outstanding success over a period of more than 20 years in dealing with a complicated but vital section of our national policy.

Safety-First Club of Maryland Sponsors Safety Forum

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. FRIEDEL. Mr. Speaker, as chairman of the Special Subcommittee on Traffic Safety, I am always greatly pleased when I read or hear that some group or even individual has taken some concrete action in the direction of helping to bring about an improvement in the traffic-safety situation. In this connection, I was very much pleased this morning to read in the Baltimore Beacon for August 1957 an article telling about a safety forum which the Safety-First Club of Maryland will sponsor on September 30 beginning at 8:30 p. m. Action is the thing it will take to get things going in the direction of greater safety on the Nation's highways, and under unanimous consent I insert this article from the Baltimore Beacon in the CONGRESSIONAL RECORD:

BARNES, INSPECTOR SCHMIDT, MAJOR WEBER, JUDGE CARDIN TO APPEAR AT SAFETY FORUM

A number of traffic experts will take part in the safety forum that the Safety First Club of Maryland will sponsor on September 30, beginning 8:30 p. m. at Pimlico Branch No. 21 of Enoch Pratt Free Library, Park Heights and Garrison Avenues.

The theme of the evening will be: The Department of Traffic Engineering, Baltimore Police and State Police View the Traffic Problem.

The panelists will include Henry A. Barnes, traffic director, of Baltimore City, Inspector Bernard J. Schmidt, of the Baltimore Police Department, and Maj. W. H. Weber, executive officer of the Maryland State Police. Judge Meyer M. Cardin, chief magistrate of the traffic court, will serve as the moderator.

J. O. Shuger, president of the Safety First Club, announces that additional forums will follow on November 20, at Forest Park Branch No. 14; January 13 at Keyworth

Avenue Branch No. 16; and March 10, at Walbrook Branch No. 8.

William Goodman, civic leader and Safety First Club board member, is general chairman of the arrangements committee. Also serving are Edgar P. Silver, chairman of the motor vehicle committee of the House of Delegates; Magistrate Samuel J. Gaboff, and Joseph Zimmerman. Various local organizations are being invited to send official representatives to these safety forums.

One Hundred and Fiftieth Anniversary of the Establishment of the American Agency System of Insurance Selling

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. WATTS. Mr. Speaker, on September 4 next in Lexington, Ky., a program observing and commemorating the 150th anniversary of the founding of the American Agency System of insurance selling will be held. It is most interesting to recall that on October 6, 1807, Alexander Henry, a director of the Insurance Company of North America, urged his fellow board members to broaden their sphere of business operation and as he put it make a determined "march to the frontier."

As a result of this pioneering spirit, there was established an agency in Lexington, Ky.—the first agent being Mr. Thomas Wallace, a prominent merchant of the area.

The status of the pioneer agent was very different from that of today's independent insurance agent. The activities of early agents were restricted largely to soliciting business and surveying property with all final and binding decisions being made by the head office of the company, and in the early days the agent's remuneration was small and unstable. As the American Agency System developed the agent's duties and responsibilities were enlarged and his remuneration was placed on a percentage basis. In the 1850's the insurance agent received the authority to issue policies and became not merely a solicitor but a true agent of the company.

In 1957, as the 150th anniversary of the American Agency System is celebrated, the independent local insurance agent occupies a place of major importance not only in the insurance industry but in the Nation's free enterprise system.

To permanently commemorate this historic event a memorial plaque is to be dedicated during the celebration activities of this 150th anniversary. The inscription thereon is most fitting and proper:

Here in the thriving frontier town of Lexington, Ky., in 1807, the American Agency System of bringing insurance protection to America's families, businesses and institutions was begun when Thomas Wallace, prominent merchant, was appointed an agent of Insurance Company of North America.

Thus, a free people, with initiative and enterprise, created a system of providing for their own security through independent local businessmen that spread throughout America, enabling the Nation to grow and prosper.

The vision and foresight evidenced so many years ago is truly characteristic of the American people.

It affords me real pleasure to extend my sincere congratulations to the Insurance Company of North America Companies and to all insurance companies upon this particular occasion. They are to be commended for the manner in which they have maintained the progressiveness, the boldness, and the vigor upon which Alexander Henry's vision and foresight was grounded.

I personally extend my sincere congratulations and good wishes.

Statement on United States Mutual Aid Program

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. FULTON. Mr. Speaker, I am submitting for the CONGRESSIONAL RECORD the statement on the United States mutual security program by Peter Muller Munk. Peter Muller Munk heads the Peter Muller Munk Associates of 725 Liberty Avenue, Pittsburgh, Pa., an outstanding and progressive firm in the Pittsburgh area.

Peter Muller Munk is an outstanding American industrial designer, who with his associates, has been working on problems of industrial management in the current United States Mutual Security program.

Since the views of such an experienced and competent man, who speaks with the knowledge of his field from a business and practical point of view, are worth close examination, I believe that the American people will enjoy reading with me this fine statement.

I am including this statement by unanimous consent of the House of Representatives.

STATEMENT ON UNITED STATES MUTUAL AID PROGRAM

As an American industrial designer who has frequent occasion to work in remote, nontourist areas of the world under assignment from our Government, I am continually shocked by reaction at home.

Instead of receiving comments of recognition and gratitude from neighbors and lawmakers, I find myself in the midst of controversy on the very value of these labors and, frequently, sacrifices.

Certainly no member of industrial management in this country is subjected to a review of his accomplishments, when such accomplishmen'ts show overwhelmingly profitable returns on an investment. Yet there are few industries who can equal the return to world peace, to market development and to American prosperity as achieved by the members of our United States mutual aid program.

Thus, at this time to permit further reductions and limitations in the President's recommendations for an effective long range mutual security program, with proper emphasis on economic development of free nations and underdeveloped areas, is to commit a great disservice to our country.

Perhaps we have all become too accustomed to intensive advertising and promotion programs to be able to evaluate the little publicized, unglamourized efforts of our economic and technical ambassadors.

As an industrial designer with long and intimate contacts with all sections of American industry, and with first-hand experience in the fields of foreign economic projects, I believe two factors stand out which deserve continued emphasis.

1. In the representatives of our International Cooperation Administration, the American people have as devoted and unselfish a group of public servants as exist anywhere. With often very modest means and frequently under physical and economic hardship to themselves and to their families, the administrators, planners and technicians of ICA are bringing hope for economic security to millions of people on the verge of despair and political cynicism. Market development, domestic prosperity, and a grasp of American methods, integrity, and tolerance are being disseminated at very modest cost to us.

2. Under contractual conditions which give the American taxpayer every protection, private industries and contractors to ICA are performing miracles of ingenuity. In cooperation with foreign governments and industry, technical goals are being achieved and productivity is being increased which will remain an everlasting tribute to American pioneering and efficiency. Despite the little comment made about these projects, we should still be aware of their effectiveness, and of the need for redoubled effort where such need is greatest.

I feel that these branch managers of the United States' interests abroad are entitled to, and should, receive support from their home office.

Unfortunately, there is no quick-acting antibiotic for poverty and for primitive methods of production and manufacturing. The cure here requires long-range planning and implementation. It requires patience, tolerance, and, above all, hard work.

It is often worse to begin with too little than not to start at all. We must measure the risks of our investment in money, in men and in goods. Once we understand this risk to our own United States security and the prestige of our free enterprise system, then we must make the necessary commitments to insure success.

To do less would be as unwise as it would be unpatriotic.

Hon. Sam McConnell

SPEECH
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. FENTON. Mr. Speaker, it was indeed grand to hear the fine tributes paid by previous speakers to our good friend and colleague Congressman SAMUEL MCCONNELL.

As one of the senior members of the Pennsylvania delegation in the House of Representatives, and as chairman of the Republican delegation, I want the membership of the House and the people of the country to know that we appreciate the wonderful statements made about SAM, regardless of partisanship.

To me, personally, it was with a touch of sorrow that we are to lose in this Congress a man of SAM MCCONNELL'S character and ability. His service here has been outstanding and he has been a credit to his district, State, and Nation.

SAM MCCONNELL'S background from his birth reflects the kind of person he is. Born in Eddystone, Pa., he is the son of a Methodist minister. He has been interested all his life in boy's work, particularly in settlement house and community centers. In his senior year at the University of Pennsylvania he was chief counselor for boys.

SAM is interested in Boy Scout work, and the great movement it is in building the future citizens of our Nation. He was a scoutmaster for 8 years, and sent 6 boys—Eagle Scouts—to the International Jamboree in London.

As chairman of the second war loan drive in lower Merion Township, Montgomery County, Pa., he obtained $9 million when their quota only called for $3 million.

Mr. MCCONNELL was elected to the United States House of Representatives in December 1943 at a special election to fill the vacancy due to the untimely death of the beloved Congressman William Ditter. He has been reelected to all succeeding Congresses.

We all are aware of the fine work SAM has done as a member of the Education and Labor Committee of the House. As the ranking Republican member of that committee he was its chairman in the 83d Congress and has handled all education and labor debates for his party in the House since 1949. As such he has been eminently fair to all sides in any debate and therefore enjoyed the confidence of employer, employee, and the public.

Mr. Speaker, I could go on and on relating the fine attributes of SAM MCCONNELL and we are pleased and happy to know that he is to give of his future life to another position of great and humane importance—that of directing the work of the National Association for Cerebral Palsy.

While SAM will be severing his official duties on September 1, we all sincerely hope that his trips to the Capitol will be frequent and that as the occasions arise we will all have the benefit of his counsel, association, and continued friendship.

May SAM MCCONNELL'S future work meet with outstanding success as it has done in the past, and that he will continue to find satisfaction in a job well done for the public and the America he loves so well.

Hon. Sam McConnell

SPEECH

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. AUCHINCLOSS. Mr. Speaker, SAM MCCONNELL and I came to Congress at the same time and a friendship developed between us from the start. I have rarely met anyone with such a congenial spirit, delightfully accompanied by a gentle wit and a great sense of responsibility. His colleagues soon found out that he was a man of great ability who took his job seriously and, as the years went by and he attained the responsibilities of leadership, he always conducted himself with fairness and courtesy. When SAM MCCONNELL addressed the House you knew that he was well versed in his subject and he never resorted to demagoguery or blatant oratory. He will be missed in many ways but I am sure the decision he has reached to accept the position of executive director of the United Cerebral Palsy Associations, Inc., was only done after most careful consideration. There is no doubt that this trustworthy and wholesomehearted American citizen will do well in whatver position he may fill and he carries with it the sincere and wholehearted best wishes of the many friends that he has made in the Congress.

The President and the Congress

EXTENSION OF REMARKS

OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. HAGEN. Mr. Speaker, I am submitting for the information of the membership a lead editorial from the August 27, 1957, issue of the Los Angeles Times, entitled "The President and the Congress." This editorial is significant because it represents one editor's position on the question of the reason why certain legislative proposals have failed in spite of the fact that they presumably have had the support of the President. I wish to make it clear that I do not agree with all of the statements in the editorial but I feel that they are significant because they represent the thinking of a newspaper which can be described as the bellwether of Republican thought in California.

The editorial reads as follows:

THE PRESIDENT AND THE CONGRESS

Senator LYNDON JOHNSON had a steak breakfast with the President yesterday and it was the most expensive breakfast the taxpayers have ever paid for. Mr. Johnson came away from it to pass the word to the boys to give back some of the foreign-aid money they had taken away from Mr. Eisenhower and Mr. Dulles. The Senators promptly gave back half a billion; so the administration will have more than 3 billion to give away this year—about 85 percent of what the President asked for instead of the 70 percent the Congress until yesterday was planning to give him.

Of such is congressional economy. A measly 15 percent reduction is made on an item which should have gone at a closing-out price.

ADVICE TO PRESIDENT

But let's be as optimistic as we can about this breakfast transaction. What was said over the White House steaks may never be known, but if Senator JOHNSON was as realistic as his leadership in the Senate presupposes him to be, he might have told the President something like this:

"It is in fact a little late, Mr. President, to upset your foreign-aid plans for the year, and I'll see what I can do to help you. But may I suggest, Mr. President, that this probably will be the last time. The temper of the country and of the Congress has turned against giveaway. They can't see that it has accomplished what you and others said it would do; we have fewer foreign friends, and Soviet-Chinese communism is further out of bounds than it ever was.

"Moreover, there is much information on mismanagement and misspending. So, as I said, you'd better think of this as the last year of the big money. When the Congress comes back for the next session, in an election year, the Members are not going to spend so freely. Maybe, Mr. President, you and Mr. Dulles ought to think up a foreign policy which doesn't entail a gift for everybody we do business with. Maybe we could just send the clients greeting cards every now and then."

MORE THAN EXPECTED

It is not good form to imagine remarks of the President of the United States, so let us adjourn the breakfast. Mr. Eisenhower got more than he had a right to expect, and the reason may be that he talked to Senator JOHNSON with more conviction than he usually brings to the support of his program.

Last week the President complained that Congress hadn't done right by his several major proposals, and in truth it hadn't passed some of them. And on the surface this was puzzling. Mr. Eisenhower has few enemies in the Congress or anywhere else; the honorable Members were not out to do him an ill turn wherever possible as they sometimes were in the time of his predecessor. What could the matter be?

The matter was that the President did not present the major items of his program with great conviction—such conviction as he seems to have revealed to Senator JOHNSON in the single instance of foreign aid. A Member of Congress could very easily get the idea that the President was merely acting as front man for others. There is much evidence that some of the proposals he presented to Congress came up to him ready-made from his staff, rather than from him to his staff for processing and then back to him and then to Congress.

For example, it was obvious when the Senate debate began that Mr. Eisenhower did not know what was in the civil-rights bill that was passed to him by Attorney General Brownell. Or that he was aware the school-aid bill he spoke for was based on misrepresentation, including fraudulent statistics, and violated the doctrine of States' responsibility in which he genuinely believes.

WARY OF COUNSELORS

When Congress divined that the President was being used by the shadowy council of advisers without portfolio who are forever plucking at his sleeve, the leading Members refused to take his proposals very seriously. On the other hand, in the few instances in which his knowledge and desires were not in doubt he got cooperation from the legislative branch. For example, he had no difficulty in getting consent to our entering the International Atomic Energy Organization, which may turn out to be the most significant piece of business of his administration.

When the record of the first session of this Congress is studied, these points should be borne in mind. The Congress, it is true, did not do a great deal. It held the line and prepared the ground for a future assault on the Federal budget. And when the President, moved by deep-seated conviction, wanted something, it was always willing to go more than halfway—85 percent of the way, or all the way sometimes. Even in the

case of civil rights, the Congress finally gave him (or soon will) what he at last decided was in his mind: a guaranty of the southern Negroes' right to vote.

Suggestion of Peter Schellin for the Adoption of a World Reform Calendar

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. REUSS. Mr. Speaker, I include a letter from Peter Schellin, of 3335 North Bartlett Avenue, Milwaukee, Wis., on the world reform calendar. I know that Members will be interested in reading about the calendar.

The letter follows:

MILWAUKEE, WIS., *August 25, 1957.*
The Honorable HENRY S. REUSS,
Washington, D. C.

DEAR REPRESENTATIVE REUSS: I am 15 years old. I attend Riverside High School. Last semester my history class made a study of the calendar, and ever since then I have wanted to write to you. * * *

I have recently read a book on the subject called Of Time and the Calendar, by Elisabeth Achelis, from which I would like to quote:

"The world calendar is solar wherein everything fits, everything agrees, everything is stable. * * *

"The revised 12-month calendar accepts the perpetual feature of * * * the year as of 364 days, wherein the 52 weeks (each of 7 days) fit within the year.

"The 365th day or the one-seventh of a week, that indispensable fraction, is placed at the end of December as a day set apart between 2 weeks whereby the familiar order of the week is not interrupted. This last day of the year has the name Worldsday and the specific date December W, which corresponds to December 31. It belongs to the annual sequence of days—Saturday, Worldsday that is followed by Sunday, the first day of each new year. By this method every outgoing year is securely sealed with the new Worldsday holiday and the year becomes a finished time period.

"The 366th day in leap years is likewise placed between 2 weeks in the midyear after Saturday, June 30, and before Sunday, July 1. Its name is Leapyear Day and its date is June W or June 31. In this manner the new Worldsday (365th day) every year and the new Leapyear Day (366th) every 4 years keep the calendar equalized, balanced, and perpetual. These new stabilizing days are unique in the calendar in being universally observed as world holidays.

"The dates which call for change are 3—March 31, May 31, and August 31—replaced by 3 new ones—February 29 and 30 and April 31. This will call for a minor adjustment of days which were observed on the vanishing dates. Birthdays will now be observed on the day before, on the 30th of the month, the method used by leap-year children ever since 1236—over 718 years ago. * * *

"Calendar reformers have solved their problem by withholding the 365th day, whereby the year has 364 days, a number easily divisible into equal quarter years of 91 days each and equal half years of 182 days each. With this satisfactory solution, the 365th day is returned to the calendar and placed at the end of the fourth or last quarter of the year as the new Worldsday.

"The world calendar is a mathematical masterpiece. It deals as successfully with the arbitrary numbers 7 and 13 as with the easy numbers 2, 3, 4, 6, and 12.

"The foursquare principle is particularly unique to our planet, Earth, which is influenced by the 4 seasons, the 4 winds, the 4 cardinal points of the compass and the 4 elements—fire, water, air, and earth. Every individual, too, functions on the 4 basic planes of life; namely, spirit, soul, mind, and body.

"The ideal of the square is far more significant and important than is generally recognized. The American form of government is based on the principle of the square—the executive, the legislative, the judicial, and the citizenry—each respected in its own right.

"The business world presents the same picture. It takes the cooperation of four groups—management, production, distribution, and consumer—to make a profitable business.

"In the educational field the grammar and high schools, college and university complete the pursuit of learning. And interestingly enough, simple arithmetic has its four distinct processes—addition, subtraction, multiplication, and division.

"There are also four definite measurements—length, height, breadth, and thickness—and (the late) Dr. Albert Einstein has taught us to think in terms of four dimensions instead of three.

"Reverting to the previously described temperamental calendar family with which we are burdened today, we now learn to our relief that with a few important rearrangements it has become a harmonious calendar family wherein all the various members have each their rightful place."

I feel that for a world that my generation will soon lead, the World Reform Calendar would be a great improvement.

Yours truly,

PETER SHELLIN.

Look Magazine Pays Tribute to ICEM—A Fine Organization

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. KEATING. Mr. Speaker, Look magazine recently paid well-merited tribute to one of the most effective international organizations now in operation, the Intergovernmental Committee for European Migration.

As an American delegate to ICEM conferences, I have had an opportunity to observe at first hand the noble humanitarian work done by this organization, and the efficient way it goes about its business. It is doing a magnificent job of aiding the world's homeless and oppressed, and deserves the commendation of all of us.

Under leave previously granted, I insert an excerpt from the Look editorial at this point in the RECORD:

INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION

ICEM is an organization with a mountain-sized aim: to restore the population balance between the overcrowded nations of Europe and undermanned nations elsewhere through orderly migration. During its 5-year history, it has facilitated the movement of some 750,000 emigrants and refugees. Most have traveled from jammed countries like Greece and Italy to long-awaited jobs in Latin America, Australia, or Africa. Since last year's Hungarian uprising, the ICEM identification tag has become a "passport" for 150,000 escapees seeking new lives in 36 different countries. Of these, ICEM helped 34,325 resettle in the United States. However, with the expiration of the Refugee Relief Act recently, some 29,000 are still in Austria awaiting resettlement—new recruits to the ranks of the unwanted that crowd refugee camps in many parts of Europe.

The committee works in behalf of 27 member nations through 15 field offices. Its job is to help preselect, process, document, and embark migrants as well as welcome them at their destinations. ICEM's interest does not cease with the surrender of a migrant to the care of a local welfare agency.

Government Controls and Subsidies in Agriculture

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. BOW. Mr. Speaker, the Independent Farmers of Ohio are self-reliant people who oppose Government controls and subsidies in agriculture and big government in general. I have had the pleasure of meeting with them on several occasions, and I include with my remarks today a letter from Mrs. Clarence Uhl, secretary, relating an incident illustrative of their ability to solve their own problems.

The letter follows:

AUGUST 25, 1957.

Hon. FRANK T. BOW,
Washington, D. C.

DEAR MR. BOW: You remember where you met Independent Farmers at Merlin Simpkins' south of Orrville. Well about a month ago his new barn burned to the ground with 40 tons of hay, a cow that had just given birth to twin heifers, the boys' 4-H Club calves, their riding horse, new milking parlor, etc. All went up in flames before the wife could get the men summoned from the fields. The thing I wanted to tell you is that Independent Farmers of Ohio, Indiana, and Michigan are meeting this Thursday to put him up a new and bigger barn. The new one will be in two wings, one 30 x 60 feet and the other wing a pole barn 71 x 91 feet. We expect to have it all under roof and painted by Thursday evening. We know it would be likely impossible for you to attend but you are invited. There will be a covered dish dinner. You might want to mention it to Congress for the CONGRESSIONAL RECORD that Independent Farmers do believe in cooperating to solve their own problems. We believe in farming the land instead of farming the Government Treasury, but do appreciate such things as Government research which will make it possible to have this pole barn construction and the whole barn built so that it is efficient and laborsaving. It will house 50 dairy cows, 2,000 bales of straw and the necessary hay and feed to feed them. Merlin Simp-

kins as you know is a young man and is chairman of our local county chapter of Independent Farmers of Ohio, Inc. It may come to your mind the difference between Independent Farmers and other farm groups. You will notice that because we are independent we have the initiative to solve our own problems of the local level and do not want to be included in social security and other giveaway schemes which only rob us of our independence and the joys which come from helping each other. We try to maintain the original American dream where independent farmers working together to solve our own problems can do anything.

Yours very truly,

MRS. CLARENCE UHL,
Secretary, Independent Farmers.

Communist Propaganda Broadcasts

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. DINGELL. Mr. Speaker, whenever we read what Communists are peddling in their propaganda broadcasts in the Middle East, in Asia, and in Africa we wonder how some people can be deceived by their obvious falsehoods and prevarications. Communist propaganda presents us as an imperialist country and yet there is not 1 inch of ground under our flag where the people do not enjoy real freedom. We have no satellites such as Poland with its Poznan riots, no Hungarys where the people are murdered because they want liberty. We are pictured as aggressors and yet we sacrifice the flower of our youth and our resources to help maintain the peace and security of the world. Soviet Russia makes all sorts of promises to help other nations and the world knows Russian performance is conspicuous by its absence.

It is not for us, Mr. Speaker, to speak of our economic aid to Europe, of our help to Greece and Turkey, of our intervention in Korea, of our aid to other peoples all over the world, assistance that has made it possible for them to maintain their sovereignty and integrity as independent nations against the encroachments of communism. But I believe it is not out of place to speak before we adjourn this session of Congress of how we do not forget our friends, of our gratitude to those who have shown their loyalty to the ideals of democracy which we cherish and uphold.

I wish to refer particularly to the Philippines. Here is a country that is linked with us by the closest ties of friendship. When the war broke out in the Pacific, when we were going from disaster to disaster, the Filipino people stood by us and fought for us. That loyalty we cannot forget. When we intervened in Korea, the first Asian nation to send its troops to fight side by side with our own was the Philippines. This is loyalty without price. In our fight against communism, the one nation in Asia that has cast its lot unreservedly with us is the Philippines. Nor can we forget the voice of General Romulo speaking always on the side of the United States before the United Nations. It is an understatement to say that his words in the United Nations have been the best answer for the propaganda mouthed by the Soviet Union and its stooges in the battle for men's minds in Asia and the world. Here is loyalty of the highest order.

After the war, the Congress enacted the Philippine Rehabilitation Act and we helped the Filipinos to reconstruct their public buildings, roads, and bridges and we paid individual war-damage claims which we did not do for our own countrymen after the Civil War. We extended the Philippine Trade Act when General Romulo came to Washington as President Magsaysay's special and personal envoy, and the same act was amended in accordance with the wishes of the Filipino people. A long history of mutual fidelity and trust was maintained unimpaired.

In this session of Congress we have shown our Filipino friends that we are a grateful people. When their able and distinguished Ambassador, Gen. Carlos P. Romulo, one of America's real friends in this troubled world, presented to us through the State Department the Philippine plea for the removal of the 3-cent processing tax on coconut oil, when he convinced us of the justice of his cause, this Congress removed the tax knowing that it will mean a loss to our Treasury of some $15 million a year.

Efforts to exclude Philippine plywood from the American market were defeated as well as the attempt to exclude Filipino laborers in Guam from the advantages of the minimum-wage law. The Philippine Scouts legislation was approved as well as the aid for Philippine war orphans. This Congress has exerted its utmost to show that we do not forget and that we appreciate deeply the loyalty of our Filipino allies and friends. We have confidence in the present administration in the Philippines and we have the highest regard for General Romulo, the incumbent Philippine Ambassador to the United States.

Mr. Speaker, I include in the RECORD the following article by Mr. Oland D. Russell, one of America's leading correspondents, which was published by the Scripps-Howard newspapers on August 23, 1957, and which describes how this session of Congress treated the Philippines:

(By Oland D. Russell)

WASHINGTON, August 23.—The late Vice President Barkley used to say: "When Churchill or Romulo come to town, we'd better double the guard at Fort Knox."

Philippines Ambassador Carlos P. Romulo put an emphatic point to that axiom this week when the House completed legislation on a bill that will mean $15 million a year to the Philippines, and that much less in revenue to us.

It removed the United States 3-cents-a-pound processing tax on coconut oil. The Philippines have been battling for 23 years to get this tax withdrawn from an old tariff law.

It was laid on in the first place with the support of the dairy and butter lobby, fighting oleomargarine. Twenty years ago the Scripps-Howard newspapers fought long and hard for removal of this tax.

A more immediate benefit to housewives will be the greater use of coconut oil in soaps, which will improve their lathering qualities.

In a little noticed move on Wednesday the House, without rollcall, completed action on a Senate bill to amend the Tariff Act of 1930. The amendment, among other things, suspended through June 30, 1960, the tax on processing coconut oil. The House concurred with the Senate amendment and sent the bill to the White House.

The action is of vital importance to the Philippines economy and will benefit the livelihood of 8 million Filipinos who depend on the coconut-growing industry.

It was due to the persistent efforts of General Romulo that this was accomplished. In order to get favorable action he had to overcome initial objections and gain the support of a half dozen influential American interests. These included the American Farm Bureau, the National Cattlemen's Association, the National Grange, and the Western Meat Packers Association, and soap manufacturers.

In addition, he conferred repeatedly with the leadership in both Senate and House and the committees concerned. He was seen so often on Capitol Hill in the past few weeks, one Congressman twitted him: "Are you a Member of Congress or an Ambassador?" Both the State and Agriculture Departments approved the bill and in the end it was attached to a measure providing for the free importation of certain tanning extracts.

Ambassador Romulo today attributed his success to the real friendship Congress has for America's true friends and allies. The present Congress, he said, may be in a mood for strictest economy, "but I am happy to say that it has been kindly and generously disposed toward the Philippines, a country which has shown its loyalty to the democratic way and has proved a stanch ally in Asia. It shows confidence in the present administration."

Originally the tax proceeds were turned over to the Philippines Commonwealth Government but when the country gained its independence, this source of revenue was lost.

The coconut oil fight is not the only successful campaign General Romulo has waged in his country's behalf during this Congress' session. He fought an attempt to exclude Philippine plywood from the United States, and he succeeded in getting Filipino laborers working for the Navy on Guam to be included in the United States minimum-wage law.

He has also seen the enactment—in this economy-minded Congress—of several bills benefiting Filipino army veterans, one of them granting back pay and allowances to the old Philippine Scouts. Another grants aid in education to some 3,600 Filipino war orphans.

As a prewar elected but nonvoting Philippines delegate to Congress he still retains floor privileges. More important is his loyal war record as aide to General MacArthur which is highly admired in Congress. With this advantageous position, it is safe to say no other Ambassador to Washington has been so close to the legislative processes here. In addition to his ambassadorial duties, he is also his country's delegate to the United Nations Security Council.

Rome Burned While Nero Fiddled

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MULTER. Mr. Speaker, Rome burned while Nero fiddled. Our world may be disintegrating while Dulles flies.

I was not there; but I imagine the following article from the Christian Science Monitor of August 27, 1957, tells all the top secret facts of life that State Department representatives have been unable to tell the House Foreign Affairs Committee:

STATE OF THE NATIONS—PROPORTIONS OF THE DANGER

(By Joseph C. Harsch)

Roughly speaking, two-thirds of the oil consumed in Western Europe comes either through the Suez Canal or by the pipeline through Syria from the Mosul fields in Iraq.

It would be a gross exaggeration to say that Moscow today controls the flow of that oil upon which all Western Europe depends heavily both for its economic welfare and for its military operations.

But it is not an exaggeration to say that Moscow's current operations throughout the Middle East bear the external earmarks of a fairly consistent and fairly well advanced reach for the handle which could turn off the flow of that oil.

This does not mean that in event of a major war the armed forces of the West would be brought to a standstill by lack of oil. Under modern military conditions it is almost certain that Middle East oil would be unusable to either side anyway. The West would almost certainly have to depend on Western Hemisphere oil regardless of what happened in the Middle East in the meantime.

It does mean that if the trend is unchecked the time will come, and fairly soon perhaps, when a large part of the daily supply of Europe's oil will be available only by grace of Moscow. One of the visible consequences could be an end to the British and Dutch oil-dispensing business, a major support of the economies of both of those countries.

There are more disturbing overtones to all that is going on in the Middle East.

Last week a Soviet cruiser and destroyer passed through the English Channel. They ran blacked out at night—a curious business. They were checked by radar. They passed through the Strait of Gibraltar into the Mediterranean.

This week another Soviet cruiser-destroyer team made the same blacked-out voyage.

Since the Suez crisis of last autumn about 80 shiploads of Soviet arms and ammunition have arrived in Egypt and a similar number of shiploads in Syria.

Of course, the arms shipped to Egypt and Syria are largely obsolete. And a few Soviet cruisers, destroyers, and submarines are no match for the United States Sixth Fleet.

Still, we are dealing with a double Soviet operation which looks increasingly unpleasant. There is the fact of extensive Soviet influence in both Egypt and Syria. There is the twin fact of this revival of Soviet naval activity in the Mediterranean.

Add to this a third factor, probably the most dangerous of all. President Nasser of Egypt has launched what amounts to a popular and fairly powerful revolutionary movement. It has little more philosophic content than the movement started by Perón in Argentina.

It's pretty thin stuff by comparison with the great revolutionary movements of the last century. But for the Middle East it's the first such movement to get underway. To people who lived untouched by the French Revolution, socialism, communism, and fascism, it has novelty and appeal. It could sweep far and fast if it ever started spreading.

For the moment, at least, Moscow is riding and exploiting this movement which has its base in Egypt. It has spread to Syria. The immediate problem confronting Western diplomats is not how to reverse what has happened in Syria, but how to keep it from spreading.

There is no visible, available means for reversing the events in Syria. The 6th Fleet can't go to the rescue of a President Kuwatly who doesn't ask to be rescued. Syria is self-sustaining in foodstuffs. Soviet arms could, in theory, be kept out by a blockade, but a blockade is an act of war, and United States policy is currently, and heavily, restrained by Washington's own insistence of last year that force must not be employed in the Middle East.

The immediate problem is how to prevent what is happening in Syria from spreading to the other Arab States. The idea of a "quarantine" is not for the purpose of stamping out what has happened in Syria. It is to prevent what happened in Syria from spreading into Jordan, Lebanon, Iraq, and Saudi Arabia.

The West is definitely on the defensive in the Middle East. It is defending a cluster of Arab kingdoms of not too modern a vintage against a popular revolutionary movement which Moscow is abetting with arms, agents, and a show of sea power in the Mediterranean.

Even a successful quarantine leaves two-thirds of Europe's oil supply flowing through Egypt and Syria, the two Arab countries where Soviet activity is highest and Soviet control the most advanced.

It is not a happy picture for the West.

Time To Close the Communists' Escape Door

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 8, 1957

Mr. KEATING. Mr. Speaker, 13 alleged Communists have now been given a new lease on freedom as a result of lower Federal court decisions this past week based on the Supreme Court's Yates decision. Had my amendment to the Smith Act—H. R. 8867—been in effect when indictments against the 13 were brought, they would not have been given this extra chance to go free. It is high time we changed to red this green light to freedom for the Reds.

The Supreme Court stated in the Yates decision last June that the term "organize" in the Smith Act refers only to the organization of the Communist Party in this country in 1945, and that charges of conspiracy to organize brought more than 3 years after that, were invalid, due to the running of the statute of limitations.

Two startling instances last week focus attention on the need to clarify the terms of the Smith Act.

In United States against Russo, now pending before the district court in Boston, the Government has now been forced to drop the "organize" part of its count against 5 of the 6 defendants, and has been forced to proceed solely on the allegation of their conspiracy to "teach and advocate" violent overthrow of the Government. The sixth original defendant, Geoffrey Warner White, an alleged Communist leader and organizer, has been set free because the "organize" count against him has had to be dropped.

In a Denver case, the 10th Circuit Court of Appeals has reversed the conviction and ordered a new trial for seven convicted Communists, by ruling that the Government's "organize" charge was invalid under the Supreme Court's Yates ruling. I was this week informed by the Justice Department that they are considering whether the case can be retried under the "advocacy" count alone.

On July 23 of this year I introduced legislation (H. R. 8867) to restate the original intention of Congress by including within the meaning of the term "organize" the continuing organizational activities of the Communist Party. Under terms of my proposal, the needed broad interpretation of this vital word would include the recruiting of new members, the forming of new units, and the regrouping or expansion of existing units.

Although, unfortunately, my proposal can have no retroactive effect on cases already brought by the Government, its enactment would give the Justice Department the latitude it will so sorely need in framing future cases against subversive elements.

As it is now, the Department is like a boxer operating with only one arm in its fight against Communists, because it can only bring one of the two counts it normally uses in prosecuting subversives. As we have seen so clearly this past week, the result can be that some alleged Reds will go scot free if the "organize" charge cannot be effectively brought, and the case against others will be greatly weakened.

Although it is understandable why Congress, snowed under with other pressing legislative matters at the end of a session, has not yet acted on my proposal, I believe it should at least be a first order of business when we reconvene in January.

Until we clarify the meaning of the Smith Act and give it the broad meaning originally envisaged by Congress, the Government will be hindered in its efforts to combat those who would destroy us.

The Need for Young Physicians

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. HENDERSON. Mr. Speaker, we Americans pride ourselves in the great

medical advances that have been made in the past generation, but if there is no one to prescribe and administer the medications, our advances mean little. One of the fears in every household is that of not being able to contact a doctor in time of need. Small communities in southeastern Ohio face just this problem.

As the older physicians leave the scene, there are no new ones to take over the practice. The trend to specialization, the migration of medical practitioners to the cities, and many other factors have all contributed to the shortage of country doctors today.

In my own district, such a situation has arisen and is repeated often throughout the country in many communities. When this happens, there is cause for general concern in the community which must then set about to meet this problem as best it can. The medical profession is helpful, of course. Yet, it must be recognized that medical services for rural areas are often most unfortunately neglected.

The problem in the community of Batesville, in Noble County, Ohio, illustrates this situation. The need for a physician has been called to my attention and the difficulties the community has encountered in its search to find a replacement for its former physician who died recently. Unfortunately, this search has not met with success to date. What this fine village is experiencing may be multiplied many times throughout the country.

The Honorable Samuel K. McConnell, Jr.

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. DAGUE. Mr. Speaker, on yesterday when so many of our colleagues took the occasion to heap well-deserved praise upon our distinguished colleague and fellow Pennsylvanian, SAM MCCONNELL, most of us who are members of his delegation withheld our tribute for fear of overdoing the demonstration.

Let it not be said, however, that we are unappreciative of the prestige his exemplary conduct as a Member of this body has brought to our delegation and to the Keystone State. Rather let it be understood that we have already conveyed to our distinguished associate the affectionate regard and deep appreciation in which we have always held him.

Many of the attainments of this experienced legislator are those enjoyed by a majority of the Members of this House to a more or less high degree; namely, honesty, integrity, dedication to duty, and an undeviating patriotism. SAM, however, possesses the one quality not too frequently in evidence here and that quality is humility, a humility that prevented him from carrying into debate that acrimony, which in so many cases has left wounds slow to heal, and which left him calm and smiling at the end of a legislative bout regardless of whether he lost or won.

All of us are loath to see SAM leave the Congress and yet we know that his decision has been based solely on his conviction that a wider field has been opened to him. As one who by his day-to-day conduct has evidenced an abiding love and respect for his fellowmen we know that he will take to his new field of endeavor the highest of humanitarian concept and that our loss will be more than offset by the contribution he will make in the never-ending battle against cerebral palsy.

We are all mighty fond of you, SAM, and we shall never forget your many kindnesses and the leveling influence your presence has had upon us. Our hearts' desire centers in your future success and in the hope that you will never forget these friends who will continue to make prideful reference to the rewarding years of association with you.

Federal Employees Invention Rights

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. CELLER. Mr. Speaker, as chairman of the House Judiciary Committee, which has jurisdiction over patents I have introduced, by request, legislation intended to secure the rights of Federal employees in inventions which they make while in the employ of the Government of the United States. The purpose of this legislation is twofold. First, it secures patent rights for the employee-inventor, and second, it protects the Government, under certain circumstances, in its free use of those inventions if it desires to use them.

This legislation was prepared by Capt. Marcus B. Finnegan and Richard W. Pogue, and is the result of their research, which is embodied in a legal article entitled "Federal Employee Invention Rights—Time To Legislate"—volume 55, Michigan Law Review, page 903, 1957. In their work they had the help and criticism of the Commissioner of Patents, and the Chief of the Patents Division of the Judge Advocate General, Department of the Army, and the Director of the Patents Legal Division of the Office of Naval Research.

Federal employee invention rights are presently covered by Executive Order 10096, and a literal interpretation of that order requires the Government to take full title from an employee-inventor when his invention is made or developed during working hours or with some contribution by the Government. Such a rule tends to discourage incentive in employees. Government agencies, fortunately, have been administering this rule liberally, so that present practice in the departments permits the employee to have commercial rights in his invention, with royalty-free license in the Government except when the employee is specifically hired to do research and development.

The instant legislation sets up standards to guide Government agencies in dealing equitably with this problem, giving to employees either outright title or commercial rights to the invention, with a royalty-free license to the Government. Where an employee is specifically hired or assigned to duty to make the invention, the Government would, of course, keep full title to the invention.

In introducing this legislation, by request, I hope that wide distribution will be made of the bill so that interested parties may study the measure and submit comments to the Congress.

The Anti-Co-op Campaign Loses Two Big Supporters

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mrs. KNUTSON. Mr. Speaker, the two news service articles speak for themselves and therefore, without comment, I ask permission to insert the reports of August 23, 1957, describing two significant withdrawals from NTEA's anti-co-op campaign:

PICKLE PACKER PULLS SUPPORT FROM ANTI-CO-OP PETITION

OCONTO, WIS. (CNS).—Another businessman has said he doesn't want to be associated with any petition to penalize co-ops through taxation.

L. H. Bond, a director of National Pickle Packers Association and local food processor, has written J. K. Kyle, Wisconsin Association of Cooperatives secretary. Bond says, "I am informed that my name appeared on a document opposing co-ops. I would appreciate your rescinding my name therefrom, and this is your authority to do so."

In June the pickle packers' secretary, W. R. Moore, wrote Congressman JERE COOPER, Democrat, Tennessee, that he wanted immediate hearings to change the tax laws as they affect co-ops. He said he did so in behalf of his members, who pack three-fourths of the Nation's pickles. Evidently Moore's position was never cleared, even with the association's directors.—D. W. A.

BIG DAIRY FIRM DISAVOWS ANTI-CO-OP SUPPORT

PALO ALTO, CALIF. (CNS).—The Borden Co., one of the Nation's largest dairy firms, has urged the Dairy Institute of California to withdraw its support to the anti-co-op drive.

After learning that the State Dairy Institute's letterhead was used in the NTEA attempt to confuse Congress about cooperatives and taxes, G. L. Spencer, general manager of Consumers Cooperative Society here, asked the Borden Co., an institute member, if it "condoned and gave support to this malicious effort." Borden is a supplier of the Palo Alto co-op's stores.

A Borden executive assured Spencer that the company had not approved the institute action and would urge the institute to rescind it.

Departmental Hypocrisy

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. BOW. Mr. Speaker, less than 3 months ago certain individuals in the executive department were carrying on a campaign of innuendo against Sp3c. William S. Girard, in order to divert public attention from the decision to surrender him to Japanese justice. Even though Girard's commanding officer had certified that the incident which has subjected him to criminal charges by the Japanese occurred while Girard was on duty, and 4 superior officers in successive reviews all confirmed this certificate, and the Government in 2 courts conceded he was on duty yet the General Counsel of the Defense Department by public announcement and by affidavit sought to negate all these certificates and admissions. General Counsel Dechert's affidavit, which the Solicitor General offered in a sealed envelope to the Supreme Court in a last-ditch effort to influence its decision, contained a recitation of hearsay testimony as to the occurrence involving Girard and practically tried and convicted him without a hearing.

With this record of public condemnation behind it, the Defense Department now sends the Assistant Judge Advocate General of the Army, Brig. Gen. Charles Decker, to Japan to advise Girard, according to news reports. It is to be hoped that his advice to Girard will be better and more to the interest of the constitutional rights of American servicemen, than the advice given to our representative on the joint committee to turn Girard over to a foreign court and deprive him of his constitutional protection.

I note that two staff members from Senate offices are also in Japan attending this trial. If these gentlemen stay through the scheduled sessions to the end, they will have a nice long vacation in Japan, for after the opening session on Monday, the court recessed the trial to September 6, when it will inspect the scene of the accident. Originally four sessions were announced for September and another in October, but it is now intimated that final decision may not be announced until late October or November. If these men do not observe every session, what will they have learned?

The protocol amending article XVII of the administrative agreement with Japan provides that a United States serviceman, prosecuted by Japan, shall be entitled to a prompt and speedy trial. The record shows that no American has ever had the benefit of this provision and that our authorities apparently have never objected to the breaking of this agreement. In keeping with the policy of lauding foreign justice as against our system of law, this and other violations of the agreement have been condoned. In fact, in eagerness to excuse the failure of the Japanese in one case to advise an accused of the charges against him before the opening of his trial, a zealous JAG officer said that this violation was excused by another violation. The trial was so long drawn out that the accused still had time to prepare his defense after opening day.

This Is Not Campaign Talk

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MULTER. Mr. Speaker, unfortunately, American political history indicates that campaign time is not the time to try to talk sense to our electorate.

With no election in the offing and no one subject to the accusation of stirring up fears for the sake of political gain, we should carefully reappraise the matter of hydrogen and atomic bomb testing.

It is with that in mind, that I commend to the attention of our colleagues the following item that appeared in the Christian Science Monitor of August 26, 1957:

DANGER BY 1970?—FALLOUT ISSUE SHARPENED
(By Robert C. Cowen)

The controversy over the safety of atomic weapons tests has been sharpened by three different expert reports which, taken together, have significantly raised previous estimates of the danger from the radioactive fallout produced by those tests.

These reports, which have appeared almost simultaneously, come from the Johns Hopkins University, a press conference called at a biologists meeting in California, and from the congressional Joint Committee on Atomic Energy.

They say respectively that the safe limit for radiation exposure set a year ago by the National Academy of Science is too high; that the radioactivity from fallout may exceed a dangerous level by 1970 if present rates of weapons testing are continued; and that there is no such thing as a "clean" bomb.

ASSURANCES QUERIED

Stated bluntly, these conclusions seem stark indeed. They need to be put into perspective where they are softened somewhat by the uncertainties, reservations, and qualifications by which they are hedged.

Nevertheless, they call into serious question the official assurances of the United States Atomic Energy Commission that the atomic tests are, and will continue to be, no significant danger to mankind.

Thus the statement issued by the congressional joint committee said in part:

"Pending a resolution of the differences and uncertainties it would appear that the consequencies of further testing over the next generations at the level of the past 5 years could constitute a hazard to the world's population. If the level of future testing rises, then the hazard could be greater and arrive sonner."

ESTIMATES TENTATIVE

This statement was issued as a 6,000-word advance summary of the report on hearings the committee held last June on the question of the extent and hazard of radioactive fallout.

The differences and uncertainties to which the committee refers come from the fact that natural scientists do not yet have a satisfactory quantitive understanding of the biological effects of atomic radiations.

Thus they cannot give positive estimates of the exact degree of fallout hazard nor can they fix an absolute level below which radiation from fallout can be considered safe on a worldwide basis.

But despite the uncertainties and differences of expert opinion, biologists can set a range of radiation levels that, to the best of present knowledge, would be the maximum considered safe for the world.

In the past, the Atomic Energy Commission has given assurance that fallout from atomic tests was well within this safe range. The tenor of the congressional report is that we may be much closer to the upper limit of that range than has been admitted.

"CLEAN" BOMB DENIED

What is more, the report notes that "there is no such thing as an absolutely 'clean' weapon," although fallout can be greatly reduced from that of present bombs. This casts doubt on the hopes raised during the hearings that clean bombs could be made which would eliminate the fallout problem by removing the fallout itself.

Meanwhile, at Palo Alto, Calif., a group of biologists warned that radioactive fallout may exceed safe limits by 1970 at the present rate of testing. Led by Dr. H. Bentley Glass of the Johns Hopkins University, the press conference was held during a meeting of the American Institute of Biological Science.

Dr. Glass estimated that fallout from British, United States, and Soviet tests now is spreading 10 million tons of radioactive material over the world every year. This is a higher rate than has been estimated before.

RADIATION LEVEL HIT

Dr. Curtis L. Newcombe further explained that it is calculated that some 50 million tons of fallout material have been released so far. When the figure reaches 70 million tons, he said, a dangerous worldwide level may be reached. In some regions, a dangerous level may have been reached already, he added.

Further emphasis was given to this warning by a report released at Baltimore by Dr. Michael A. Bender, a colleague of Dr. Glass at Johns Hopkins. Dr. Bender referred to a radiation level set a year ago by the National Academy of Sciences at the safe, average, accumulated exposure allowable for human reproductive organs over a 30-year period.

This figure was 10 roentgens. It was thought to be only a fraction of what would really be a dangerous dosage. Dr. Bender said that laboratory experiments now indicate that this figure actually is too large, perhaps two to three times too large.

The 10 roentgens "safe" level was part of a report that President Eisenhower has called the official reference for the administration on the effects of radiation. Dr. Bender's report shows how seriously that reference now is being questioned.

German Recovery—And Elections

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. CELLER. Mr. Speaker, the Western Powers are confronted with the serious and extreme dilemma of Europe.

There is not a single European power that can cope with the Soviet empire. However, in combination, the European powers are more than a match for Russia. These European powers are endeavoring now, under the tutelage of the United States, to weld themselves into a combination, witness Euratom, the common European market, called Euromarket, and the Coal and Iron Community. All this constitutes a decided push toward European unity. Indeed, properly combined, these European powers have a greater population, a greater developed industrial capacity, and much higher technical skill than the Russians. If these European nations are divided and unable to take common action, they can, indeed, be cut to pieces.

No chain is stronger than its weakest link. We must strive to make every one of these European nations strong—the stronger the better. We must, in particular, make Germany strong, despite the fact that she has been our erstwhile enemy.

Germany occupies a most strategic position in Europe. We cannot afford, for our own protection, to leave any stone unturned to make Germany the strongest bastion of the Western Powers.

If a third war should come upon us, no one can foretell the result. The period that would follow would be horrendous and terrible. In all likelihood, the Communist empire would fall apart. Most empires built, in turn, by revolution collapse when involved in a general war. Napoleon discovered this, to his sorrow; so did Hitler. Such a war would be Russia against the world. Russia would lose. But would Europe be saved? That is far from certain.

This dilemma of Europe is also the dilemma of the United States. If Russia would win and Western Europe were to fall permanently under Russian sway, says A. A. Berle, Jr., in his Tides of Crisis, "the United States would be a lonely country, indeed."

What can we do to make Germany stronger? Must we not see to it that those personalities like Conrad Adenauer remain in power? He has been in part the mastermind of the miracle of German recovery. There are evidences on all sides of the remarkable economic advance of the Federal Republic. After the war the German economy presented a picture of absolute chaos. Its currency was unstable, its cities were in ruins; 500 million cubic yards of rubble had to be removed; railroad and motor traffic had shrunk to a mere fraction of former volume; the German merchant marine no longer existed; and every day found thousands of refugees pouring into Western Germany from pre-Hitler German territories in the east. The dismantling of the industrial plants for reparations had further reduced the productive capacity. There was a dreadful breakdown in all moral standards.

But a combination of intelligent economic planning, with the determination of all citizens to work with might and main, has brought about the great miracle of German recovery. Not only to Conrad Adenauer, the Chancellor, but to the Minister of Economics, Ludwig Erhard, belongs much of the credit for bringing Germany out of financial and economic confusion and chaos into financial and economic strength and stability.

There is an interesting article about this recovery by Hans Otto Wesemann in the Atlantic Monthly of March 1957, and I herewith submit a paragraph therefrom:

> Hundreds of thousands of Germans have justified this faith in their initiative, each in his own fashion. Most impressive of all, perhaps, were the accomplishments of those who fled across the "green border" from the Soviet zone of occupation, bringing with them nothing but a few plans or drawings, and the knowledge of how to build up a business. Here and there they found a town or village which was willing to place idle land or a heap of ruins at their disposal, and perhaps aided them to start anew by extending credit to them. They traveled on freight trains or bicycles all over the country, digging up machinery here and there, starting up production on the most modest basis, then plowing their profits back into expansion. The apparent mystery of this development is clarified by an incident that took place in the British sector of Berlin, where shortly after the end of the war a Soviet officer had directed the total dismantling of a world-famous electronics plant. A few years later he visited the same plant, to find thousands of workers employed at thousands of machines. "We made a mistake," he commented. "We should not have removed the machines, but the people." (It should be kept in mind, of course, that after 1949 the Western Powers reversed their position on restricting German industry and began to encourage the expansion of production.)

Recently, the three major Western Powers and West Germany issued the now famous Berlin Declaration. Here are the principal points of the declaration: First, a European settlement depends on the free election of a new all-German government. Second, the West has never required as a condition of reunification that a reunited Germany join the North Atlantic Treaty Organization. If the German people should choose NATO, the West would offer assurances to the Soviet Union. Third, initial steps in the field of disarmament should lead to a comprehensive agreement which presupposes a prior solution of the problems of unification. The West does not intend to enter into any agreement on disarmament which would prejudice the reunification of Germany.

This declaration was timed as a means of helping Chancellor Adenauer and his colleagues in the elections to be held this coming month. I think it will have a good effect on the elections and Adenauer will be reelected. The opposition is headed by Erich Ollenhauer, chairman of the Social Democrats. Lacking issues of a domestic nature, Ollenhauer has seized upon this Berlin declaration and has called it disappointing. Ollenhauer believes that this declaration has hurt the German chances of unification of East and West Germany. Ollenhauer and the Social Democrats are certain that unity can be achieved only if the Bonn government withdraws from the western alliance and the Bonn government negotiates independently with Moscow. Thus, our ace in the hole is Adenauer, and certainly not Ollenhauer. Small wonder, therefore, that as another boost to Adenauer the State Department recently stated that the Eisenhower administration currently had in mind an approach rather than a concrete plan for disposing of enemy assets seized in World War II.

President Eisenhower has issued a White House statement promising eventually a solution of the problem of alien enemy assets. He assured Adenauer and the world, in fact, that the solution would be in accordance with the principles governing the comity of nations. The administration stated that its aim was to restore "the historic American policy of maintaining the sanctity of private property, even in wartime."

If all this is true the many conflicting legal and practical issues which have bedeviled the problem for more than a score of years will be reconciled. This problem involves the fate of nearly $600 million worth of assets, primarily German, but in part Japanese. These assets were seized by the American Government during the war. There is also involved American counterclaims for war damages. There is likewise involved the international agreements under which the Allied Nations, including the United States, pledged themselves to retain the seized assets in lieu of reparations, while the German government undertook to compensate its nationals for such assets Theses agreements have complicated the problem these many years.

The administration proposes to complete the sale of the seized properties which are expected to bring some $541 million for the German assets and some $54 million for the Japanese assets. The administration and President Eisenhower have promised to pay in full all legitimate American war claims. This, of course, the administration assumes will remove one argument for holding on further to the assets. Thereafter, as previously agreed upon, German and Japanese individuals will receive up to $10,000 in compensation; the balance of the assets will be prorated among the remaining owners, both individuals and corporations.

The New York Times in an editorial emphasized these observations and applauded the pledges of the administration.

The solution suggested is in line with the settlement of the problem made with Italy concerning seized Italian assets. This settlement was made in 1947.

According to administration sources, this action, when consummated, might well be deemed an act of grace. The

administration apparently hopes, also, that this pledge will have a desirable effect upon the electorate in West Germany and will give to Adenauer's candidacy a genuine lilt and lift. Undoubtedly President Eisenhower promised Chancellor Adenauer a declaration of this sort when the Chancellor recently visited the White House.

It is interesting to note that in the past, particularly under Chancellor Bismarck, the German political and military strategists claimed that the cornerstone of Germany's foreign policy should be "a reinsurance treaty" with Russia. Now the political strategists of West Germany under Chancellor Adenauer believe that the linchpin of the Federal Republic's strength is "a reinsurance treaty" with NATO and the western allies. I believe by the end of the year the Federal Republic will have become the most important continental member of NATO. West Germany is bound to dominate the "Little Europe" of the Coal and Steel Community, Euratom, and the Euromarket. West Germany will be able to exert a great influence on United States policy. If developed and used properly, Germany's great miracle of recovery, with a remarkable Adenauer victory, could be used by the United States and the western allies to deal with and cut down the truculence of Russia.

Mr. Khrushchev, wise and foxy, knows of the strength in Adenauer and timed his recent visit to East Germany in an all-out effort to defeat Adenauer in the forthcoming German elections. It is part of the Soviet campaign to wreck the North Atlantic Alliance. Fortunately, his loudly hailed demonstrations of so-called indestructible Soviet and East German friendship were deemed a flop. Surrounded by steel-helmeted members of the East German Red Army—creation of the Soviets—Khrushchev denounced both Chancellor Adenauer and the United States for rearming West Germany. The language of his attack against us was most vitriolic. He sounded off in a way to help, indirectly, the opponents of Adenauer, namely, those led by Ollenhauer. That visit of Khrushchev to East Berlin and East Germany is clearest justification of our more than friendly attitude toward Adenauer and our rooting for him for reelection.

It may be that this kind of intervention in the politics of another country is very new to us. We get a little embarrassed when we are reminded of it. But we are now a world power and it is essential for us to express keen interest in certain elections. Frankly, we have been known to favor Latin American claimants for offices for many years. Such intervention, therefore, is not entirely unprecedented. Frankly, it would be insane not to offset and counterbalance the effects of Khrushchev's visit to East Berlin.

The Adenauer story is like a romance. It is the country hicktown boy who made good. He first saw Paris and Rome and Washington when he was 75 years old. For 70 years his was the life of mediocrity in and around Cologne. He was its town councilor. He arose to lord mayor and remained such 16 years. The Nazis deposed him. He remained in the political background during the Hitler regime, was twice arrested by his hoodlums and twice set free.

In 1945 American occupation forces rediscovered him and again set him up as lord mayor of Cologne.

He became chairman of the biggest branch of the Christian Democratic Union and in September 1949 he formed the first government with a majority of two votes in the Bundestag. He has been Chancellor ever since.

His has been a consistent policy of reconciliation with the West.

As was stated by Terence Prittee recently:

> He preserved in the face of the occupiers of his country a dignity that was virtually unique, thus marking himself out as the best man to deal with them on behalf of his fellow Germans. In them he inspired confidence alike by his refusal to complain about material discomforts and by his steely insistence on getting on with the tasks of political organization. Work and responsibility were making him into a younger, healthier man.
>
> He was given a unique chance by the cold war. This put him on the path which the Western Powers were bound to tread—that of consolidating a Western Germany of 50 million people politically, economically, and spiritually and incorporating it in a Western defense system and in a Europe in process of unification. The milestones along this path have been the Petersberg agreement (for converting the Allied Military Government into a High Commission which administered under the terms of the Occupation Statute), the entry of West Germany into the Coal and Steel Community and the Council of Europe, the Bonn and Paris agreements which conferred sovereignty and the right to rearm, and German entry into NATO and WEU.

An exasperated comment of a political opponent of Chancellor Adenauer as "Der Alte's" seeming indestructibility was, "at his age men never die."

Now at 81 he campaigns like one at 41. He dominates the present campaign with his amazing personality, whistlestopping with a 30-man party in a special campaign train—not unlike the Eisenhower or Stevenson technique—the candidate Adenauer warned that his rivals would weaken ties with the United States and the West so that we Germans would cease to exist as a free people.

Also I have naught but praise for the efforts afoot to reestablish diplomatic relations between West Germany and Israel. I understand that the Chancellor is sympathetic to this idea and desires to further relations of peace and accord with Israel.

The Premier of Israel David Ben-Gurion is desirous of such a proposal being fulfilled. He recently said in the Israel Parliament that the Germany of today is not the same country as that of the Nazi regime. He pointed out that despite the skeptics, Bonn had scrupulously observed its reparations agreements both with respect to Israel and to the Jews in general. Germany is fulfilling an important role in a united Europe, he pointed out, and Israel must look forward to establishing relations with that entire region, particularly since the Jewish State is planning to embark on gigantic projects which are well beyond the strength of Israel and world Jewry alone.

Indeed we do well to support "Der Alte."

American Bar Association Endorses Arbitration Bill

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. GARMATZ. Mr. Speaker, it is highly gratifying to advise the Members of the House of Representatives that most favorable action on the arbitration bill, H. R. 7577, which I introduced, has been taken by the American Bar Association. This nationwide organization of lawyers at its recent meeting gave attention to the provisions of my bill upon the convening of the house of delegates, the policymaking body of the American bar.

Previously the association's committee on arbitration and maritime law had given thorough study to the provisions of H. R. 7577 and had recommended favorable action. The board of governors of the association thereupon approved the recommendation after which the bill was placed on the agenda of the house of delegates. Upon it being reached, the recommendation was unanimously adopted and favorable action urged by the Congress of the United States.

I submit this information for the benefit of my fellow Members in the hope that before the next session they will take occasion to study the provisions of this bill and will subsequently give their support to it.

The statement concerning the action to which I have referred has been published in the American Bar News, volume 2, No. 8, August 15, 1957, page 3, as follows:

SUMMARY OF HOUSE OF DELEGATES ACTIONS IN NEW YORK

> Maritime arbitration: Upon board of governors recommendation, the house adopted a resolution by the standing committee on admiralty and maritime law calling for ABA approval of H. R. 7577, or a similar bill. The measure would remedy present jurisdictional and procedural defects in the United States Arbitration Act. The main provisions of the pending bill seek to give statutory force to judicially recognized standards governing the selection and conduct of arbitrators, to make the statute of limitations applicable in arbitration proceedings, and to provide a means of correcting errors of law in awards in maritime arbitrations.

Proxmire Winner in Wisconsin

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 28, 1957

Mr. EVINS. Mr. Speaker, following the news of the election on yesterday in Wisconsin, I ask unanimous consent that there be reproduced in the appendix of the RECORD an article by Mr. Godfrey Sperling, Jr., of the Christian Science

Monitor, dated August 19, last. Mr. Sperling, with considerable accuracy, analyzed the situation in Wisconsin and paid a fine tribute to the senior Senator from Tennessee, Senator KEFAUVER, who campaigned in his behalf. I believe the article of current interest and should be reproduced in the RECORD.

Mr. Sperling's article follows:

[From the Christian Science Monitor of August 19, 1957]

"BATTER UP" IN WISCONSIN

(By Godfrey Sperling, Jr.)

MILWAUKEE.—A letter to the editor in the Milwaukee Journal queries in a meaningful vein: "Is it too late to persuade Kohler and PROXMIRE to withdraw in favor of Red Schoendienst?"

The Senate race seems almost forgotten as the Braves lead the pack. And into this climate of baseball hysteria, which complacent easterners who are losing their ball clubs could hardly believe, steps a clean-up hitter in his own rights: Senator ESTES KEFAUVER (Democrat) of Tennessee.

Senator KEFAUVER's influence with the voters here is such that to many Democrats he is "our Democratic Senator." He can go into Racine and in each instance tell the people how glad he is to come to "Raisin." And this normally unforgivable political faux pas decreases his popularity not a perceptible bit. He can mouth near-nothings as he moves among the Wisconsin crowds, yet he evokes goodwill wherever he goes.

"Could it be," the question is being asked here, "could it be that ESTES's popularity will rub off onto PROXMIRE?"

Underdog BILL PROXMIRE, of course, needs all the outside help he can muster if he is to defeat former Gov. Walter J. Kohler in the August 27 race for the senatorial seat formerly held by Joseph R. McCarthy. Gov. Mennen G. Williams came in from Michigan for a day of campaigning here. And Senator JOHN F. KENNEDY (Democrat) of Massachusetts will be in for a day this week.

KEFAUVER TOURS

Slugger KEFAUVER's batting average in Wisconsin hardly needs a recap. In 1952 he won by a landslide over two favorite sons who were pledged to President Truman in the presidential primary. In 1956 no opponent, including Adlai Stevenson, had the indiscretion to challenge ESTES in his second home State.

And, until the big city votes started to pour in, Senator KEFAUVER was splitting 50–50 with President Eisenhower in the votes cast in the 1956 presidential primary. This, of course, was not a direct contest. And, normally, a great many more people vote Republican in this State than Democrat. So even the 44-percent slice of the vote, which eventually went to Senator KEFAUVER, looked quite impressive. And his even greater hold on the farm vote once again showed how strong the Senator is in the rural areas of the Midwest.

Senator KEFAUVER now has come in for a 3-day tour, a banquet, and TV appearance in Milwaukee on the first night, a speech and handshaking at Watertown, Milwaukee, and Sheboygan the next day and evening, and a sweep into Westby and Eau Claire on the final day.

What can Senator KEFAUVER do in 3 days? The possible political impact can be sensed from counting the Senator's previous visits to Wisconsin. Prior to 1952 he was in for a Jefferson-Jackson banquet in 1951. Then he was here 4 days in 1952; in 1953 it was 3 days; 1954, none; 1955, one and a half days; and 1956, 6 days.

POLL SCRUTINIZED

Thus, it might be said that ESTES has built his political fortress here in less than 20 days.

So in 3 fast-moving days of handshaking here it is conceivable that the Tennessean could give PROXMIRE a sizable boost.

This, of course, is predicated on the unprovable assumption that political popularity is transferable. Swinger PROXMIRE, who has gone to bat 3 times now in this State without a hit (3 gubernatorial defeats in a row), naturally can only hope that ESTES somehow will be able to reach across and add some batting power to the PROXMIRE cause.

When questioned on his presidential ambitions, Senator KEFAUVER said he had to focus his efforts on his own 1960 Senate race this time. But he would not rule out the possibility of entering the presidential primaries that year. He had noted the Gallup poll which showed him leading all Democratic candidates in popularity. He said it was very interesting.

The Gallup poll showed a margin for Senator KEFAUVER of 6 percent over Senator KENNEDY, 21 percent over Senator LYNDON B. JOHNSON of Texas, 23 percent over Gov. Frank G. Clement of Tennessee, 24 percent over Senator STUART SYMINGTON of Missouri, and Senator H. HUMPHREY, 25 percent over Governor Williams, and 27 percent over Gov. Edmund S. Muskie of Maine.

But what the Galup poll did not show was the even greater margin that Senator KEFAUVER probably holds over the others in the farm States. Senator KEFAUVER is undefeated in the Midwest primaries he has entered. No one will forget his upset victory over Mr. Stevenson in Minnesota. And, despite a waning popularity in his home State of Tennessee which showed up in the presidential election, Senator KEFAUVER materially strengthened the Democratic ticket in the Midwest farm States.

FORMIDABLE FOE

The slogan to prospective challengers should be, "Remember Minnesota." A rising presidential aspirant could wreck his entire political future in a battle with Senator KEFAUVER on ESTES' chosen home ground.

With election apathy plus baseball madness holding the stage here, Slugger KEFAUVER (who can draw crowds despite this general political inattention) may be able to do the job expected of him. Meanwhile, Mr. PROXMIRE continues his campaigning stint that has gone on almost continuously since 1952. This time, despite forecasts to the contrary, he's hoping that somehow he will get on base.

The Real Story of Oregon Labor

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. ULLMAN. Mr. Speaker, the real story of Oregon labor has always been one of public service. Union members in my home State have long demonstrated their willingness to cooperate in all community endeavors.

Just one more example of the community spirit of Oregon unions was their participation in the highly successful building bee for the Oregon Museum of Science and Industry. I think Oregon unions are to be congratulated for their participation in this event and for their other noteworthy community projects. I ask that an article appearing in the August 23 edition of the Oregon Labor Press, which describes the participation of Oregon unions in the building bee as well as some of their other community activities, be printed in the RECORD.

The article follows:

PARDON US WHILE WE BRAG ABOUT THE UNIONS OF OREGON

"Take a look. Now you can see what the unions of Oregon are really like!"

This was the comment of an observer at last Saturday's fabulously successful building bee for the Oregon Museum of Science and Industry. More than 200 union bricklayers and 60 hodcarriers laid over 100,000 units of masonry to raise the walls of the new museum in a single day. Value of the time and skill they donated was more than $50,000—not to mention the free services of union meatcutters, butchers, cannery workers, and musicians who provided food and entertainment for the 11-hour masonry marathon. (Other unions, incidentally, have contributed more than $5,000 in cash to the OMSI project.)

It was a spectacular example of generous public service by unions and their members. And because it was spectacular, the building bee received full coverage in the daily press, television, and radio. One of the papers quoted a spectator's remark that "this is the real story of Portland labor."

And that is the point of this editorial. The real story of organized labor in Portland and Oregon is public service.

In the normal course of events, labor seeks no special credit or publicity for its consistent, year-around program of public service. But the headlines lately have been black with the sins of a few New York goons who call themselves labor leaders. Perhaps some innocent people are getting the idea that they're typical. So forgive us if we brag a bit about the unions of Oregon:

Community services: Oregon unions have given strong support to their local United Funds, Community Chests, and public-service agencies. And now this support is expanded by the creation of local AFL–CIO community service committees whose purpose is to serve each community in a great variety of practical ways.

Scholarships: The Oregon State Labor Council's annual college scholarship program, now in its 11th year, has given a total of 36 scholarships of $500 each and 34 lesser scholarships to Oregon high school seniors.

YWCA: Oregon unions raised $16,000 for the new YWCA building in Portland.

Youth activities: No one has ever attempted to count the amount of time and money given by Oregon unions to the PAL Club, to junior baseball and bowling teams, to the Boy and Girl Scouts and to summer camps for youngsters.

Public service: Oregon is probably unique in the number of union members who serve their State and local governments as unpaid members of State commissions, school boards, city councils, port commissions, civil-service commissions, and various county and civic boards and committees. Many, too, are leaders in their local community clubs, PTA's, church, lodge, and service groups.

Help for individuals: Just 3 weeks ago, 400 members of Machinists Local No. 63 worked overtime at the Iron Fireman plant and gave their paychecks (totaling about $5,000) to a fellow member who had lost his children and his home in a tragic fire.

Last March, building tradesmen volunteered a Saturday's work to add a new room to the home of a polio victim.

Last month, machinists of the Portland area provided a guide dog for a sightless student who will enter Lewis and Clark College this fall.

Health and safety: The contributions of Oregon unions to public health and safety are, literally, too numerous to be listed here. Especially notable are the job safety program of Portland building trades unions and

the traffic safety campaign sponsored by the Oregon State Labor Council during the Christmas-New Year holiday season last year.

Good citizenship: Through their register-and-vote campaigns, the unions of Oregon have emphasized their strong belief that good citizenship is a prime requisite of good unionism. And through their legislative representatives at Salem, they have worked for legislation to benefit the State and its citizens as a whole—not just for laws to benefit unions alone. (What other group of lobbyists can make this claim?)

With these few examples, we have barely scratched the surface in describing the service of Oregon unions to their State and community. What we're trying to say is very simple:

This is the real story of Oregon labor.

FTC Action Against Chainstores

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. MULTER. Mr. Speaker, on August 22, 1957, the Appendix of the RECORD carried my remarks of August 15, 1957, with reference to the Federal Trade Commission proceeding against the Giant Stores. In those comments I erroneously referred to the fact that the complaint against that company had been dismissed by the FTC. I should have said that the hearing examiner had recommended that the complaint be dismissed, and that the matter is awaiting final decision by the Commission.

I certainly hope that the Commission will overrule the examiner and refuse to dismiss the proceeding.

In my opinion, it is being hypertechnical to pretend that because a retail merchant, big or small, engages in a minuscule operation of meat preparation, it can thereby avoid regulation by the FTC. Such a decision flies in the face of all logic and reason as well as the clear congressional intent as expressed in the law.

In this case, the hearing examiner recommends that the proceeding be dismissed on the ground that only the Department of Agriculture has jurisdiction over this retail outlet. With an operation running into millions and millions of dollars through some 36 supermarkets, and with the finding that the percentage of meat preparation is minuscule, the examiner nevertheless says that because of that meat preparation operation, the Federal Trade Commission has no jurisdiction and the company has subjected itself only to regulation under the Packers Act. If that is the law, then General Motors, or any other big company, need only put in a thousand-dollar operation for the preparation of meat and the Federal Trade Commission will lose jurisdiction over it.

I cannot believe that the law is entitled to any such ridiculous interpretation, but, if it is, we had better change the law and do it quickly.

If the law is subject to any such absurd interpretation, the FTC should be the first to recommend to the Congress that the law be corrected.

Highlights of the Liberation of the Soviet-Enslaved Nations

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks I am enclosing an article of mine that appeared in the June 1957 issue of the magazine Lithuanian Days.

The article follows:

HIGHLIGHTS OF THE LIBERATION OF THE SOVIET-ENSLAVED NATIONS

(By HUGH SCOTT, Representative from Pennsylvania)

After the presidential and congressional elections last fall, it became known from election results in the predominantly American-Lithuanian-inhabited polling districts that the Republican nominee for the high offices of the President and Vice President, as well as for both Houses of the Congress, had received overwhelming support there.

Draugas, commenting on election results, observed that the Republicans ought to be deeply satisfied with the way the American-Lithuanians had voted in the Chicago, the largest American-Lithuanian settlement in the United States, because as Chicago goes, so goes all country.

Time magazine did not fail either to note the pro-Republican trend in what it called Little Lithuania; namely, the American-Lithuanian-inhabited wards in Chicago.

If this is so, our Lithuanian voters must have approved wholeheartedly of the 1956 Republican platform adopted in San Francisco last summer and serving as a guide for the President, the Vice President, the Senators, and the Congressmen.

Let us briefly recall its highlights, as far as it has to do with the liberation of the Soviet-enslaved nations. It is self-understood, of course, that the Lithuanian problem is identical with the Latvian and with the Estonian problem. Solutions must develop in the same manner and at the same time.

"We rededicate ourselves to the pursuit of a just peace and the defense of human liberty and national independence," the platform reads. "We shall continue to seek * * * the liberation of the satellite states—Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Latvia, Estonia, and other once-free countries now behind the Iron Curtain. The Republican Party stands firmly with the peoples of those countries in their just quest for freedom. We are confident that our peaceful purposes, resolutely pursued, will finally restore national independence to oppressed peoples and nations."

And with obvious reference to the uprisings in East Germany in 1955 and Poland in 1956, the platform goes on: "For the first time, we see positive evidence that forces of freedom and liberation will inevitably prevail if the free nations maintain their strength, unity, and resolution."

Hardly were these words spelled out when the revolt broke out in Hungary and shook the Soviet Empire to its very depths. Although the revolt was mercilessly crushed by a ruthless Soviet military machine, it is as sure as that the day follows the night that there will be more spontaneous revolts which in the unfolding of history will ultimately bring freedom to all the captive peoples, including the Lithuanians, the Latvians, and the Estonians.

In drafting the above liberation principles as a constituent part of the 1956 platform, the executive committee of the Republican National Committee, of which this writer was a member at that time (and still is), was guided by what President Eisenhower had said in Cincinnati, on September 22, 1953:

"These principles demand that we use every political, every economic, every psychological tactic to see that the liberating spirit, in the nations conquered by communism, shall never perish. Thus, we shall help each captive nation to maintain an outward strain against the Moscow bond. The lands closed in behind the Iron Curtain will seethe with discontent; their peoples, not servants under the Soviet master, but ardent patriots yearning to be free again. Nothing is so damaging to a tyrant's war machine as the steadfast spirit of an unhappy people."

There was another more recent statement by President Eisenhower confirming his views expressed in 1953, on which the executive committee of the Republican National Committee relied in drafting the 1956 platform.

"The free world," President Eisenhower said in a message to the American Friends of Captive Nations rally held in New York on May 1956, "has not been reconciled to the fate of captive peoples behind the Iron Curtain. We shall keep these wrongs and injustices at the forefront of human consciousness until they are corrected."

This message was one of the reasons why the 1956 platform did not refer at all to any Lithuanian, Latvian, and Estonian Soviet Republics; it spoke of Soviet satellites, a term loosely applied to independent states which closely follow their master's dictates. Such is the case with Poland, Czechoslovakia, East Germany, and other European states in the Soviet orbit.

There were many more similar pronouncements made by various influential persons and organizations which the executive committee of the Republican National Committee took into serious consideration while drafting the 1956 platform.

The statement and the accompanying resolution which I submitted for the American Friends of Captive Nations to the Republican platform committee deserves special attention. The reasons are twofold:

Firstly, there was contained a program of certain concrete steps toward the liberation of the captive peoples; secondly, the membership of the American Friends of Captive Nations is distinguished and well represents a cross section of American public opinion. As an illustration, its members include Senators MUNDT, DOUGLAS, and KENNEDY. Senator KNOWLAND likewise approved the statement and the resolution submitted in San Francisco and addressed the rally in New York: Representatives Anfuso, Bentley, Dodd, Judd, Murray, McCarthy, Poling, St. George, Tumulty, and myself; the president of the International Rescue Committee Angier Biddle Duke, and a host of renowned professors, writers, journalists, and leaders in religious and civic life. The Reverend Monsignor Balkunas represented the fine American-Lithuanian organization.

The general interest in AFCN activities was well attested to by the fact that its rally in New York was sponsored by the Veterans of Foreign Wars, the Catholic War Veterans, the Jewish War Veterans, and leading organizations of American citizens from the captive nations. President Eisenhower, Vice President NIXON, and many more political leaders sent their encouraging message.

True to its purpose of coordinating the efforts aimed at the information of the American people concerning the tragic plight of the Communist-enslaved nations and of suggesting concrete measures to achieve this purpose, the AFCN's statement and resolution boiled down to the following: (1) To declare our solidarity with the captive nations; (2) to make their liberation the first and major subject on the agenda of any negotiations with the Soviets; (3) to refuse to relax trade restrictions, or to accept the so-called cultural delegations or to agree to any security pacts, until freedom has been accorded to the enslaved peoples.

Today, as in San Francisco at the Republican convention, I fully subscribe to the foregoing suggestions. I firmly believe that mere statements of our desire to see the captive nations liberated is not enough. We must prove that this is our foremost goal through a dynamic foreign policy. Liberation of captive nations must not be forgotten for a moment, in all of our negotiations with the Soviets. It is certain that the rulers of the Kremlin never lose sight of their objectives.

Perhaps we may, someday, agree upon a demilitarized zone in Europe, but we must never agree to it if the Baltic States are included in the demilitarized zone and are not afforded an opportunity to hold free elections and to decide for themselves their own way of life.

It would be unrealistic to assume that the United States will or should declare war in pursuance of its policies of liberation. Any future thermonuclear war would be so terrible and would cause so many millions of deaths among all nations and particularly in the immediate area of combat actions that the question justly arises whether there would be anyone left to liberate after the victorious freedom forces took possession of the territory to be liberated. So the thermonuclear way is not the way to liberation.

Hence, we are forced to seek liberation by peaceful means only. We can, however, widen the area of freedom by refusing to recognize the finality of the present territorial arrangement in Europe. This is not an empty dream. Poland seems to have won peacefully at least a degree of limited freedom; perhaps she will be able to maintain it. Hungary had to resort to a revolt, and for a brief period of time she managed to get complete freedom. Another spark may start a new revolt somewhere, and possibly with greater and lasting success. There is a great ferment and the Soviet can never rest easy where its suppression continues.

Above all we must never bargain with the Soviets for the price of freedom of the Baltic peoples and of all the captive peoples of the Soviet regime. We must keep on hammering, through our communication outlets upon the idea of eventual liberation. We must, however, be careful not to incite to premature uprisings. We must wait: no dictatorship in history has been permanent. They breed the germs of their own ultimate disintegration.

The present administration has shown by its deeds that it had not abandoned the liberation principles embodied in the 1956 Republican platform. It has furnished sufficient proofs that it does not share the views of those pessimists who believe that there is a finality, for better or for worse, about what has now occurred in Eastern Europe. (Former United States Ambassador to Moscow George F. Kennan). The United States representatives to the U. N. have been constantly on the alert for a good chance to remind the delegates of other states, including the Soviet Union, about the plight of the Baltic Nations.

As for both Houses of Congress, their unwavering attitude was clearly demonstrated on the occasion of Lithuanian Independence Day this year. Never before have so many Senators and Representatives taken the floor to denounce the enslavement to Lithuania and express hopes that the day of her liberation will not be far away. The CONGRESSIONAL RECORD of February 14, 1957, is an eloquent testimony to this effect.

The executive committee of the Republican National Committee has already begun discussing the strategy for the 1958 congressional and gubernatorial elections. It is a sure bet that the Republican candidates will express themselves next year with greater vigor than ever before in favor of liberation policies as stated in the 1956 Republican platform. We do not share the pessimistic spirit of surrender of many in the party of opposition, whose regrettable policies failed in the time of their testing.

Federal Funds for Education

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. ELLIOTT. Mr. Speaker, Alabama, along with most other States, is faced with great need in the field of education. The need is for classrooms, for more highly trained teachers, for libraries, laboratories, and athletic facilities.

I believe Alabama has the raw materials to undergird a prosperous economy. She needs an elevation in education to aid economic growth.

Present high Federal taxes make it difficult for Alabama to finance proper school construction, teachers' salaries, and other monetary educational needs from within the State. Realizing this, the House of Representatives of Alabama adopted the following resolution to aid States in developing and maintaining adequate educational standards. The Alabama Senate followed the House by adopting the resolution on June 28, 1957. The resolution was approved by Governor Folsom on August 2, 1957. I feel sure this resolution will be of interest to other States also.

House Joint Resolution 8

Whereas the present maximum Federal tax rates on both individual and corporate incomes are extremely high; and

Whereas this Federal tax burden has, in many instances, become so great as to prevent adequate taxation on the part of the States and other local governments sufficient to enable the various States to properly finance and support the public schools; and

Whereas the education of the young people of this country is one of the gravest responsibilities and one of the most important functions of government; and

Whereas the various States are desperately in need of additional funds if adequate educational standards are to be developed and maintained in the public schools, and thereby insure to the children of this great country the proper education to which they are entitled: Now, therefore, be it

Resolved by the Legislature of Alabama (both houses thereof concurring)—

(1) That the Congress of United States is hereby memorialized to enact legislation providing for the payment to each State of 1 percent of the Federal income-tax payments collected by the district director of internal revenue from such State, such sum to be paid by the district collector of internal revenue into the general treasury of the respective States to be appropriated by the legislatures of the respective States for the general welfare and benefit of the people of said States.

(2) That a copy of this resolution be transmitted to the various State superintendents of education, asking them to encourage similar action in their States.

(3) That a copy of this resolution be transmitted to each member of the Alabama delegation to Congress.

United States Handouts Disastrous, British Are Told

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the City Press, a London weekly newspaper, reports that American handouts have proved disastrous for Britain. It urges an end to American handouts.

This report bears a London dateline of August 23 and the news article appeared in the Chicago Daily Tribune.

The article follows:

UNITED STATES HANDOUTS DISASTROUS, BRITISH TOLD—DOLLARS HIDE NATION'S FAILURES, PAPER SAYS

LONDON, August 23.—American foreign aid has proved disastrous for Britain and the world, the City Press, a London weekly newspaper, said today. It urged an end to American handouts.

The conservative weekly, which circulates mainly through London's financial district, said:

"Ever since the end of the war, American governments have been pouring dollars into our country to shore up the British economy. And all the time our economy has grown weaker.

FAILURES OBSCURED

"Our foolish political leaders have taken the country far down the road to socialism with nationalization and cradle-to-the-grave social services and the people cannot see the appalling failures of those schemes because American dollars have been propping us up."

The City Press said Britons would never get a clear look at the country's economic and social weaknesses "until American dollars cease to make unworkable systems look as though they are working."

Calling for the cessation of handouts, the weekly concluded:

"We beg our American friends to stop it. They are misusing their own taxpayers' money. They are not helping us. They are not helping the world."

A LONE VOICE

The City Press is alone in its antiaid stand. Most newspapers here lament Congress' efforts to cut aid spending.

The Tory Yorkshire Post said:

"For every American dollar given in aid to the allies of the United States, those allies now spend $5½ on defense themselves. To emphasize this is in no way to lose sight of the enormous generosity the warm-hearted American people have shown.

"These figures are used in Washington to encourage the practical and economic minds in the House of Representatives to pass the authorizing bill without any cuts. We trust that they will also inspire a sympathetic attitude toward allies in pursuit of their

legitimate interests—especially in the Middle East.

"CAN'T BE WHITTLED

"Congress will be wise to recognize that foreign aid cannot safely be whittled down in present circumstances."

The liberal Manchester Guardian said gloomily:

"President Eisenhower will have to have a lot more Congressmen to breakfast if he is to save his foreign-aid program from cuts which he thinks jeopardize American security.

"Sending in Mr. Dulles, Admiral Radford, and General Twining to speak words of foreboding to the Senate Appropriations Committee will probably not be enough. It is even doubtful whether the President himself can save his bill by a direct approach to the leaders of both parties in Congress."

Congress Should Not Adjourn Until the Pay Increase Bills for Postal and Federal Employees Have Been Finally Acted Upon

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. WOLVERTON. Mr. Speaker, the drive for adjournment of Congress is on in full force. It is regrettable to realize that in all probability the adjournment at this time will leave the postal pay bill and the classified employee pay bill in the hands of the President without final action by Congress if the President vetoes the bills.

It is generally understood that the President will veto both bills. This in the ordinary course of events will come after Congress has adjourned and gone home. Thus, without Congress in session to pass on the vetoes it leaves them in force and effect, and the legislation is dead.

It is particularly regrettable because both bills were passed by overwhelming majorities in both Houses of Congress in both instances. There were very few votes against either of the bills. It could be truthfully said that both of them were passed almost unanimously.

It is right and just that Federal employees in the postal service and other agencies of government should receive the benefit of these increase pay bills to enable them to meet the high cost of living. Workers in industrial and commercial enterprises have in many instances received by means of negotiation or even by strikes, in some cases, the increase they were entitled to have. We have also recently seen the wages or salaries of employees in the State, county, or municipal offices increased. This has been necessary. Why, then, should faithful Government employees be denied the increase they are in justice entitled to have?

When the necessary increase pay bills were passed, especially by such large majorities in both the House and Senate, it is not right for Congress now to deny the increases provided by an adjournment and thereby make effective a "pocket veto."

Of course, if the President signs the bills it would not be necessary for Congress to be in session as the bills would then become law, but in case the President does not sign the bills, then in my opinion the Congress should be in session to act on the vetoes, and by the votes of the Members either sustain the veto or pass the bills over the vetoes. It is not fair nor just that Congress should run away from its responsibility in this matter.

I am opposed to adjournment until this important piece of business has been decided, as it should be by the Congress, if and in the event Presidential vetoes should make such necessary.

Civil Rights

SPEECH
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 27, 1957

Mr. DAVIS of Georgia. Mr. Speaker, I am opposed to this resolution. A vote for this resolution is a vote for the so-called civil-rights bill, H. R. 6127, with the Senate amendments, and with the amendments provided for in this resolution.

The proposal contained in House Resolution 410 is one of the most unusual and extraordinary legislative actions I have seen or heard of. These proposals are completely new. The proposed amendment in lieu of Senate amendment No. 15 was not contained in the bill as originally introduced, or in any amendment which was offered to the bill in the House or in the Senate. It is one of the most drastic proposals made during the entire progress of this legislation. It would take away a valuable and precious right which every American citizen now possesses. Its provisions have not been discussed before any committee or subcommittee, and cannot be discussed in any detail in the 1 hour which is allotted for argument for this entire resolution.

It is regrettable and deplorable that Members of this great legislative body would be stampeded by political pressure into railroading any kind of legislation through in this fashion. It is deplorable that any Member would so far lose sight of fundamental rights and privileges and of constitutional government as to support such a legislative monstrosity, such a radical departure from orderly, sound, legal procedure as this resolution embodies.

I agree with the statement of David Lawrence in his newspaper column of yesterday in the Washington Evening Star, in which he said that this week is a week of infamy in the United States Congress. As I contemplate the events taking place on the floor of this House today I am reminded of the statement I once heard made by my dear departed friend, the late Honorable Eugene Cox, Representative from the Second Congressional District of Georgia, when he said:

I would not do to go to Heaven what some people do to get elected to Congress.

The Battle for Water

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. ULLMAN. Mr. Speaker, we in the Pacific Northwest have long been aware of our great water resource heritage. That awareness has prompted us to consistently fight for the fullest and most comprehensive development of this God-given heritage. We have been blessed with an abundance of water but we have always realized that what may be an abundance now could very well be a shortage in the foreseeable future.

An article which appeared in the Washington Star on August 25, 1957, contains a good summation of some important facts concerning our water supply and the possibility that we will be faced with a water shortage in the near future. I think it of great importance that we all fully realize the dangers inherent in this approaching shortage and consequently I ask that this article be printed in the RECORD.

The article follows:

THE BATTLE FOR WATER—NEXT CYCLE MAY BE ROUGH

(By Phil Yeager)

Ours may be the last American generation to know the blessings of abundant water. No one is going thirsty during the current dry summer along the eastern seaboard, but there is no guarantee people won't go thirsty in the next dry decade unless radical new techniques of fresh water acquisition are developed and much greater storage facilities devised.

It doesn't require mathematical genius to see why.

Right now the United States is thought to be consuming fresh water at the rate of 200 billion gallons per day for all purposes—industry, irrigation, and personal. Hydrologists say that if current trends in population growth and water needs are projected ahead to 1975 the water consumption level will reach about 400 billion gallons a day.

There are three big reasons for the rapid acceleration: More people, more industry, greater water demands by both.

In 1900 municipal water used by or on behalf of residents averaged less than 95 gallons per person per day. By 1950 it was 198 gallons. If the same ratio of increase is maintained, by 1975 the per capita use should be around 175 gallons for the Nation's estimated 228 million population—or 40 billion gallons per day.

Since this water would account for only 10 percent of total fresh water used by that time, it is clear that agriculture and industry are the real gluttons—and that their appetites are growing rapidly.

SUPPLY IS CONSTANT

Whatever the cause of increased consumption, the supply stays constant.

On the basis of records kept over a 62-year period, the United States experiences an average daily precipitation runoff of about 820 billion gallons. While this is more than double the expected water consumption rate by 1975, present storage facilities such as dams and reservoirs are capable of capturing only about 20 percent of the runoff.

Standing alone these figures give a distorted view of the true picture, for much of the daily runoff which is not stored is nevertheless used. Moreover, runoff represents only about a fifth of the total precipitation, and a good deal of the additional rain or snow eventually finds its way back to underground water tables.

However, since (1) between 75 and 90 percent of all fresh water used in the Nation does come from runoff; (2) it will never be possible to capture or use a large percentage of the total runoff, and (3) underground water is being consumed faster than it is being restored—the figures do show how rapidly we are reaching a critical point in the ratio of water consumed to water available.

Chances seem good that the country will get through the present dry period without too much economic upheaval.

But note the long-range weather predictions.

In recent years there has been a tendency to relate weather cycles to solar radiation in general and sunspot activity in particular.

The sunspot cycle, which may run as short as 7 years or as long as 17, averages about 11.3 years. This parallels the length of time our wet and dry weather cycles seem to run. Thus United States weather during the 1920's was considerably wetter than average. In the 1930's it was quite dry and produced the dust bowls of the Great Plains. In the 1940's it was again very wet.

"The present period," say the experts, "presumably 1952–62, is running very dry in accordance with this large-scale cycle."

Experienced meteorologists and climatologists have reservations about various aspects of the sunspot theory, but they do not deny there are certain rhythmic variations in the amount of continental rainfall.

TROUBLE IN '73?

Assuming the cycles continue in the pattern they have been following, the next set of dry years should be starting just about the time fresh-water consumption begins to double the current rate, i. e., around 1973.

Apparently the dry cycles of the 1900's have been, so far, a little less dry than they were in the 1800's. The wet cycles have been slightly wetter. But this trend, which is by no means great enough to offset increasing water use, may not continue. In any case, it is possible that the dry cycle of the 1970's will produce as much as 10 percent less than normal rainfall.

For those times, and under the circumstances, the resulting shortages are likely to be far more serious than those of today. And today's are bad enough.

Last year, for example, the Associated Press conducted a nationwide survey of cities and States with water problems brought on by the present dry cycle. "Countless communities all over the country," it disclosed, "are suddenly discovering their water facilities just won't do the job any more. * * * During the 1953 drought only three States in the entire Nation, Idaho, Mississippi, and Rhode Island, reported no water shortage problems."

Compounding the difficulty of securing enough initial fresh water are such increasing complications as pollution, the invasion of fresh water tables by salt water, erosion, and the like.

THE COST WILL RISE

This is not to suggest a totally bleak outlook. Water problems in the future will doubtless be solved. But they seem unlikely to be solved without a great deal more effort.

Many experts believe that by the time the next dry-weather cycle comes around it will be impossible to handle national water needs unless there have been advances in four basic directions: Stabilization of underground water, regulation and storage of runoff water, conversion of salt water to fresh, and weather modification and control.

Even if the water problems of that day are dispelled by greater storage and new techniques, it is not likely that water will ever again be as cheap as it is today. Today's youngsters, whose parents are generally paying from 20 cents to 40 cents per 1,000 gallons for water, may by 1957 be paying $2 or $3 for the same amount.

Charity and Security—American Taxpayers Oppose Permanent Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial that appeared in the Wall Street Journal yesterday on the subject of American foreign aid.

CHARITY AND SECURITY

Two broad arguments are commonly used to defend the present foreign-aid program—one ethical, the other practical.

Th ethical approach is that, as a matter of simple charity, the richest Nation in the world ought to help less fortunate ones. Senator PAUL DOUGLAS developed this theme in a recent magazine article; Christ, he observed, was the great do-gooder of all time.

The United States is not, we think, deficient in Christian charity. In both private and public ways it is constantly helping other peoples when they are confronted with emergencies, famine in India or taking in refugees from Hungary. It has even helped potential enemies in distress, sending food behind the Iron Curtain.

Basic differences exist, however, between this kind of charity and the Government's foreign aid program. The official program provides money and materials to governments, and only indirectly if at all to the people who could best use it.

Governments are usualy cynical; in the underdeveloped lands particularly they are often corrupt. Also they frequently have grandiose and uneconomic schemes for using the help, so that it may turn out to be a detriment. It may encourage the receiving government's vices, including sloth, instead of its virtues. Moreover, the official American Government program is now presented as permanent; it is not to meet disasters but to go on and on, regardless of need, regardless of waste and other harmful effects.

The concept of Christian charity has to be given a painful wrench to make it cover these activities. In contrast, the practical defense of foreign aid seems on the surface more plausible.

Certainly it can be argued that, in the kind of world we live in, allies are desirable—providing they are self-reliant, strongly anti-Communist allies that would not fail us in a showdown. And coldly calculated aid is an ancient instrument of diplomacy. But it does not follow at all that permanent foreign aid is required in order to have useful allies.

Admiral Radford the other day offered the country grim alternatives if foreign aid is substantially curtailed: Either we would have to expand our own Armed Forces greatly, with nearly every able-bodied man of military age spending several years in service abroad or we would have to withdraw into a Fortress America.

This newspaper does not accept the validity of these alternatives. There is another one, and the only correct one. That is that our allies, in their own self-interest, make the necessary contribution to the joint defense out of their own resources. If they are economically incapable of making a sufficient effort, then their military value is diminished in any case. If they are unwilling to do so, then their reliability as anti-Communist allies must be gravely questioned.

Secretary of State Dulles came close to raising just that question when he said that, in the absence of permanent foreign aid, the free world may no longer be prepared to follow the leadership of the United States and the whole security structure may be endangered. If that is so—if our allies will not be allies unless bribed forever—then the whole vast and costly program designed to make them strong and determined has been a colossal flop.

We hope the people of this country will always respond generously when human beings elsewhere are faced with emergencies or disasters. We hope this country will always use its diplomacy to advance the national interest—including the use of money in special circumstances that clearly call for that.

But a permanent Government program of indiscriminate aid neither reflects charity nor can it guarantee security.

A John Jay Museum for the People

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. YARBOROUGH. Mr. President, a telling editorial in today's New York Times, one of the greatest newspapers in the history of mankind, warrants the attention of every American who loves his country and who wants to preserve for posterity the historic evidence of exemplary living and high virtue among the Founding Fathers.

In Westchester County, N. Y., is located an inspirational shrine—the estate of the first Chief Justice of the United States, John Jay. There is, at this time, the danger that this historic relic of American independence will be lost forever, unless the county, the State, the Nation, or some patriotic group, agrees to purchase the shrine.

How tragic, Mr. President, would be the loss to the American people if the home of this great American, and the priceless documents which are there for exhibition, are not preserved as an inspiration for future generations. I would like to endorse this editorial. This shrine should be established as a national museum. Certainly we owe no less to the memory of this gallant leader of American freedom, and to his good works which survive him. I ask unanimous consent that the editorial from the New York

Times of August 28, 1957, be printed with these remarks in the Appendix to the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A. JOHN JAY SHRINE?

Westchester spent $1,100,000 recently to acquire and redevelop for public use the Dunwoodie Golf Course in Yonkers. But the county has decided not to spend $136,000 to buy the John Jay shrine on Route 22 north of Bedford Village.

The swift action in saving the golf course from conversion into a crowded real estate development is laudable. But what of John Jay, first Chief Justice of the United States, holder of other high offices, and a great emotional balance wheel in the disputes among the founders of the Nation? Jay lived at Bedford House many years and left there bundles of his correspondence with George Washington and other early leaders. Westchester would acquire some of the letters, mementos, furniture, antiques, costumes, paintings and other contents of the house for the $136,000. The historical society is eager to operate the mansion as a museum. The park commission is willing to maintain the 30 acres that go with the house.

The Westchester Board of Supervisors thought well enough of the purchase earlier this year to pay $1,000, by unanimous vote, for an option. Then, after political huddles of the majority party, the option was dropped. Westchester should reconsider this opportunity before this valuable fragment of American history—plus a park—is lost. As the population increases, the preservation of the Jay shrine could be at least as worthy as the saving of a golf course.

Salute to the U. S. S. "Iowa"

EXTENSION OF REMARKS
OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. TALLE. Mr. Speaker, a few days ago the Department of the Navy announced that the great battleship U. S. S. *Iowa* was to be decommissioned. Immediately I felt that special recognition of its gallant service to our country should be shown. Accordingly, as chairman of the Iowa delegation in the House of Representatives, I proceeded, with the approval of my State delegation in the Congress, to make arrangements with the United States Navy for our group to be received aboard the U. S. S. *Iowa* for the purpose of paying her appropriate honor. I thereupon had a parchment scroll prepared which was signed by every Member from Iowa now serving in the Congress.

Consequently on last Saturday, August 24, I, together with some of my colleagues and other interested persons from Iowa, had the honor and privilege of visiting the battleship, U. S. S. *Iowa*, now stationed at Norfolk, Va., but scheduled to be retired from active service later this year. It was an experience I wish every Member of this body might have shared.

I was especially impressed with the high caliber of the men we met aboard the *Iowa*, particularly her skipper, Capt. F. Julian Beton, and her executive officer, Comdr. T. C. "Ted" Siegmund. They are a genuine credit to the United States Navy and to the *Iowa*.

I was also immensely pleased to meet 22 young men from the State of Iowa who are presently serving aboard the ship and who I feel are a great credit to their State. They are:

E. A. Schoenfelder, CWO, from Marengo; Fred W. Adams, PN3, Elliott; Richard T. Anderson, FN, Creston; Edgar L. Beebe, EMP3, Des Moines; Glen G. Butler, ETRSN, soldier; Charles W. DeCook, IC3, Wadena; T. A. Ditsworth, FN, Humboldt; Charles E. Dorl, BT3, Clarinda; R. O. Eick, SN, Waverly; Larry K. Gahring, EM3, Belle Plaine; C. B. Heithoff, TD3, Reinbeck; Richard C. Holts, BM1, Boone; Donald W. Leith, SA, Waterloo; Gary O. Marlin, FN, Creston; T. G. McAllister, SN, Cascade; Leroy A. Nelson, ETRSN, Webster; Quinn R. O'Brien, EM3, Council Bluffs; Charles E. Otto, EM3, Clinton; Clarence W. Moyers, SN, Burlington; Adar P. Reid, CS2, Wilton Junction; R. E. Richey, SN, Council Bluffs; and Larry B. Thomassen, EMFN, Leighton.

As part of the Saturday ceremonies aboard the ship, Mr. Speaker, it was my proud privilege to present to Captain Becton a scroll signed by every Member of the Iowa congressional delegation. The parchment scroll will be made a part of the permanent archives of the U. S. S. *Iowa* and reads as follows:

On the approaching retirement of the great battleship U. S. S. *Iowa* (BB 61) the undersigned Members of the Iowa delegation in the Congress of the United States express their appreciation to that magnificent fighting ship and those who have served in her for bearing with honor, dignity, and courage the name of our sovereign State.

Mr. Speaker, the U. S. S. *Iowa*, one of the famous battleships of the Navy, will be decommissioned at the Philadelphia Navy Yard beginning October 14, 1957. It seems particularly appropriate at this time to review briefly the history of this mighty vessel.

The U. S. S. *Iowa* which we visited at Norfolk is the fourth Navy ship designated as the *Iowa*. The first, a 3,200-ton vessel, was commissioned in 1864 and was stricken from the Navy Register 18 years later. The second was an 11,346-ton ship which performed blockade duty off Cuba and fired the first shot at Santiago Bay during the Spanish-American War. The third *Iowa*, a battleship planned to be almost as large as the present one, was canceled in the midst of construction in accordance with the Washington treaty which limited naval armament.

It should be noted, Mr. Speaker, that the ship's silver service, which is now on display in the captain's cabin, was purchased by an appropriation of the General Assembly of the State of Iowa and presented to the second *Iowa* on June 19, 1897. In making the presentation, C. G. McCarthy, State auditor of Iowa, said in part:

While we hope that our Navy shall never turn from the face of any enemy, may we not indulge the larger hope * * * that the *Iowa* * * * shall somehow find a place as a messenger of peace rather than of war * * * be herald of human progress rather than foeman to international strife.

However desirable this wish was, it was not destined to be fulfilled. Less than a year later, the Cuban situation and the sinking of the *Maine* brought on the Spanish-American War. The *Iowa* was stationed outside the harbor of Santiago, Cuba, where the Spanish fleet under Admiral Cervera had taken refuge. On the morning of Sunday, July 3, 1898, the *Iowa*, which lay opposite the mouth of Santiago Harbor, fired a shot from a small gun and raised the signal: "The enemy is attempting to escape."

In the fierce fighting that followed, the *Iowa* crippled the *Maria Teresa*, sank two Spanish destroyers, and then with her sister battleships crushed the *Oquendo* and the *Vizcaya*. The Spanish captain of the sinking *Vizcaya* surrendered to Capt. Robley D. Evans aboard the *Iowa*. Later Admiral Cevera and his staff were transferred to this gallant namesake of the Hawkeye State.

During World War I, the *Iowa* served as a training ship and guarded the entrance to Chesapeake Bay. She was used as a target for naval gunfire after World War I, and was later sunk as other assembled vessels honored her with a 21-gun salute.

The present *Iowa* was commissioned on Washington's Birthday, 1943, the first of four called the *Iowa* class. She is one of the world's largest, fastest, and most powerful battleships. Builders, working day and night during the war, took 3 years to construct her at a cost of $110 million. Today her replacement cost is estimated at well over $200 million.

The *Iowa* displaces nearly 60,000 tons, is 887 feet long, and measures 108 feet across her beam. The length is 13 feet shorter than 3 football fields laid end to end. The highest point of her superstructure towers 185 feet above her keel; 150 feet above the waterline are 13 separate deck levels whose combined height is equivalent to the height of a 17-story building.

The engineering plant and auxiliary machinery drive the ship at speeds in excess of 30 knots. The main plant is capable of developing 212,000 horsepower; the electrical generators could supply electricity to a city of 20,000 inhabitants.

The engineering force must maintain more than 900 electrical motors, 5,300 lighting fixtures, 250 miles of electrical cable, and more than 1,300 telephones. The distilling plant can make more than 100,000 gallons of fresh water from the sea every day; the capacity of her fuel oil tanks is more than 2½ million gallons.

In wartime, the *Iowa* carries nearly 3,000 men who consume 7 tons of food a day. In the huge storerooms, 100 tons of fresh fruits and vegetables, 650 tons of dry stores, and 84 tons of fresh meats can be stored. This is a total supply of 834 tons of foods, a quantity sufficient to last 119 days.

A floating city, the ship has a soda fountain, barber shop, cobbler shop, laundry, tailor shop, printshop, hospital, seven dining halls, library, photographic

laboratory, dental office, dispensary, and bakery.

Her armament consists of nine 16-inch guns that can hurl 25 tons of projectile a minute at a distance of 23 miles. The *Iowa* also has 20 5-inch dual purpose guns and numerous 40-millimeter rapid fire machineguns. She is heavily armored and is able to withstand extremely heavy punishment.

Mr. Speaker, the record of the *Iowa* during World War II is one to be proud of. Briefly, her war service was as follows:

August 27, 1943, departed Boston for Argentia, Newfoundland.

November 12, 1943, carried President Roosevelt to and from the Cairo-Teheran Conference.

January 20–February 2, 1944, member of the supported force for air strikes against Eniwetok Atoll (Marshall Islands) including Kwajalein Atoll, January 29, 1944.

February 16–17, 1944, participated in strike against Truk Atoll. Engaged in sweep around Truk resulting in destruction of 1 destroyer, 1 minelayer, and 1 subchaser of the enemy.

February 22–23, 1944, member striking force on Tinian Island.

March 18, 1944, participated in bombardment of Mille Atoll—Marshall Islands.

March 30, 1944–April 1, 1944, member support force for air strikes against Palau Woleai—Caroline Islands.

April 21–24, 1944, member support force air strike against Hollandia–Wake, New Guinea.

April 29–30, 1944, member support force air strike against Truk Atoll—Caroline Islands.

May 1, 1944, participated in bombardment of Saipan and Tinian, first battle of the Philippine Sea.

September 1944, member support force, air strikes against Philippines and Palaus, as a unit of Fleet Adm. William F. Halsey's 3d Fleet.

October 12, 1944, light units of the force sank an enemy cruiser in the San Bernardiho Straits.

October 25, 1944, Second Battle of Philippine Sea in San Bernardino Straits.

November 1944, member support force for air strikes on Leyte and Luzon.

April, May 1945, operated around Okinawa and Ryukyus.

May 28–June 14, 1945, operated with 3d Fleet, member support force for Okinawa operation and air strike against Kyushu.

July 10, 1945, participated in bombardment of Muroran, Hokkaido, Japan.

July 17, 1945, participated in bombardment of Kitachi, Honshu, Japan.

July 28, 1945, member support force for air strikes against Japanese fleet remnants at Kure, Japan.

August 15, 1945, cessation of hostilities.

Mr. Speaker, in the spring of 1949, the *Iowa* was retired from the active fleet and laid away amidst a silent company of dormant, mothballed ships in San Francisco Bay.

Three years later she was back in action in Korea. During her tour in the Far East as flagship for the commander of the 7th Fleet, the *Iowa* fired more than double the amount fired during her World War II service, 4,500 rounds of 16-inch ammunition.

Returning to the Atlantic Fleet after an overhaul in November 1952 the *Iowa* conducted training exercises for her crew. She took part in the NATO exercise, "Operation Mariner," in 1953, and trained midshipmen during the summer months. Returning to the Norfolk area until November 1, 1954, she sailed to take part in the largest postwar exercise in the Atlantic, known as Lantflex 1–55.

Earning a "well done" from the commander of the 6th Fleet, the *Iowa* served a 3-month tour of duty in the Mediterranean from January until April. After embarking 600 midshipmen, she sailed in June for ports in Spain, England, and Cuba, continuously conducting drills and exercises for the middies, returning in August. She later conducted other midshipmen cruises.

Next month, the *Iowa* will participate in "Operation Strikeback," part of a joint NATO exercise, which will terminate her active service.

During the past 14 years, the *Iowa* has earned numerous battle stars, presidential citations, and other awards. I would like to cite a few of them here.

The U. S. S. *Iowa* (BB–61) earned the following battle stars:

Asiatic-Pacific Area Service Ribbon.

One star, Marshall Island operation: Occupation of Kwajalein and Majuro Atoll, January 29–February 8, 1944; Mille Atoll, March 18, 1944.

One star, Asiatic-Pacific raids: Truk attack, February 16–17, 1944; Marianas attack, February 21–22, 1944; Palau, Yap, Ulithi, Woleai raid, March 30–April 1, 1944; Truk, Satawan, Ponape raid, April 29–May 1, 1944.

One star, Marianas operation: Capture and occupation of Saipan, June 11–24, 1944; Battle of the Philippine Sea, June 19–20, 1944; capture and occupation of Guam, July 12–August 15, 1944; Palau, Yap, Ulithi raid, July 25–27, 1944.

One star, western Caroline Islands operation: Capture and occupation of southern Palau Islands, September 6–October 14, 1944; assaults on the Philippine Islands, September 9–24, 1944.

One star, Leyte operation: Battle of Surigao Strait, October 24–26, 1944; 3d Fleet supporting operations, Okinawa attack, October 10, 1944; northern Luzon and Formosa attacks, October 13–14, 1944; Luzon attacks, October 15, 17–19, November 5–6, 19–25, December 14–16, 1944; Visayas attacks, October 21, 1944.

One star, Okinawa Gunto operation: 5th and 3d Fleets raids in support of Okinawa Gunto, operation, April 24–June 11, 1945.

One star, 3d Fleet operations against Japan, July 10–August 15, 1945.

One star, Tinian capture and occupation, July 20–August 10, 1944.

One star, Hollandia operation, Aitape Humboldt Bay-Tanahmerah Bay, April 21–24, 1944.

China Service Medal, extended, September 2–24, 1945, January 26, March 25, 1946.

Navy Occupation Service Medal with "A" clasp, March 23–August 6, 1951; May 4–November 21, 1952.

United Nations and Korean Service Medal, March 30–October 10, 1952.

One star, second Korean winter, April 5–30, 1952.

One star, Korean Defense, summer-fall 1952, May 1–October 17, 1952.

Korean Presidential Unit Citation, March 31–October 19, 1952.

Philippine Republic Presidential Unit Citation, October 10, 13–15, 17–26, 1944; November 5–6, 19–25, 1944; December 14–16, 1944.

Mr. Speaker, this is the remarkable record of an illustrious fighting ship. Since the U. S. S. *Iowa* will be retired shortly from the active fleet, I consider it especially appropriate to call attention at this time to her great service to the United States. I only regret that this ship, which proudly carries the name of the Hawkeye State, will be missing in the future from among the vessels of the Navy's active fleet.

The House Versus the Senate

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. HOLLAND. Mr. President, several days ago I noticed in the New York Herald Tribune an excellent article by Hon. EUGENE J. MCCARTHY, a member of the Committee on Ways and Means of the House of Representatives, entitled "The House Versus the Senate." The article was written in such scholarly style I thought it ought to be in the RECORD where all Senators and Representatives and others could read it. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HOUSE VERSUS THE SENATE

(By EUGENE J. MCCARTHY)

(Representative MCCARTHY, a member of the Ways and Means Committee of the House of Representatives, is a Democrat from Minnesota.)

It seems to be fashionable these days to criticize the House of Representatives, the greatest forum of the people in our Federal Government. Sniping and carping at the operation of the House has been growing over the last few years. The House has been compared unfavorably with the Senate as a place of achievement.

Is this criticism valid? How badly are improvements needed? How does the House really compare with the Senate in terms of accomplishment, of casting light on great national problems, of providing legislative cures?

The effectiveness of the House of Representatives, its organization, its procedures and its relationships to the Senate and to the executive branch of the Government—all of these are important questions that deserve studious, objective, and serious attention.

In the 167 years since the adoption of the Constitution there have been many changes

in the Government of the United States, but certainly one of the most significant of these changes has been that of the shift in the power of relationship of the House of Representatives and the Senate. While upper or second legislative bodies in other countries have declined in importance, some disappearing altogether and others surviving as little more than symbols, the Senate of the United States has grown in power and in authority.

The first great impetus to an increase in Senate power arose out of the controversy leading up to the Civil War. After the war the Senate assumed more and more initiative in the introduction of legislation and became bolder in insisting on Senate modifications of legislation.

As governmental activities have expanded, the power of the Senate to confirm appointments both in the judiciary and in the executive offices has become increasingly important.

Similarly in the area of foreign affairs the Senate's power has increased as foreign policy has become more significant in our national life.

Along with the advantages derived from these historical changes, the Senate has had the help of a number of institutional advantages. The 6-year term in the Senate, plus the experience of its Members, and its continuity as a body, give it a stability and strength lacking in the House of Representatives. On a purely arithmetical basis, a Senator's vote on a legislative proposal is worth approximately four times that of a vote of a House Member. Senate rules and practices regarding committee assignments multiply this power. House Members are permitted to serve on only one major committee—Senators may serve on more than one. House committees usually have from 2 to 3 times as many members as do Senate committees. The importance of a single vote in a Senate committee of 15 is really worth more than twice that of a single vote in a House committee of 30 members.

The House, as critics have said, has limited its effectiveness somewhat by its own rules. Great debates today are the Senate debates. Debate in the House was effectively limited by rules changes brought about under Speaker Tom Reed in the last decade of the 19th century. These changes did prevent obstruction and delay in the general legislative process, but at the same time practically destroyed effective House debates. As a result, public interest, at least as reflected in the press, is generally concentrated not on what is said in House debate, but rather on the outcome of the vote.

The important consideration is not the feelings of House Members, but rather that of the consequences for the country of the predominance of the Senate. The fact that the Senate generally proposes to spend more money than does the House, or that it has gained power while the House has been losing it, need not in itself be disturbing. If the Senate is a truly representative body, and it is operating effectively and responsibly as the dominant body, it should perhaps be allowed to continue in its position of power. If, on the other hand, the Senate is not truly representative, if it is not as effective or fully responsible as it should be, there is reason for concern. If a case can be made for the system of legislative checks and balances, with the Senate acting principally as a check on the House of Representatives, if it is desirable to have some specialization and differentiation of function between the House and the Senate, then the problem of distribution of power is a matter of concern to the citizens of the United States.

Obviously the Senate is not as representative as is the House. Although there is need for more even apportionment of congressional districts, representation in the House of Representatives is still much closer to popular representation than it is in the Senate, where the millions of citizens of the State of New York and the fewer than 200,000 citizens of the State of Nevada are equally represented by two Senators. The House remains more truly the people's branch of the Government. Moreover, since all House Members are elected every 2 years, membership in that body more accurately reflects changes in popular opinion and judgment than does membership in the Senate, in which in every term of Congress some two-thirds of the Members have been carried over from previous elections.

The increase in the power of the Senate has disturbed the system of checks and balances, which was reasonably conceived, and has tended to destroy differentiation of function between the House and Senate. There is evidence that the Senate is trying to do too many things to do all effectively—to formulate and review foreign policy, to check on the Executive appointments, both before and after they are made, to check on the administration continuously, to cover the whole field of legislation, and to look after the needs of a statewide constituency.

The consequences of the seniority system are much more serious in the Senate than they are in the House, where larger membership makes control by committee chairmen more difficult, and where respect for the office and jurisdiction of the chairmen is not as great as it is in the Senate. Senators are generally responsive to all, or nearly all, local and special interests of their States. House Members are directly responsive only to those in their respective districts.

A strong President providing leadership to the country and strengthening the House of Representatives, can stand against the Senate. To do so, however, the President usually must have dramatic issues and critical conditions, as in the case of war or domestic disturbance comparable to the great depression.

The principal defense of the House against the loss of its power to the Senate has been, in recent years, the strength of its leadership. A man like Speaker SAM RAYBURN, backed by committee chairmen and members of the House, has successfully stood against the Senate, but, as a matter of fact, strong House leadership has consistently been more successful in opposition to Executive proposals than it has been to those of the Senate. What is needed is an institutional strengthening of the House of Representatives—the reestablishment of the House of Representatives as the predominant governmental body.

The House should assert itself in competition with the Senate in the field of general legislation, but more particularly when questions of revenue and of appropriations are in dispute. The House should insist that it be given more voice in foreign affairs. The Senate should be encouraged to give special attention to Government service and to assume the responsibility for the effective and efficient administration of Government affairs, and for the quality and conduct of both civil service and appointed personnel.

House rules should be changed in order to allow House Members to sit on more than one major committee and to allow more liberal debate, with the possibility of great debates again in the House of Representatives. House Members, too, should become more active in national party activities and should insist on their greater recognition in national conventions.

There is need for better organization in the House of Representatives; for greater party cohesion and party responsibility; for more unity, integrity, and function of the House; and for a greater will on the part of its Members to stand as a body, on a bipartisan basis when necessary, against either the Senate or the executive branch of Government.

If the House is to "decidedly predominate," as James Madison stated that it should at the time of the drafting of the Constitution, these are the changes that are needed rather than superficial changes such as modification of the seniority system and the rather empty suggestions of greater individual determination, responsibility, and attention to duty as suggested by some critics.

Texans Opposed to Gun and Shell Registration

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 28, 1957

Mr. YARBOROUGH. Mr. President, yesterday I submitted to the hearing of the Alcohol and Tobacco Division of the Internal Revenue Department my reasons for opposing regulations that would require records of all rifles, shotguns, other guns, and ammunition sold in this country.

The people of Texas are opposed to this proposal, and I want to give Congress the benefit of some of the letters that have been written by readers of the Houston Press, one of my State's largest newspapers.

Their letters show how the people feel about this proposed regulation.

Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD these letters from readers of the Houston Press for Monday, August 26, 1957.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

PRESS READERS DISCUSS GUN LAWS, WHAT TO DO ABOUT "MURDERTOWN" TAG

SAYS WE'RE IN DANGER OF LOSING RIGHT TO OWN FIREARMS

EDITOR, THE PRESS:

It is noted with great satisfaction by myself, and certainly the thousands of other citizens, who have a stake in the matter of legislation to take away the rights of our citizens to own firearms including pistols, that the Houston Press is giving space to we who differ in our ideas on such legislation.

Firearms are probably more necessary for the protection of our present generation than were any and all generations who have fought for freedom since the day the new world was colonized by oppressed and distressed people from the old and decadent European monarchies.

Important equipment

It is certainly true that the most important equipment of our forefathers who founded and settled this country were the old deer rifle and the pistol. Both of these arms have been greatly improved, of course, since the days of the musket and the cap and ball pistol. Its purpose remains exactly the same.

We think with awe and reverence of our frontiersmen, always outnumbered, standing undaunted against the raids of the redmen with only the deer rifle and the pistol to pro-

tect his wife, his children, and his own life and property.

Is greater danger

However, we are in far greater danger today, one that means more than the loss of life. It will mean the loss of our liberty and our precious freedom which our forbears with these very same rifles and pistols won for us. So let us forthrightly condemn any movement from whatever source that would restrict in even a small degree our traditional right to buy and use firearms.

Again thanking our Houston Press for its fairness in presenting all sides of the vital questions which confront us, I am,

Very truly yours,

ALSTON T. DAVIS.

HOUSTON, TEX.

WHY NOT ABOLISH THE CAR, TOO?—ITS DEATH TOLL OUTDOES THE PISTOL

EDITOR, THE PRESS:

The Press is due my thanks, as well as the thanks of thousands of other citizens, who crave a little space to discuss the pistol and gun legislation that some misguided persons and groups are trying to get passed.

Typical of the misleading, erroneous and oftentimes malicious ideas is the August 21 letter of Mr. Holland in your mail bag.

1. He says, "A new home appliance has taken Houston by storm. Every home needs a pistol, rifle, or shotgun, it seems." These are certainly not new, and these are not appliances. These have been, since our forefathers came to Texas, our best and most valued protection and means of livelihood.

2. These have certainly been kept under the same roof with our children, and because of the protection so afforded our children grew to manhood and useful lives.

3. For the information of Mr. Holland, there are now in Houston homes of all classes of citizens thousands of loaded rifles, shotguns, and pistols where children are never injured by such arms. It takes only a little care in keeping these above the reach of toddlers. Doesn't Mr. Holland know that most Texas boys are in the meadows and woods with their rifles, most of them by the time they are 10 or 12 years old? These are our boys who, when called to the colors, need little training to step into the front lines.

4. Houston's great majority of citizens are neither nutty nor vicious, but they would be if they listened to the likes of people like Mr. Holland, who seek to have our citizens disarmed and helpless before the criminals, hoodlums, etc., who frequent the dives.

5. Every year there is a small percentage of people killed in hunting accidents, but just consider the great numbers killed yearly in traffic. Why doesn't Mr. Holland scream for the abolition of the auto? Why doesn't he want to tear down the skyscrapers, legislate out the elevators, and do away with gas stoves and heaters, etc? All of these take a far greater toll of life than do pistols in any year.

Thanks again to the Press for giving us a chance to express our side of this question, and to public officials like Dave Thompson who have the courage to admit that ours is the fault for lack of proper enforcement.

ALFRED L. SCHULZE.

TO DISARM THE CRIMINALS IS A PIPEDREAM

EDITOR, THE PRESS:

It is strange that so many well-meaning people cannot learn anything from the experiences of others. To them the lessons of history are wasted.

The idea of disarming the criminals is just a pipedream. All that can be done along that line is to disarm the law-abiding citizens. He is the only one who obeys the gun laws.

If more killings took place, they would at least be killing each other.

J. E. JOHNSON.

CONROE.

OPPOSES DISARMING LAW-ABIDING CITIZENS

EDITOR, THE PRESS:

Having followed with great interest the letters and artices on buying, selling, and the carrying of pistols appearing in your paper and the calling on the board of inquiry by Judge Thompson and the comments and recommendations of other officials, I am writing as follows:

The writer is just as opposed to our high murder rate and misuse of pistols as any other citizen but as a former Army officer, police officer, and president of one of our Houston Gun Clubs and a member of the National Rifle Association of America, we are opposed to antigun laws of any kind that require registration of firearms or are aimed at the disarming of law-abiding citizens.

Have adequate laws

As Judge Thompson says, we have adequate laws if they are enforced and enforcement by our law officers and convictions by our judges and juries when guns are used illegally will cut down on our crimes of violence.

However, we all seem to overlook the idea-of-intent when a pistol is used in the commission of a crime and want to blame the gun which is harmless unless someone uses it. When a person intends to commit a crime, kill another person, commit a holdup, or commit some other crime, if he does not have a gun handy, he will use a knife, club, hammer, baseball bat, automobile, or anything else which becomes a deadly weapon when used as such.

And one thing to remember is that guns in the hands of law-abiding citizens and officers have prevented far more crimes of violence, assaults, robberies, and so forth, than have been used in the commission of crimes.

Thousands of clubs

There are thousands of gun clubs in this country whose members use pistols, rifles, and shotguns in target practice and we have a national board for the promotion of rifle and pistol practice.

In addition we have millions of sportsmen who hunt and fish and use pistols and hunting knives when hunting or fishing as sidearms for shooting small game, large fish when caught, snakes, and so forth.

Several States have laws authorizing the use of these arms by licensed hunters and fishermen. Then there are millions of law-abiding citizens who would like to have pistols or firearms around the house, and who never use them but like to have them at home for protection. Yet, we have a few fanatics and well meaning but misguided people who would penalize all of these people for what about 3 percent of our population does.

In closing let me also say that I believe two of our Houston papers have done more to advertise our great city as the murder capital of the world than all of the other papers and magazines put together.

E. D. ANDERSON.

The Fund for the Republic Studies a Free Society—Maj. Joseph R. Parten

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 28, 1957

Mr. YARBOROUGH. Mr. President, Maj. J. R. Parten, of Houston, Tex., is a leading citizen not only of Texas but of America. Major Parten served with the Field Artillery overseas in World War I, served with distinction on the Board of Regents of the University of Texas, and rendered outstanding service to the Nation as Director of the Transportation Division of the Petroleum Administration for War during World War II. He served as director of the Federal Reserve Bank at Dallas from 1944 to 1956, and, in the international field, served as a United States member on the Reparations Commission at Potsdam and Moscow in 1945. Major Parten is a very successful businessman and is now president and general manager of Woodley Petroleum Co. J. R. Parten has served his State and Nation with great ability and distinction.

I am proud that he is my good friend. For more than a quarter of a century he has stood for educational progress, honest government, and integrity in office in Texas, having been an active advisor and worker with Gov. James V. Allred, Dr. Homer P. Rainey, and me, in our successive efforts for the people of Texas.

Major Parten is one of the 20 members of the board of directors of the Fund for the Republic, which is now embarking on a most important study of the dangers facing our democratic way of life.

Mr. President, I request unanimous consent to print in the Appendix of the RECORD, as a part of these remarks, the attached editorials from the Providence, R. I., Bulletin of June 18, 1957, entitled "What Is a 'Truly Free Society'?"; from the New York Times of July 19, 1957, entitled "A Free Society"; and from the Denver Post of July 22, 1957, entitled "How Fares Freedom?"

I also ask unanimous consent to have printed in the RECORD an article from the Fund for the Republic Bulletin of July 1957 entitled "Freedom and Justice: The Basic Issue," and the list of the board of directors of the Fund for the Republic.

There being no objection, the editorials, article, and list were ordered to be printed in the RECORD, as follows:

[From the Providence (R. I.) Bulletin of June 18, 1957]

WHAT IS A "TRULY FREE SOCIETY"?

The study of pure science is often derided as an impractical and expensive waste of time. Yet, it is only by the understanding of basic laws of nature that dramatic scientific advances are made possible.

For instance, the theoretical discovery by the late Albert Einstein that matter could be converted totally into energy set the stage for the advent of the nuclear age.

Similarly, theoretical studies of the society in which we live can be highly rewarding. The day-to-day problems at all levels, from the scholarly to the mundane, become so demanding of time, thought, and energy that most people never have a chance to take a long, quiet look at where society has come, or where it's going and why.

Therefore, the decision of the Fund for the Republic to direct a major research effort at clarifying the nature of a truly free society and how it can be maintained is a welcome one, indeed.

Such an excursion into philosophical definitions might seem as remote from the pressing issues of this day as Einstein's curiosity about matter and energy was to the atomic bomb. Yet the fund's projected study is basic to our understanding ourselves

as social and political animals, and so to our very survival.

As Robert M. Hutchins, president of the fund, pointed out, society has undergone revolutionary changes since the 17th and 18th centuries when the modern concepts of human freedom were being formulated.

Indeed, when civil liberties were defined in the Declaration of Independence and the Constitution, with its remarkable Bill of Rights, the United States was small and life was geared to a sparsely settled agrarian society. Beyond the church, Government represented the "only significant social organization." Certainly, there were no such things as the business and industrial colossi, the gigantic labor unions, powerful pressure groups and the overwhelming nature of mass communications that we know today.

Scores, if not hundreds of different pressures and influences are impinging on individual freedoms in ways never even conceived 200 years ago.

Yet, we continue to use the same words to express philosophical values largely unchanged since 1776, with little regard for their applicability or validity in a modern age. And just as a piece of tempered steel breaks with dangerous whiplashing when bent beyond endurance, so society can react with dangerous passions when the concepts by which men live are twisted into cynicism by maladjustment to the social reality.

Competent scholarship is, of course, essential to the success of such a venture, and happily the fund has obtained the services of a group of 10 distinguished Americans to direct the study. If well done, then the project could prove an important bit of philosophical preventive medicine, sparing America from the destructive contradictions of a sort of national schizophrenia.

[From the New York Times of July 19, 1957]

A Free Society

The Fund for the Republic is embarking on an important study of one of the great problems facing our democracy: the effect on freedom and a free society of the large-scale organizations and institutions that have grown up in the last half-century and that were as unknown to the Founding Fathers as the jet airplane and the atomic bomb.

Big business and big labor, to name two major forces of the new age, inevitably affect our life as a Nation and our freedom as individuals. These new groupings—in industry and in labor, in voluntary associations and in pressure groups—have helped change our society from the relatively simple association that it was to the highly complex network of interrelationships that we see around us. Their profound impact on personal freedom and on the structure of the State must first be understood before it can be properly coped with. In announcing the new study, Robert M. Hutchins, president of the fund, said: "We must find out how these developments affect freedom and justice. We must discover the basic issues they present."

This basic issues program is described as a principal part of the present phase of the fund's operations, which began with a grant from the Ford Foundation over 4 years ago. The fund has been spending its money by and large in some exceedingly useful directions despite ill-informed and often irresponsible criticism that has been directed against it. In so doing, the fund has helped strengthen American democracy, and the new study just announced gives every indication of being a major contribution to this end.

[From the Denver Post of July 22, 1957]

How Fares Freedom?

The Fund for the Republic has undertaken what could prove its most valuable contribution to the American way of life which so many of us take too much for granted. With the aid of 10 distinguished Americans the fund will study and report on the issues of individual freedom and civil liberty in the United States.

So far, four broad areas of examination have been outlined: The industrial corporation and its effects on economic, political, and social freedoms of the individual; the trade union and its relationship with its members, its community and its terms and practices as they affect individual rights; the Government's defense policies and their impact on traditional civil liberties; and the role of religion in public life, relationship between church and State, and right of religious dissent.

As Alan Barth writes in the current New Republic, "civil liberties have come back into fashion" with the recent United States Supreme Court decisions upholding individual rights against the encroachment of big Government. But big business and big labor have equally important effects on freedom in a democracy. So do other big institutions which have sprung up in this country since the 18th century—pressure groups, mass communications, and so forth.

This is what the fund is moving into. To conduct its survey of contemporary American life it has enlisted Adolph A. Berle, Columbia professor and former Assistant Secretary of State; Henry R. Luce, Time-Life publisher; Scott Buchanan, philosophy professor and former dean of St. John's College; Eugene Burdick, author of the Ninth Wave and assistant professor of political science at University of California; Eric Goldman, Princeton history professor; Clark Kerr, chancellor of University of California; Father John Courtney Murray, S. J., Catholic theologian and editor; Isidor I. Rabi, Nobel prize-winning Columbia professor and chairman of General Advisory Committee of the Atomic Energy Commission; Robert Redfield, anthropology professor at University of Chicago; and Dr. Reinhold Niebuhr, Protestant theologian and editor.

During the past 4 years the fund has spent $8 million on studies of communism, maintenance of due process, protection of freedom of speech and belief, education and maintenance of equal opportunity. Now the fund proposes to answer two crucial questions of our times: What is a truly free society, and how can such a society be maintained?

In announcing the fund's new program, President Robert M. Hutchins warned that the defense of civil liberties today involves more than the mere insistence upon strict adherence to the Bill of Rights. Tremendous changes have occurred since the Declaration of Independence and the Constitution were written, "with consequences which their authors could not even imagine."

So the fund proposes to evaluate how freedom and justice have fared, and how they can best be safeguarded in context with our modern society. It does not delude itself that it can come up with all the final solutions, but it does promise to define the fundamental issues and problems in order to provide, as Mr. Hutchins said, "the basis for intelligent discussion of the most important issues of our time."

If the fund can do that, it will have achieved one of the most important accomplishments of our time. For as John Philpot Curran declared in his speech on the right of election in 1790: "The condition upon which God hath given liberty to man is eternal vigilance."

[From the Fund for the Republic Bulletin for July 1957]

Freedom and Justice: The Basic Issues

The Modern Problem of Civil Liberties

The Fund for the Republic has enlisted 10 distinguished Americans, outstanding for their experience and competence in relevant fields, to conduct an extensive inquiry into the basic issues of individual freedom and civil liberty in the United States. In a coordinated program on which the fund will presently put a major emphasis, they will seek to identify and clarify those fundamental issues that underlie most of the tumult concerning questions of freedom and justice in our contemporary society.

When the fund was established in 1953 it took as its charter the Declaration of Independence, the Constitution and its Bill of Rights. The purpose of the fund, as the directors expressed it, was to make these founding statements living documents in the daily affairs of the Nation. This work must and can continue. Yet it has become increasingly clear that the defense of civil liberties, as traditionally understood—a mere insistence upon the letter of such texts as the free-speech clause of the first amendment or the constitutional protection against self-incrimination—is no longer enough to meet the real issues which are constantly arising in this field.

After intensive thought and consultation, lasting over a year or more, the directors and officers of the Fund for the Republic have concluded that their fundamental problem does not lie in the ill observance of the great 18th century texts; it lies rather in the immense changes in the circumstances and institutions of the American people, which have rendered the application of those texts to contemporary affairs so confusing and difficult a task.

The 18th century constitutional structure, with its Federal and State bills of rights, was developed for a small, scattered, almost wholly agrarian society. Except for the church, Government was virtually the only large, organized institution with significant impact on the individual; and the constitutional guaranties were, naturally, concerned almost wholly with the protection of indivdual and minority interests against Government. There were no giant industrial corporations; no trade unions; the modern political party was not even contemplated; mass communications were not in the hands of huge, highly organized and centrally controlled media; the voluntary pressure group scarcely existed. Today these and other big institutions affect the individual for good or ill quite as intimately as big government does. Without a reexamination of the modern context, without full inquiry into the true, as opposed to the alleged, effects of these institutions, the modern problems of liberty and justice in a free society will remain insoluble.

To Clarify the Basic Issues

The Fund for the Republic does not delude itself with a hope that final solutions for those problems can be found through any single effort. It does believe that the basic issues of freedom and justice can be defined; that the mistaken or fictitious issues which absorb most current dispute can be stripped away; that the real problems can be clarified and set forth in terms permitting of their rational debate among free men.

This is the purpose of the new program. The primary responsibility for the work will be in the hands of the 10 consultants, who are:

A. A. Berle, Jr., attorney, former Assistant Secretary of State and Ambassador to Brazil, professor of corporation law at Columbia University since 1927; and author of a number of books on the corporation, including (with Gardiner C. Means) The Modern Corporation and Private Property, a foundation work on the subject published in 1932.

Scott Buchanan, professor of philosophy, with a wide background of teaching at Amherst, Harvard, University of Virginia, University of Chicago, St. John's College, Fisk University, and elsewhere; a member of the American Mathematics Association and

American Philosophical Association and author of works on philosophy and politics.

Eugene Burdick, assistant professor of political science at the University of California; a Rhodes scholar; a novelist as well as political scientists; and in 1950–51 a member of the staff of the Naval War College.

Eric F. Goldman, contemporary historian and presently a professor of history at Princeton. He has been a Guggenheim Fellow, a Library of Congress Fellow, and a State Department lecturer in Europe and India.

Clark Kerr, chancellor of the University of California at Berkeley, and a specialist in the fields of labor economics and industrial relations. A member of the War Labor Board, 1943–45, and of Presidential factfinding boards, he has had extensive experience as impartial chairman or arbitrator in industrial relations.

Henry R. Luce, editor and publisher, the founder of Time, Life, and Fortune magazines, a director of the Union Theological Seminary, the Metropolitan Museum of Art, and the Roosevelt Hospital.

John Courtney Murray, S. J., Catholic theologian; editor of the quarterly, Theological Studies; formerly visiting professor of philosophy at Yale, and trustee of Manhattanville College.

Reinhold Niebuhr, graduate professor of theology and ethics at Union Theological Seminary, New York; editor of the quarterly, Christianity and Society, and the biweekly, Christianity and Crisis; author of works on Christian ethics and on Christianity and international and domestic politics.

Isidor I. Rabi, physicist, presently chairman of the General Advisory Committee of the Atomic Energy Commission; a member of the United States National Commission for UNESCO, and author of many contributions on quantum mechanics, nuclear physics, and molecular beams.

Robert Redfield, anthropologist; professor at the University of Chicago since 1927; past president of the American Anthropological Association. He has served as research associate of the Carnegie Institution of Washington, in charge of ethnological and sociological field work.

With Robert M. Hutchins, president of the Fund for the Republic, these men will meet regularly for extended sessions of study and discussion, directed toward the clarification of the basic issues of freedom and justice in the modern state. Elmo Roper, chairman, and George N. Shuster, vice chairman of the board of directors of the fund, will participate in the work of the group in order to maintain a close liaison between the consultants' committee and the board.

The consultants will initiate and coordinate whatever factual studies or theoretical or practical investigations they may need to help them in their primary task of clarification. They expect to have published, through whatever media may be most appropriate, the results of such supporting studies, as well as reports of their own discussions, preliminary findings and such conclusions as appear to be of value. The work is seen as one of continuing inquiry, discussion and publication.

In announcing the program, Mr. Hutchins said: "It is our hope that the program will develop findings and reports which will form the basis for intelligent discussion of the most important issues of our time."

INITIAL PROJECTS

The program has been conceived as a single undertaking in which every member of the consultant group will be jointly responsible for the conclusions in every field of study. At the outset, however, some division of the task is obviously necessary: Four separate study projects are now being organized, and others will be developed later. For each project 1 or more of the consultants have assumed a special responsibility, while 2 or more members of the fund's board of directors have agreed to lend counsel and assistance and to provide liaison between the board and the project. The four initial projects are:

On the industrial corporation

This project will seek to appraise the effects of the corporation on the economic, political, and social freedoms of the individual; later it will try to determine the meaning for a free society of the corporation's relation to other institutions. The project will seek the cooperation of industry and assistance from universities, trade associations, and competent individuals.

Special consultant: A. A. Berle, Jr.

Liaison directors: M. Albert Linton, J. Howard Marshall.

On the trade union

This project will examine the relationship between the union and its membership, between the union and the community, and the implications for individual rights of collective-bargaining practices, terms of union contracts, size of the bargaining unit, and other factors. The project will develop initially through informal conferences and discussions with trade-union officials, industrial relations experts, arbitrators, and others qualified to contribute.

Special consultant: Clark Kerr.

Liaison directors: Oscar Hammerstein II, Paul G. Hoffman, Meyer Kestnbaum.

On individual freedom and the common defense

While the expansion of modern big government is one of the most striking of the institutional changes since 1789, government as a whole is too vast a subject for any single study. It was therefore decided to begin with a study of government in its capacity as an institution to provide for the common defense. The project will seek to identify the significant points of impact of government's measures for defense (against both internal and foreign threats) on the traditional concepts of freedom and liberty; it will explore the effects on individual freedom of the draft and other military manpower policies; of measures for the control of sedition; of measures directed toward the prevention or detection of espionage and similar conspiratorial crimes. The project will probably commission certain special factual studies and will consult with qualified persons in government, law, education, and science.

Special consultant: I. I. Rabi.

Liaison directors: Charles W. Cole, Herbert H. Lehman, Jubal R. Parten.

On religion in a democratic society

The first amendment guarantees the right of the individual to the free exercise of religion and prohibits governmental establishment of any church. But in our increasingly complex society many issues remain unsettled—problems of censorship, parochial schools, adoptions, etc. To explore the basic issues underlying these controversies the project will deal with the relationships between church and state, the role of religion in public life, the right of religious dissent, the meaning of freedom from as well as for religion. The project will appoint a consultant subgroup composed of Protestants, Catholics, Jews and humanists who will meet regularly with the special consultants and liaison directors. Spokesmen for various points of view on these questions will be called upon for consultation and advice. The project will also sponsor special seminars and commission needed studies and research from qualified individuals and institutions.

Special consultants: Father John Courtney Murray, S. J., Dr. Reinhold Niebuhr.

Liaison directors: Msgr. Francis J. Lally, Mrs. Eleanor B. Stevenson, Dr. Henry P. Van Dusen.

FOR LATER DEVELOPMENT

Other similar projects will be undertaken in the future. These may be devoted to other institutions; they may, particularly in the case of government, be devoted to different aspects of the institutions already under examination; they may study certain central problems of freedom which do not lend themselves to the institutional approach. The organization of these projects will be flexible enough to permit the employment of whatever methods seem most useful and whatever minds have most to contribute, but it will in general follow the pattern approved by the board of directors for the four initial undertakings.

The 10 members of the consultants' committee have agreed to serve for at least 1 year, and in June 1958 the progress of the program will be reviewed and its further direction defined. The present group, as Mr. Hutchins reported to the board on its formation, "is remarkable for the individual distinction of its members; for the diversity of their interests, backgrounds and points of view; for the harmony and ease of communication in their meetings; for their dedication to the purposes of the fund and for their enthusiasm for the program on which they are working together." Theirs may well prove a contribution of major significance to freedom and justice in the United States.

THE BOARD OF DIRECTORS OF THE FUND FOR THE REPUBLIC, INC.

Chairman, Elmo Roper, Elmo Roper & Associates, New York, N. Y.

Vice chairman: George N. Shuster, president, Hunter College, New York, N. Y.

Harry S. Ashmore, executive editor, Arkansas Gazette, Little Rock, Ark.

Bruce Catton, Bethesda, Md.

Charles W. Cole, president, Amherst College, Amherst, Mass.

Russell L. Dearmont, president, Missouri Pacific Railroad, St. Louis, Mo.

Erwin N. Griswold, dean, Law School of Harvard University, Cambridge, Mass.

Oscar Hammerstein II, New York, N. Y.

Paul G. Hoffman, Pasadena, Calif.

Robert M. Hutchins, president, The Fund for the Republic, Inc.

William H. Joyce, Jr., San Marino, Calif.

Meyer Kestnbaum, president, Hart, Schaffner & Marx, Chicago, Ill.

Msgr. Francis J. Lally, editor, The Pilot, Boston, Mass.

Herbert H. Lehman, New York, N. Y.

M. Albert Linton, chairman of the board, Provident Mutual Life Insurance Co., Philadelphia, Pa.

J. Howard Marshall, vice president, Signal Oil & Gas Co., Fort Worth, Tex.

Jubal R. Parten, president, Woodley Petroleum Co., Houston, Tex.

Alicia Patterson, editor and publisher, Newsday, Garden City, L. I.

Eleanor B. Stevenson, Oberlin, Ohio.

Henry Pitney Van Dusen, president, Union Theological Seminary, New York, N. Y.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Americans Should Have More Respect for Their Own Bill of Rights

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. WILEY. Mr. President, September 17 is Constitution Day. It was on September 17, 1787, that the United States Constitution was adopted. This is indeed a hallowed occasion. However, these days, some Americans seem, unfortunately, more determined to pay lipservice to the Constitution than to give it genuine respect.

That is particularly true in the case of what amounts to some Americans' outright disrespect for the Bill of Rights of the Constitution. Some Americans apparently do not seem to mind if the Bill of Rights is ignored or trampled upon, so long as it is the other fellow who is being hurt. These Americans do not seem to understand that if the Bill of Rights is violated with impunity, as regards one group, then all groups are in danger.

The Bill of Rights exists for all, not just for a few.

I point out these facts in connection with this further fact: The other day, a professor from the University of Wisconsin read a research paper before the American Sociological Society, meeting in annual convention here in Washington, D. C. The paper summarized the results of a survey of a sample of college students in two universities—the University of Wisconsin, and Northwestern University. The surprising result of the survey was that it showed that comparatively few students seem to believe in some of the provisions of the Bill of Rights.

It appears, from the survey, that more than 4 out of 10 would deny an accused person a public trial, under some circumstances.

About the same percentage appear to believe that there are some groups to whom it would be all right to deny the right of peaceful assembly.

And one-quarter of those interviewed see no objection to double jeopardy in criminal proceedings.

This survey ought to give all Americans pause to reflect.

I think our University of Wisconsin and Northwestern students might well brush up on their study of the history of the United States Constitution, the history of why we adopted these precious first 10 amendments to the Constitution.

I have a high regard for these two great universities, naturally; and I hope further studies may show that the students have a better understanding of, and wider sympathy for, the blessings with which we are all endowed.

I send to the desk two items: first, an article from the August 28 issue of the Madison Capital Times on this research paper; second, a statistical table from the paper itself.

I ask unanimous consent that these two items be printed in the Appendix of the RECORD.

There being no objection, the article and table were ordered to be printed in the RECORD, as follows:

[From the Madison (Wis.) Capital Times of August 23, 1957]

SOCIOLOGISTS IN SURVEY FIND UNIVERSITY STUDENTS REJECT PRINCIPLES OF BILL OF RIGHTS

WASHINGTON.—The freedoms guaranteed to Americans by the Bill of Rights apparently are no longer cherished by college students, a team of sociologists reported today.

Drs. Robert McGinnis, of the Univerisity of Wisconsin, and Raymond W. Mack, of Northwestern University, presented to the 52d anual meeting of the American Sociological Society the results of a survey they conducted among University of Wisconsin undergraduates.

In the survey, the first 10 amendments to the United States Constitution—familiarly called the Bill of Rights—were transformed into a 14-item questionnaire.

A "random sample" of students was asked to answer the questionnaire, which brought out their attitudes toward various Bill of Rights principles such as freedom of press and religion, protection against double jeopardy, the right to avoid self-incriminating testimony.

The students "overwhelmingly rejected the principles of the Bill of Rights," McGinnis and Mack said.

Less than 1 percent of them expressed complete agreement or even acceptance with reservations of all the Bill of Rights principles.

The questionnaires were submitted to 483 Wisconsin undergraduates chosen at random from the student body in attendance in September of last year.

Among the findings:

Three students out of four believe there are circumstances in which an individual ought to be subject to a double jeopardy.

More than 7 in 10 would deny an accused person the right to confront his accuser. Nearly half went further and said there are situations where star chamber proceedings are preferable to public trial.

About 4 out of 10 held that there are some groups to whom the right of peaceful public assembly should be denied.

A study of belief in the Bill of Rights: Percent in agreement with each of 14 provisions of the Bill of Rights, university students and schoolteachers

[In percent]

Provision	Group			
	(1)	(2)	(3)	(4)
Reserved rights	44	53	54	71

Radio Bulletin of Farmers Union Grain Terminal Association

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio bulletin dated August 27, 1957, issued by the Farmers Union Grain Terminal Association, St. Paul, Minn.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, AUGUST 27, 1957

How important are farm prices to farm prosperity? Ask a farmer, and he'll tell you that farm prices are all important. And, he'll wonder to himself why anyone would ask such a foolish question. Every farmer knows he's got to have decent prices to survive. Farming, after all, is a business, and if prices aren't high enough to cover costs of operation and return a profit, the business is in plenty of trouble. That's the boat the farmer is in. That's why he's so concerned about the low prices he gets for what he raises and sells now.

But, if this is so simple, why talk about it? Well, here's the reason. Several months ago, the Secretary of Agriculture gave a talk to Minnesota bankers, meeting in St. Paul. In this speech, the Secretary dealt with what he called half-truths about agriculture. One of

the so-called half-truths that the Secretary claims to see has to do with the role of farm prices. Now, the editor of Successful Farming magazine got a copy of that speech, but, from another source, he got evidence that blows the Secretary's argument sky high. He tells about it in the latest issue of that magazine.

He says that "By interesting coincidence, two pieces of printed matter recently reached Successful Farming editorial offices at almost the same time. One was a speech by Secretary Benson to a group of bankers in which he stated, 'A fourth half-truth is that farm prosperity depends directly on farm prices * * *. It is income that farmers spend, not price. Income is the result of production times price per unit minus costs.'"

The other, adds the editor, was a chart in the Monthly Review, put out by the Tenth Federal Reserve District bank. Says the editor, "The chart is especially interesting after reading the Benson statement, because it shows that farm income follows farm prices up and down rather closely and almost ignores the 'total farm production' line."

One look at the chart shows that the editor is right. And, he concludes with this observation, "So perhaps Secretary Benson's statement is wrong in attempting to minimize effect of price on income—more wrong than the half-truth he's attempting to dispel." Now the source of the chart which the Federal Reserve bank shows is, of course, none other than the Department of Agriculture. Yes, right in the Secretary's own shop, he could have, if he'd tried, found the evidence that shows farmers must get decent prices to come out with decent net incomes. The chart tells the story that Secretary Benson missed, or perhaps doesn't want to tell about. The simple truth is that the farmer's price, and his net income, go up and down together.

Right now they are down, and Successful Farming magazine reminds us that Secretary Benson played a big part in bringing them down. In fact, the magazine editor says Mr. Benson has launched a big push from his office in Washington to make farm prices even lower next year.

Farmer's don't, however, need a chart to remind them of the cold, hard facts about making a living on the farm. They know the score. That's why they've worked for farm programs to protect prices, and why hundreds of thousands of them, right here in the upper Midwest, market their grain, GTA, the co-op way.

Mutual Security Conference Report

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. PELLY. Mr. Speaker, the compromise on the differences between the House and Senate on the mutual security appropriation is not going to satisfy either those who support this program for our national security or those who oppose any or all aid to other friendly nations.

Here, it seems to me, is a clear issue. We necessarily cannot represent the viewpoint of the majority of our constituents. By that I mean, there is plenty of information available to Members of Congress which supports the necessity of adequate funds in the interest of national security, yet these facts are not generally available to the public. Therefore, it seems to me, we have the obligation of voting for restoration of funds even though public opinion at home does not fully support such action. After all, the testimony given at hearings on the mutual security bill was definite. For example, after retiring as Chairman of the Joint Chiefs of Staff, Admiral Radford at such a hearing returned and restated his unequivocal support of this program as an essential part of our defense. He reiterated as a retired citizen what officially he had said previously, and he knew the facts. Now I know the American people do not see the mutual security program entirely in the light of defense which many of us do, but that is the light in which Admiral Radford testified.

The voting in Congress indicates, I am sure, that the viewpoint of constituents is a strong influence on us. But today we must vote our own consciences and not as it is politically expedient to vote. The security of the Nation is at stake. So I must personally stand up on this issue and be counted with those who support this unpopular but nevertheless what I believe to be essential program. It is one that will deter war and Communist aggression. I accept the position that defense needs have become so expensive, it is economy to build up the means of self-defense of other friendly peoples abroad rather than to try and maintain major mobilization at home to the point of virtual national bankruptcy.

One new aspect, important since the Army leadership in Syria was taken over recently by the Communists, is now linked with this bill. We have, as I understand, 14 allies chiefly in the Middle and Far East whose military strength depends on it. The five countries, Korea, free China, Vietnam, Pakistan, and Turkey, by our assistance have 2,100,000 men under arms. These countries are under Communist pressure from without and from within. By treaties, approved by the Senate, we have said the security of the United States would be in jeopardy if Communist aggression succeeds against any of these. Therefore, we have a vital interest in the ability of each country to stand and defend its own integrity.

As legislators, let us not dodge our responsibility. This is waging peace. This mutual security, if adequate, will prevent war. As such we must provide sufficient funds for the program.

So, Mr. Speaker, I am impelled to support the maximum restoration of funds in the conference report on the mutual security bill.

A Congressman Should Visit With His Constituents

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. McCULLOCH. Mr. Speaker, I believe that a Congressman should be in his district to confer and visit with his constituents whenever official duties do not require him to be in Washington.

When Congress adjourns in a few days, I expect to return home and to be available for conferences and visits with residents of the Fourth District in the courthouse of each county seat between 8 a. m. and 4 p. m., in accordance with the following schedule:

Allen County, Lima: Thursday, September 19.

Auglaize County, Wapakoneta: Tuesday, September 17.

Darke County, Greenville: Wednesday, September 18.

Mercer County, Celina: Monday, September 16.

Miami County, Troy: Tuesday, September 24.

Preble County, Eaton: Wednesday, September 25.

Shelby County, Sidney: Thursday, September 26.

No appointments will be necessary. Any problem with, or opinion concerning, the Federal Government will be proper subject for conference.

Of course, I will be glad to see residents of the district, in my Piqua office, any time that Congress is not in session, except on the days scheduled above.

One-Third Socialized

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Punxsutawney Spirit of August 26, 1957:

ONE-THIRD SOCIALIZED

We are approximately one-third socialized. And if the trend continues at the rate it has followed since 1929, in 50 years 99 percent of our economy will be socialized and 1 person out of 100 will be privately employed.

That startling observation comes from Emerson P. Schmidt, director of economic research for the Chamber of Commerce of the United States. He points out that last year nearly one-third of the national income was channeled through Government, either Federal, State, or local. He adds: "Just as human wants are unlimited and insatiable, it appears that the pressure for Government intervention and expenditures is unlimited and insatiable."

Dr. Schmidt is particularly concerned with the continuing effort to load more and more activities and functions on the Federal Government. As he sees it, "We've seemingly become incapable of distinguishing between national problems and nationwide problems." Washington now runs 54 grants-in-aid programs and 13 new ones are in the current budget—including one for assisting States to plant trees. The results are inevitable. The Government bureaucracy grows. The proportion of our earnings taken by Government tends to increase. More and more Government controls and regulations come into being, to the detriment of the free market. As a consequence, he finds, * * * our growth rate has not been what it could be under more favorable tax treatment and less debilitating regulations. According to him, since 1946 our per capita real income—

which is income adjusted for changes in taxes and in prices—has increased only $182, or about $18 per year per person.

Dr. Schmidt deals in considerable detail with the steady growth of governmental intervention in the fields of money and banking. Intervention has taken various forms at various times, including the forcing down of interest rates, guaranteed loans, easier borrowing arrangements, etc. And this, he writes, "puts the economy under constant inflationary pressures and creates political pressures for direct Government lending, direct controls, and regimentation. It must finally lead to capital investment rationing, compulsory saving, price and wage controls, profit controls, the allocation of labor to specific assignments—a regimented economy."

It is frequently said and commonly believed that the demand for new services and interventions by Government comes from the people and so is irresistible. Dr. Schmidt characterizes that as almost 100 percent hokum and buncombe. He is convinced that the demand comes, instead, from a comparatively small number of researchers, writers, and intellectuals. They get their ideas widely talked about—and then * * * the politicians latch on to them and make them their own.

Is the situation hopeless? It is not, in Dr. Schmidt's view. Today, he feels, the basic drift of thought in the Western World is toward more conservatism—and that this drift can be capitalized upon. We can, he argues, get better representation at all levels of government. He makes his final point in these words: "If we each begin somewhere at the local level, within a few years we can change the sociopolitical climate in the direction of greater productivity and more freedom for all."

One Man or Many?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kane Republican, Kane and Mount Jewett, Pa., of August 26, 1957:

ONE MAN OR MANY?

"One of the most persistent issues of modern times is the controversy over defense organization at the seat of government," writes Col. J. D. Hittle, United States Marine Corps, in the July issue of United States Naval Institute Proceedings. "In essence the issue is a clear-cut one and centers on the question of whether or not our Nation should discard the Joint Chiefs of Staff as the top military planning agency and replace it with the Prussian-German type single chief of staff and supreme general staff system."

In 1947 Congress established the JCS system and specifically forbade adoption of the supreme general staff system. Ever since, efforts have been made to change the law and authorize the appointment of a single chief of staff. As Colonel Hittle points out, there are superficial attractions in this plan. And one danger, in his view, is that "It deceives because it offers what so many seek—an easy, simple solution to a very complicated problem."

For instance, the fact that in actual combat, troops require a single commander is used as an argument in support of the single chief of staff concept. But, as Colonel Hittle observers, field commanders—no matter how high their rank or important their command—are not responsible for determining the Nation's basic strategy. They only implement it. "This," he writes, "points up the very fundamental difference between planning at the national and lower levels—planning at the seat of government originates the national strategy. Subordinate theater commanders carry out such strategy as it applies to their respective commands." Moreover, determination of the basic national strategy involves far more than military decisions alone. It is always influenced by many other and diverse elements—political, industrial, economic, etc.

The great military successes of Frederick the Great—a monarch whose authority was absolute, and who was supreme commander in war—are cited in favor of the single chief proposal. But as Colonel Hittle shows, Frederick operated under vastly different conditions of warfare. He had ground forces only, and faced none of the problems resulting from the need to coordinate ground, air and naval forces. At his greatest battle his army numbered but 36,000 men—about the size of 2 present-day divisions. As war became more and more complex, Colonel Hittle finds, the single chief of staff or single commander system failed to keep pace. Indeed, he believes that the ultimate defeat of Napoleon, another supreme commander with absolute power, was due to that failure, and that the emperor "did not comprehend sea power or naval problems."

Colonel Hittle presents many convincing arguments against the single chief system, and in favor of the JCS system we now have. To quote him once more, "The JCS system assures full development of land, sea and air warfare doctrines and material, because no one service can dominate another. All are partners in national security. The single chief of staff permits 1-man and 1-service control of the armed forces and leads to stifling of progress and service initiative."

University of Wisconsin School of Banking

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. WILEY. Mr. President, there is now meeting at the University of Wisconsin a most interesting school. In attendance are 1,128 bankers from 39 States of the Union. They are enrolled in a course in banking, sponsored jointly by the university and by an organization of American bankers.

The 2-week course is being addressed by many of the outstanding economists and bankers of the Nation.

The school demonstrates the interest versity of Wisconsin is a servant, not simply of the youngsters of my State, but also of the entire adult population, and not simply of my State, but also of other States of the Union.

The school demonstrates the interest of the banking profession in serving ever more effectively the financial needs of the people of this country. This is the sort of development which shows how private banking is on its toes, eager to learn, to improve, and to serve.

I ask unanimous consent that an article on the subect of this banking school be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal]

LARGEST BANK SCHOOL AT UNIVERSITY OF WISCONSIN DRAWS 1,128

MADISON, WIS.—With the largest enrollment in its 13-year history, the University of Wisconsin School of Banking will open Monday.

A total of 1,128 bankers from 39 States have enrolled for the 2-week course, which will close with commencement exercises September 6.

The school is sponsored jointly by the university and the Central States Conference, which consists of bankers' associations in 16 Midwestern States. Students are required to attend three summer sessions before graduating, and in addition must complete extension work between sessions.

This year, 325 members of the third-year class are expected to receive diplomas. Chancellor Clifford M. Herdin of the University of Nebraska will be the commencement speaker.

Dr. Herbert V. Prochnow, a Wisconsin alumnus and vice president of the First National Bank of Chicago, is director of the school. Fayette H. Elwell, dean emeritus of the university's school of commerce, is administrator.

Prochnow is a former Deputy Under Secretary of State for Economic Affairs and has been director of the school since 1945. The curriculum includes courses in contemporary economic problems, commercial bank credit, investments and commercial law.

Prochnow said that 110 faculty members drawn from the fields of banking, government, economics, law, and business would lecture. He said that faculty members include outstanding authorities in their fields.

Among the lecturers are Dr. Gabriel Hauge, a special assistant to President Eisenhower; Clarence B. Randall, also a special assistant to the President and former board chairman of Inland Steel Co.; Willis Gale, board chairman of Commonwealth Edison Co., Chicago, and Dr. Sumner H. Slichter, Harvard economist.

Wisconsin lecturers will include Carl M. Flora, vice president of the First Wisconsin National Bank, Milwaukee, and John H. Shiels, president of the Madison Bank & Trust Co., Madison.

Surplus Property for Worthy Agencies

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. KEATING. Mr. Speaker, I have today introduced a bill to make certain welfare and recreation agencies eligible for Federal surplus property.

Under the present law, such surpluses can go only to medical institutions, health centers, schools, colleges, and related organizations. The proposed bill would broaden eligibility to include agencies such as the Salvation Army, YMCA, YWCA, Travelers Aid, and similar organizations.

The bill grew out of recommendations drawn up by a National Welfare Assembly Committee, which included members drawn from American Foundation for the Blind, Child Welfare League of America, Council of Jewish Federations and Welfare Funds, Council on Social Work Education, Girl Scouts, National Council of Churches of Christ in America, National Federation of Settlements and Neighborhood Centers, National Jewish Welfare Board, National Recreation Association, Salvation Army, United Community Funds and Councils, Young Men's Christian Association, and Young Women's Christian Association. In addition, the following organizations also expressed their interest in this subject: American Hearing Society, Board of Hospitals and Homes of the Methodist Churcch, National Catholic Community Service, and United HIAS Service.

The present law, which limits eligibility for surplus Government property to educational and health organizations, should be expanded to include worthy welfare and recreational agencies. These include settlement houses, homes for the aged, youth centers, character building agencies, and adoption centers.

These agencies are doing a magnificent job of helping our young people, our aged, and many of our needy citizens. They need and can make good use of surplus property in their work.

Since the Department of Health, Education, and Welfare cooperated with the National Welfare Assembly Committee in drawing up the agreement out of which this bill grew, it deserves wide support and should be acted upon as soon as possible after Congress reconvenes in January.

We should leave no stone unturned in helping these fine organizations pursue their objectives, for in the end their success will mean a better America for all.

San Francisco Only Logical Home Port for U. S. S. "Ranger"

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. SHELLEY. Mr. Speaker, I profess no talent as a naval strategist. I feel that I am wise to leave that to the admirals. But I do profess considerable knowledge of the sea and the men who sail it, having spent a good many years before the mast. The men who make up the complement of the beautiful new *Ranger* are, I am sure, no different in their tastes and desires from the merchant seamen; the bluejackets of the lesser but no less proud vessels of our splendid fleet, or the boys who man the lovely white cutters of the United States Coast Guard.

Ask them their idea of the best liberty town on the coast and we will wager that San Francisco wins the toss, hands down.

There has been much argument and comment both in the public prints and in the CONGRESSIONAL RECORD on why the *Ranger* should make Long Beach her home port rather than Bremerton or San Francisco. The reasons given are certainly valid as far as they go for either of these two fine ports to the northward and southward of San Francisco. But let us take a minute or two to discuss the ship's assignment from the point of view of her 3,500 crew members' welfare and morale.

Has anyone ever walked down the main street of a Navy town when liberty has been granted and the town's population virtually doubles in the space of hours? The sea of white hats may make the hustlers, the gyp artists, the tattoo parlors, and the beer-joint operators faint with delight as the jacktars struggle with their own form of temptation on where to spend their money.

Has anyone ever thought of the housing and schooling problems that beset the smaller Navy town when a ship the size of the *Ranger* drops her hook in her permanent anchorage? Has anyone experienced the married sailors' dismay when they learn the stepped up rent they would have to pay for cramped quarters in an already cramped community?

To a city the size of San Francisco, the influx of 3,000 Navy families would be a drop in the bucket. The city is big enough to absorb far more than that, and in San Francisco the natural beauties, the wonderful climate, and the cultural and educational advantages are a strong morale inducement which I feel should be carefully considered.

The quasi-military experts have argued that farther south in California the flying conditions are better than those in the San Francisco area. The number of crystal-clear days may be more frequent farther south, but I doubt it. This may seem naive of me to mention, but nowadays is aerial combat limited only to those days when no vagrant whisp of nimbo-stratus clutters the horizon and the eyeballs of the foe are clearly visible a rocket's range away?

San Francisco's shipyards are quite capable of handling a ship of the *Ranger's* bulk. The critics point out that another west-coast port would be better equipped to handle her if she ever became badly damaged. Again at the risk of naivete, may I suggest that were she banged up, the unfortunate event would probably occur somewhere east of Suez, and were she required to limp home for docking, the difference in nautical miles on a great-circle run from the Far East to any port on the west coast would be practically negligible.

I enjoy a mental picture of the *Ranger*, steaming in stately dignity beneath the Golden Gate Bridge, inbound from a Far East patrol. Below, in her berthing spaces the liberty section is getting ready to go ashore. The dialog might go something like this.

"What are you gonna do tomorrow, Boats?"

"Going to take the wife and kids out to the ball game. I hear those San Francisco Giants are playing a doubleheader."

San Francisco, with its unlimited facilities to absorb, educate, and entertain the 3,500 sailormen and their families, wants to be home port of the *Ranger*; and with its shipyard facilities and unquestioned position as a major port city on the Pacific coast, ought to be the home port for the queen of the Pacific Fleet.

Latin American Policy

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. REECE of Tennessee. Mr. Speaker, I have on several occasions during the last few months, addressed the House indicating my concern over the campaign of the gentleman from Oregon against several Latin American republics. I honestly feel that his activities are contrary to the best interests of our national security and the welfare of amicable hemispheric relations. I have tried to be quite objective in my comments on the gentleman's activities and have raised numerous questions which he has seen fit either to evade or to leave unanswered. If these questions were fully and completely answered by the gentleman, the House might be in a better position to judge his actions in light of full disclosure. I would like to take this opportunity to repeat some of my questions posed on July 19, and August 9, 1957, in the fond hope that the gentleman will see the benefit of complete and candid replies in the interest of a full understanding of his objectives.

I have stated that the gentleman foments revolution and in support of this assertion, I quoted his words of June 13, 1957, on this floor. "Do I foment revolution against dictators? Yes; gladly, and until I die." I asked the gentleman if he still adheres to this position or has he seen the folly of an American representative fomenting revolution against friendly Allied countries.

I have asserted that from a reading of certain Costa Rican newspapers it would appear that the gentleman's statements and actions were an intrusion into the foreign policy prerogatives of the executive branch of the Government. In order to judge the correctness of my assertion I have, on several occasions, asked the gentleman to make available to the House all his public and private statements made in the Caribbean area. He has consistently refused to do so.

I have repeatedly questioned the gentleman concerning his weekend excursions to Costa Rica and Colombia in the company of a female employee of the Library of Congress. I have asked the gentleman to explain why this employee, Mrs. Bennett, was given equal pictorial and editorial billing by Costa Rican newspapers and why she was termed "a collaborator of the gentleman from Oregon." Also, I have asked that the gentleman make known the extent of the

expenses defrayed by the Government of Costa Rica and a Colombian newspaper. I brought to the gentleman's attention the fact that the Associated Press, under dateline June 15, reported that Mr. and Mrs. Porter arrived in Costa Rica on that date. I asked the gentleman if the Associated Press had confused Mrs. Bennett with Mrs. Porter and, if not, were Mrs. Porter's expenses defrayed similarly. None of these questions have been answered.

As regards the gentleman's attitude toward the propriety of the Library of Congress providing the services of Mrs. Bennett, I have inquired of the gentleman if he believes that those services are proper. I raised the question of conflict of interest in Mrs. Bennett, a Federal employee of the United States, accepting emoluments from foreign governments. I ask the gentleman if he had sought a ruling on this question from the Attorney General of the United States. There has been no answer.

I felt that in light of my assertions concerning the improper actions of Mrs. Bennett, it would be helpful to judge their correctness if the gentleman from Oregon were to make available a summary of Mrs. Bennett's actions and public statements in the Caribbean. Such might explain her widespread press coverage in Costa Rica. No such information has been forthcoming from the gentleman.

The gentleman has stated that the military advantage of aid to certain Latin American countries is only fancied but he admits that the Department of Defense asserts that the military advantage gained thereby is very real. I have asked the gentleman if he considers himself a more qualified judge of military requirements than the Department of Defense. The question remains unanswered.

I agree with the gentleman that the Communist danger in Latin America can be more attributed to subversion than invasion but that there is no difference in the end result. I asked the gentleman if he is aware that the Red government of Guatemala established by subversion was overthrown by Castillo Armas just in time to prevent the arrival of Soviet arms in a Swedish ship.

The gentleman has stated on numerous occasions that everyone in the State Department below the post of Assistant Secretary for Inter-American Affairs agrees with his policies. In the interest of the continuation of our good-neighbor policy, I ask the gentleman to make public the names of those State Department officials who are not in sympathy with this long-established bipartisan policy. Again, the gentleman has failed to produce.

The gentleman has stated that he has been "lionized by the people of Costa Rica." In this regard, I asked the gentleman what connection there was between his fervent reception in Costa Rica and his introduction of an amendment to the mutual security bill which would have cut off aid to Costa Rica's archenemy, Nicaragua.

I ask the gentleman to explain the meaning of the overwhelming defeat of his amendment to the mutual security bill particularly in light of the fact that he had brought these amendments and his report thereon to the attention of every Member of this body 2 weeks before the vote was recorded.

I have asked the gentleman why he does not consult with the House Committee on Foreign Affairs or the Secretary of State before making his radical charges against the governments of allied countries. Again, no satisfactory answer was forthcoming.

These and many other questions designed to reach a better understanding of the objectives of the gentleman from Oregon remain unanswered. I have no means of knowing whether the gentleman will ever choose to reply but in the absence of any explanation from the gentleman, I conclude his silence is a tacit admission of the veracity of my assertions.

Mutual Security

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 28, 1957

Mr. MAY. Mr. Speaker, for the RECORD, I want to include the latest summary of the Federal aid mutual security debate as depicted in the following editorial by one of Connecticut's finest newspapers, the Hartford Times.

I have long felt that this program is one of the most important weapons we have for the defense of the free world and in maintaining America's leadership. I have consistently voted for foreign aid, yet, at all times have been particularly interested that this program be on a sound economic basis with no waste. The day may come when foreign aid can be eliminated, but until peace is secured, we should continue this program as economically as possible as insurance to peace in the world.

FOREIGN AID CUT COMING

The Senate has restored $500 million of the $800 million the House cut from the President's near $4 billion request for foreign aid. The matter will go to conference committee to adjust the two bill versions.

The long, sharp debate in both Senate and House has made an impression on the administration. Vice President NIXON says that a worldwide survey is to be made in an effort to cut the costs of foreign aid operations. He virtually agreed that cuts could be made without loss of effectiveness when he said:

"I would be less than candid if I were not to say that in some areas of the world there has been waste and that in some areas of the world where we have provided funds it hasn't accomplished the purposes we would like."

The American people will need to be kept up to date on the facts if they are to continue to give support to this highly desirable program. The critics cannot be allowed to have the last word.

The program began as a temporary venture as the Marshall plan during the Truman administration and was designed to stem the swelling postwar tide of aggressive communism in Europe. Red-instigated general strikes threatened to overthrow governments in Italy and France. Our economic aid removed the economic distress on which Reds were basing their appeal.

There is sound basis for holding, as Mr. NIXON did, that "the expenditures we make in the foreign field are just as important and, in some ways more in the interest of the United States than the expenditures we make in our own defenses here at home." But that proposition needs the constant support of relevant facts.

Especially there must be frank scrutiny of the causes of public criticism. Mr. NIXON said that "as result of the congressional attitude toward this program, the administration is examining the operation of these programs all over the world to see ways in which we can do it with less money than we have been doing in the past."

With such information in hand, further debate can be intelligently carried on. Some degree of economy is indicated by the removal of admitted waste.

Professional Visual Care for War Veterans

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. SISK. Mr. Speaker, the Committee on Veterans' Affairs has reported favorably to this House H. R. 6719, which we may anticipate will be before the House for action shortly after we convene in January. I would like to commend this legislation to the Members and urge that during the recess they take the opportunity to examine it. The bill would provide urgently needed salary adjustments to the professional personnel of the Veterans' Administration. I am convinced these adjustments are not only merited, but that they are most necessary if we are to secure for veterans the high caliber health and hospital services they deserve.

I would like particularly to address my remarks and draw the Members' attention to section 5 of H. R. 6719, which would provide a long overdue recognition of the services and accomplishments of the optometric profession and would enable the Veterans' Administration to make far better use of optometrists in providing visual care for veterans.

About 10 years ago the Congress directed that the armed services commission optometrists. As a consequence, more than 300 doctors of optometry are on active duty with professional status as commissioned officers of the military services, holding ranks as high as lieutenant colonel in the Army, captain in the Navy, and major in the Air Force. Under present regulations, doctors of optometry, graduates of accredited and recognized colleges requiring 5 or 6 years of college work leading to doctors' degrees, are classified as technicians, grades 5 to 7 by the Veterans' Administration and are paid and treated as such. As a consequence, fewer than 10 optometrists are employed by the Administration throughout the country. Unfortunately, the veterans and taxpayers are

the ones who suffer through this inconsistent discrimination.

I do not think there can be any doubt of the ultimate economy and improved visual care which would result if the Congress enacts the authorizing provisions of section 5 of H. R. 6719 and if a strengthened program of visual care of veterans is conscientiously formulated by the Veterans Administration. Doctors of optometry are providing about 75 percent of the visual care in the United States and it is unthinkable that we should deny this same visual attention to veterans.

Doctors of optometry are intensively trained to test and diagnose visual defects and to consider test results and prescribe appropriate corrective lenses and devices. This training to diagnose, to analyze, and to prescribe are the phases of their work in the visual health field which merit professional recognition, for they require the exercise of independent, trained judgment. Doctors of optometry are thus differentiated from nurses, laboratory workers, and other technicians who carry out orders given them by a doctor.

Doctors of optometry are also intensively trained to recognize diseases of the eyes, though treatment of diseases by medicine or surgery is outside their field. When a patient exhibits symptoms of disease, he is referred to a specialist in diseases of the eye in exactly the same manner as your family medical doctor refers patients to specialists when diagnosis and treatment are not in the medical field in which his services will provide the attention and expert handling required.

During committee consideration of this legislation, two objections were raised to the provisions of section 5 giving professional status to doctors of optometry. It was said this should not be done because the present professional staff of the Veterans' Administration is designated as the "Medical Service," and optometrists are not medical doctors. To me, such an argument completely lacks substance and is a quibbling over words. It would be far better to rename the division as "Health Service," than to deprive veterans of this care—if any recognition is to be given to such an argument.

More serious was the allegation that optometrists are not professionally trained. I looked into this, because I certainly do not want to bring about unskilled or untrained visual care. I find that every college in this country giving a degree as doctor of optometry maintains a professional school of optometry with high requirements for admission, including at least 2 years of preprofessional training at the college level, with a minimum of 3 or 4 additional years of professional study, requiring 5 or 6 years of college training in all. This compares favorably with the requirements of other professions concerned with health care and exceeds a number of them.

I think the Members will agree that this requirement, together with the provisions of section 5 authorizing the Veterans' Administrator to determine requirements for eligibility, effectively insure the highest professional standards. I feel it is unfortunate that misleading statements were made to the committee in this regard.

There is a larger and perhaps a more important principle involved in the legislation we consider which bears on health care for veterans, servicemen, and others entitled to such care. I think it would be most unfortunate if we became so circumscribed and bound to the canons and beliefs and theories of any one school or branch of the healing art that we could not take advantage of the services offered by another branch. We all may suffer if we are blind to the advances of science and the formulation of new theories which, perhaps, do not fit into the thinking of older schools. We cannot afford to trust our health and well-being exclusively to a monopoly of thought.

Treasury Department Analysis of Customs Administrative Bill of 1957

EXTENSION OF REMARKS

OF

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. COOPER. Mr. Speaker, on August 23, 1957, I introduced, at the request of the administration, H. R. 9424, entitled "A bill to amend certain administrative provisions of the Tariff Act of 1930 and related laws, and for other purposes." Our distinguished colleague, the gentleman from New York, Representative REED, introduced an identical bill, H. R. 9425, on the same date.

I have received from the Treasury Department an analysis of this legislation. I have received a large number of requests for copies of this analysis from interested individuals and organizations.

Since it is highly important that all interested individuals and organizations have this material for study prior to the commencement of the second session of this Congress, under unanimous consent, I ask to have it printed in the Appendix of the RECORD.

ANALYSIS OF CUSTOMS ADMINISTRATIVE BILL OF 1957—TITLE I, AMENDMENTS TO THE TARIFF ACT OF 1930 AND RELATED LAWS—REFERENCES TO REPEALED LAWS—OBSOLETE STATUTE REPEALED

Section 101: (a) The act of March 24, 1874, was repealed by section 643 of the Tariff Act of 1922 (42 Stat. 989) and no corresponding provision of law is now in effect.

Section 3433 of the Revised Statutes was superseded by section 3177 of the Internal Revenue Code of 1939, and the latter has now been superseded by section 5521 of the Internal Revenue Code of 1954.

(b) Section 3448 of the Revised Statutes was superseded by section 2197 (a) of the Internal Revenue Code of 1939, and the latter has now been superseded by section 7701 of the Internal Revenue Code of 1954.

(c) Section 3369 of the Revised Statutes was superseded by section 2190 of the Internal Revenue Code of 1939, and the latter has now been superseded by section 5753 of the Internal Revenue Code of 1954.

Section 901 of the Revenue Act of 1926 was superseded by section 3074 (a) of the Internal Revenue Code of 1939, and the latter has now been superseded by section 5333 of the Internal Revenue Code of 1954.

(d) Section 241 of the Criminal Code has been repealed and the matter is now covered by title 18, United States Code, section 42.

(e) Revised Statute 2904 is obsolete. Dutiable value on imports is determined in accordance with section 402 of the Tariff Act of 1930, as amended.

DEPOSIT OF IMPORTED LIQUORS IN BONDED WAREHOUSE

Section 102: Section 11 of the act of March 1, 1879 (19 U. S. C. 467) would be amended by eliminating detailed statutory requirements regarding inspection and a time-consuming stamping procedure by customs officers of casks and other containers of imported liquors. If the Secretary should deem it necessary in the administration of applicable Federal laws for any marks or stamps to be placed on containers of imported liquors, he would be authorized to issue regulations requiring the marks or stamps. An obsolete provision dealing with distilled spirits in containers of not less than 5 wine gallons is deleted.

FREE ENTRY OF RETURNED ARTICLES

Section 103: (a) and (c) Subparagraphs 1615 (e) (3) and 1615 (g) (3) would be amended to insure that articles, resulting from manufacture of imported merchandise entered under bond for export pursuant to the proposed amendment to section 308 (1) made in section 105 of this bill, could not be reimported free of duty. This follows the policy of related provisions of paragraph 1615 dealing with merchandise manufactured in bonded warehouse (par. 1615 (e) (3)), etc.

(b) The amendments of pragraph 1615 (f) would provide, in effect, for the inclusion in the duty to be assessed on a blend of foreign and domestic liquors returned to the United States after having been exported, of an amount equal to any tax which may have been waived on the domestic component. This would remove an ambiguity in the present law and thus forestall a possible claim, that such a blend upon return to the United States may be subject to a duty equal only to the duty and tax waived or refunded on the foreign component.

By deleting the second sentence of subparagraph (f), the necessity of affixing internal-revenue stamps as evidence of duty payment to returned American manufactured tobacco before its release from customs custody would be eliminated. The existing requirement leads to confusion because the assessment to which the internal-revenue stamps relate is a duty not a tax. Evidence of duty payment on tobacco can be established satisfactorily and more economically by a rubber stamp such as is now used in the case of returned American cigars and cigarettes.

The spelling of "respect" is corrected in the fourth sentence.

PERSONAL EFFECTS OF TRAVELERS

Section 104: The amendment of paragraph 1798 (g) would ratify and stabilize an administrative ruling to the effect that no duty is collectible on account of the sale of the wreckage of a tourist's automobile within 1 year after its importation, and would apply the principle of the ruling to other articles in addition to automobiles. While it is not believed that the forfeiture provisions of the existing statute are violated by a sale of such wreckage, a statutory standard defining the extent to which an article must be reduced in value by a casualty if the sale thereof is not to result in forfeiture, is considered desirable for administrative guidance and certainty.

The new subparagraph (h) would permit residents of the United States who rent automobiles while abroad, to make incidental crossings into the United States in the rented

car without being faced with payment of duty on the car. It is anticipated that the regulations would limit the side trips to some such period as 7 consecutive days but recognize that numerous side trips may be made. The regulations would recognize the possibility that rented cars may be wrecked and therefore not be returned abroad and provide for no forfeiture in such a case. (See above amendment proposed to subparagraph (g).)

TEMPORARY IMPORTATION UNDER BOND FOR EXPORTATION

Section 105: (a) Under the present section 308 (1) of the Tariff Act, articles may be entered, temporarily free of duty under bond for exportation, for repair, alteration, or to be processed. However, if the processing would be such as to result in articles manufactured or produced in the United States, entry under section 308 (1) bond would not be allowed. For example, this bond procedure is not available to an importer who brings in a shipment of airplane parts for use in the manufacture by him in this country of an airplane which will be exported. This is because the airplane would be considered to be an article manufactured or produced in the United States. For the importer to do this under present laws, he must file a consumption entry, pay duty on the merchandise, file an application for drawback pursuant to section 313 (a) of the Tariff Act, prepare a drawback entry to cover the exported product, and await the payment of drawback of 99 percent of duties paid on the imported merchandise used. This procedure is costly and time consuming to both the importer and the Government.

The proposed amendment of section 308 (1) would permit operations like the one just described to be carried out under import-export bond even though the article as exported would have been processed to such a degree as to be considered "an article manufactured or produced in the United States." Specifically, the proposal would allow imported merchandise (except distilled spirits the manufacture of which is prohibited by the second proviso of 19 U. S. C. 1311; flour or byproducts produced from wheat prohibited in 19 U. S. C. 1313 (a); and certain other commodities containing alcohol) to be entered under a section 308 import-export bond for use in the manufacture or production of articles solely for export, upon compliance with specified conditions designed to safeguard the revenue. No substitution of domestic merchandise for the imported merchandise would be permitted. A complete accounting would be required for all products and wastes, and all products and valuable wastes would have to be exported or destroyed under customs supervision. Specific identification of the imported merchandise would be preserved, the provision being applicable only to merchandise covered by a single entry. When the merchandise is covered by more than one entry, or when the substitution of domestic for imported merchandise is desired, the drawback procedures would have to be followed.

Adoption of the recommended provision in the areas specified to supplement the drawback procedures, which are the only ones available under existing law, would result in a substantial reduction of time consuming work to the Customs Service, and enable many importers who manufacture by lot solely for export to avoid having their money tied up for extended periods awaiting the processing of their claims for drawback.

Conforming amendments are proposed to paragraph 1615 of the Tariff Act (19 U. S. C. 1201, par. 1615) in section 103 of this bill to insure that such manufactured articles would not be reimported free of duty under that paragraph.

(b) Proposed new subdivision (13) would permit entry under temporary bond for export of articles solely for public fairs or exhibitions. This includes articles to be exhibited as well as the backdrop material. The privilege would be available for public fairs and exhibitions other than those designated pursuant to the proposed Trade Fair Act, title II of this bill. Unlike special trade fair legislation and the proposed general Trade Fair Act, subdivision (13) would not cover articles to be sold or consumed at fairs or exhibitions nor make any allowance in duty due to deterioration while on exhibition nor permit the articles to be entered for consumption. Of course, the existing provisions in title 19, United States Code, section 1557 (c), for destruction in lieu of exportation of merchandise at the importer's request without payment of duty would be available.

DRAWBACK AND REFUNDS

Section 106: (a) The provision for permitting the use of imported and domestic merchandise of the same kind and quality on a substitution basis in the manufacture or production of articles for exportation with benefit of drawback was first enacted as section 313 (b), Tariff Act of 1930, which extended the substitution privilege to sugar, nonferrous metals, and ores containing nonferrous metals. Substitution was authorized because of the difficulty encountered by manufacturers, such as canners and sugar refiners, who used both imported and domestic merchandise in manufacture, in preserving the identification of the imported merchandise used. This resulted in the abandonment of many just claims for drawback. It was believed that manufacturers should not be foreclosed from drawback on their exported products because of the loss of identification and the admixture of imported and domestic merchandise.

By Public Law No. 109, 82d Congress, 1st session, the substitution privilege was extended to metal, and ores containing metal, generally, and to linseed, etc. And by Public Law No. 1012, 84th Congress, 2d session, the privilege was further extended to printing paper, coated or uncoated.

Manufacturers using merchandise other than sugar, metal, ores containing metal, flaxseed or linseed, flaxseed or linseed oil, or printing paper have indicated that they believe the substitution privilege should be extended to the merchandise they use in manufacturing for export on the same basis provided for the above-enumerated commodities. After careful study the Bureau of Customs has concluded that there are classes of merchandise other than those listed in the statutes in connection with which substitution is just as feasible as it is in the case of the enumerated classes of merchandise. Under the proposed new language the feasibility of granting the substitution privilege for an article would be determined as applications therefor are received from time to time from the manufacturers who believe their operations permit the utilization of substitution without endangering the revenue and without interference with the efficient conduct of customs business.

The problems of administering the proposed provision would not differ in nature from those which have been resolved in administering the existing substitution provisions. The privilege would not be extended in any case where substitution could not be as successfully administered as under existing law.

(b) The amendment of section 313 (f) would delete a provision that drawback of duties on salt used in curing exported meat may not be allowed in amounts less than $100. There is no similar limitation on allowances of other drawbacks, and no reason is known for continuing the limitation, which has appeared in provisions ancestral to section 313 (f) at least since 1883.

DEFINITIONS

Section 107: The title of appraisers would be changed from "appraiser of merchandise" to "appraiser of customs" to identify the position with its customs function and conform to the title of other principal field officers like collector of customs, comptroller of customs, and surveyor of customs. Mention of the chief assistant appraiser would be deleted, because the definition as proposed to be amended is believed broad enough to include this position, especially in view of title 19, United States Code, section 1500 (c), which empowers the chief assistant appraiser to perform the duties of the appraiser.

REMOVAL OF GOODS FROM PLACE OF UNLADING

Section 108: The amendments of section 448 (a) would—

(a) Permit definite determination of the time when the liability of the carrier on account of irregular removal of imported articles from the place of unlading ceases by specifically providing that removal is to be made in accordance with regulations of the Secretary. The liability now ceases when a permit for the removal has been issued by the collector of customs, and it has been difficult to determine what amounts to an issuance of a permit in certain classes of transactions, particularly when the articles are forwarded in bond to a second port of entry.

(b) Clarify the extent of the carrier's liability by expressly providing for liability for liquidated damages equal in amount to the duties, taxes, charges, and exactions accruing on the merchandise irregularly removed. In respect of such merchandise which is duty free and consequently as to which duties, taxes, charges, and exactions accruing may be negligible, it is necessary to provide a minimum liability ($500) to discourage laxity in handling such goods. Administrative relief, of course, may be granted in appropriate cases, such as where duty-free goods were not removed with any purpose of evading customs requirements.

(c) Change the carrier's liability from one for "duties" to one for liquidated damages, in order that administrative relief may be extended in cases such as where an irregular removal is for direct exportation and proof of the exportation is furnished.

(d) Change "48 hours" to "5 days" to conform with the extension of the 48-hour period formerly prescribed for making entry in section 484 (a), Tariff Act of 1930, to 5 days by section 16 (b) of the Customs Simplification Act of 1953 (19 U. S. C. 1484 (a)).

(e) Conform the references to merchandise and baggage with the fact that the term "merchandise" in this section is defined in 19 United States Code 1401 (c) so as to include baggage.

VERIFICATION OF DOCUMENTS

Section 109: Section 486 (d) was added as a new provision to the Tariff Act of 1930 by section 17 of the Customs Simplification Act of 1953 (19 U. S. C. 1486 (d)). It authorizes the Secretary of the Treasury by regulation to prescribe that any document required by any law administered by the Customs Service to be under oath may be verified by a written declaration in lieu of the oath. However, the new section did not provide that penalties applicable in a case of the filing of a false oath would be applicable if a false declaration were to be presented in the same circumstances. In accordance with the apparent intent and purpose of the previous legislation, this amendment would prescribe the same penalties for such written declarations, given falsely or not given when required, as are now provided in the case of oaths.

ADJUSTMENT OF VALUE FOR CHANGE IN QUANTITY

Section 110: A recent final decision of the customs courts has required an unrealistic valuation for duty of certain goods purchased at a price per unit of weight which lose weight through evaporation of moisture on the voyage of importation without any diminution in their actual value. The proposed amendment of section 507 would correct the result of this unrealistic decision by authorizing an adjustment, upward or downward as may be appropriate, in the unit value to compensate for either losses or gains in weight which do not affect the real value of the goods. The adjusted unit value would be applied to the landed weight of the merchandise to determine the dutiable value, thus permitting assessment of ad valorem duties on the real value of the goods.

This amendment, of course, would not affect the appraisement of merchandise the weight of which does not change during storage or transportation or merchandise whose actual value is affected by changes in weight.

REVIEW OF ADMINISTRATIVE DECISIONS

Section 111: In general the amendments proposed by this section would change existing law (1) by permitting notices of appraisements to be given in the same manner as notices of liquidations; (2) by permitting liquidation to be made without awaiting a final appraised value; (3) by authorizing administrative review of appraisements by appraisers and eliminating collectors' appeals to reappraisement; (4) by changing the time within which appeals and protests may be filed to 90 days; (5) by requiring deposit of liquidated duties where appeals or protests are filed in connection with merchandise entered, or withdrawn from warehouse, for consumption; (6) by making certain conforming amendments to section 514 of the Tariff Act of 1930 (19 U. S. C. 1514); and (7) by prescribing when mailed appeals or protests are filed.

Subsection (a): Proposed section 501 (a) would eliminate the present statutory requirement that written notices of appraisements be given directly to interested parties and provide instead for notices of appraisements to be given in accordance with section 505 of the Tariff Act of 1930 (19 U. S. C. 1505), that is, "in the form and manner prescribed by the Secretary of the Treasury." This would permit notices of appraisements to be given in the same manner as notices of liquidations. It is intended to issue regulations providing for a combined notice of appraisement and liquidation. The Treasury Department is studying the practicability of giving the combined notice by mail so as to provide better service to the importing public and modernize the present method of giving notices of liquidations, which generally is by posting the notice in a conspicuous place in the customhouse.

The general authority of collectors to file appeals to reappraisement is eliminated as unnecessary in view of the proposal to amend section 515 of the Tariff Act of 1930 (19 U. S. C. 1515) by providing for administrative review of appraisements by appraisers. (This is explained more fully in the comments under subsection (d) of this section of the draft bill.)

Proposed section 501 (b) and (c) would permit liquidations to be made immediately after the initial administrative determination of value, without awaiting possible administrative or judicial review of the valuation but subject to revision if the final appraised value either upon review by the appraiser or by the court differs from the initial appraised value.

Under existing law the administrative determination of the duties due on imported merchandise, i. e., the liquidation of an entry (19 U. S. C. 1505, 1514, 1515), awaits the final determination of the value of the merchandise, i. e., the appraisement (19 U. S. C. 1500, 1501). The proposed amendments would greatly expedite advice to importers as to their duty liability and would permit a very substantial reduction of the backlog of unworked entries which must now be carried for periods ranging from 2 to 10 years or more until value litigation is settled. After the notice of appraisement has been given (proposed sec. 501 (a)), the importer would have 90 days within which to appeal for reappraisement. The importer would continue to have the same rights to protest the liquidation he now possesses except that the time for filing a protest is changed from 60 to 90 days. (This is explained in the comments on the proposed amendments to sec. 514.)

Subsection (b): The amendments of section 503 of the Tariff Act (19 U. S. C. 1503) are necessary to conform that section with the changes proposed to be made in sections 501, 505, 514, and 515 of the Tariff Act by this bill.

Subsection (c): The proposed amendments of section 505 of the Tariff Act of 1930 (19 U. S. C. 1505) would permit notices of appraisements as well as liquidations to be given in the form and manner prescribed by the Secretary of the Treasury, as explained in the above comments on proposed section 501 (a), and provide that if a notice of liquidation or appraisement is mailed, the date of mailing is deemed the date the notice is given. This is patterned after existing provisions of section 501 (a) (19 U. S. C. 1501 (a)) and definitely fixes the time within which appeals or protests may be filed.

Subsection (d): The time within which protests against decisions of the collector may be filed would be changed from 60 days to 90 days. The period prescribed for filing appeals to reappraisement in proposed section 501 (a) is also 90 days. As indicated above, under the proposed bill an importer would receive notice of both appraisement and liquidation of an entry at the same time and the 90-day periods would run concurrently. He would have to decide whether to file an appeal or a protest, or both, within a stated period of time. Under existing law, the notice of appraisement is given first and 30 days are provided for filing an appeal. The notice of liquidation is given after a final appraised value is determined and 60 days are allowed for filing a protest against the liquidation. It is believed importers are entitled to the longer 90-day period within which to consider whether to file appeals or protests and it is hoped that with that longer period the number of protective appeals or protests, which otherwise would have been filed because of insufficient consideration, may be minimized.

The other changes proposed to section 514 of the Tariff Act of 1930 (19 U. S. C. 1514) are conforming amendments.

The language to be inserted in the first sentence would conform section 514 with the proposed amendment to section 520 (a) (2) set forth in section 113 of this draft bill and with the amendment of section 520 (c) (1) (19 U. S. C. 1520 (c) (1)) made by section 20 of the Customs Simplification Act of 1953 (67 Stat. 519). The language, dealing with reliquidations and protests where appeals to reappraisement have been filed, to be inserted after the first sentence of present section 514, is designed to avoid any possible conflict between the existing finality of liquidation provisions of section 514 and the portion of proposed section 501 (c) which would require reliquidation of an entry in accordance with a change in final appraised value determined through review of an appraisement by an appraiser or in a judicial reappraisement proceeding. It would make clear that protests may be filed against such a reliquidation on the limited ground that it is not in accordance with the final appraised value. Without this language, a conflict possibly could arise if the original liquidation was not protested and became final and conclusive on all parties by virtue of section 514 but the initial appraisement was changed by reason of administrative or court action. This amendment is also intended to reassure parties who wish to contest only the appraisement that it would be unnecessary to protest the liquidation to protect their rights with respect to matters relating to the appraisement, such as changes in classification by reason of a final appraised value differing from the initial appraised value on which the liquidation was based. Reliquidations to reflect such changes would be authorized and such reliquidations would be subject to protest on the ground that they do not follow the final appraisement.

Subsection (e): The proposed amendments of section 515 (19 U. S. C. 1515) would provide for review by appraisers of appealed appraisements in substantially the same manner as the collector's review of protested liquidations is prescribed by existing law (19 U. S. C. 1515). Provision is made for transmittal of papers to the court in appropriate cases where appeals or protests, or both, are filed after the required administrative review is made. The requirement of paying liquidated duties upon protest now applicable in the case of goods entered directly for consumption is extended to goods withdrawn from warehouse for consumption with respect to which either an appeal or protest, or both, is filed. A more detailed description of the proposed amendments to section 515 follows.

REVIEW OF APPRAISEMENTS

515(a): Proposed section 515 (a) would provide for review by appraisers of their appraisements when an appeal is filed. Under this provision appraisers would not be authorized to change an appraisement voluntarily in the absence of an appeal once a notice of appraisement has been given. This differs from the authority of collectors who may reliquidate an entry during the protest period even though no protest has been filed. Experience has demonstrated in the case of protests that differences between an importer and the collector often are resolved and certain errors in liquidations corrected upon the review without the necessity of court proceedings. It is anticipated that the review by appraisers would have the same salutary results and ultimately speed up the final determination of duties. Upon review the appraiser would be authorized to modify in whole or in part the original appraised value or to affirm it. However, he would not be authorized to increase the original appraised value upon review, unless the appeal takes the position that the original appraised value was too low. In such a case the appraiser could, if he agreed with the importer, increase the original appraised value. Such a situation could arise for example where the tariff schedule provided for a lower rate of duty on articles which are worth more per dozen. The importer might want the higher value in order to obtain the lower rate.

Notice, as in the case of the original appraisement, is to be given of any modification and appeal therefrom may be taken. If an appeal is filed from any modification, or if the appraiser affirms his original decision, the papers are to be transmitted forthwith to the court in accordance with proposed 515 (c).

The 90-day period for review would commence to run upon the expiration of the period within which an appeal could have been filed if none had been filed, that is 90 days after the notice of appraisement is given. In the existing law on collectors' review of protests the 90-day period begins running when the protest is filed. The change is made to prevent a situation from arising where the 90-day review periods for appeals and protests would expire on different days in instances where both an ap-

peal and protest are filed in connection with the same entry but on different days (and see comment on sec. 515 (c)), and to provide time for the additional review by the appraiser.

REVIEW OF LIQUIDATIONS AND OTHER DECISIONS

515 (b): Except for the commencement of the review period described under section 515 (a) above, there is no change of substance here.

TRANSMISSION OF PAPERS TO COURT

515 (c): This subsection would provide for transmission of papers to court where upon review the appraiser or collector affirms his original decision or if there is an appeal or protest from the modification of a decision. As under existing law, there will be no additional administrative review when a protest or appeal is filed in connection with the modification of the original liquidation or appraisement.

In cases where an appeal and protest are filed in connection with the same entry and the action taken following review (for example, affirmation of either the appraisement or liquidation, or both; or a protest or appeal is filed against a modified liquidation or appraisement) is not agreed to by the importer so that the matter must be determined by the court, provision is made for transmittal of the appropriate papers to the court at the same time. This requirement illustrates the need to have the review period for appeals and protests commence at the same time.

DEPOSIT OF DUTIES

515 (d): This amendment would extend to goods entered for warehouse a requirement for deposit of liquidated duties now applicable in the case of goods entered directly for consumption where a protest is filed. That requirement would also be extended to cases where appeals to reappraisement are filed. Moreover, the law would spell out that protests or appeals not accompanied by deposit of liquidated duties are subject to summary dismissal by the court. It is anticipated that these amendments should result in reduction of "automatic" appeals to reappraisement (and protests to a lesser degree) simply because there is an advance in value over the entered value irrespective of whether any real issue is present.

COMPLIANCE WITH COURT DECISIONS; RETRANSMITTAL OF PAPERS

515 (e): This merely rephrases existing law with no change of substance.

Subsection (f): Section 516 (a) of the Tariff Act of 1930 (19 U. S. C. 1516 (a)), relating to American manufacturers' appeals to reappraisement, would be amended to insure that existing procedures governing the special appeals covered by section 516 (a) would not be disturbed by the amendments proposed by this section of the bill to section 501 and related provisions of the Tariff Act. It would defeat the purpose of section 516 (a) if the new procedures, which would be applicable generally to appraisements and appeals, were to apply with respect to the special procedures contemplated by section 516 (a).

TIMELY MAILING TREATED AS TIMELY FILING

Subsection (g): This would add a new section to the Tariff Act of 1930 patterned after section 7502 of the Internal Revenue Code of 1954. It would apply where a protest or appeal is mailed to the proper customs officer within the time prescribed by the Tariff Act, as indicated by the postmark on the envelope, and is received after such time has expired. In such a case, the protest or appeal is deemed timely filed.

Since it is possible to predate postmarks where mailing machines or other devices are used, subsection (b) of the amendment provides that a postmark not made by the United States post office shall be deemed the date of delivery only to the extent permitted by regulations. If the document is sent by registered mail rather than ordinary mail, the registration before the due date is prima facie evidence that the document was delivered to the proper officer, and the date of registration is deemed the date of mailing. These provisions follow substantially subsections (b) and (c) of section 7502 of the Internal Revenue Code.

Subsection (h): This is a special effective date provision for section 111.

EXAMINATION OF PERSONS AND RECORDS

Section 112: Existing law authorizes customs officers to cite importers and others to appear before them for examination under oath and to require the production of letters, accounts, contracts, invoices, or other documents relating to merchandise imported within 1 year previously, in connection with classification or appraisement matters. The proposed amendments of sections 509, 510, and 511 of the Tariff Act of 1930 (19 U. S. C. 1509, 1510, and 1511) would broaden this authority to permit such examination of persons and records to be extended to matters relating to customs transactions generally which have occurred up to 3 years before the citation to appear is issued. These amendments would enable customs to give full effect to improvements in internal audit techniques, by spot checking the records of importers, brokers, and carriers to verify the accuracy of internal customs operations. Importers, brokers, and carriers maintain inventory, accounting, and other documentary records of their business transactions. By having access to such records customs can verify the accuracy of its own records as to such matters as the quantities and types of goods imported and deliveries of goods by carriers.

REFUND OF ERRONEOUS COLLECTIONS

Section 113: It is the present position of the Bureau that an erroneous collection of fees, charges, or exactions other than duties or taxes, such as a collection for storage or for reimbursement of salaries or expenses of employees assigned for special services, is refundable after the expiration of 60 days after payment only if a proper protest against the collection is filed with the collector within that 60-day period. The proposed amendment of title 19, United States Code, section 1520 (a) (2) would remove some inequities which have occurred under the present law by permitting refunds of such erroneous collections determined within a year after payment, even though no protest was filed. That time element is similar to the time limitation now prescribed for correction of so-called clerical errors under title 19, United States Code, section 1520 (c) (1). And title 19, United States Code, section 1520 (c) (1) would be conformed with the change proposed in section 111 of this bill to extend the protest period in title 19, United States Code, section 1514 from 60 to 90 days.

ENFORCEMENT POWERS OF CUSTOMS AGENTS

Section 114: The amendment of section 595 would clarify the law as to the enforcement powers of customs officers and extend certain enforcement provisions of the customs laws to make more effective the administration of laws enforced by customs officers which are not custom laws, such as the export control laws. A somewhat similar provision was enacted as section 104 of the Narcotic Control Act of 1956 dealing with the more limited area of violations of laws relating to narcotic drugs.

WAIVER OF SURETIES ON BONDS

Section 115: The amendment of section 623 would confirm an administrative practice of providing by regulation for taking bonds, which are required by the customs laws, without sureties or deposits of cash or securities in lieu of sureties for certain types or classes of transactions where such sureties or deposits are unnecessary to protect the revenue and it is burdensome to require either a surety or deposit. For example, under existing regulations sureties and deposits are not generally required for import-export bonds in the case of (1) certain vehicles or craft brought in temporarily by a nonresident to take part in a race or other specific contest for which no money purse is awarded or (2) commercial travelers' samples or professional equipment or tools of trade. In these cases the vehicles, craft, samples, equipments, or tools of trade are imported for a temporary period and to be exported within a certain time.

TITLE II—TRADE FAIRS

Section 201: The proposed Trade Fair Act was originally drafted at the request of members of the House Ways and Means Committee. A draft bill substantially the same as this section was transmitted informally to the chairman of the committee in the spring of 1954, but there was no action on that draft. The draft would cover generally the objectives of exposition statutes of a kind which have been introduced to the number of 3 or 4 in most recent sessions of the Congress and its enactment would permit the Treasury to draft general regulations to apply to all similar expositions, thus resulting in a considerable saving in time and manpower for the customs service.

TITLE III—EFFECTIVE DATE AND SAVINGS CLAUSE

Section 301: (a) This subsection would make the changes in law proposed in the bill effective 30 days after enactment, unless otherwise specially provided for.

(b) This subsection is intended to maintain the status quo on rights and liabilities already accrued under laws which would be repealed or modified by the bill.

Administration Guilty

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger of August 27, 1957:

ADMINISTRATION GUILTY

The Eisenhower administration is guilty of causing an almost scandalous reduction in GI home building. The Veterans 'Administration reported recently only 151,870 applications for GI home loans had been made during the first 6 months of 1957.

When viewed in comparison with 254,827 for the first 6 months of last year, the figure is a tremendous reduction.

In June of 1957 the number of applications received for GI home loans was the lowest for any June since the end of World War II—12 years ago. In testimony before congressional committees recently, Veterans' Administration spokesmen admitted that very little money is being made available for the GI program.

A Democratic Senator has charged the administration's latest change in interest policies—raising the interest rate on FHA-insured home mortgages to 5¼ percent—might even further reduce the volume of GI home-building activity.

The record of the present administration concerning GI home loans is not a good

one. Desipte all the excuses and explanations, a drop such as that experienced in the last 12 months is very undesirable. Not only does it seem to us morally wrong, since the high interest rates of the administration and its tight money policies have slowed up housing construction, but the reduced building affects the sale of appliances, furnishings, and other things, which also affect the general economy of the Nation.

Puerto Rico and Its Governor

EXTENSION OF REMARKS
OF
HON. A. FERNÓS-ISERN
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. FERNÓS-ISERN. Mr. Speaker, during the first session of this Congress there have appeared in the RECORD sundry statements with reference to various aspects of Latin American policy in general and to policies concerning the Caribbean area in particular. Although I am the only person in the Congress who represents a Caribbean community, I have not felt inclined to participate. However, in a spirit of fairness and justice to my constituents in general and to the chief executive of the Commonwealth of Puerto Rico, Gov. Luis Muñoz-Marin, in particular, I must now make the present statement. But, before I proceed, may I say that it is not my intention to engage in debate with any of my colleagues who have preceded me. I merely wish to set the record straight in what concerns Puerto Rico and its Governor.

Many, if not most, of the Members know Governor Muñoz-Marin, and I know that those who do have always had a high respect for him. In this regard, I must express my deep appreciation for what our colleague from California [Mr. JACKSON], had to say in his remarks on Monday. Perhaps it is unnecessary that I may say anything on this subject, but men pass on while the printed word remains. The record might be confusing if the Resident Commissioner of Puerto Rico were to remain silent.

I shall begin by observing that the powers and functions of the government of the Commonwealth of Puerto Rico are about the same as the functions and powers of the government of any State of the Union, and that the United States Government operates in Puerto Rico in the same way as it does in any State of the Union.

I observe, too, that there are only 65 miles of water between the Dominican Republic and Puerto Rico. Whatever the political conditions in the Dominican Republic may be, it is a fact that a substantial number of Dominican citizens have chosen to exile themselves from their native country, and that Puerto Rico, as well as New York, and certainly other places in the United States, have become their havens. Whether they live in Puerto Rico, New York, or Miami, they live under the same United States laws. I can understand that the feelings between these exiles and officials of their own government may be taut and tense. It does not require much imagination to conceive it. But no matter how strained those relations may be, I do not believe that such a situation should justify transgressions of the boundaries of propriety as to either of them in dealing with or referring to or passing judgment on the acts of officials of the United States Government or of the State governments, including the Commonwealth of Puerto Rico.

There is an instance which I shall point out where I think such boundaries have been transgressed. In a letter recently inserted in the RECORD, accusations have been made by a Dominican official with respect to the Governor of Puerto Rico for the reason that the latter granted an interview in his office in San Juan to a gentleman of Dominican extraction, a resident of the city of New York, who was then visiting Puerto Rico. He was accompanied by a former president of the Dominican Senate who has been a resident of Puerto Rico for many years. These gentlemen are known to be opponents of the present Dominican administration. No evidence, whatever, except supposition and speculation, has been given to consider the visit of this gentleman to Puerto Rico as anything improper. But it seems that, in the opinion of the Dominican official, the officials of the government of Puerto Rico are under an affirmative obligation to refuse to receive callers, or in any way communicate with persons who happen to be opponents of the present Dominican administration.

We in Puerto Rico live under the laws of the Commonwealth and the laws of the United States and no other. It is not our concern what political habits in other countries may be.

The Governor of Puerto Rico would not refuse to confer at any time with his own political opponents. It seems absurd that he may be expected to refuse to confer with anyone merely because that person is somebody else's opponent.

Suppression of freedom of thought, expression and association in Puerto Rico cannot be imposed either by direction or indirection from within; less so, by indirection from without.

Rights and privileges recognized in the United States are as sacred in Puerto Rico as anywhere in the Union. The citizens of the Commonwealth of Puerto Rico fully expect such rights always to be so maintained.

Why Not Teach Religion?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald of August 26, 1957:

WHY NOT TEACH RELIGION?

Should religion be taught in a State-supported college or university?

The State University of Iowa thinks so. That university's school of religion has just finished its 30th year.

The purpose of the school is to tell students what the various religions teach. The school does not try to gain followers for any particular religion.

Classes are taught by Protestant ministers, Catholic priests and Jewish rabbis. Some of the courses are: "The Catholic Faith," "Religious Groups of America," "The Religions of Mankind," "The Protestant Faith," "Protestant Christianity" and "Jewish History."

Iowa's School of Religion is not supported by tax money. The school's money comes from individuals and organizations.

The Catholic Church pays the salaries of the priests on the faculty. Protestants pay the salaries of the Protestant professors. B'nai Brith Hillel Foundation, a Jewish organization, pays the salary of the rabbi on the faculty.

Many State universities have adopted the Iowa plan of teaching religion. Some have set up departments of religion.

Is it constitutional to teach religion in a State-supported university? No Government action ever has been taken to prevent the study of religions in a university.

Iowa takes the position that religion is an essential part of an orderly society. It does not teach religious faith. It teaches only information on religions as they exist.

Students get an understanding of the history and literature of the various religions and an insight into their meaning. They also get an understanding of the spiritual values in human life.

Against a backdrop of nuclear weapons, international distrust and fear, this sounds like a good idea.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following:

KEENOTES

(By Representative ELIZABETH KEE)

I am writing Keenotes this week slightly ahead of my usual schedule. The House of Representatives is momentarily expecting the fall of the gavel denoting adjournment of the 1st session of the 85th Congress. Should this occur before the weekend, I plan to leave Washington immediately to return to the fifth district and a prolonged round of visits with all my good friends and constituents back home. It will be good to see the hills of West Virginia again.

Meanwhile my time is divided between trying to complete bits of unfinished business at my desk and scurrying through the subway to the Capitol in answer to the quorum bells summoning Member to the floor to vote on the spate of bills—the unfinished business—which always seems to flood Congress in the final days of any session.

It is, of course, much too early to pass judgment on the record which the 85th Congress has written for itself thus far. Many political writers will, however, attempt to do so, using as a basis the extent to which the administration's recommendations and pro-

gram have been enacted into law. This is hardly a sound appraisal.

Both the administration and the Congress are answerable to the people and no Congress can acquit itself of its grave responsibilities by becoming a rubber stamp of approval for anything and everything an administration might propose. In this respect, the 85th Congress has, I feel, acted with wisdom and restraint. It has considered each of the President's legislative recommendations with great thoroughness and in terms of the national interests. It has not permitted itself to be coerced into hasty decisions by the pressures of political expediency and it has maintained an attentive ear for the wishes of the people rather than for the whimsies of the White House.

I use the word "whimsies" purposefully for I know of no better way to describe the administration's constantly shifting position on its own legislative proposals. Every effort to pin the administration down to a firm stand on any given issue, at any given moment, has proved a frustrating experience for both its most ardent supporters and its most vigorous opponents, alike. Take the very important matter of the budget, for example.

After severely criticizing the spending policies of his predecessors in office, the President in January submitted to Congress a budget calling for the greatest peacetime spending in the history of the country, a record of $7.8 billion. In July, he issued instructions to his Cabinet members to hold expenditures in their departments down to the $70 billion level of the preceding (1957) fiscal year.

When his own Secretary of the Treasury denounced the 1958 budget as too large, the President, gravely agreeing that this was so, invited the Congress to cut it. But hardly had Congress settled down to this challenging task, than the President appeared on television to warn the American people that any cuts in the appropriations he had requested for his defense and foreign-aid programs would seriously imperil the national security.

The administration has been equally vague and indecisive about other of the long list of recommendations in its program. The need for school construction legislation was pointed up as urgent and then when the bill was before the House, the something less than lukewarm enthusiasm for it emanating from the White House, helped its opponents to defeat the bill.

Passage of the first civil-rights bill to get through Congress in 80 years also had legislators going around in circles. The administration would compromise. It wouldn't compromise. It insisted upon section III. It didn't care about section III. No bill at all was better than enactment of the Senate version. With modifications, it would accept the Senate version. Small wonder, then, that many Members of Congress were hard put to know just where the administration stood on this most critical legislation.

Reviewing the events of this session in my own mind as I write this, I am more than satisfied that the 85th Congress, in its first session, has dealt conscientiously and responsibly with the problems and the affairs of the Nation. Where no emergencies existed, it has wisely refrained from hasty action. It has delved beneath the surface of each legislative proposal, cautiously exploring what far-reaching effects it might have upon our people.

Above all, it has responded notably to the public demand for economies in government. It has known how to be generous where generosity was called for, as witness the pay raises voted the hard-pressed postal and classified employees of the Federal Government. But it has also known how to eliminate nonessential spending when the benefits received were not equal to the dollars spent.

In fact, a major portion of the 85th Congress' time so far has been devoted to the budgetary and bookkeeping problems of the Nation, and in the years ahead the American taxpayer may be very happy that it was.

And now, wishing everyone in the Fifth District a very pleasant Labor Day, I look forward to seeing all of you in person shortly.

Address by the Honorable Frank M. Coffin, of Maine, to the Maine Soil Conservation District Supervisors Association Annual Meeting, Thorndike Hotel, Rockland, Maine, August 29, 1957

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. METCALF. Mr. Speaker, one of the most critical, and most challenging issues before this Congress is the great need for more adequate conservation legislation. As the demands on our land and water resources increase, our responsibility to conserve and use wisely the resources we have is more imperative than ever.

Our distinguished colleague from Maine, Mr. COFFIN, has made some pertinent and imaginative suggestions on this subject. In a speech to the Maine soil conservation district supervisors, Mr. COFFIN outlined an approach to improving our program for tree planting and land utilization. This is a subject of considerable interest to the people of Maine, of course, but his suggestions in the following speech merit the attention of conservationists in the entire Nation:

President Sanborn, Chairman, Harriman, Commissioner Newdick, supervisors, and friends, having emerged from the heat and humidity of Washington and the last frantic days of the congressional session, I welcome the opportunity to be with you in this pleasant Maine setting tonight. I am not sure that my function should be that of a speaker in your program, but rather that I should be playing a more appropriate role as a listener.

One of the great pleasures and satisfactions of my first months in Congress has been the opportunity to learn more about the problems and programs of agriculture. I confess that my joy would be more complete if I had all the answers to the problems, but for the present I shall content myself with learning and some tentative explorations in the fields of agricultural policy. From what I have observed of the battles raging among the so-called farm bloc in Congress, caution seems the better part of valor.

I am not here, tonight, to tell you how to solve the problem of surpluses, the increasing squeeze of lower farm prices and higher costs of operation, and the gigantic challenge of our productive capacity. I am here as a layman who must weigh in the balance the conflicting proposals which appear in Congress and vote for legislation which will benefit you and the consuming public. I am here to examine one phase of agriculture, to stimulate some inquiry in an area which is of great importance to our entire Nation, and particularly to the State of Maine. That area lies in the great field of conservation and land utilization.

I would like to call to your attention tonight a little bit of the past, a larger chunk of the present, and a glimpse of the future.

The first settlers on this continent found an abundant land waiting for tillage, presenting vast opportunities for the production of food and fiber. As the eastern seaboard was settled, and as land—once rich—was depleted, the pioneers moved westward for richer soil. The land has been cultivated, bared, and in many areas of the country stripped of its productive capacity.

The political emphasis in the last few years has been on the problem of surpluses in certain commodities, but the day is coming when we may be plagued—not with surpluses—but with a shortage of arable land on which to produce enough food and fiber for ourselves and others.

Fortunately, the warnings of the early conservationists have been heeded, and since the thirties we have been making great strides in correcting some of the abuses which have been so wasteful of land and water resources in the past.

We in Maine can be proud of the record we are building in the field of conservation. The work which you and your fellow agriculturists are doing is an inspiration to anyone who takes the time to study the results of your work.

Approximately 95 percent of the farms and farm land in Maine are within the boundaries of the State's 15 farmer-organized soil conservation districts. Maine's high-ranking position so close behind the 16 States that are 100 percent covered by such districts is doubly significant.

It reflects the progressive manner in which the State's landowners and operators have taken advantage of the district machinery provided by the 1941 State law for local, democratic organizations to deal more effectively with individual and community soil and water conservation problems. In addition, it points up the tremendous responsibilities of local leadership in advancing the State's basic agricultural economy. These responsibilities rest upon the shoulders of the 45 locally chosen soil conservation district supervisors and the State Soil Conservation Committee.

Agricultural production represents a better than $200 million annual cash business in Maine. Nothing can be more important to the long-time health of this or any other State's agricultural productive capacity than the protection and improvement of its basic soil and water resources.

Maine's soil conservation districts—with 15 years of progressively successful experience and accomplishment behind them—are looked to for continued effective leadership, through their elected supervisors, in maintaining our productive agricultural resources for continuing use. The 10 years of effective work in the Knox-Lincoln district are a challenge to the future, as is the experience in the other districts of the State.

Maine's soil and water conservation program has been built on sound foundations, since the original establishment of the erosion control demonstration project in the Aroostook County potato area in the mid-thirties. It has advanced through the teamwork of local farm and business community leaders, the college of agriculture, experiment station, and extension service at the university, and various other local, State, and Federal agencies, including the Soil Conservation Service, and other divisions of the United States Department of Agriculture.

The statistics showing the present level of activity in the soil conservation districts of Maine are most impressive. Nearly 8,000 cooperators, with a million and a half acres are participating in your program. Two thousand six hundred of these cooperators are located in my own congressional district.

In the Second District alone over one and a quarter million acres of soil surveys have been completed, and basic plans for 1,543 farms have been drawn up.

Conservation applied on the land is the physical measure of success of the soil and water conservation effort to which the Nation has addressed itself during the last quarter of a century. Another dependable yardstick of our advancement in basic resources preservation is the unprecedented public concern over the conservation, development, and most efficient use of our water, timber, grass, and wildlife resources.

The soil conservation district program has, with the cooperation of local, State, and Federal interests, given us a great democratic experiment and an adventure in initiating and implementing practical conservation action. Under the watchwords "conservation, development, self-government" this program provides an outstanding example of democracy in action.

Congress, meanwhile, has a continuing history of providing broadened soil and water conservation authorizations as need has dictated, and of making necessary appropriations to carry them out. Admittedly, the funds made available for the Federal share of technical and other conservation participation have not always been as much as were desired or could be used effectively by local soil conservation districts or other conservation users and assisting agencies. But these appropriations have been increased year by year in an attempt to keep up as nearly as possible with obviously growing district and other needs and demands.

Technical assistance under the 1935 Soil Conservation Act, through the Department of Agriculture's Soil Conservation Service, remains, of course, the backbone of the Federal contribution to the national action program of soil and water conservation, supplemented by the important cost-sharing assistance of the agricultural conservation program. Both have stood the test of soundness in purpose and results through more than two decades of operation.

Of similar promise in a broader field of conservation need is the opportunity opened up by the 1954 Watershed Protection and Flood Prevention Act for still wider cooperative action in dealing with water supply and management problems extending beyond agricultural lands and individual properties to entire communities or metropolitan areas.

So far, no immediate appropriate watersheds for use of the new Watershed Act apparently have been programed in Maine; but undoubtedly further study of likely watershed areas, as local community interest develops, will confirm the need and the opportunities for small watershed projects similar to those getting underway in neighboring Northeastern States.

Particularly as it was broadened in 1956 to include more multiple-purpose municipal and industrial water supply needs, drainage and other purposes, the Watershed Act has a place in the overall soil and water conservation potential of the southeastern area and other parts of the State.

We do not have as serious flood-prevention situations to cope with as are found in other parts of the country, but there is always a need for conserving the moisture in the soil for crop and pasture production, for streambank protection—especially in handling snow-melt runoff—drainage rehabilitation of wetter croplands, and so on. Land use treatments with the practices being used in the soil conservation districts are basic to any watershed treatment; and the Watershed Act may well operate to facilitate and strengthen the soil conservation districts' going programs.

There have been, of course, other important conservation measures provided by recent Congresses.

There is the Water Facilities Act for making direct or insured loans through private banking sources and the Farmers' Home Administration for soil and water conserving or drainage facilities and reforestation.

In addition, a provision has been inserted in the revised Internal Revenue Code, making it possible for farmers to treat expenditures for a number of soil conservation measures as current expenses that may be deducted from farm income for income tax purposes.

Another, the Great Plains conservation program, ties together more closely Federal, State, and local technical, financial, and other conservation efforts on a primarily conservation land-use basis. It is, at present, limited to the Great Plains area, but it could suggest similar application in principle elsewhere.

There is the newer Soil Bank Act with its conservation reserve features for helping landowners to get less productive acreage into permanent trees or grass crops, or into use for water storage. It is regrettable that more emphasis has not been placed on the soil conservation features of this act, rather than the present public stress on getting crops out of production.

The very circumstances of such broadened conservation authorizations and programs point up the fact that the resources conservation job, though well advanced in general, is not finished anywhere, and it is only well begun elsewhere. The fine accomplishment in erosion control and conservation land-use methods in the Maine potato country, for example, by no means indicate that the whole task is finished even there, much less in the State as a whole.

There are comparatively new-found problems coming into focus. Good agricultural land is being withdrawn from production and taken over for suburban building and industrial sites, highways, airfields, and various other nonagricultural uses. Conservationists, agricultural interests, and planning authorities alike have been growing more and more conscious of the vast, so-called "strip cities" spreading over the countryside before the onrush of fast increasing populations and urban concentrations—and of the land and water problems developing in their wake.

Even in Maine, areas like those around Portland and Bangor, especially with the influx of summer residents, have not escaped this trend. Now is the time for us to act.

Now is the time to make sure we do not waste the resources of this verdant State. We must treasure our two jewels of great price—our unsurpassed 85 percent forest cover and our unequalled annual rainfall. Now is the time to put our minds and hands to the task of preserving our land and water resources before they are lost forever.

Faced with the problems of our peculiar soil conditions, confronted with changing market patterns, we should adapt ourselves to the most useful and productive use of our land.

To me, one of the great opportunities presented to us is the potential development of our forest resources to meet the ever increasing demand for wood and wood products. New uses are being found for wood. As long ago as 1947 I was impressed with a challenging book entitled "The Coming Age of Wood."

Greater demands are being placed on the available supply of wood and lumber products. With forest development we can preserve our land and water resources and provide greater economic opportunities for our farmers and for our manufacturers and workers.

A start has been made in this area, but it is only the beginning. The problems of long-term investment, the hazards of fire, the steady drain of taxes, and the delayed return on tree planting make it almost impossible for many of our farmers to consider going into tree farming on the scale which is necessary if we are to meet this challenge.

Under the Soil Bank Act, for example, a relatively small acreage of land can be planted to trees, with Government assistance for planting and land rental payments. We have substantial acreages of land that were cropped at one time, but which are not qualified for soil-bank payments under existing requirements of the act because they are not cultivated at the present time.

In the current session of Congress I drafted a bill which I introduced with Representative McINTIRE, seeking to amend the Soil Bank Act by providing for participation by those who "plant and maintain trees for the contract period on specifically designated acreage of land on the farm which was once used in the production of such crops and is still suitable therefor."

This problem of land that has been abandoned to cropping use is particularly challenging from the standpoint of getting more needed conservation planting done in Maine. The need for some workable incentive or other solution persists beyond the present facilities of the soil-conservation districts themselves for expanding this part of their regular soil-conservation program.

We cannot afford to have our former croplands grow up to useless hardwood brush. We cannot allow the opportunity of wood utilization and supply to pass us by.

My soil bank bill, H. R. 6303, offered a tentative approach to the problem. The Agriculture Department has not looked on this suggestion with a kindly eye. Before we can arrive at a practical solution it will be necessary for us to explore the possibilities of some pilot projects similar to those pursued under the original Soil Conservation Act of the 74th Congress, which later developed into the very effective watershed program.

Several possibilities suggest themselves. Some require Federal action, some State participation, and all demand the cooperative effort of farmers and farm leaders like yourselves.

There is the possibility of expanded Federal-State participation and cost-sharing in actual tree planting. There is the suggestion of long-term Federal loans for tree farming, where conservation practices are followed. There is the proposal for deferred taxation on land planted to trees under such a program. And, there is the thought of cooperative tree farming by groups of farmers, where the resources of a single farmer are not sufficient to carry the load. There may be other avenues which can be followed in approaching this challenge.

This, to me, is one of the soundest ways in which we can help to preserve the identity of our family farmers. This, to me, is one of the most effective means of preserving the beauty and productive grandeur of our State—it is a means of preserving a way of life that is dear to us all.

Soil conservation districts offer the logical means through which we can deal with these farm and watershed programs locally. No one knows the problems better than the district supervisors and the district cooperators, or has had more sound experience in the field of resource conservation, in Maine and throughout the country.

There are today 2,770 soil conservation districts, including 93 percent of the Nation's farms and ranches, and 88 percent of its farmland. As of January 1, 1957, nearly 1,140,000 district cooperators had basic conservation plans on nearly 320 million acres. Soil surveys, on which are based the conservation farm plans that guide the application of soil and water conservation practices on the land, had been made on more than 500 million acres in the districts.

Applications for Federal assistance on projects through the Watershed Protection and Flood Prevention Act, meanwhile, totaled 742

to August 26, 1957. That many had been made by local communities, approved by their States and forwarded to Washington. A total of 278 of these had been authorized for planning assistance. Fifty-five already were approved for operations. Conservation and land-treatment and flood-prevention work is well along, also, in the 58 pilot small-watershed projects, along with similar flood-prevention work on subwatersheds in 11 major authorized watersheds under the 1944 Flood Control Act.

This progress and accomplishment is made possible by bringing to bear the human and physical resources of many individuals and many communities on the common problem, from Maine to California, from Florida to Washington State. The results obtained stem from the initiative, leadership and hard work of nearly 14,000 soil conservation district supervisors and one and three-quarter million district cooperators—like those in the 15 soil conservation districts of our own State of Maine.

In January I hope to implement some of the suggestions I have made tonighht with further legislation to encourage the expansion of our tree planting program. I hope you will give considerable thought to the tentative proposals I have made with a view to advising me on the wisdom and practicability of these or other approaches.

I am therefore seeking your assistance during the next 4 months to discuss various kinds of pilot projects that might well be incorporated in such legislation. This process of analysis and creative thinking on your part will contribute immeasurably to our chances of success. I say this with such experience as I have gained in the legislative process. Over 15,000 bills are filed each session. Only a few reach final passage. Those bills which contain not only a fruitful idea but which are accompanied by the down-to-earth support of citizens who know the problems which the legislation aims to solve have the best chance of success.

You have the experience and the knowledge necessary for sound recommendations. The success of any such program will depend on your contributions. As a Representative in Congress I can help you with enabling legislation.

I can think of nothing more appropriate than a new and needed approach to land stewardship originating in the State of Maine.

How To Dispose of Surplus Food

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. BURDICK. Mr. Speaker, the Tax Foundation has come through with some pertinent information on the subject of surplus foods, and I present here the article:

SURPLUS FOOD COULD SUPPLY EVERY FAMILY

Fellow asked the black sheep: "Have you any wool?" To which the sheep replied: "No, sir. No, sir. But the Commodity Credit Corporation has a lot of it."

This modern version of the nursery rhyme wouldn't be too far from the truth. According to a recent report the CCC had 38 million pounds of wool, black, white and gray, collected under the price support program.

Wool, however, isn't the only commodity held by the CCC in millions of bushels, pounds, hundredweights. There are also (among other things) butter, cheese, dried milk, dried edible beans, corn and wheat. All carefully stashed away and paid for with billions of tax dollars.

At the end of May, the CCC estimated its net realized loss on price support operations for 11 months of fiscal 1957 at $1.2 billion—compared to an $844 million loss in the like period in 1956.

Any difficulty envisioning these vast stores (currently cached in tents, bins and even floating ships) would be made easier, says Tax Foundation, Inc., were the quantities divided up among American families in something like a surplus crop dividend.

Here is what would result if CCC's inventories were whacked up among the 43½ million American families:

Commodity	Number of pounds or bushels in inventory	Approximate distribution per family
Butter	51,935,000	1 pound.
Cheese	193,507,000	4½ pounds.
Dried milk	182,934,000	4¼ pounds.
Dried beans	247,300,000	5¾ pounds.
Corn	849,059,000	19½ bushels.
Wheat	848,490,000	Do.
Wool	37,906,000	1 pound.

Department of Health, Education, and Welfare

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. FOGARTY. Mr. Speaker, these are the closing moments of the 1st session of the 85th Congress. There is some pressing business still to come before the House prior to adjournment. The important items of business on our agenda are well known to all of us in Congress, as they are to the Nation. Only a matter of the utmost urgency should be brought up on the floor if it is a departure from the specific issues that await our consideration.

I am convinced that the irresponsible and arbitrary actions of the Bureau of the Budget—actions which reverse the considered judgment of Congress and flout the expressed will of the American people—constitute a matter of such urgency.

I am talking about the apparently deliberate refusal of the Executive Office of the President's Bureau of the Budget to permit the executive agencies to spend, or even to plan to spend, the sums of money appropriated by Congress and approved by the President as the necessary and proper expenditures for these agencies and departments.

I will not generalize. Let me be specific.

On June 27 of this year, the Congress voted an appropriation bill for the Department of Health, Education, and Welfare. Two days later, the President signed this bill into the law of the land. Among other vitally important programs for which this bill provided—programs which affect all Americans in a very direct and personal way, like social security, education, vocational rehabilitation, and food and drug regulations—there were eight appropriations totaling $211 million for research against cancer, heart disease, mental illness, and the other diseases that kill and cripple millions of Americans each year.

I do not need to tell my colleagues that this year, perhaps more than any other year in recent history, appropriation bills have been considered with great care; nor do I need to tell my colleagues why this has been true. In most instances, the administration's appropriation requests have been cut back, reflecting the commitment of Congress to reduce unnecessary Federal spending and stop the threatening upward spiral of inflation.

In some individual instances, however, the Congress voted more funds than the administration requested. This is one of its responsibilities, in the final analysis—to review these requests for funds, to evaluate them, and to act on them—to cut them, approve them, or increase them, according to the considered best judgment of the Congress in session. A cornerstone of our constitutional system rests on this authority and responsibility of Congress to set the fiscal and legislative base for the programs of the executive branch of the Federal Government.

In the case of the medical research programs of the National Institutes of Health—after weeks of hearings and discussions involving literally hundreds of witnesses before both Houses of Congress—we provided a modest increase in the requested funds from $190 million to $211 million. I will highlight the importance of these appropriations with four simple statements of fact: First, these funds support more than one-third of all the medical research done in this country today; second, many of the great recent advances against disease have resulted from research supported by these appropriations; third, the experience of both Houses of Congress over a period of many years has been that these programs have been accorded, because they have merited, the confidence and respect of our country's scientific institutions and of people everywhere; and fourth, the effect of denying a large part of the needed funds for these programs, or of creating a feeling of uncertainty as to their availability, is sure to be seriously damaging and may be catastrophic.

Despite these facts, and despite their knowledge of the conviction of Congress that these programs should receive sustained and far-sighted support, a handful of the President's advisors have apparently decided that the full amount of the funds appropriated for the National Institutes of Health shall not be spent—although Congress, and the President want it to be available if needed. Even today, nearly 2 months after President Eisenhower signed the bill into law, and after an incredible series of contradictory and delaying acts, the situation is far from clear. Those who direct these programs have been told they are permitted to spend—and this only after some extreme pressure on the Bureau of the Budget from Congress and from the Secretary of Health, Education, and Welfare, Mr. Folsom—most,

but still not all, of what they need in the first quarter of fiscal year 1958. They still do not know, and Secretary Folsom does not know, what they will be permitted to spend for the rest of the fiscal year by those omniscient and omnipotent manipulators of the Federal fiscal processes who advise the President but do not feel compelled to carry out his orders after he has appraised their advice and made his decision.

I will not go into any of the harrowing details. A simple chronology of the events related to the National Institutes of Health appropriation since June 27 will make my point.

On that date, their bill, which increased the President's appropriation request by $21 million, was passed and sent to the White House.

On June 29, the President signed the bill into law.

Yet the day before, June 28, the Director of the Bureau of the Budget had issued instructions which not only forbade spending at the level approved by the President the next day, but—incredible as it sounds—directed a pattern of spending which for the National Institutes of Health would be actually below what the President had asked Congress to appropriate in the first place.

On August 7, the Bureau of the Budget advised Secretary Folsom that it could not make up its mind about the full year, but that he would have to cut roughly $17 million out of the first quarter's spending for the 8 appropriations.

On August 13, Secretary Folsom asked the Bureau of the Budget to reconsider, and they yielded a little bit.

On August 20 Secretary Folsom again asked them to reconsider, and they yielded a little bit more.

It is not for me to say how much effect was made by the inquiries of Congress as to the status of these matters during the time they were in negotiation. A committee of the Senate chaired by the distinguished Senator from Alabama, LISTER HILL, looked into it. A committee of the House, which I am privileged to chair, looked into it twice. I cannot feel that it was a very rewarding experience for any of us. Certainly there has been no clarification either as to general policy or as to specific intent on the part of the Bureau of the Budget. The National Institutes of Health are still nearly $800,000 short of their needs for research in their own laboratories in Bethesda during the first quarter. And they still have no idea how much, during the remainder of the year, they will be permitted to spend of the total of $211 million appropriated for the medical research they conduct and the research and training they support among the Nation's medical schools and universities.

I am sure it must be apparent, even to the uninitiated, that medical research cannot go forward in the face of these fiscal uncertainties. Those who do research and those who foster environments where creative research can thrive have every right to expect stability and continuity in that part of their support derived from the Federal Government. They do not expect arbitrary and capricious action of the kind that has characterized the Bureau of the Budget's handling of these appropriations this year. Such actions sow seeds of uncertainty and indecision among the scientific community and do irreparable damage of a deep and lasting nature.

I want to emphasize what I mean by the National Institutes of Health. It is not, as some may think, just a group of laboratories in Bethesda, Md. They are part of it, and they do splendid work, and they must be supported at adequate levels so their scientists can continue to make the outstanding contributions to the Nation's health that they have made in the past.

Much more important, however, is the fact that through the National Institutes of Health a large segment of all the medical research in this country is supported. Thus we are not concerned here with the simple maintenance of a Government bureau. When doubt and uncertainty creep into the fiscal picture, it shakes the entire medical school and university world by undermining their confidence in the stability of Government support. The Congress by its actions and the Public Health Service by its wise and careful administrative leadership have gradually built up this confidence as these programs have come into being and developed in size and in stature since World War II. I am sure it is the intention of every Member of Congress that the scientists and scientific institutions who are part of this national research effort against disease should not feel insecure in this support. Yet we find that all of the confidence that has been built up through the years can be undermined by a few people in the Budget Bureau who do not understand the significance of stable support and apparently do not care if our medical research effort is strong or weak, as long as they can juggle figures to what they think to be their own advantage.

Last year, nearly 7,000 research projects in 700 research institutions all over the country were supported by these funds. More than 3,000 people were being trained for careers in medical science and related fields. These are not statistics. They are people, and they are the people who are and will be the producers of new knowledge which will benefit all mankind. They know, as you and I know, and as all thoughtful people know, that medical research cannot be turned on and off like a faucet under the hand of some master planner.

Yet not 2 weeks ago, I had a desperate call from a distinguished scientist. He had trained for a career in medical research and teaching—long, hard years of specialized work in which the only rewards were those satisfactions that come to a scientist in the accomplishment of the progressive steps of his career. He had submitted an application for research grant support from the National Institutes of Health. That application was reviewed by the groups of nonfederal scientists and laymen who advise the Surgeon General on the scientific merits of each application. The project was recommended highly, and the Surgeon General approved it. The scientist was notified of this action, but at the same time he was told that it was dependent on the availability of funds. So far so good. But now came the impact of the Bureau of the Budget. The scientist wants to make the study, his institution supports him, the project is found worthy of support by an outstanding scientific review panel, the Surgeon General wants to support the study, the Congress appropriates funds which permit such support, the President signifies his assent—and yet there follows a period of shilly-shallying, of backing and filling, of delay and confusion. The weeks pass. The scientist is uncertain. He wants to think everything is all right. To do the study, he has to make his plans, hire technical staff, arrange for laboratory space, reapportion part of his teaching load. These things must be done in the spring and early summer if they are to meet the needs of the academic year. Yet Public Health Service officials are not permitted to definitely commit the funds to him. There was something in one of the Bureau of the Budget's directives about not approving any new grants. Other bureaucratic phrases fly thick and fast. They add up to the fact that the scientific administrator in Washington cannot tell the scientist in the university that the funds are on their way. And so he, having once had confidence in the stability and leadership of this federally supported research program, has to call me, his Congressman, to see if I can help resolve his bewilderment.

I must say, with a great deal of chagrin, that I was not able to give him, nor was I even able to find out, the answers.

I am disturbed to think what might have happened on these apportionments had Congress not happened to be in session during the period of time when this sequence of contradictions and equivocations took place.

Let me remind you, too, that this is not an isolated instance. Last year, for example, and in connection with these same appropriations I have been discussing, the techniques were different but the apparent intent was the same. Again the Bureau of the Budget withheld the right to spend appropriated funds. They said, in effect, spend at a curtailed rate until you have justified to our satisfaction that you can spend the newly appropriated amount wisely—and then made sure they were not satisfied until the year was more than one-quarter gone, thus assuring themselves of savings which were in fact forced by these delaying tactics and resulted in a shrunken program.

I have talked about this issue in terms of medical research not because it is unique, but because it so clearly makes the point. Other Public Health Service programs have been similarly affected, as have other important functions throughout the Department of Health, Education, and Welfare, whose programs are so intensively scrutinized by the appropriation committee of the House which it is my privilege to chair.

I cannot say from first-hand experience whether the same situation prevails among other agencies. I doubt, however,

if there are many whose appointed heads are as forthright and as consistent as Secretary Folsom. Although he must have been subjected to tremendous pressures from the President's budget intermediaries, he has steadfastly refused to compromise his principles or the Department's program. It is ironic indeed that he must make such fights within his own family, but he is the more to be praised for standing up for what he thinks is right.

It is altogether inappropriate and perhaps impolitic for me to interpret his position. I would have to guess from his actions, however, that he believes in careful budget formulation and thoughtful budget defense, followed by prudent administration of appropriated funds so that if there are savings, they are the product of economical administration rather than the arbitrary prejudgment of a group of slide-rule experts whose calculations totally ignore the substance of the programs involved and their present and potential meaning to the American people.

It is my conviction, gentlemen, that if this trend is permitted to continue, it will make a mockery of the established and proved appropriation processes of Congress. We can hold all the hearings we want, and render the most considered judgment of which we are capable in the public interest, but it has no meaning if the Bureau of the Budget—with or without Presidential instruction or that of the assistant President—interferes with the orderly processes of government by imposing fiscal restraints in direct contravention of the will of Congress. And they do this on the slender pretext of the Antideficiency Act, which was designed to prevent overspending by executive agencies, and not to superimpose their judgment on that of Congress.

I do not suggest that there is any grand strategy behind this series of moves. It would be unthinkable that—having capitalized on the plans for extending traditional and creating new programs which the public wants—this administration could now abandon them and deliberately contrive enforced savings so that there can be a possibility of a tax reduction in an election year at the expense of the health of the American people. I would rather think that it is merely shortsighted budget maneuvering on the part of a handful of misguided people that underlies these events.

For I know, as you my colleagues know, what is at stake. It is not merely an issue between the legislative and executive branches—although preservation of our respective roles is of the utmost importance. Just as important, however, is the fact that those who direct the affected programs cannot do what clearly needs to be done in the public interest.

Let me illustrate, again, from the National Institutes of Health.

During the first quarter of the fiscal year, the Bureau of the Budget—after first trying to withhold $17 million for these programs—finally withheld just over $700,000 appropriated by Congress for laboratory research and clinical investigations at Bethesda. This is still under appeal, but even if the appeal is won, a great deal has been lost—confidence and morale, to be sure, but also definitive studies of the kind not one of us would wish to see curtailed. Let me cite a few: research on the Asian influenza vaccine and on the disease itself; marked expansion of studies of radiation as part of the broad field of physical biology; a new study centered in Panama and dealing, among other things, with the continuing threat of yellow fever; a new project which initiates a program of research against mental illness within expanded clinical facilities at St. Elizabeths; a comprehensive, multidiscipline study of the biological aspects of aging; an expansion of the promising research field represented by viruses and cancer; establishment of studies in both metabolic and infectious diseases, using animals in germ-free environments as the research tools.

The successful conduct of research of this kind is certain to yield important advances in medical science and may mean the difference for many Americans between health and productivity on the one hand, and death and disability on the other.

It is not, of course, only the research programs of the Institutes that are affected. In combination, the restrictions placed on initial spending and the uncertainties over how much can be spent during the full year are certain to inflict damage on all of the major programs of the Department, including other activities of the Public Health Service.

The Department, as you know, is fairly young. But it is composed of a number of established activities. Grouping them together as the Department of Health, Education, and Welfare was a great forward step. In addition to giving the individual programs a frame of reference, it also permits and encourages a coherent and unified attack on certain major problems with which the Department is faced. And now these complex programs are also impeded by false economy and threatened by budgetary confusion.

A typical example is in the work of the Department related to our older citizens—the aged and infirm. I have pressed the Department hard for 3 years to assert more leadership in this field. Finally they have at least made a good beginning. Elements of the Department's new and promising program are found in the Social Security Administration, the Office of Education, the Office of Vocational Rehabilitation, and all three bureaus of the Public Health Service, as well as in the Secretary's own office. And now even this good start is being cut back. Does the Bureau of the Budget really think they know better than the whole Department how appropriated funds for these programs can most effectively be spent? Is there any one of them who knows anything at all concerning the substance of these programs which they so casually reduce or destroy?

The same thing can be said for mental health and mental retardation. I have discussed and studied this field in general and in specific for almost all of my 17 years in Congress. This does not qualify me as an expert. But I know that this is a problem of immediate and alarming proportions. The mentally ill, the severely disturbed, the psychologically or physically handicapped children—I am convinced that we cannot and must not fail to do whatever we can on their behalf. And yet we find research and study in this field being forbidden even though Congress has made money available—even to the unbelievable point of impeding the small beginning made by the Office of Education in studies of how better to teach the mentally retarded up to their optimum educational level.

I say we cannot permit a handful of numbers experts in the Bureau of the Budget to decide whether such studies should or should not be undertaken. With me, this is both a practical matter and a matter of principle.

I call upon the administration to cease these confusing, delaying, and damaging practices. I shall watch the fiscal events of this year with a great deal of interest. If there is no improvement during the next budget and appropriation cycle, I will most certainly seek full discussion and appropriate action to assure Congress and the American people that this disturbing threat to our system of government is remedied.

But this is not enough, because this is remedial and not immediate action. I also call upon the President of the United States to take steps now to untie the hands of the program people in his executive branch. I cannot believe that he knows what is happening in his name. He has gone on record many times to confirm his belief in and support of medical research. He cannot be aware that his own staff is undercutting programs which reflect his own convictions.

I am sure that the remarks I make here to alert the House of Representatives will be brought to his personal attention. I feel sure that when he knows the facts, he will order the Bureau of the Budget to stop this highhanded and destructive practice at once.

Hon. Samuel K. McConnell, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 27, 1957

Mr. WIGGLESWORTH. Mr. Speaker, I want to join in the tributes paid to our able and distinguished colleague, Hon. SAMUEL K. MCCONNELL, of Pennsylvania, who is leaving us at this time to accept the position of executive director of United Cerebral Palsy Associations, Inc.

He has rendered outstanding service to his district and to the Nation during the past 14 years in which he has been a Member of this House.

He has made a very special contribution as a member of the House Committee on Education and Labor, and as its senior Republican member and its chair-

man at a time when the committee has had most difficult problems to deal with.

By his character, his ability, and his spirit of fair play at all times he has won widespread respect in all walks of life, regardless of party affiliation.

His colleagues on both sides of the aisle who have both high regard and affection for him will greatly miss his daily association.

SAM and I have been good friends ever since he came to the Congress.

I have greatly valued his friendship over the years.

I join in wishing him every success and happiness in the work ahead.

Bureaucrats Take Over Functions of Congress Firearms Control

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. BURDICK. Mr. Speaker, a very serious situation has developed in regard to the proposed revision of the Federal Firearms Act by the Internal Revenue Service. I have here an article which appeared in the Dan Smoot Report of Monday, August 26, 1957, which I desire to insert in the RECORD, as it gives a clear analysis of the effect of the proposed regulations if they are enforced.

Dan Smoot, the author of this article, is well and widely known. For 9½ years he was with the FBI, and for 2 years was on the FBI staff in Washington, as an administrative assistant to J. Edgar Hoover. His work as a stanch supporter of fundamental Americanism is nationally known, and for that reason I believe his article on the Internal Revenue's proposed regulations are well worth our earnest and careful consideration:

In the Federal Register of May 3, 1957 (vol. 22, No. 86), there appears a proposed revision of the Internal Revenue Service Regulation, issued under the authority of the Federal Firearms Act.

The principal changes in the firearms regulations are as follows:

1. Each manufacturer or importer of a firearm shall identify it by stamping, in a manner not readily obliterated or altered, the name and location of the manufacturer or importer, and serial number, caliber, and model of the firearm.

2. Manufacturer's and dealer's records of receipt and disposal of firearms must be retained permanently on the premises until discontinuance of the business by the licensee.

3. A manufacturer or dealer must maintain on the premises complete records of the production, receipt, or disposition, at wholesale or retail, of all pistol or revolver ammunition. The ammunition must be described as to manufacturer, type, caliber, and quantity, and the identity of the persons from whom received and to whom sold must be shown.

4. A person purchasing a firearm or handgun ammunition in over-the-counter sales must acknowledge receipt thereof in his own handwriting in the prescribed record.

This is a classic example of the operations of administrative law. These new regulations, secretly and arbitrarily written by an administrative agency of the Federal Government, were not passed by Congress. Congress, in fact, knew nothing about them.

Some anonymous bureaucrat simply decided to change the law of the land—indeed, to stretch the law of the land until it violated the basic constitutional rights of the people—without even bothering to consult the legislative branch of the Government.

What happened after that official notice in the May 3 Federal Register is an interesting story.

A few sports writers found out about the new administrative regulations and sounded the alarm.

For example, Norman Phillips, in his Field, Stream, and Ocean column for the Valley Times (North Hollywood, Calif.) on May 29, 1957, said:

"The boss has kindly granted us an extra column today so that we can tell you about the most dangerous piece of antifirearms legislation that has come along in quite a while. it just popped up out of nowhere, and it's slated to go into effect Monday, June 3. You'll have to act fast if you want to stop it.

"Briefly, the Income Tax Bureau has issued three directives: section 177.50, section 177.52, and section 177.54. The first requires that all guns be stamped with caliber and shell size; the second, that all firearms be registered with the Government, and the third, that all ammunition other than .22 caliber rim fire be registered.

"It directs every sporting goods store to keep a record of all ammo sales and to file a report on every cartridge and shell sold. In short, it's just what the antigun forces have been trying to get through for years—and what we have always defeated. But it's slipping right through now, without anyone knowing.

"The question is not are these good laws or bad. The question is, what right does the Internal Revenue Bureau have to regulate the conduct of American citizens by passing regulations? The Constitution specifically gives the power to pass laws to the Congress, and prohibits any other body from so doing. These are not laws that have been introduced in Congress and discussed by your elected officials. It will do no good to write to your Senator or your Representatives in Washington; he couldn't stop them if he tried. He doesn't get to vote on them. They go into effect next Monday, just because some Internal Revenue bureaucrat decided they ought to be put into effect. Nobody votes. He just issues an order.

"This legislation by directive strikes at the foundations of the American system; is as vicious an attack on our Constitution as anything a foreign power ever thought up. Even if the laws were good instead of bad, they should still be fought for that reason.

"The only thing you can do is to sit down and write two letters right now. Don't put it off, because the regulations go into effect Monday. Just say you are against the enactment of firearms and ammunition registration regulations 177.50, 177.52, and 177.54. Say that they would only serve to harass law-abiding citizens, without having any effect on lawbreakers.

"Don't be insulting, but just get a few sentences down on paper. Mail one copy to Secretary of the Treasury G. M. Humphrey, Washington, D. C., and two copies to Department of Internal Revenue, Alcohol and Tax Division, Washington. Yes, you have to write to Internal Revenue in duplicate. It's a Government bureau and they have to have two copies of everything."

Subsequently, Guns magazine, the American Rifleman, and other similar publications took up the cry.

In his column for July 19, 1957, Norman Phillips had this to say:

"Due almost entirely to the prompt letter-writing efforts of sportsmen all over the Nation, the new Treasury Department ruling has been suspended for the time being. Our local sportsmen, alerted by a column written by this reporter, turned in a fine showing of protest and the whole thing is held up for a while. But this illegal law is still on the books, and Treasury officials can decide to enforce it at any time.

"We refer, of course, to the Internal Revenue ruling that dealers must register all sales of firearms and ammunition. It even goes far enough to tell manufacturers how they must make and mark their guns. It was never voted into law by Congress, remember—it was some Washington bureaucrat sitting behind a desk who dreamed this one up. The Constitution specifically gives Congress alone the authority to enact legislation. But then, a little think like the Constitution isn't going to slow down an Internal Revenue man when he wants to dream up something new.

"The weirdest thing of all, to this reporter, is the fact that Treasury officials have sent out word the law is not to be enforced; not just yet, anyway. Look at it logically—if the Treasury has the power to make a law, how dare they not enforce it? On the other hand, if they are not required to enforce, and make arrests under this law, then it isn't very much of a law, is it?

"Just one more question—since when did enforcement of a law, even a bad one, become optional with a public servant? This whole business smells like something Hitler or Stalin dreamed up."

The story is not yet ended. Vigorous public protest has caused the Treasury Department to start hemming and hawing about the new regulations—claiming, as Norman Phillips points out, that the public need not be excited because the Treasury Department is not going to enforce the new regulations (which are already on the books).

Now, the Treasury Department has arranged a public hearing.

(On August 27 the Internal Revenue Service started public hearings in Washington to give all interested parties an opportunity to be heard on the subject of the new firearms regulations.)

Inasmuch as practically nothing about all this has been in the major newspapers, or on radio or television, one wonders just how the "interested parties" were to find out about the meeting.

* * * To me, the grimmest aspect of this firearms controversy is the Federal bureaucracy's disrespect for the Constitution of the United States.

Amendment 2 of the Constitution says: "The right of the people to keep and bear arms shall not be infringed."

Politics Stalemate Farm Legislation—Benson Exploits Disunity Among Farmers

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. COOLEY. Mr. Speaker, as the 1st session of the 85th Congress draws to a close, it occurs to me that I should advise the Congress and the country concerning the work of the House Committee on Agriculture during the weeks and months of the present session. I also feel that I should discuss some of the problems with which the members of our committee have been confronted and

ay something about the present plight f American farmers.

Such a report, to convey to the Na- ion a true accounting, must bring for- ard at the outset the name of Mr. Ezra aft Benson, Secretary of Agriculture.

BENSON RETURNS FROM THE WILDERNESS

In the closing weeks of this Congress, hen the Secretary of Agriculture, under ormal circumstances, would be in Washington eagerly pressing all matters ital to the well-being of farmers, every- ne was wondering as to the whereabouts f Mr. Benson. His absence seemed to be hrouded in some sort of mystery. The President indicated at a news conference hat the Secretary was out in the country etting grassroots opinion on a new farm rogram. Apparently the President did ot know where the Secretary was nor id he know what he was doing. But ow the veil of mystery has been lifted nd we are told that the Secretary has een wandering in the wilderness for 50 ays and nights. He says he was in- pecting national forests. We, of course, ope that he found everything well in he wilderness. Actually, the farmers of merica think that the Secretary has een in "a wilderness" since the begin- ing of his administration. Ever since e has been in public office we have been oping that the Secretary would come p with some new idea, but to this good ay he has neither presented a single ew thought nor a single new idea. His ne purpose has been to drive down farm rices and income.

CONGRESS ALERT TO FARMERS' NEEDS

Mr. Speaker, there has never been a ession of Congress in which the Mem- ers who are interested in the well-being f agriculture have worked more dili- ently, more faithfully, or with a greater edication, in behalf of those millions of ur citizens who live and labor on the arms of our country. I commend those Members of both parties who have roven themselves to be devoted friends f agriculture.

PARTISAN POLITICS PLAYS A PART

Unfortunately, partisan politics has ifted its ugly head in our committee oom. The problems of agriculture are aramount and should be considered in n atmosphere which is entirely free rom partisan politics and political ex- ediency. Members of our committee of oth parties are devoted to the cause of griculture and to the well-being of all he people of our Nation, but we are ivided along party lines and in such a ituation the farmers of the Nation are he ones who suffer.

When the 85th Congress convened in anuary the agricultural economy, after 4 long years of steady and devastating eterioration, was still growing progres- ively worse. Secretary Benson was winning the great battle to bring down rices and to lower farm income. Never n any occasion has he championed the ause of farmers. Many farm families, nable to make ends meet, have moved nto towns and cities seeking jobs which were not available. Others were hold- ng on to their land only by privation nd by increasing their debts. Many perators of larger farms were hard- ressed. Meanwhile, other great seg- ments of our economy continued to en- joy unparalleled prosperity.

SITUATION DEMANDED ACTION

This Congress immediately set to work to undo the damage that had been done to the farm program in the 4 years of Mr. Benson's reign; to take whatever legislative steps were needed to restore stability to agriculture—and thus to bring our farm people into equal part- nership in the rewards of American free enterprise.

But, Mr. Speaker, our efforts have been nullified by the Secretary of Agri- culture, Mr. Benson.

The deep concern of the Members of this House for the well-being of agri- culture is vividly spread in the records of our Committee on Agriculture, which it is my privilege and honor to serve as chairman. These records show that the Members of this body have introduced in this session 513 bills, intended to im- prove the conditions on our farms and our committee has taken final action on 272 of these bills.

Our committee, with its 18 subcom- mittees, has conducted 176 hearings and study sessions. We studied all the bills carefully and, as is the custom, selected those we deemed to be worthy of early action and submitted them to the Secre- tary of Agriculture.

Mr. Speaker, the House, the Congress, the farmers of America, should know this:

We sent 125 bills to the Secretary. Mr. Benson approved only 16 of these bills. He disapproved or proposed sub- stantial changes in all the others or did not express an opinion at all. He re- jected all legislation proposing funda- mental improvements in the operation of farm laws to increase the income of farm families.

We sent to him bills proposing revi- sions in the present loan and acreage allotment program. We forwarded to him bills proposing two-price or domes- tic parity systems for various commodi- ties which would let these crops move competitively into world markets while maintaining a reasonable price in our domestic markets. We sent to him pro- posals for production payments, com- pensatory payments, or marketing equalization payments to farmers. He returned them with the Department's stamp of disapproval.

BENSON WOULD DESTROY PARITY PRINCIPLE

Instead, Mr. Benson sent us his own proposal, that the flexible 75 to 90 per- cent of parity supports for the major crops, the sliding scale which he in- stalled, now be discarded and that he be given absolute authority, at his own per- sonal discretion, to fix the supports of major crops at zero to 90 percent, or to eliminate the program completely. In effect, Mr. Benson's program for agri- culture is that we make him the czar of agriculture.

Needless to say, no Democrat would touch Mr. Benson's bill; and likewise, it is to the credit of the Republican Mem- bers of the Congress that they, too, have washed their hands of this new effort of the Secretary to destroy the parity prin- ciple which the farmers of America were so long in winning and which the Nation had come to accept as sound and fair. Agriculture is in the middle of a sad and sorry situation when the Secretary of Agriculture is not able to persuade and prevail upon any member of his own po- litical party to introduce legislation which he proposes.

Mr. Speaker, although Mr. Benson cannot find support in the Congress for this new mischief he proposes, we have learned that when the Secretary disap- proves a measure it is doomed. This is the lesson the President taught us last year when he vetoed H. R. 12, the bill which sought to stop the downward flex- ing of farm prices and to restore 90 per- cent of parity price supports.

Thus, the threat of veto, at Mr. Ben- son's signal, thwarts the Congress.

THE SECRETARY EXPLOITS DISUNITY

Moreover, the Secretary does not rely entirely upon the veto, nor upon the fortunes of his bills in the Congress, to accomplish his ends. He has a third design. It is the most crafty, and the most cunning, of all. It is contemptible and unforgivable. We have it from no less a source than the Wall Street Jour- nal, which supports Mr. Benson's poli- cies, that the administration is exploit- ing disunity among farmers to bring down farm prices. The following is from the front page of this newspaper's edi- tion of August 2:

Benson maneuvers to blunt opposition to his drive for lower price supports.

He'll seek power to ease planting curbs right away if props drop. Aids figure fatter harvests would offset the initial pinch of lower prices on farm income. Benson will hold out hope that controls would die eventually. He'll promise to use prop-cut- ting power moderately, trim supports to world market levels in easy stages.

Administration strategists aim to exploit splits within commodity groups. They play California cottongrowers against Dixie pro- ducers in the push for lower fiber props. Officials make the most of intercrop jeal- ousy. Benson plans to ask authority to lower dairy support floors; spokesmen for major crops complain mandatory dairy props incur heavy losses.

Benson's foes fail to agree on an alterna- tive. Some Democrats plug hard for direct payments to farmers. Others refuse to swal- low the idea. Benson's backers take cheer from the opposition's distress.

A BATTLE WON AND LOST

Mr. Speaker, only a few short years ago we were confident that a long, hard, and sometimes bitter struggle had been won. We thought that at long last agri- culture had been accepted in equal part- nership to share equitably in the rewards of free enterprise along with all other segments of our society.

Today we find ourselves embattled perhaps as never before.

Farmers are again the poor relations in the Nation's economy. The parity principle is under assault, and has been shaken to its very foundation. Crop is pitted against crop, region against region, organization against organiza- tion. This disunity is being exploited to rob the farmer of the rewards for his work.

The situation we confront today is strangely and ominously reminiscent of the state of agriculture 25 years ago.

There are many Members of this House who can remember—and some

will never forget—the late 1920's when agriculture went into a devastating decline. Our farmers called for help. The rest of our economy—much as today—was preoccupied with prosperity, and the farmers' cries scarcely were heard.

Ultimately, in the early 1930's, the ruin of agriculture ran its inevitable course, and our whole economy tumbled into a great depression.

It was then that this country came to a realization of the importance of agriculture to the strength and prosperity of our whole economy. That was when our farm program was born.

Mr. Speaker, in a few days we shall be back home, in our districts among the good people who sent us here, and in our daily associations we shall be giving accounts of our stewardship. Our farmer friends will want to know why agriculture is depressed—why the farm program that operated so well so long and at so little expense is not now working to help them—why farm families are not sharing in the Nation's prosperity—why nothing has been done.

I am going to tell the truth. I am going to tell my farmer friends about Mr. Benson, and about those who hold his hand. My people are going to hear from me two stories: One, a 20-year story; the other, a 4-year story.

THE 20-YEAR STORY

The 20-year story, which began in 1933, is an account of the accomplishment of the parity principle—agriculture's magna carta. The income of agriculture multiplied sixfold, sevenfold, or eightfold in those two decades. For 11 consecutive years prior to 1953, the average prices paid to farmers were at or above 100 percent of parity. Rural people were able to buy the conveniences and comforts hitherto available only to those who resided in the cities and towns. The blessings of electricity were taken into the rural areas. Farmers became financially able to mechanize their farms and to apply the new sciences, to bring the blessings of abundance at low cost to this country. Farmers, with the means to do it, devoted their resources and energies to the restoration and conservation of their most precious resource, the soil. Better farm income created greater markets for industries in the cities, made jobs, and kept factory wheels turning.

During those 20 years the output per farm increased by 100 percent, so that now each farmworker feeds 20 persons. As a consequence of this new efficiency in agriculture American families have had available to them more and better food, for an expenditure of a smaller percentage of their total income, than in any other period of history. Although in recent years retail prices have increased as farm prices declined, even today the average hourly wage of industrial workers will buy twice as much food as in 1929.

Our accomplishments in agriculture were phenomenal. What did this 20-year program cost?

The Commodity Credit Corporation supported the prices of the major storable crops for the 20 years prior to 1953, not at a loss, not at a cost, but at an actual profit of $13 million. For these two decades the CCC price supports on basic crops, nonbasics, perishables and nonperishables, storables and nonstorables—potatoes, eggs, wool, and everything else—amounted to only $1,064,000,000.

The total losses on all price-support programs through the Commodity Credit Corporation on all commodities amounted to only $1,064,000,000. I emphasize the fact that this was a cumulative loss for 20 years; to show just how negligible this loss really was, and in fairness to farmers the cumulative losses should be related to cumulative gains for the same period of time. The cumulative farm marketings for the same 20 years, 1933–52 inclusive, amounted to more than $390 billion. The cumulative national income for the same 20 years amounted to over $3 trillion. So in fairness, we must relate price-support losses both to farm income and to national income to realize just how negligible the losses really are.

THE 4-YEAR STORY

Now let us look at the 4-year story which began in 1953, and which continues—though we pray that it may not be for long.

First, we recall that 1953 was the year in which the assault was launched upon the parity principle—the Secretary of Agriculture began shouting to the country: "The farmer is pricing himself out of his markets"—and here is the story:

Farm prices dropped in 1953 to 92 percent of parity, to 89 percent in 1954, 84 percent in 1955, to 82 percent in 1956, and prices in July 1957 were running below July of 1956 in terms of parity.

Farm net income dropped from $14,256,000,000 in 1952 to $11,800,000,000 in 1956.

Farm-mortgage debt has risen from $6,600,000,000 in 1952 to approximately $10 billion today.

Whereas the CCC price-support program for 20 years cost $1,064,000,000, the losses for the 4 years, 1953 through 1956, were 3 times the combined total of the previous 20 years—slightly over $1 billion in 20 years, and $3 billion in 4 years. Meanwhile, CCC investments in surpluses increased from $2,452,000,000 in 1952 to $8,211,000,000 as of January 1, 1957.

Briefly, in 4 years Mr. Benson has lost 3 times as much money in CCC price supports as this program cost in the previous 20 years; at the end of the 4 years he has 3 times more surplus on hand than he had when he started; farm prices are down 18 percent and farm income down 15 percent.

Mr. Speaker, thus is the dreary 4-year story of the farmer's income going down and the costs to the Government going up.

FACTS AND FIGURES

To aid the Members in pointing concisely to what has taken place, and what is taking place, in agriculture, I am inserting at this point certain facts and figures. But before submitting these facts and figures I want to emphasize that Secretary Benson has had more money, more personnel, and more power and authority than any other Secretary of Agriculture in the history of this Re public. He has had more committees more commissions, and personal advise than any other Secretary in history When he took office our agricultura budget was only $1,817,000,000. The la Benson proposed was for approximate $5 billion, amounting to almost 50 per cent of the total net income of all th farmers of America during the year 195 Only a small part of this gigantic sum actually went into the pockets of farmer

CCC PRICE SUPPORT LOSSES

As of January 1, 1953: $1,064,617,225.

As of January 1, 1957: $4,005,229,643.

(NOTE.—The losses in 4 years, from Janu ary 1953 through 1956, were about thre times the total of losses during the previou 20-year history of CCC price support opera tions.)

Twenty-year loss (1933–52): $1,064,617,22

Loss (1953 through 1956): $2,940,612,41

CCC OPERATIONS IN BASIC CROPS ONLY (COTTON WHEAT, TOBACCO, CORN, RICE, AND PEANUTS)

January 1, 1953 (at the end of 20 years) $13,011,290 profit.

January 1, 1957 (4 years later): $1,22 671,853 loss.

(NOTE.—A $13,011,290 profit over a 20-ye period of CCC price supports on the basi turned into an $8 million loss within months after Mr. Benson took office. I 4 years under Mr. Benson losses on the basi amounted to $1,235,683,243 compared to th $13 million plus profit in the previous years. These losses have been piling highe since January 1, 1957.)

(NOTE.—The CCC support program for cot ton, over 20 years, showed a profit of ove $268 million. But this profit has been wipe out, by a cotton program loss of over a ha billion dollars in the last 18 months.)

Losses on dairy products

Up to Jan. 1, 1953	$121, 523, 3
Since Jan. 1, 1953, to Jan. 1, 1957	1, 161, 871, 6
Dairy program total	1, 283, 395, 0

(By the end of June 1957 the dairy pro gram losses had exceeded $1,400,000,000.)

CCC INVESTMENTS

Total CCC investments (inventory and loans) as of Jan. 1, 1953	$2, 452, 000, 0
Total CCC investments (inventory and loans) as of Jan. 1, 1957	6, 211, 000, 0
Total increase in 4 years	5, 759, 000, 0

CCC investments by crops (inventory an loans)

Crop	Amount	Value
Cotton:	*Bales*	
Jan. 1, 1953	1, 097, 000	$166, 779, 0

1955	11,340,000,000
1956	11,836,000,000

National income

1932	$43,049,000,000
1948	208,980,000,000
1951	250,779,000,000
1952	266,406,000,000
1955	296,379,000,000
1956	314,471,000,000

Mr. Speaker, these are the facts and the figures. I will tell my people the truth, that the 20-year story is the triumph of the parity principle and its meaning in a better life for farm families, more and better food for a smaller part of the paychecks of consumers and a modest cost to the Government; that the 4-year story is of the dismantling of this hard-won parity principle and what this has meant in new deprivations for farmers and huge costs to the Government.

MORE TROUBLE AHEAD

Now, where do we stand today?

I regret that I must tell my farmer friends that the worst seems yet to come.

Those who are tearing down the parity principle—the farmers' Magna Carta—thus far have accomplished their ends principally by destruction of the 90-percent of parity price supports and the substitution of a sliding, flexible, lower support system, down to 75 percent of parity for the major storable crops.

Now, as I have heretofore mentioned, the Secretary of Agriculture has sent to the Congress a proposal that he be given absolute power, in his own personal discretion, to support the basic crops at 0 to 90 percent of parity, or to eliminate supports completely. He evangelizes a free-market and free-price route for agriculture.

I can see nothing but farm bankruptcy in such a policy.

THE NATURE OF THE FARM PROBLEM

Agriculture alone cannot live under one system and the rest of the economy under another. Wages do not fluctuate with supply and demand. Labor has its minimum wage and collective bargaining laws. Supply and demand have little influence on the cost of transportation, electric power, and telephone service. Industry puts a price tag on what it produces.

Agriculture is the only major element of our total economy that has no device outside of Government, to pattern its production to market needs. Farmers have no way of measuring what should be their individual contributions to a balanced national supply of food and fiber, without Government help. Farmers have virtually no bargaining power in the commerce they conduct.

Shall we say to the farmers of America that you shall go into the market places with what you produce and, hat in hand, ask: "What will you give me?"

The farm families on these broad lands are the primary producers of the wealth of this Nation. Yet, in 1956, although they comprised 13.2 percent of our population, they received only 6.3 percent of our national income. Income of all farm workers last year averaged only 78 cents an hour, for their labor and their management. The average wage of industrial workers increased to $2.08 an hour. The per capital income of the 22,250,000 people living on farms amounted to only $889—and a third of this was from off-farm sources such as part-time jobs in town—while the per capita income of our nonfarm population soared to $2,010.

Yet we have before the Congress, directly from the Secretary of Agriculture, a proposition for the further dismantling of price supports—a proposition that would totally wreck the parity principle, which is agriculture's only recognized means of determining the inequity of its position in relation to the rest of our economy and society.

THE ANTIFARMER CAMPAIGN

Perhaps never in history, as in the last 4 years, has 1 segment of our society been singled out for such lambasting, such slander, and generally such cruel treatment as has been administered to the farmers of America.

Through every medium, through press releases, through radio and television, in speeches, thousands upon thousands of words have been beamed to city dwellers. With evil sounding overtones, such words as "surpluses," "controls," "subsidies," "waste," have been drummed into city ears. Our customers in town have been told that the farmer is pricing himself out of his markets, with a hint that he is living a high life on Government checks. The farmers have been denounced, ridiculed, and vilified from one end of the land to the other by people in high places.

Moreover, as I have pointed out to the House, a successful attempt has been made to divide farmers, to set one group, one region, one organization against another.

The great shibboleth of the exploiters of disunity is the one word: "Freedom."

Never has one word embracing a noble aspiration of a people been more soiled in its usage. The American farmer is the most independent, the most freedom-loving individual on earth. The question is: Shall we let the exploiters use this virtue to permanently repress our farm families and to make them content with a lesser share in the rewards of America's free enterprise?

Industry and business manage, adjust, and control production and the flow of goods offered for sale. We are told that if farmers enter into a program to pattern their production to the measure of their markets they are surrendering their freedom.

Industry and business put a price tag on the goods they produce and merchandise, but the farmer is propagandized that if he enters into an arrangement to use the pricing principles that are necessary to the success of any enterprise, he will lose his independence and his liberties.

The exploiters would deny to the farmers the recourse to their Government such as has been used to restrain the impact of the free play of supply and demand in industry and business and has mitigated and tempered the hazards of working and trading in industry and business.

Let me make my own position clear.

I shall work to the limit for the real independence of farmers, and of all Americans; but I shall never brood on the farmers' loss of their freedom to go bankrupt and their freedom to become again the paupers in this Nation's economy.

The free-market and free-price route that is now being preached for agriculture, while the farmers' production costs are fixed high by the protections afforded all others in our economy, will surely put our farmers at the mercy of a world price.

We shall not submit to reducing the American farmer to the rank of world peasant.

Many of us representing agricultural districts supported the laws that have brought a new era of prosperity to the laboring man. We supported the enactments that have created the economic climate for the greatest business prosperity in our history. I would not repeal these statutes.

We supported and fought for the laws that established the parity principle for agriculture. We shall not rest until the

befuddled foes of equity for agriculture are routed out of administrative places in Washington and the farmers' position of due reward for enterprise is restored and secured.

PROPAGANDA CAMPAIGN PLANNED

Mr. Speaker, I have information to the effect that officials of the Department of Agriculture are now preparing for perhaps the greatest program of propaganda that has yet been undertaken. I am advised that workers in the Department of Agriculture have been directed to prepare and to present facts and figures in such fashion as to indicate that all is well on the farm front, that farmers are not really hurting and are not in distress. Under the guise of summarizing accomplishments under the Eisenhower administration, officials of the Department will try to show that farmers are riding on a rosy road to prosperity.

Soon we may expect the entire propaganda potential of the Department of Agriculture to be beaming misleading information to the people of the country. Perhaps officials of the Department of Agriculture will indicate:

That farm prices have turned the corner, that they are higher than a year ago.

That farm income is headed up for the first time in a peacetime year since 1947; that farm assets are at an all-time high, and that only 1 out of 3 farms is burdened with a mortgage.

That exports are larger than ever before.

That surplus holdings of the Commodity Credit Corporation are being drawn down. That markets are returning and surpluses are disappearing.

Our farmers have learned that when Mr. Benson says things are getting better it is time for agriculture to get ready for something worse. Certainly, when Mr. Benson reports that farm prices have turned the corner, he will not mention the fact that farm costs are climbing faster than prices and that farm prices in July of this year were below the prices of July of last year in terms of parity. I am quite certain that the Secretary of Agriculture will not mention the hundreds of millions of dollars of losses incurred and the hundreds of millions of dollars paid out in subsidies which are responsible for increases in exports and some slight reduction in the inventories of the Commodity Credit Corporation. Actually Mr. Benson would probably do farmers a favor if he would withhold this new and bright presentation which he is planning, for we see and realize that in the past, whenever he talks up prices, parity has gone down. Here are some of the things Benson has said in the past and here is what has happened to parity every time he has talked of prices:

Date	Benson said—	Parity stood at (percent)—
Feb. 11, 1953	"Analysis leads us to expect no major changes (in farm price) during the next several months."	94
Apr. 7, 1953	"Our analysis * * * anticipate that prices of farm products during the spring and summer will be steady."	92
Oct. 21, 1953	"It's my belief that the major price declines are behind us."	90
June 30, 1954	"It (last month's 4-percent farm-price decline) does not indicate a general weakening in the farm-price structure."	88
Jan. 7, 1955	"I am convinced that for agriculture the road ahead will be smoother than the one we have been traveling."	86
June 15, 1955	"I am confident that we have seen the worst of the transition which agriculture goes through following every major war."	81

Mr. Benson talked some more in 1956 and the level of farm prices dropped to 82 percent of parity.

In reviewing the records and summarizing accomplishments, no doubt the Secretary will lay considerable stress on the achievements of the rural development program. The farmers will recall that this program was launched in the wake of searing criticism of the Secretary early in his administration when his aids made statements to the effect that "inefficient" farmers should stop trying to farm and find jobs in industry. By the operation of this program, Secretary Benson cannot kid small farmers into believing that he and his associates have had a change of heart.

Mr. Benson spoke a few weeks ago in Minnesota. Mrs. Margaret Terning of Cokato, Minn., daughter of one of the township's finest farmers and wife of another one of the area's finest farmers, asked the Secretary: "How is the farmer to meet his obligations in the face of lower farm prices and rising costs?" Mr. Benson's reply: "Seek other employment."

During the entire time that Mr. Benson has served as Secretary of Agriculture he has had in mind and has worked diligently to accomplish one goal, and that is to lower farm prices and bring down farm income. His sliding scale is sliding the farmers of America into bankruptcy.

FARMERS MUST STAND TOGETHER

Mr. Speaker, we shall never accomplish an equitable position for agriculture in Washington unless there is behind us, at the grassroots, a mobilization of purpose, understanding and action in a united agriculture.

Those of us in Washington who have the interest of agriculture at heart will never impose a program upon farmers. We shall not act until we know what farmers want.

Our weakness in the Congress at this moment is the disunity in the ranks of agriculture. The house of agriculture is divided. This is the work of the Secretary of Agriculture and those who support him. The exploiters are using the disunity they have created to tear down the parity principle.

There have been reports in the press that political overtones are evident, that the declining farm population may be a factor in the calculations, and the strategists, playing for political power by repressing farm prices, may reason that they will more than offset losses in the dwindling rural vote if they pick up additional support in the cities.

This is a sorry business, but I have no fear of it.

Our problem is to bring agriculture into one community of purpose and effort.

AMERICA'S STRENGTH

We may then convince the Nation that the interests of our great rural and urban populations are one and the same that they are tied inextricably together.

We may then show America where her essential strength lies. We may point out that in America 1 farm worker feeds 20 persons, while in Russia agriculture requires the labor of fully one-half the total population. We shall emphasize that the efficiency of our farmers along with the moral fiber of a free people, is the basic difference in the stature of a democratic America and a communistic Russia. We shall sink home the fact that, while one-half Russia's total population works on farms and still cannot meet the Communists' need for food and fiber, in America the efficiency of our farmers releases 90 percent of our work for other employment—in factories, in mines, in shops, in transport, in all the other pursuits which—with the abundance of food and fiber from our farms—makes the United States standard of living the object of longing of peoples the world over.

We shall tell our story. We shall spread the truth about agriculture.

Once we in agriculture are united—once we put our house back together—I am supremely confident that our friends in the towns and the cities, and their representatives in the Congress will insist—as a matter of self-interest and of simple American justice—that our parity principle be restored, that farm families share fairly in the reward of enterprise, and that they enjoy a full partnership in the blessings of this capitalistic system which has made our abundance and our strength the envy of the world.

Navy in Greatest Transition

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. RIVERS. Mr. Speaker, the Navy is, as has been pointed out by the distinguished Chief of Naval Personnel, embarked on one of the most monumental transitions since the history of this Nation or of naval development. No branch of our service nor any branch of any military service since the dawn of history has undertaken such a transformation. To be sure, this change in the very concept and basic operation of a naval fleet will not be a "bargain basement operation." It will cost money, it will cost time and it will require the greatest minds that this Nation can produce; it will require men and women

who are dedicated "beyond the call of duty" to this historic task.

Mr. Speaker, the change from gunpowder to atomic weapons and from guns to guided missiles is a costly undertaking. All of the services are undergoing a change. However, when one branch of the service must so program its combatant materiel of war from conventional power to nuclear power, along with the attendant unforeseen and unexpected problems arising, it requires the whole cooperation of every segment of the organization. It requires trained men and women, Mr. Speaker, this fact is called to the attention of the Nation by the distinguished Chief of Naval Personnel, Vice Adm. J. L. Holloway, Jr. Admiral Holloway gave to the Nation the Holloway plan which has produced more trained officers than any program in the history of this country. He has made the Nation conscious of its required contribution to the Navy and to the Marine Corps in all of its varying avenues of endeavor. Admiral Holloway has served his country in many important billets from command of battle cruisers, battleships, and other craft of lesser importance, to Superintendent of the Naval Academy and now Chief of its important Bureau of Naval Personnel. In this capacity, he is required to assign every officer of the fleet or ashore in each billet everywhere on earth. Mr. Speaker, he has a terrifying responsibility and he is demonstrating his great and most unusual genius in a capacity that brings praise from every walk of life from the Congress to the man on the street. Mr. Speaker, in the Army-Navy-Air Force Register of August 24, Admiral Holloway has written a magnificent article which I want all Americans to read—all Americans for all time. He titles his magnificent treatise "Navy in Greatest Transition." Mr. Speaker, under leave to extend my remarks, I herewith include this fine contribution by Admiral Holloway:

Navy in Greatest Transition

(By Vice Adm. J. L. Holloway, Jr., U. S. Navy, Chief of Naval Personnel)

The Navy is embarked on the greatest transition in its history. At one and the same time, and on a worldwide basis, the Navy is moving from:

Conventional to nuclear power.

Gun powder to atomic weapons.

Guns to guided missiles.

Propeller planes to supersonic jets.

Fast control systems to superfast, automatic systems.

All these steps require trained men, and not just perfunctorily trained men. To operate complex equipment, to take responsibility for thousands of lives, to serve with imagination and dedication in all parts of the world requires men with the highest levels of knowledges, skills, and attitudes. But the educated mind, the alert eye, the nimble hand, and the devoted heart are not the products of chance. They must be developed before the acute need arises.

The Navy does not find readymade guided missilemen or nuclear weaponsmen; nor can readymade experts in inertial navigation international relations, or officers skilled in military management problems be obtained overnight.

To meet its responsibilities the Navy must operate the largest training organization in the free world under single management. In scope this program ranges from preparatory training that stresses the three R's for semiliterate recruits to postgraduate education at the master of science and even the doctor of philosophy level for officers. Hundreds of schools and courses prepare naval personnel to perform vital assignments in the operating forces and shore establishments.

The first part of this article will describe some highlights of the naval officer training programs; the second part will take up some recent developments in enlisted training; both will show how Navy training is meeting the challenge of training tomorrow's Navy—today.

Civilian firms are realizing how long and difficult is the course of executive development. Corporate personnel managers warn their employment interviewers that the "young man you hire today may be the company's president tomorrow."

We in the Navy have had much experience with the problems of executive replacement. We have always recognized that the midshipman is the future naval leader. We cannot "hire" our senior naval officers from the "outside." Training lead time where officers are concerned is very long; we must project 10 and 20 years into the future when we train the midshipman and junior officer.

We must prepare for future supersonic missile ships, superspeed nuclear-powered submarines, antimissile missiles, transoceanic sonar, and all of the other automated electronic and atomic devices of the next decades, by grounding our officers in the basic technical subjects that are required for an understanding of the new equipments. For example, at the beginning of the training process our Naval Academy and NROTC courses include an introduction to the study of guided missiles, nuclear weapons, and nuclear power. For the officer already with the fleet there are the guided missile schools at Dam Neck, Va.; Pomona, Calif.; and Naval Air Station, Jacksonville, Fla., where the focus is on the applied mathematics, physics, electronics, hydraulics, aerodynamics, and other sciences required for missile weapons systems; there are the nuclear power courses at Idaho Falls and New London; there are nuclear weapons courses at Sandia Base, N. Mex., and elsewhere.

POSTGRADUATE TRAINING

Our practice is to send new officers direct to duty in the fleet. However, after an appropriate tour of duty, the naval officer has many opportunities for postgraduate training.

There are about 1,000 officers on board at the United States Naval Postgraduate School, Monterey, Calif., and another 300 pursue studies in the graduate schools of Massachusetts Institute of Technology, Stanford, Harvard, the George Washington University, and in similar outstanding institutions. Incidentally, the United States Naval Postgraduate School is the only service institution accredited to give master's degrees and doctor's degrees as well as baccalaureate degrees.

HIGH SCHOLASTIC STANDARDS

Scholastic standards are important because the modern naval officer must deal with the problems as well as the results of our complex technology, economy, and political and social organization. The men he leads as well as the ships and weapons he directs, are all products of our civilian institutions. The preface to Soldiers and Scholars (by John W. Mastland and Lawrence I. Radway, Princeton University Press, 1957) states this as follows: "The traditional distinction between military and civilian affairs in American life has become less significant. Under present condtions at home and abroad, it is obviously not enough for the Armed Forces to provide good soldiers, sailors, and airmen, and the leaders necessary to command them in battle. Today many of these leaders are called upon to work closely with foreign affairs experts, industrial managers, scientists, labor leaders, and educators."

ATOMICS AND MANAGEMENT

The United States Naval Postgraduate School is the first educational institution to install a small-scale nuclear reactor. This 100-milliwatt reactor will be available to the officer students for practical experience in the operation of atomic powerplants.

Other new courses or additions to existing courses in the Navy's postgraduate program put an increasing emphasis on guided missiles, special weapons, inertial navigation, advanced fire control systems, electronics, and foreign languages. A new course, also indicative of the complex times in which we live, is the middle-management course at the postgraduate school.

For some time the Navy has had an advanced-management course at Harvard; the new middle-management course at Monterey will provide the middle-grade officers of the Navy with a better understanding of their managerial responsibilities and opportunities.

OFFICER PROMOTION

The officer promotion qualifications program supplements an officer's on-the-job experience and insures that officers selected for promotion are qualified to perform the duties of their grades. It raises and broadens the scope of knowledge of all naval officers and stimulates their professional growth.

To do this we use all the methods of formal training, resident courses, written examinations, and correspondence courses. The typical line officer in progressing from ensign to captain—a 20- to 25-year period—can expect to complete no less than 30 correspondence courses. Each of these courses is a well-packed, well-presented injection of important professional information.

LEADERSHIP MOST IMPORTANT

The new hardware of the Navy will increase the need for training for leadership. Complex operations call for men of higher levels of education and skill; and the handling of these men calls for more imaginative leadership as well as for the time-honored standards of character and integrity on the part of the naval officer.

The naval officer's career is, indeed, one of continuous training for the challenge of leading. History proves that in time of war we must live on our accumulated education—our grassroots and our basic indoctrination; during hostilities we take our people with their more or less fixed education content, and by rapid training methods bring them into operational competence in minimum time.

In the decades between wars, and in peace, we restore our educational and deeper seasoning processes which only time can adequately fortify. Training continues, and education builds the deep reservoirs of knowledge upon which we live, once war breaks upon us. Thus our officers serve the greatest Navy of all time—in peace and war, in training and in fighting.

THE NEW ERA

The new era that is bringing about such a tremendous impact on the Navy in the areas of electronics offensive weapons and air defense systems, guided missile systems, antisubmarine defense systems, nuclear power, and nuclear weapons has imposed a problem of first magnitude on all naval training.

Never before have we faced such exacting demands in terms of quality and quantity for people with the extensive technical education and training required to operate and maintain these new weapons. In addition, we must continue to meet the training requirements in all conventional areas.

We may have fewer men in the Navy, but each will cost us more. The investments in education and training will increase as more

and more men become responsible for more and more complex and expensive equipment.

FUNDAMENTAL TRUTH

Whether the Navy is training to man ships of the past, present, or future, there is one fundamental truth under which we operate. This truth—this concept—sets the Navy apart and is unique among all the services. Limited space aboard ships requires that every man aboard must be able to perform his twofold duties—his technical duty and his battle duty. In battle the whole ship goes into action, and every man on board has his place on the team that fights the ship. The storekeeper becomes an ammunition passer; the commissaryman becames a telephone talker; and the personnelman takes his place on the damage control team. Add to this dual demand the complexity of the modern weapon systems which the technician must maintain and operate, and the incredible speeds with which attacking aircraft of today and tomorrow approach their targets, plus the superweapons of tomorrow with which the man-o-warsman has to contend, and the magnitude of the training job facing us is brought into focus.

SHIPS OF 1,000 SKILLS

A ship is a community requiring heat, light, power, food, clothing, and medicine. It must maintain and repair itself. It must move under its own power. It must carry out its missions and in doing so employ all sorts of complex operations and equipments. All these functions require trained men. A Navy destroyer, according to a recent survey, needs over 1,000 skills for its operation and maintenance. These are separate and distinct skills as defined by the official Dictionary of Occupational Titles. But there are only 200 to 250 men on board a destroyer. If the destroyer were civilianized, it would have to tow a hotel barge astern of it in order to provide housing for all the technicians required. Thus all these skills must be available in the men on board, and they must obtain their skills from carefully planned, efficient training programs.

NEW TRAINING

The increasing emphasis on nuclear power, guided missiles, special weapons, computers, and the automation of more functions must be matched with a similar emphasis on the training of men to operate, maintain, and repair the equipments and systems which are constantly being developed, modified, improved, and put into operation. New schools, new courses, new training aids, and new publications are being developed in all these areas. The demand for naval technicians and the corresponding demand for training are tremendous.

TECHNICIAN DEMAND

To help solve this demand for technicians we have established numerous courses and programs. Three new programs that are proving highly successful are: The Naval enlisted advanced school program, the operator maintenance training program, and the horizontal conversion program.

In the Naval enlisted advanced school program (NEASP) experienced career enlisted men are sent to engineering colleges for 2 years of specialized engineering instruction; then they return to the fleet for 4 years of duty; and then they go back to college for 2 more years and obtain their degrees. By this means the Navy is developing a new type of practical engineers—Navy men with technical skill as well as engineering knowledge.

Our NEASP graduates will be able to understand the workings of entire systems and will be able to supervise the operation and maintenance of the Navy's newest equipments.

This plan started in September 1956 when our first quota of selected men entered Purdue University. They have established a remarkable record there. Our men, carrying a heavier, accelerated course than the average engineering student, have nevertheless earned marks averaging 4.35—while the other students have averaged 3.9.

The operator maintenance training program provides for the intensive technical training of equipment operators—e. g., radiomen, sonarmen, radarmen—in the maintenance of their equipment. The more the operator can service his own equipment, the fewer highly skilled repair technicians are required for routine work, and the more efficient is the operation of the equipments.

The horizontal conversion program permits a man in a crowded rating, for example, gunner's mate, to qualify through training and examinations for conversion to an uncrowded rating, for example, guided missileman. The horizontal conversion helps balance the Navy's enlisted personnel structure and at the same time provides a man with additional advancement opportunities. All this, of course, means another challenge to Navy training because before the men can be converted they must acquire new skills.

ENLISTED NAVAL RESERVE

Enlisted Naval Reserve training goes in equal step with the Regular training programs. Naval reservists attend the Regular schools; and they use the same aids, courses, publications, and correspondence courses. All Reserve training is kept current with regular training whether it is drill night training or active duty for training on board a ship.

To give reservists actual frontline experience, Operation Deployment East and Operation Deployment West have been established. In Operation Deployment East enlisted reservists are flown to the 6th Fleet in the Mediterranean for 18 days of practical operational experience with the fleet. In the Deployment West enlisted reservists are flown to the 7th Fleet in the west Pacific for 22 days of duty. Only outstanding reservists are chosen for these tours and therefore these deployments provide not only practical experience but also act as motivating factors in the Reserve program.

A NATIONAL ASSET

The Navy is cooperating with the Department of Labor's new project titled "The Skilled Work Force of the United States." This project provides for the interchange of training methods, aids, and publications between industry and the military. Already the committee for this project has called for a wide choice of Navy-produced materials. This acceptance by industry of Navy training ideas and methods is another indication of the high quality of naval training.

MODERN CHALLENGES

I like to think that if an impartial observer were seeking a training program to prepare men for advanced weapons systems, for global operations, for leadership and good management, and a program that created as well as adapted and used the best of training methods and in doing so developed better individual and better citizens, the impartial observer would recommend that one could do no better than to adopt the United States Navy's training programs in whole and in part. The challenges have been and are great; the responses are magnificent.

Address by Hon. Robert F. Wagner, Mayor of New York, at Launching of the Steamship "Santa Rosa"

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 29, 1957

Mr. FALLON. Mr. Speaker, the distinguished mayor of the city of New York, the Honorable Robert F. Wagner, has just delivered a significant address outlining in persuasive manner the importance of the American merchant marine and tracing the history of the various contributions to its upbringing.

The speech was delivered in connection with the launching of the new steamship *Santa Rosa* by the Grace Lines at Newport News. Mrs. J. Peter Grace, wife of the president of W. R. Grace & Co., was the sponsor at the launching, the initial one in the current ship replacement program initiated by the United States Maritime Administration. The Grace Lines have been outstanding in their maintenance of superior transportation facilities for decades, the new ship taking the place of the present steamship *Santa Rosa* which for 25 years has operated between the east coast and the Caribbean and South American ports.

Because of the timeliness of the well-chosen remarks of Mayor Wagner, and because I am profoundly aware of the importance of maintaining a strong merchant marine at all times, I take pleasure in including the text of the mayor's address in the CONGRESSIONAL RECORD:

ADDRESS OF MAYOR ROBERT F. WAGNER

To be here with you on this most happy and important occasion is an honor and privilege.

I was particularly pleased when Mr. J. Peter Grace, president of W. R. Grace & Co., and Mr. Lewis A. Lapham, president of the Grace Line, asked me to participate in these ceremonies.

The invitation afforded me an opportunity to take part in a significant event in the history of our American merchant marine, the launching of the new *Santa Rosa*.

The invitation was, in addition, especially gratifying because it came to me as mayor of the city of New York from two men whose very families included members who had served distinguished terms as mayors of great cities. In the instance of Mr. Grace, his grandfather, William Russell Grace, was twice elected mayor of New York City and served from 1881 to 1882, and from 1885 to 1886. I am sure that we all recall the distinguished service in the years 1944-48 of Mr. Lapham's father, Mayor Roger D. Lapham, of San Francisco.

Finally, I am pleased that I have the opportunity here in a sister port area to tell of some of the constructive program which New York City is accomplishing in order to strengthen its port and to better serve the maritime industry.

In New York we are keenly aware of the American merchant marine's contribution to

the national economy and to America's defensive strength in a troubled world. I have repeatedly, during my years in public service, expressed myself in favor of the vital need for strengthening and keeping strong the American merchant marine.

This occasion is a significant one in the history of a shipping company which is strongly linked with New York. As New York developed into its preeminent position as the world's greatest port, the Grace Line has developed to a preeminent position among the leaders of the maritime industry.

New York City and the Grace Line trace their relationship back to about 1865, when William Russell Grace, a native of Ireland, came to New York by way of Peru, where he had previously established several successful enterprises.

Soon after his arrival in our city, William Russell Grace rented office space in downtown Manhattan and, with chartered sailing ships, began trade with the west coast of South America. The organization he had previously set up in Peru facilitated his shipping activities in that part of our hemisphere.

Through the 1870's and 1880's his New York to South America transportation services expanded. Early in 1892 he introduced steamers in the South America run. I need not underscore for you that the great shipping activities which have been carried on by his successors have continued to grow and to strengthen at an enviable pace. Nor need I point to the well-known and outstanding position which the Grace interests hold in fields other than in shipping, aviation and chemicals being only two which I would mention.

Today the Grace Line operates 19 *Santa* ships out of New York City. Of these 19 vessels, 2 are express liners to South America; 9 are combination cargo-passenger ships, and 8 are freighters. I understand the Grace Line plans to add several additional freighters to the South America service by the end of this year.

I view this launching of the new *Santa Rosa* not alone for its significance in adding to the Grace fleet and to our merchant marine, but in a broader sense, as spelling out in dramatic fashion the continued success, growth, and leadership of the Grace Line.

It is obviously pleasing to me as a New Yorker to recall that the Grace Line leases an outstanding city-owned terminal in Manhattan which is made of integrated piers 57 and 58 on the North River, and, in Brooklyn, occupies a pier at the foot of Java Street.

Pier 57, an integral part of the Grace North River Terminal, is a modern, uniquely designed structure which has received worldwide attention from engineering, port, and terminal experts. It is particularly suited to the great concentration of operational activity which so marks the Grace Line. Actually, the pier boasts of not only a roof supporting hundreds of automobiles being transported over Grace Line ships, but also affords underwater cargo storage facilities. The underwater storage is accomplished by using the interiors of 3 huge concrete boxes which form the substructure of the pier.

The development of New York City's pier facilities is going forward at a rate unexcelled in many, many years. Under the direction of Commissioner Vincent A. G. O'Connor, whom I am happy to see here today, the department of marine and aviation, which administers our waterfront, is making most substantial progress on its $187 million program to rebuild New York City's waterfront.

We have completed negotiations, have purchased some $2 million worth of steel for its substructure and will shortly commence the building of the new Holland-America Line pier at West Houston Street on Manhattan's North River. This huge $19 million passenger and cargo terminal, of dramatically new and advanced concept, will bring to New York from New Jersey the great Dutch line with an attendant great increase in the maritime economy of our city.

My colleagues on the city's board of estimate and I have encouraged Commissioner O'Connor in forwarding a program which, commencing this year in most substantial developments, will remake whole sections of New York's waterfront and add great facilities which will give efficiency in operations to steamship lines and railroads, and add employment for workers engaged in the transportation field.

We are already building several new railroad shipping terminals in Manhattan and tearing out old structures to make way for the modern and efficient terminals which are replacing them.

A great new terminal will be announced shortly for Brooklyn, a mammoth freight facility which will be leased to another of the foreign lines. This will again evidence New York's determination to preserve its leadership in world trade and to justify its continued acceptance by the shipping industry as the hub of international commerce.

But, to get back to the Grace Line and its new *Santa Rosa*, we are looking forward to the spring of 1958 when this beautiful new ship will enter our harbor on its maiden voyage and begin operations between our city and the Caribbean and South America.

We are looking forward also with equal enthusiasm to the completion of the new sister ship of the *Santa Rosa*, the *Santa Paula*. I am happy to learn that the *Santa Paula* also is expected to be soon launched and to undertake service next year.

The outlay of some $23 million by the Grace Line and the Federal Government for the *Santa Rosa* as part of the Grace Line's $286 million fleet replacement program points up the Grace Line's confidence in the future and the American people's determination that an increasing number of ships plying the oceans of the world will fly the American flag.

Thank you again for inviting me to be with you today and for the opportunity to be present at the launching of this great ship.

May God grant her many, many successful and happy voyages.

Baxley Has Corporation To Help Finance Factories

EXTENSION OF REMARKS

OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 26, 1957

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert at this point an article concerning industrial development in cities throughout the Eighth Congressional District of Georgia. The article follows and is entitled "Baxley Has Corporation To Help Finance Factories":

[From the Atlanta Constitution of August 6, 1957]

BAXLEY HAS CORPORATION TO HELP FINANCE FACTORIES

(By Jim Montgomery)

BAXLEY, August 5.—Appling Industries, Inc., is the name of an industrial development corporation organized to raise local dollars to help finance the development of manufacturing payrolls in this southeast Georgia community and environs.

In its organization and operation it differs little from close to 100 other such units scattered throughout the State—all with essentially the same purpose.

Their combined assets—which will never be combined—give Georgia a potential source of $12 million or so in capital to finance new and expanding industry.

Most of this total is on paper, today.

Many communities have already raised such funds, but a good deal of the total is what members of these corporations think they could raise—tomorrow, if necessary—through a communitywide sale of stock or debentures.

But the heaviest accent in these tub-thumping campaigns is, with rare exceptions, on providing financial aid to build a branch plant for a company headquartered outside of the community.

A Constitution survey of civic leaders and businessmen in 25 middle and south Georgia communities indicates that a local industrialist would be given the same consideration as an outsider in 13 of them—if the occasion ever came up.

The fact that it hasn't is some of these towns might suggest that their local industrialists either have reason to feel otherwise, or that they would rather not risk the possibility that the community would resent their making profits on its investment.

This was the tenor of replies heard in the 3 communities where such aid was considered as highly unlikely, and in 4 others where the answers amounted to a highly qualified "maybe."

But this is 1 of the 5 remaining communities (which is just a fifth of those surveyed) where there is no doubt as to the sincerity of their positive answers.

Baxley is helping a local industry.

Local firms also have found aid in Edison, Jesup, Waycross, and Americus (and probably some other towns not surveyed).

Valdosta and others have come through to aid the expansion of long-established branch plants—businesses in operation long enough to have gained a sort of quasi-local status.

Here in Baxley the matter did not come up until last April, when a young man who had been operating an upholstery trim shop seemed on the verge of shutting his doors and moving on to look for better opportunities.

But local businessmen didn't want their community to lose a man of his talent and ability by default—by failing to support a promising venture that could be nurtured in their own backyard, while at the same time pinning all their hopes for economic growth on the problematical attraction of a branch plant.

So why not stay in Baxley, they asked the young man, and go into the furniture-making business?

They backed up their proposition by launching a public sale of stock that brought in more than $5,000 despite a limitation that no one person could buy more than a single $200 share.

The Baxley Better Built Furniture factory was then launched in quarters provided rent free for 6 months, with rental thereafter to be determined within reasonable limits by the firm's ability to pay.

It's only a few months since the start, and the firm's employment figure and studio couch output are still small—but it's a going business because Baxley went all out to help a neighbor.

A somewhat more unusual incident took place recently in Wayne County, a few miles southeast of here—more unusual because Jesup is riding the crest of a new prosperity that came a few years ago with the establishment of Rayonier's chemical cellulose plant.

Rayonier is the dominant employer there, a situation that will become even more so when a capacity-doubling expansion is completed soon. Some communities admittedly tend to forget about their older, smaller industries when something big and new moves in.

But that didn't happen in Jesup.

Sea Island Shirts, Inc., with headquarters and sales offices in New York, had been making shirts here for 18 years when a recent internal reorganization and change in ownership resulted in making the Jesup plant a separate corporation under Robert Pascal, the man who had run it for years.

The Pascal Corp. needed working capital, and decided to raise it in the plant's home town.

The Jesup Chamber of Commerce backed up this idea, and its members knocked on local business doors until they had sold $100,000 in preferred stock in the Pascal Corp. to 71 people.

These investors will get 6 percent per annum for their funds (which will be repaid in a maximum of 10 years), and Jesup is now headquarters of a nationally known apparel firm—a firm that employs more than 300 production workers now.

An additional 200 jobs will be added eventually, depending on when plant expansion plans can be carried out.

According to Jesup Chamber of Commerce Manager R. Jack Fishman, two other Georgia communities had offered to build Pascal complete new plants in their towns, but he wanted to stay where he was if he could get enough local capital.

"And that he did," Fishman said, "without resorting to the appeal that he might otherwise move away."

In Waycross right after World War II, a local furniture manufacturer needed $10,000 for an expansion program, and that city's industrial development corporation (now replaced by a quasi-governmental authority) came up with what he needed.

Their money, with interest, was paid back in full in just 2 years, though it could have been strung over a longer period.

In southwest Georgia's Calhoun County, a group of businessmen in Edison had grown increasingly concerned over the area's population loss due in part to the lack of nonfarm payrolls.

Calhoun had 10,438 residents in 1940, but the census 10 years later counted only 8,578.

They pondered the possibility of trying to attract some sort of industry from the outside, but conviction grew that a new locally owned and operated industry would be best for their economy.

Getting an outsider to come in would, for one thing, have taken a lot of effort that might not prove successful; for another, a branch plant's operations were felt to be too subject to the whims of absentee officers not too concerned with Edison's problems; also, the profits of such a plant would not be of any direct benefit locally.

So in 1952, Edison Textiles, Inc., was formed with capital of $63,000 raised through the sale of 630 shares of stock to between 20 and 30 local people.

Production of girls' underwear, sun suits, and nightwear began in a remodeled horse show barn, and first year sales of $44,000 provided 42 workers with $16,000 in wages.

Two years ago, Editex added 3,000 square feet to its building, and today it employs some 80 local residents on a $160,000 annual payroll. Annual sales have passed the $500,000 mark, and its goods are sold in stores throughout the Nation.

President and General Manager Ed J. Faber and Vice Presidents William Israel and Dan Hammack (all are directors, too), are now considering possible expansion plans that within 3 years are expected to bring a $400,000 annual payroll to more than 180 employees—and an annual sales volume exceeding $1,250,000.

What's more, if retained earnings won't provide enough expansion capital, they're sure they can raise whatever they need by selling debentures right at home—where they're achieving their goal of providing payrolls to build a better community.

Vietnam Celebrates Second Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. POWELL. Mr. Speaker, because Congress will not be in session on the occasion of the celebration of the second anniversary of the proclamation of the Republic of Vietnam on October 26, 1957, I wish to take this opportunity to send warm greetings to the people of Vietnam, President Ngo Dinh Diem, and His Excellency Tran Van Chuong, Ambassador of Vietnam, in honor of this event.

In 2 short years of independence free Vietnam has made commendable progress toward stability, security, and strength. Vietnam can justly take pride in her notable accomplishments. They have laid the foundation for even more satisfying development in the future. Among the factors that explain the remarkable rise of free Vietnam from the shambles created by many years of murderous civil and international war, the division of the country at Geneva, and the continuing menace of predatory communism, there is the dedication, courage, and resourcefulness of President Diem himself. In him, his country has found a truly worthy leader whose integrity and devotion to his country's welfare have become generally recognized among his people. Asia has given us in President Diem another great figure, and the entire free world has become the richer for his example of determination and moral fortitude.

The United States is proud to be on the side of the effort of the Vietnamese people under President Diem to establish freedom, peace, and the good life. The United States wishes to continue to assist and to be a loyal and trusted friend of Vietnam. President Diem during his recent visit to the United States said on May 13, 1957:

You all know what we have achieved during the last 2 years. Most people know that we could not have succeeded as we did without American material aid. But not many know that equally important for our survival was your moral aid, a kind of aid that usually does not come from governments but from the people directly. * * *

Recently, we and our friends talked much about our need for leadership on other levels than the political—for leadership in the cultural, technical, and economic fields. In order to build a stable economy, which is the necessary basis for democracy, we do indeed need such leaders whom we now so desperately lack. This is why we welcome your technical advisers, whether they come from your Government, from private industry, from universities, or from foundations.

We welcome such help, but even more we would welcome support for our efforts to train our own technicians. Although we want your advisers in our country, we aspire also in this effect toward fuller independence. We must multiply our efforts to educate our youth for these great new tasks.

Vietnam is a great temptation for the Communists. Vietnam is the gateway to the invasion of southeast Asia and to its immense resources in manpower and raw materials. President Diem has said:

We all still live in great peril of losing out to a determined enemy who is active along a front line that circles the whole globe. Fate has put us at a crucial spot on the border between democratic freedom and Communist tyranny. Your aid enables us to hold this crucial line, and to hold it at less expense to you, and at less danger to the world than you could have done it yourselves. * * * We need you. * * * Our people hate war, but they also hate to be slaves.

If attacked, we shall fight again. Your aid and your friendship will help us fight well and, we hope, successfuly. We will then surely not fight for Vietnam alone. And if we, as we pray, are spared such a conflict, it may well be because the enemy is afraid of our determination and strength. In any case, and whatever the future will bring, we shall repay the debt we owe to the free world.

We are proud of the progress being made by Vietnam and happy that we are able to assist. The orderly development of the new states of southeast Asia to political stability and economic well-being is a source of gratification. As one who deeply believes in freedom, democracy, and the importance of achieving a better understanding among all nations, I wish Vietnam every success which she so richly deserves.

Hometown Funds Bringing New Plants to Georgia

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 26, 1957

Mrs. BLITCH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following newspaper article:

[From the Atlanta Constitution of August 7, 1957]

HOMETOWN FUNDS BRINGING NEW PLANTS TO GEORGIA

(By Jim Montgomery)

AMERICUS, August 6—Things are looking up today for soft-drink bottler Tom Warren,

young man determined to do everything he can to help his business and his community.

As he sees it, these goals are inseparable.

That's why he's serving as chairman of the Americus Industrial Development Committee, which has just completed negotiations for a 65,000-square-foot mobile home manufacturing plant that will create 100 or more new jobs by the end of the year.

Hanging fire are 2 more manufacturers expected to occupy an additional 90,000 square feet and provide 200 more jobs at the 160-acre industrial site recently purchased by the Americus-Sumter County Development Corp.

The improved property will represent a sizable investment even before the first plant takes shape on it.

(Another mobile home manufacturer, by the way, has been eyeing 3 other Georgia communities and 1 in South Carolina. He reportedly has decided on one of the Georgia towns, and is expected to announce the location soon.)

Warren and other young Americus businessmen "got on the ball (in industrial development work) because we were losing too much manpower, and our sales figures showed it."

"Every time 1 person moves away it means my sales fall by 200 bottles a year, and my community backs up instead of moving ahead.

"So we set out to get new payrolls."

And set out they did. When the development corporation here was organized last fall, some 200 people bought more than 1,000 shares of stock at a dollar a share.

Each share committed its holder to purchase, on demand, a 3-percent debenture of at least $100 denomination to mature in a maximum of 20 years.

Thus assured of at least $200,000 when needed, the corporation was ready to talk turkey with prospects. First came a $35,000 plant financed on a 10-year basis for a truck body manufacturer, who promptly turned around and paid up the whole works.

Then came the purchase (price undisclosed) of the new industrial site.

And thanks to its advance preparation, it took the corporation just 3 days to lay its hands on $150,000 with which to finance about three-fourths of the cost of the new mobile home plant. Marlette Coach Co. will pay 5.5 percent interest on this money (of which 2.5 percent will be used to defray the development corporation's expenses), and finance the remainder itself.

But in order to keep its funds from being tied up too long, says Warren, the Americus group hopes it will be able to get one of the State pension funds to take over the note as soon as the building is completed.

The $150,000 can then be used to finance a plant for one of the other firms now considering an Americus location.

This community wants new plants as much as anyone, the bottler said, "but we feel that we ought to get a fair rate of return on any money we invest. We've made concessions in the past, and whether we do again will depend on the circumstances."

ASKED NOTHING FREE

"But we sure enjoyed working out this last deal, because they didn't ask to get anything free. And they agreed to pay the going rate of interest on the money being loaned to us."

That's pretty much the way most Georgia communities feel about such matters.

In Montezuma, for instance, the development corporation is charging an apparel plant 4 percent interest on the $25,000 put up for a maximum of 20 years by about 50 local investors to partially finance a plant built in 1948.

Mrs. Nanita G. Schofield, Montezuma Chamber of Commerce manager, doubts that enough funds of that type could be raised locally unless a profit was assured.

NO BIG TEST

Dawson Banker Frank Smith estimates that the Terrell County Development Corp. could raise up to $150,000 "at the going rate of interest" to finance a new industry, but no big employers have come along to test his supposition.

Albany, Inc., could probably raise a $500,000 industrial ante, according to chamber manager Walter R. Brown, but investing any part of it on a profit or nonprofit basis "will depend on the ability of the borrower to pay."

Another south Georgia county plans to finance a new plant through the sale of $120,000 of stock to local shareholders, the principal to be repayed over an 8-year period after the 12 years required to pay principal and interest on a commercial loan.

ANNUAL RENTAL

During the second 20 years, however, the company operating the plant will most likely pay an annual rental amounting to 1 percent of the total plant cost to the local development corporation.

Holders of some $60,000 worth of $25 par value preferred stock in Greater Camilla, Inc., will get a return of $1.50 a share per year on their investment in a new 26,000-square-foot apparel plant, according to B. T. Burson, development corporation and chamber of commerce president.

An additional $60,000 is being borrowed at the going rate of interest from the State teachers' pension fund.

The Thomasville-Thomas County Industrial Development Corp. is set up to raise as much as $50,000 locally, to be repaid over a 20-year period at a cost to the borrower of 2 percent, which would just about cover the group's operating expenses.

REAL RETURN

The real return, says Chamber Manager Dewey Norwood, will come in the form of economic gain for the whole community from new jobs and income provided by such a plant.

A few other communities feel the same way, but development experts now advise them to charge the going rate of interest, since any company worth having should be willing to pay it.

Industries for Brooks County, Inc., organized in Quitman just last month, hopes to raise $20,000 in its first year through the sale of $25 units ($5 par value stock and $20 par value bonds) bearing a guaranteed 2 percent return from the outset.

GETTING RETURNS

Elsewhere in the State, development corporation investors get returns of 2 and 3 percent (Valdosta), 5.5 percent (Homerville), 6 percent (Jesup), 4 percent (Dublin and Milledgeville), 4½ percent (Monticello), and 3 to 6 percent (Jackson).

In Alamo, on the other hand, some 20 citizens put up $55,000 to build a 14,000-square-foot apparel plant—even before they had a prospect.

Then, headed by Chamber of Commerce President L. M. Achord, they started casting about and landed an occupant already making shirts in nearby Vidalia and Dublin, Oxford Manufacturing Co.

PAY THROUGH RENT

More concerned about getting their first major industry than making money directly on their investment, the Wheeler Countians worked out a lease with Oxford to pay off the principal only through rent over 10 to 25 years.

Alamo made some other concessions, too, Achord said, but the new employer probably wouldn't have branched out to Alamo if the deal hadn't been made extra attractive.

Though the wisdom of giving so much is widely debated in industrial development circles, there's no argument in Alamo, where some 175 Wheeler County and neighboring folks will soon be cashing regular paychecks—providing the old agricultural economy with a much-needed industrial transfusion.

Libya Celebrates Sixth Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of one of the 29 participating nations in the Asian-African Conference on friendly terms with the United States.

Congress will not be in session when Libya celebrates her sixth anniversary of independence on December 24, 1957, hence I wish to take this opportunity to send greetings to the people of Libya, His Majesty Mohamad Idris Al Mahdi Al Senussi, and His Excellency Saddigh Muntasser, Ambassador of Libya, in honor of this event.

On December 24, 1951, King Idris proclaimed "to the noble people of Libya that in fulfillment of their endeavors and of the United Nations resolutions of November 21, 1949, our beloved country has, with the help of God, attained independence." Both the League of Nations and the United Nations had proclaimed the concept of international responsibility for less fortunate peoples. Libyan independence became for many states the expression of this concept and of the assertion of the rights of nationalism.

Since 1951, Libya has been moving slowly but concretely in the direction of political maturity; its governmental institutions have assumed greater substance and authority; its economy has been bolstered by foreign grants and technical assistance; and its people have grown increasingly to accommodate themselves to the existence of national institutions which are somewhat more powerful and far more impersonal than those of the tribe or the family. In addition, the Libyan Government has enhanced its prestige and underlined the country's strategic importance in the Mediterranean area by concluding special agreements with the United States and United Kingdom permitting the establishment of western troops and bases in Libya. Libyan foreign policy has shown a marked friendliness to the United States and a growing understanding and appreciation of the threat of international communism.

We are proud of the progress being made by Libya and happy that we are able to assist. The orderly development of the new states of Africa to political stability and economic well-being is a source of gratification.

The Facts Behind International Harvester Prices

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, August 29, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "The Facts Behind International Harvester Prices."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE FACTS BEHIND INTERNATIONAL HARVESTER PRICES

It may have come to your attention that International Harvester again has found it necessary to announce increases in the price of most of its products.

You may reasonably ask why.

The purpose of this pamphlet is to tell you what has been happening over the past several years to our cost-price structure, for the current increase is but the latest phase of a continuing economic trend.

This economic trend in our country since the beginning of World War II is now familiar to most people. They realize that when such basic elements of costs as wages, salaries, and materials and supplies are increased substantially, selling prices of finished products also must be increased. For the past 10 years especially, there has been, with some interruptions, a steady increase in these basic elements of cost.

We can trace these events and their effect upon our prices most clearly if we go back to 1941. That was the last year in which the distortions of World War II were not present in any marked degree. It was a year in which the farm price parity index stood at 93, as high as it had been since 1925.

I. SIXTEEN YEARS OF COSTS AND PRICES

Three elements of costs over the past 16 years have used up about 95 cents out of every dollar our company has received. These are: (1) costs of materials, supplies, and other related expenses, which in 1955 took about 56 cents of every dollar received; (2) wages and salaries of our employees, which took about 34 cents; and (3) taxes, which took about 5 cents.

Let's look at the increases we have experienced since 1941 in the two principal elements of our costs, and compare our price increases with them:

1. Since 1941, costs of the materials and supplies which we buy, taking an average of all of them, had increased, as of August 1, 1956, by 109 percent.

2. Since 1941 and up to August 1, 1956, the average hourly earnings of our employees had increased by 169 percent.

Since 1941, up to August 1, 1956, the prices of our farm equipment products, including farm tractors and farm implements, had increased only 96 precent—considerably less than our increase in costs.

By comparison, the increase since 1941 in the prices received by farmers for their products, as of August 1, 1956, was 119 percent.

So, prices received by farmers, even at the lower levels of early 1956, were ahead of farm equipment prices. In recent months prices received by farmers have turned upward again.

Now, let's look at what happened in August 1956.

II. INCREASED MATERIALS COSTS

During the summer of this year a strike in the steel industry was followed by substantial wage increases for the employees of that industry, as well as liberalization of retirement and welfare benefits and the establishment for the first time in the steel industry of supplementary unemployment benefits. This was followed by price increases for iron and steel products. Including small increases that had been made prior to the strike, these increases for the types of steel we use in our manufacture averaged about 8.5 percent.

Iron and steel products are the most important materials we use, both in tonnage and in dollar amount. So this increase in basic steel prices has had another major effect on our production costs.

But only a part of our increased production costs stems directly from the iron and steel price increases. There will be a further major effect on our costs caused by the increased prices which will be charged us by the thousands of suppliers who furnish us with finished or semifinished components made principally of iron and steel. Many of these increases exceed in percentage the increase in iron and steel prices.

Furthermore, we have experienced numerous increases in the costs of many other materials not made of iron and steel, and have received notices of many others to take effect in coming weeks.

The estimated increased cost of materials and supplies to Harvester, on an annual basis, is $40 million.

III. INCREASED WAGES AND SALARIES

Since 1945 Harvester employees have received a number of substantial wage increases. These increases have included both basic wage and salary increases and adjustments under the cost-of-living and annual improvement agreements made with unions. Proportionate increases have been made for employees not covered by union contracts.

In 1941, the average straight-time hourly earning rate of Harvester factory employees (excluding overtime premium pay but including night bonus) was 85.5 cents.

On August 1 of this year these rates had risen to $2.30 an hour. At this point the rates were 169 percent more than the 1941 rate.

Since August 1, 1956, employees have received an additional 6-cent-an-hour annual improvement increase as well as another 4-cent cost-of-living increase, for a total of 10 cents an hour. This additional 10 cents brings the current average straight-time hourly earning rate for Harvester factory employees to $2.40. This is an increase of 181 percent since 1941.

There also has been a tremendous increase in the cost of fringe programs for the benefit of employees, including hospitalization, sickness, group life insurance, supplementary unemployment payments, vacation and holiday pay, and retirement plans. The total cost of these plans is about 50 cents per hour for every employee of the company, which must be added to the $2.40.

The 1956 wage, salary, and fringe benefit increases, when applied throughout the company's operations will cost Harvester about $15 million annually.

IV. OTHER INCREASES

These are not the only increases in costs our company must bear. There will be substantial increases in our transportation costs, and in other expenses of doing business.

It is estimated that these increased costs will amount, on an annual basis, to $5 million.

Now we can put them together for a combined picture of what has happened in our business since August 1, 1956:

Annual cost to Harvester of increases in materials prices	$40,000,000
Annual cost to Harvester of increased wages, salaries, and liberalization in employee plans	15,000,000
Annual increase to Harvester of transportation and other expenses	5,000,000
Total annual cost to Harvester	60,000,000

The assertion is sometimes made that a company such as ours could absorb out of its profits increased costs such as we have sustained this year and in other recent years. The absurdity of that statement is shown by the fact that our average net profit resulting from each dollar of sales during the past 16 years has been only 4.5 cents.

Had the company tried to absorb increases in costs during the past 16 years, we would long since have been out of business, for these higher costs have totaled hundreds of millions of dollars.

Of even greater significance is the reduction which has occurred in this net profit margin during the past years, shown as follows:

Net income (after taxes) from each dollar of sales

	Cents
1951	4.6
1952	3.7
1953	3.7
1954	2.7
1955	3.9
1956 (9 months ended July 31, estimated)	3.4

For a company like Harvester, which requires a large amount of capital in relation to its sales volume, its profit margin is unquestionably one that cannot absorb increased costs continuously and provide future capital.

So, in view of the higher costs we now face, totaling at least $60 million on an annual basis, and despite our continuing efforts toward economy and improved efficiency, Harvester's only alternative was to increase prices—even though the farm equipment market is down from past years.

The increases in costs were studied carefully, and price increases on farm equipment products were announced. These price increases amount only to 5 percent. Appropriate price increases have also been put into effect on motortruck and construction equipment products.

It was our policy as we studied these higher costs, as it has been in the past, to hold the price increase to the very minimum.

The chart on page 2 shows the record of Harvester's increased average hourly earnings, increased materials costs, and its farm equipment price record for 16 years. For purposes of comparison, the prices received by farmers for their products also are shown. We believe this record shows that we have tried to hold our farm equipment pricing to a consistent policy of (1) not increasing prices until higher costs made it necessary, and (2) in every case holding increases to the minimum justified by costs.

There is one other price policy which Harvester has followed consistently:

We have not increased prices during periods of shortages when customer demand outran supply.

Harvester does not look with favor on the continuing trend of rising costs and prices. We deplore it. We join with that vast army of people who desire stability in key economic factors.

However, as long as major increases take place in the costs of materials, wages, and salaries, transportation, and other expenses, Harvester, like nearly all other companies,

has no choice but to increase its prices correspondingly.

INTERNATIONAL HARVESTER CO.
CHICAGO, ILL.

Cambodia Celebrates Its Fourth Anniversary of Independence, November 9, 1957

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 29, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of one of the 29 participating nations in the Asian-African Conference on friendly terms with the United States.

Because the Congress will not be in seession at the time of the event, I wish to take this opportunity to congratulate the people of Cambodia, His Majesty King Norodom Sihanouk, and His Excellency Nong Kimmy, Ambassador of Cambodia on the occasion of the celebration of the fourth anniversary of independence of Cambodia, November 9, 1957.

The people of Cambodia have displayed courage and scored no small victories on their path to independence. Cambodia became an associated state within the French Union as a result of the French-Cambodian Treaty of November 8, 1949. Following additional arrangements with France, the Cambodian King proclaimed national independence on November 9, 1953. International recognition was accorded Cambodian sovereignty in the Geneva Declaration of July 21, 1954.

Cambodia and the United States have enjoyed close friendship and cooperation. According to Secretary Dulles:

United States policy in Cambodia is based on a simple precept: That is, the United States through its military and economic aid programs seeks to assist the Cambodian Government in its endeavor to maintain the sovereign independence of the Kingdom. This assistance is extended only at the wish of the Royal Cambodian Government, which officially requested military aid on May 20, 1954, and military and economic aid on September 1, 1954.

The United States considers it to be in its national interest to help in the economic and social advancement of all free nations. The best way that we in America can maintain our own independence is to help other countries maintain their independence. Only by granting full independence to the Asiatic peoples can the Communists be deprived of the contention that they are liberating those peoples from colonial rule. Full sovereignty for all people is the only way to rally them at this hour to the cause of the West and to persuade them that it is in their own interests to fight to the death against the Communists.

As one who deeply believes in freedom, democracy, and the importance of achieving a better understanding among all nations, I want to again extend warm greetings to the people of Cambodia, and wish them every success.

Importation of Swiss Watches

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, August 29, 1957

Mr. DIRKSEN. Mr. President, in connection with the continuing controversy over the importation of Swiss watches, I submit for inclusion in the CONGRESSIONAL RECORD a letter from Paul F. Mickey, vice president of American Watch Manufacturers Association, Inc., which sets out some highly interesting facts and figures.

This is a vital moment to the watch industry, and also the preservation of high type skills which have so long been identified with that industry.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN WATCH MANUFACTURERS ASSOCIATION, INC.,
Washington, D. C., August 13, 1597.

Senator EVERETT MCKINLEY DIRKSEN,
United States Senate, Washington, D. C.

DEAR SENATOR DIRKSEN: We have recently told officials of the various agencies and departments involved in the current Office of Defense Mobilization study of the watch industry of certain facts and views on the current condition of the jeweled watch industry, the need for immediate Government action, and the quality of action required. In order that you may be fully informed, we are writing now to make the important parts of that information a matter of record for your consideration and possible future reference.

Eighteen months have elapsed since the domestic jeweled watch industry asked ODM to act under section 7 of the Trade Agreements Extension Act of 1955. Seven months have passed since ODM's public hearing on the problem.

During this period the industry's situation has deteriorated, especially since the first of 1957. Production in 1956 was 2,066,000 units, whereas 1957 production is running at the rate of 1,622,000 units. This reflects an additional cutback of 110,000 watches since our conference. The 1957 rate is 21 percent below 1956.

Average employment on domestic watch production in 1956 was 3,955. Current employment is now about 3,300, a drop of 16 percent. This reflects a decline of an additional 200 employees since our conference.

Imports of jeweled watch movements in 1956 were 7,062,000 but have increased in 1957 to an annual rate of 7.9 million movements, a 13-percent increase. The actual increase for the first 4 months of 1957 over the first 4 months of 1956 was 12 percent.
